sanctioned strength is one Director, 9 Superintending Geologists (including 2 Deputy Directors), 31 Geologists, 1 Petroleum Geologist, 72 Assistant Geologists, 2 Geophysicists, 2 Assistant Geophysicists, 1 Geophysical Technician, 2 Chemists, 1 Physicist, 9 Assistant Chemists, 1 Mining Engineer, 1 Deputy Mining Engineer, 1 Drilling Engineer, 1 Driller and 1 Registrar. This staff is divided into (a) Headquarters Division, and (b) Field Staff. The Headquarters Division, with its office in Calcutta, includes 2 Deputy Directors (one in charge of General Administration, Publications, and Records and the other in charge of Mineral Development and Technical Administration), 1 Petrologist and 1 Curator with assistants who identify rocks and minerals submitted for examination by the public and superintend the Museum collections, 1 Palaeontologist with assistants who is responsible for the identification of fossils and supervision of the fossil collections, and a chemical staff working in the Headquarters Laboratory. The office sections include, in addition to the general administrative sections, a Library section, a Publication section and Drawing office, including map and process sections. Geological maps are prepared in the Drawing office and smaller maps are also printed there. The departmental Library is well-equipped with books and publications on geological and allied subjects. These may be consulted by the general public and in certain circumstances may be issued on loan.

The Field Staff, who spend about half of the year on geological fieldwork in any part of the Indian Dominion and the remaining 6 months at headquarters, are deputed to work either in the Field Circles or in the Specialist Sections, the former consisting at present of 5 Circles, *viz.*, (1) Western Circle for Bombay, Saurashtra, Cutch, Malwa, Rajputana and Rajasthan; (2) Northern Circle for East Punjab, Himachal Pradesh, Patiala and East Punjab States Union, U.P. and Bihar; (3) Central Circle for C.P., Madhya Bharat, Vindhya Pradesh and Orissa; (4) Eastern Circle for West Bengal and Assam; and (5) Southern Circle for Madras and the latter of 6 Specialist Sections, *viz.*, (1) Mineral Development Section; (2) Engineering Geology and Ground Water Section; (3) Geophysical Section; (4) Drilling Section; (5) Exploratory Mining Section and (6) Rare Minerals Section. The Field Circles each embrace one to several provinces while the activities of the 6 Specialist Sections cover the whole of the Indian Dominion. Each Field Circle is under the supervision of a superintending geologist. The individual Mapping Circles embrace one to several provinces while the activities of the two specialised circles cover the whole of India. The object of the Field Circles is to continue the detailed geological mapping of the Indian Dominion. Officers in these Circles carry out preliminary investigations on such mineral occurrences as are found during the course of mapping, and also undertake the simpler types of engineering geology and water-supply investigations. They also supply the geological guidance necessary in any geophysical work which may be carried out in their areas. Officers of the Mineral Development Circle are men who have specialised in the study of certain minerals, such as coal, iron, manganese, clays, gypsum, etc. Their work is of an all-India character, and they operate and give advice to provinces wherever their specialised knowledge is of advantage. Similarly, the work of the Engineering Geology Circle is of an all-India character, the members being highly specialised in the geological investigation of dam-sites, water-supply or any geological problems related to engineering.

With the present small staff, this section can take on only a limited number of investigations but it is hoped that it will be expanded to the required cadre as quickly as possible. It works in close co-operation with the Public Works Dept. of the various Provincial Governments. The Geophysical Section is at

present working mainly on water-supply and engineering geology problems, and on the location of small mineral deposits. The Drilling, Mining and the Rare Minerals Sections have just begun to function—additional staff is still being recruited. For work in connection with the testing of mineral deposits, exploring dam-sites and underground water resources, drilling equipment is being purchased.

Every year, before the programme of the field surveys is decided upon, the Provincial Governments are asked to give details of geological investigations, mineral surveys or engineering enquiries which they desire to have carried out. Such definite programmes of fieldwork may also cover the States, joining the Indian Union and may be carried out free of charge. If, however, any special problem has to be dealt with which does not come under the regular programme of the Department (*e.g.*, a mineral survey of a particular area, an enquiry connected with a particular engineering project, or short-term investigations involving specialised geological knowledge), a charge may be made for the services of the officers deputed for such work.

Recently a Mineral Information Bureau has been organised within the Geological Survey of India with the object of assisting and advising the public on the development and utilisation of mineral resources. The Bureau publishes a quarterly journal called "Indian Minerals" in which information is given in language which can be easily understood by the general public.

The results of the investigations and researches of the Department are published in—

- (i) *Records of the Geological Survey of India*, which include the Annual Reports, Annual Mineral Review, and short papers. One volume of 4 parts is published annually. Every 5 years, a Quinquennial Review of the Mineral Production of India, is published as a separate volume of the *Records*.
- (ii) *Memoirs of the Geological Survey of India*; in general each volume deals in detail with a particular area or a particular mineral.
- (iii) *Palaeontologia Indica*, which deals entirely with palaeontological matters.

As a part of the *Records*, a series of Bulletins on particular minerals have been published in recent years. These Bulletins are intended to summarise the geological information available in India on commercial minerals. As each edition goes out of print, these Bulletins are revised and reprinted.

Thus to cater for the Mineral Industry, the Geological Survey of India publishes:

- (a) An Annual Review of Mineral Production, the contents of which are mainly production statistics relating to the previous year.
- (b) A Quinquennial Review of the Mineral Production of India, giving a review of the trend of the industry during the past 5 years.
- (c) Bulletins, each giving a summary of geological knowledge on a particular mineral.
- (d) A semi-popular quarterly journal known as the "Indian Minerals" which contains articles on minerals and mining in India, mineral statistics and abstracts of world mineral news, etc.

During the War, the publication of the *Records* (except Bulletins) and *Memoirs* was suspended, but this has now been resumed.

The advice of the Geological Survey of India is taken by the Central Government and others on all questions of mineral policy including grant of mineral concessions. To encourage and assist the teaching of geology in classes and

colleges, the Department presents collections of minerals, rocks and fossils and gives lectures to students and at times to the public with a view to popularising the study of geology.

The geological functions of the Mineral Utilisation Branch of the Department, which was established as a War measure, have been taken over by the Mineral Development Circle.

The Strategic Branch, which was formed during the War with a view to providing geological information and advice for the Allied Forces, has been dissolved.

Survey of India.—The first authoritative map of India was published by D'Anville in 1752, when the exploration of the then unknown India was still largely in French hands. It had been compiled from routes of solitary travellers and rough chart of the coast.

The Survey of India may be said to have been founded in 1767—ten years after the battle of Plassey—when Lord Clive formally appointed Major James Rennell, the first Surveyor General of Bengal, at that time the most important of the East India Company's possessions.

Rennell's maps were originally military reconnaissance maps and latterly chained surveys based on astronomically fixed points, and do not pretend to the accuracy of modern maps of India based on the rigid system of triangulation commenced at Madras in 1802 and since extended over and beyond India. Even now, however, the relative accuracy of these old maps makes them valuable in legal disputes, as for instance in proving that the holding of a Bengal landowner was a river area at the time of the Permanent Settlement of 1793, so that he is debarred from its benefits.

From these beginnings, this department has gradually become primarily responsible for all topographical surveys, explorations and the maintenance of geographical maps of the greater part of Southern Asia, and also for geodetic work.

Geodesy means the investigation of the size, shape and structure of the earth, and the geodetic work of the department consists of primary (or geodetic) triangulation, latitude, longitude and gravity determinations. From these the exact "figure" of the earth is obtained, whereby points fixed by triangulation can be accurately located on its curved surface. This system of fixed points holds together all topographical and revenue surveys, and the existence of such a system from the early days of the department has avoided the embarrassments caused in other countries where isolated topographical surveys have been started without a rigid framework, with the inevitable result that they could not be fitted together.

A geodetic framework is, therefore, essential in any large survey, but there are a number of other activities, all of them ultimately utilitarian which can be suitably combined with its execution, and the following are some of those which have been carried out in India:

Precise levelling for the determination of heights;

Tidal predictions and publication of Tide Tables for thirty-nine ports between Suez and Singapore.

The Magnetic survey; Observation of the direction and force of Gravity;

Astronomical observations to determine latitude, longitude and time;

Selenographic and meteorological observations at Dehra Dun.

Indian geodesy has disclosed widespread anomalies of gravitational attraction in the earth's crust, which have recently led to a reconsideration of the whole theory of isostasy.

Topographical Surveys.—In the past this department used to carry out the large scale revenue surveys for most of India, and was conducting this work for Central and Eastern India till 1905.

Though revenue survey is primarily a record of individual property boundaries and is unconcerned with the surface features, ground levels and exact geographical position essential to a topographical survey, it was on the whole found economical to carry out both surveys together.

By 1905 however, the small scale topographical surveys compiled from the large scale revenue maps had fallen seriously in arrears, owing to the relatively slower pace and incompleteness of the latter, on which non-revenue-paying areas are normally shown blank.

An authoritative Survey Committee appointed by the Government of India considered the position in 1905. It was feared that a separation of the topographical and revenue surveys might result in a wasteful duplication of work and two overlapping but mutually discrepant systems of mapping. These objections were met by a ruling that the basis of both systems of survey should be identical and provided either by the Survey of India or under its supervision.

Subject to this principle, the remaining revenue surveys were handed over to the provinces, who had always paid for them as part of the overhead charges of revenue collection, and the Survey of India was enabled to concentrate its energies on a complete new series of modern topographical maps in several colours on the 1-inch to 1-mile scale.

This new series had been rendered necessary by the natural demand for more detailed information to be shown on maps, especially as regards the portrayal of hill features by contours and proper classification of communications.

It was intended that the survey begun in 1905 should be completed in twenty-five years, and then revised periodically every thirty years. Owing however to the First World War and more recent retrenchments, only about three-fourths of the programme had been completed by 1939. In spite of a reduction of scale for the less important areas.

Although from 1905 to 1939 new surveys were carried out every year, covering from thirty to sixty thousand square miles, an area roughly that of England, the maps of a large part of the country are still over 20 years old, printed mostly in black only, and have hill features shown by roughly sketched form lines or hachures; such changes in town sites, canals and communications as have been embodied in them have not been surveyed, but are entered from data gathered from outside sources.

Owing to the serious financial situation in 1931, the establishment of the department was severely cut down and its annual expenditure halved.

During the Second World War, topographical survey work in India practically ceased, and since the conclusion of hostilities the main efforts of the department have been directed to large scale surveys for utilitarian purposes, such as dam sites and areas for irrigation, so that no appreciable progress has been made since 1939 in the 1905 topographical programme.

Large Scale Surveys.—Surveys and records of international, state and provincial boundaries have always formed an important item of topographical work, and in recent years numerous Guide Maps have been published of important cities and military stations usually on scales of about 3 inches to the mile, where the 1-inch to 1-mile scale is inadequate.

Air Surveys.—The use of air photographs for survey purposes has become a normal practice and air survey is employed wherever it is considered advantageous to do so. The Survey of India has arranged with a company in India for the supply, on contract rates, of such photographs as it may require for survey purposes.

Air photographs in pairs for stereoscopic examination or made up in the form of mosaics are very often of value in inspecting sites prior to undertaking detailed survey operations, or may sometimes render these unnecessary.

Activities.—So far as work for the Central Government will permit, this department is prepared to undertake local surveys on payment for provinces, states, municipal and other local authorities and private firms; and will give advice as to the methods to be employed on such work. Surveys of the above description include:—

Forest and cantonment surveys;

Riverain and irrigation surveys;

Railway and city surveys;

Surveys of tea gardens and mining areas.

The department is also equipped to carry out lithographic printing and can undertake such work on payment.

Civil Aviation.—With the establishment of an International Civil Aviation Organization, India will be required to keep up its share of certain international series of civil aviation maps and charts. Orders giving the specifications for these have not yet been finalized nor has agreement been reached as to the share of mapping which will be undertaken by each of the member countries of the above Organization.

Administration. The administration of the Survey of India is in the hands of the Surveyor General of India under the Ministry of Agriculture. The headquarters office of the Surveyor General of India is in the Old Secretariat at Delhi and is under the administration of the Deputy Surveyor General. A technical office is attached to this which can provide estimates and make arrangements for any urgent work. There is also a small map issue office in the Old Secretariat.

There are four regional Directors of Survey Circles in addition to a Director of Map Publication. The headquarters of the latter is in Dehra Dun.

The more purely geophysical and mathematical activities of the department are dealt with by the President Geodetic and Research Branch, Dehra Dun.

There are map printing offices at Dehra Dun and Calcutta, the resources of which may be made use of by Government Departments and the public for printing special maps, illustrations for reports, patents, diagrams, etc.

During the war, the Department was almost entirely devoted to work in direct support of the war effort and many of the civil activities outstanding have been interrupted or suspended. These activities have now been resumed and intensified particularly in relation to development projects.

Zoological Survey of India (Calcutta).—

The Zoological Survey of India was founded in 1916 on the basis of the Zoological and Anthropological Section of the Indian Museum which itself is a descendant of the Royal Asiatic Society of Bengal. The extensive Zoological collections cared for and maintained by the Zoological Survey of India partly belong to the Asiatic Society, mostly to the Trustees of the Indian Museum and partly to the Central Government. Besides the collections, which are rich in types and unique specimens of Indian fauna, the greatest asset of the Survey is its extensive Zoological library, probably the second best in the British Commonwealth and certainly the best in Asia. Under certain rules and regulations, the books are sent out to bona fide research students thereby encouraging zoological research even in the remotest corners of India.

By conducting surveys of molluscs in connection with the spread of Bilharzia after the First World War both on the eastern and western frontiers of India and the surveys of rats in connection with the spread of Typhus in the Manipur Valley during the Second World War, the Zoological Survey of India justified the confidence reposed in it by the authorities. In recent years, it has supplied staff for the development and research in fisheries and for the Plant Protection Bureau of the Central Government. Certain sections of the Fisheries Research are now located in the Zoological Survey of India.

Even from a purely utilitarian aspect the potentialities and resources of the Survey are very much under-exploited.

The objects for which the Zoological Survey of India was founded are (i) to undertake faunistic studies so as to acquire all possible information on the geographical distribution of Indian animals, (ii) to maintain and add to the National Zoological collections started nearly a century and a half ago by the Asiatic Society of Bengal, (iii) to maintain and develop the public exhibits in the Zoological galleries of the Indian Museum at Calcutta, (iv) to identify specimens as required by investigators in any part of the country and (v) to advise the Government on zoological matters.

The Zoological Survey of India publishes *Records and Memoirs of the Indian Museum* which are journals of Indian Zoology and recently the publication of the *Fauna of India* has also been transferred to the Survey. The Reports of the Zoological Survey of India published triennially are well illustrated and highly informative.

The Anthropological Section of the Survey was budded off in December 1945 and formed the nucleus of the Anthropological Survey of India. With it the publication of "Anthropological Bulletins" was also transferred to that Department.

Since its establishment, the Survey had to weather many heavy storms, such as the Inchoate Retrenchment Committee proposals of 1923, the 1931 Retrenchment Committee proposals which crippled it completely, the shifting of the Survey from Calcutta to Benares in April-May 1942, the Varuna Flood of September 1943, and the depletion of its staff to meet the needs of Fisheries Development and Research. The report of Lt.-Col. R. B. Seymour Sewell, formerly Director, Zoological Survey of India, submitting proposals for the reconstruction and expansion of the Survey, issued in November 1946, is still under the consideration of the Govt. of India. As Zoological Departments are not well developed in most of the Indian Universities and as nature history studies are not much in vogue in this country, for the recruitment of staff, a Scheme

for Training in Systematic Zoology has been in operation in the Zoological Survey of India since February 1946.

The Zoological galleries, which suffered heavy damage due to occupation of the Indian Museum by Army Authorities, are being reconstructed and restored. Some of them have been thrown open to the public since October 1947.

In 1948, the Government of India decided to retransfer the Survey to Calcutta but as sufficient accommodation for housing the collections and offices could not be found in the compound of the Indian Museum, a large rented building (Jabakusum House, 34, Chittaranjan Avenue, Calcutta 12) was placed at its disposal. Library, Birds and Mammals Section and the office of the Curator, Zoological Galleries, are located in the Indian Museum while all other Sections and the main office are in the rented building. The Government proposes to put up a new Fire-proof Spirit Building for the Department inside the compound of the Museum the plans for which are being drawn up.

PUBLIC HEALTH

THE history of the public health administration in the sub-continent may be traced back to the appointment of the Royal Commission in 1859, which recommended measures for the amelioration of the health of the army and the civil population. In accordance with its suggestions "Commissions of Public Health" were established in the provinces of Madras, Bombay and Bengal in 1861. This led to the appointment of Sanitary Commissioners. In 1868 the Government of India issued a resolution "drawing the attention of local bodies and village muons to their duties in the matter of sanitation."

The success achieved by such efforts was negligible except in the larger cities. Owing to the vast number of the sick the main emphasis was laid on curative medicine; preventive medicine did not receive proper attention. The outbreak of plague in 1896 had a great effect on the people and the Government, awakening them to the need of overhauling the public health machinery in the country.

The report of the Plague Commission in 1904 was a landmark in the history of public health administration. It recommended the strengthening of public health services and the establishment of laboratories for research and the preparation of vaccines and sera, but the total effect of the measures adopted in pursuance thereof was small. Attention was directed mainly to urban centres while about 90 per cent of the population lived in villages.

Under the Government of India Act, 1919 the health administration was transferred to Provincial Governments making it a subject directly under Ministers responsible to the Legislatures. This position continues under the Government of India Act, 1935 and the Provincial Governments are unfettered in the development of health and sanitation in areas under their jurisdiction. The effect of this transfer are summarised by the Health Survey and Development Committee in its report as follows:—

"Ministers were anxious to promote the growth of Education, medical relief and preventive health measures as far as funds permitted. Indeed, there has been, since the Reforms, far greater public health activity in the provinces than ever before."

Another important landmark in the history of public health in the country is the setting up by the Government of India, of a small Committee known as Environmental Hygiene Committee. This Committee is to cover a long range of public health activities such as town

and village planning; housing, rural and urban water supply; sanitation; river and water pollution; control of insect vectors and diseases; and regulation of certain offensive trades.

The Committee has not completed its deliberations yet.

VITAL STATISTICS

India's population growth is characterised by high levels of fertility and mortality. Inter-connected with this feature is the high infantile mortality. Thus, her birth rate, death rate and infantile mortality rate are much higher than those of Western Countries.

An idea of the levels of birth rate, death rate and infant mortality rate and their trends is given in the following paragraphs but particular attention is necessary when considering these rates in 1947. In the second half of 1947 there was a violent upheaval in many provinces due to the movement of displaced persons. It has not been possible to assess the effect of these movements on the structure of population and the recording of vital events. It is not unlikely that some of the variations in the rates observed in 1947, may be due to this unknown abnormal factor.

Birth rates.—The five yearly averages for the pre-war period 1937-41 was 32.8 and for the war years 1941-45 was 28.3. This noticeable fall in the birth rate was shared by almost all the individual provinces. There was a sharp fall in the birth rate during the famine years of 1943 and 1944 when the figure came down to 26 per mile but in 1945 and 1946 there was a substantial increase. In 1947, the rate again came down to 26.6 per mile as against the corresponding figure of 29.1 per mile in 1946 for areas now in partitioned India. In 1947 the provinces of Assam, East Punjab, Delhi, Bihar and West Bengal recorded a fall in the rate of the order of 5 per mile over the corresponding rate in 1946.

Death rates.—The five yearly averages of 22.1 in 1937-41 and of 22.8 in 1941-45 show that disparity in the death rates was not so marked as in the case of birth rates, the only instance of an increase of over 2.0 per mile being Bengal which went through the great famine of 1943. It seems therefore reasonable to hold that in spite of the stress and strain which war conditions brought to bear on community life, the rise in mortality over India as a whole was not appreciable. The death rate in 1946 was 18.7 per mile being the lowest on record. The rate in 1947 increased to 19.7 per mile but was still on the low side. The provinces which compared to 1946 showed in 1947 an increase in death rate of over 2 per mile were Bombay, C.P. and Orissa.

Infantile mortality rates.—The five yearly averages for 1937-41 was 161 per 1000 live births and there was little change in the average for 1941-45. Here again, the war years did not produce a rise in the sub-continent as a whole, while some of the individual provinces recorded varying reductions in the infantile mortality rate in comparison with the five year period before the war. The infantile mortality rate was 136 in 1946 which is the lowest on record. In 1947 it increased to 146 but was still on the low side. The provinces which compared to 1946 showed a heavy increase in the rate in 1947 were Delhi, C.P., East Punjab, Assam and Orissa.

Birth rate during the last decade has shown unmistakable signs of a decline. There is also evidence to show that there has been decline in death rate. This decline is more prominent in the case of infant mortality.

EPIDEMICS

Activities of the public health departments have been successful in considerably reducing the suffering and loss of life from cholera, smallpox and plague but it cannot be claimed that these epidemic diseases have been under control completely. It is not uncommon for these diseases to break out every year in an epidemic form in one or the other part of a province and thus the prevalence of these diseases in a province considered as a whole turns out to be at a fairly high level. However, when the epidemic becomes more widespread than it usually is, the provincial figure of incidence shows an abnormal rise and the provinces may then be said to be severely affected. Considered in this light, the incidence of cholera in 1947 was rather heavier than usual in the provinces of Bombay and Madras. There was a severe outbreak of the epidemic in East Punjab and this was connected with the influx of displaced persons from Pakistan. The incidence of smallpox was not abnormal anywhere except in Delhi where 655 smallpox deaths were recorded. In fact, the prevalence of the disease was particularly low this year. Plague was more active. Unlike cholera and smallpox, the disease prevails on an extensive scale in the provinces of U.P., Bihar, C.P., Bombay and Madras; other provinces are more or less free. This year all the five provinces were abnormally affected. The numbers of deaths from plague recorded in U.P. and C.P., were the highest during the last decade.

Statistics of case incidence are collected in all the Indian provinces in respect of the five conventional diseases only. Happily typhus is rare and yellow fever unknown in India. As

the symptoms of the remaining three *viz.*, cholera, smallpox and plague are known to the layman who reports the occurrence of cases of these diseases, a fair idea of the trend of their incidence in the general population can be formed from the published figures, though they are generally incomplete. Figures of deaths recorded under these diseases present a more reliable picture. Information on the incidence of other diseases is lacking. Some idea of the relative importance of these may be formed from the statistics of patients treated for these other diseases in the Hospitals and Dispensaries, which in so far as they relate to Government institutions and the Army are published annually. Statistics of army recruits rejected for various defects may often furnish useful information in this connection.

Nativity and mortality statistics are in a somewhat better position. These are collected in several details, *e.g.*, by age, sex and community. Statistics of deaths by causes are recorded under several headings but their usefulness is limited by the fact that the information is supplied by laymen. This difficulty is really responsible for the large variation in the list of causes of death under which deaths are published by the provinces. Several provinces do not separately show deaths from important diseases like malaria and tuberculosis in the rural areas. In view of the general unreliability of the recorded cause of death, all India mortality statistics are shown under seven groups *viz.*, cholera, smallpox, plague, dysentery and diarrhoea, fever, respiratory diseases and all others. The three epidemic diseases generally do not account for more than 5 per cent of total mortality in any province. By far the largest proportion of total deaths is recorded under the group "Fever." This group includes a variety of heterogeneous diseases and a large number of unclassified conditions which for want of proper facilities for diagnosis are catalogued here by the informants. In most of the provinces 50 to 75 per cent of mortality is shown under this group, but this merely reflects the peculiar idiosyncrasy of the reporting agency and not the relative importance of the disease included in the group. The information available from the published data is insufficient for the purpose of assessing the extent and the precise nature of the problems in health administration.

LEPROSY

Leprosy has been prevalent in the sub-continent for many centuries, being recognised and described by ancient Hindu physicians. The *Sushruta*, *Saṁhita* written 2,500 years ago describes the different forms of leprosy, and its treatment with chaulmoogra oil, the mainstay in its present-day treatment.

The 1931 census report recorded 150,000 persons suffering from leprosy. Investigations carried out by expert leprosy workers indicate that at a conservative estimate the number of cases is about 1 million (10 lakhs). About three-fourth of these cases are of the mild type and are not infective. The disease is found throughout the sub-continent, but is most prevalent in parts of Assam, West Bengal, Bihar, Orissa, Central Provinces, Madras, Hyderabad and Travancore.

Leprosy relief work has been going on for a long time. Apart from the Central and Provincial Governments, and some local organisations, the Mission to Lepers and the Indian Council of the British Empire Leprosy Relief Association have played an important role in this field.

Founded by Wellesley Bailey, the first asylum was built at Chamba, Punjab, in 1875. The Mission now runs about 30 leper homes with about 10,000 inmates. It has done very noble work and has given a lead in various ways. The Provincial Governments assist the Mission by making grants on a *per capita* basis.

Leprosy Relief Association.—The introduction of new methods of treatment of leprosy led to the foundation in the year 1924 of the British

Empire Leprosy Relief Association in London followed by the foundation of the Indian Council of the Association in 1925; later, provincial branches were formed in most of the provinces of India. At the inauguration of the Indian Council, Lord Reading, the then Viceroy and Governor-General of India, issued an appeal on behalf of the Association, and collected a sum of over Rs. 20 lakhs, which forms the Capital Fund of the Indian Council.

The work of the Association has greatly stimulated interest in leprosy in the sub-continent, resulting in knowledge of the disease, of its prevalence, clinical forms, prognosis, spread and the factors influencing its spread. The medical profession as a whole is now taking a keen interest in the leprosy problem. H.E. the Governor-General of India is the President of the Indian Council and the Director-General of Health Services, the Chairman of the Governing body: K. Sanjiva Row and Balwant Singh Puri, the Honorary Treasurer and Secretary respectively. Dr. Dharmendra, an officer of the Medical Research Department, Government of India, is at present the Research Worker of the Association.

The research work of the Association is carried out at, or directed from, the School of Tropical Medicine, Calcutta, and is done in collaboration with the Endowment Fund of the School and the Indian Research Fund Association. The main activities of the Association are:—

(i) **Research.**—This includes clinical, histological, bacteriological, epidemiological, and immunological studies. Recent studies of the only immunological test the "lepromin test" or the "Mitsuda Reaction" by Dr. Dharmendra at the School of Tropical Medicine, Calcutta, have resulted in a great improvement in the test, and have thrown considerable light on the mechanism of the reaction.

(ii) **Post-graduate Training in Leprosy.**—Special post-graduate training classes for training doctors in the diagnosis and treatment of leprosy are arranged annually at the School and over 1,000 doctors from the sub-continent, and not a few from abroad, have attended these special courses. In addition, lecture demonstrations in leprosy are given to the L.T.M. and D.T.M. classes at the School.

(iii) **Leprosy Surveys.**—In the early years, survey parties carried out rough sample surveys in different parts of the sub-continent in order to get an idea of the incidence and distribution of the disease. More recently, intensive surveys of small selected areas have been carried out in different parts of the country in order to collect information about the factors that favour the spread of the disease and in order to study the possibility of evolving suitable methods of isolation of infective cases for the control of the disease.

(iv) **Publication and Propaganda.**—"Leprosy in India," a quarterly journal published by the Association, is a record of the study of leprosy and anti-leprosy work in the sub-continent and other places. Recently a new propaganda booklet entitled "Popular Lecture on Leprosy" by Dr. Dharmendra has been published, which gives the main facts about leprosy in simple and non-technical language.

The Treatment of Leprosy.—The mainstay in the treatment of leprosy has been injections of chaulmoogra (hydnocarpus) oil or its preparations. Recently encouraging results have been reported by the use of certain sulphone drugs such as "Promine" and "Diacone." It is yet too early to assess the value of this group of drugs in the treatment of leprosy. The treatment with chaulmoogra oil is of value in individual cases. It cannot be expected to control the spread of leprosy with treatment alone.

Control of Leprosy.—Leprosy can be controlled by raising the general economic and social conditions of the population and, by preventing contact of infective patients with healthy people, specially children. The only sure method of

preventing contact with infective cases is the isolation of these cases in leprosy hospitals, sanatoria, or colonies, etc. Great difficulty is experienced in providing institutional accommodation for all infective cases in the country. The total accommodation in all the institutions at present is for about 15,000 patients whereas a rough estimate of infective cases places the figure at 2½ lakhs. So some other methods of isolation are urgently needed to supplement the institutional isolation.

The two alternatives are the isolation of the patient in his home, and the isolation of all the patients of a village or a group of villages in huts made in the outskirts of the village. Home isolation is practicable only in families with sufficient financial resources. Village isolation appears to be specially suited to India with its big leprosy problem and limited resources. It is desirable that methods of village isolation should be developed in suitable areas and then widely applied.

Under Dr. Cochrane, now Director of the Leprosy Campaign of Madras Province, rural preventive units were established in 1939, the object of which was to deal with the problem of leprosy in rural areas. Each unit consists of an administrative block, including treatment centres and staff quarters, and a segregation area where patients sleep at night and where evening meals are provided. All infective cases of leprosy in villages served by the preventive unit are required to sleep in the segregation area, thus preventing contact with their families during night. In the villages where such control methods have been adopted, there has been a marked decrease in the gross incidence of leprosy over the period 1939 to 1945, whereas in villages where such control had not been established, the incidence of leprosy had increased, in one case to more than twice the 1939 figure. The decrease was particularly marked amongst infective cases and children.

With the advance in knowledge of infectiousness of leprosy there has been some change in the existing restrictions on patients suffering from leprosy, and the leprosy Section of the Madras Public Health Act (1939) has been considerably modified, the amended act of 1944 allowing considerable liberty to patients suffering from leprosy while at the same time ensuring adequate protection for the public.

Central Leprosy Teaching and Research Institute Committee.—On the recommendations of the Health Survey and Development Committee that a Central Leprosy Teaching and Research Institute should be established, the Government of India, Ministry of Health, appointed a Committee in November, 1948 to consider the steps to be taken in implementing the following recommendations of the Health Survey and Development Committee:—

"Our proposals for the organisation, maintenance and control of this and of similar institutions for certain other diseases have been set out in the section dealing with post-graduate medical education. Its function will include the training of leprosy workers, the active promotion of research in this subject and the development of an information service providing the latest information regarding the treatment of the disease and anti-leprosy work in general for the benefit of the Government and organisations interested in leprosy in India. It should assist Provincial Governments in the development of their campaign against the disease, so desired. It should be located in an area which provides suitable clinical material in abundance and should have attached to it, a large leprosy hospital together with its out-patient department and a group isolation colony. The development of clinical research and field investigations, as distinct from Laboratory studies, should be an essential part of its duties."

At the time of going to press the Report of the Committee is not published.

Leprosy Conferences held at Wardha and Calcutta:—Two conferences on leprosy were held. One was held at Wardha in October, 1947 and its Report has already been published by the British Empire Leprosy Relief Association (Indian Council) and the Second Conference was held at Calcutta in December, 1948 under the auspices of the B.E.L.R.A. (Indian Council) and its report is not available at present.

MALARIA

Malaria is by far the most important disease in India and Pakistan, both from the point of view of sickness and of mortality. It has been estimated that in both the Dominions at least 100 million persons suffer from this disease annually, and that out of 8 million deaths from all causes every year, it is responsible for at least 2 million deaths due to its direct and indirect effects. In addition, 25 to 75 million cases, primarily debilitated from attacks of malaria, are finally reported under other diseases. The loss in man hours of these millions employed in all types of labour in industry and agriculture runs into colossal figures resulting in much avoidable wastage of potential wealth.

Malaria is primarily a disease of the rural areas, as the mosquitoes that transmit it, breed in fresh water collections more often associated with rural rather than urban conditions. Ninety per cent of the population living under rural conditions following agricultural pursuits, are exposed to the risk of suffering from this disease. While malaria has been successfully controlled in some urban and industrial areas like the coal-fields, railway colonies and tea estates, where the population lives in compact colonies and is subject to some degree of discipline, in rural areas, with a sparse and scattered population, the *per capita* cost of its control has so far been considerably high. A proper exploitation of the special feature of seasonal action of the new synthetic insecticides which enables the operations to be carried out at extended intervals has simplified procedure to the extent that the control of malaria in vast rural areas has now become economically and technically feasible, as borne out by experiments carried out in recent years in Delhi, Bombay and other areas. The new anti-malaria drugs such as paldrine and chloroquine also provide efficient weapons for combating this disease.

Malaria control in the provinces and the major States of the Dominions is carried out by their respective anti-malaria organizations.

The officers employed in the anti-malaria organizations have been recruited from among those trained at the Malaria Institute of India, Delhi, a Central Government organization. The Institute which has been recently expanded, also functions as the Central headquarters of malaria research, is devoted to the promotion of uniform standards and serves as a bureau of information on all malaria problems. It also directs and supervises malaria control organizations in Centrally Administered Areas and coal-fields in India which are meant to serve as models to the rest of the country.

The special importance of malaria lies in the fact that it hampers the full exploitation of natural resources and in fact, the development of large tracts of land is held up owing chiefly to the prevalence of this disease. The World Health Organization has decided to utilize the Institute as an instrument of international co-operation in malaria work in South East Asia Region and has in consultation with it, formulated a number of schemes for malaria control in India and the neighbouring countries with the specific purpose of ameliorating the critical shortage of food and rehabilitation of the displaced populations by making those tracts malaria free. The schemes are already in the process of implementation in collaboration with the Institute.

PLAGUE

Plague in India first appeared in Bombay in 1896 and within a short time the disease spread widely throughout the country. Its incidence

reached the maximum in 1904 with a total mortality of 9,04,577 in the sub-continent excluding Burma. Since then there has been a gradual decline and now the incidence of the disease has been reduced very considerably. In 1940, the total deaths recorded in the sub-continent were 19,799 which figure came down to 11,084 in 1941 and 10,577 in 1942. In 1943 the figure went up to 13,578 and since then there has been a steady rise in the recorded mortality with 21,525, 29,751, 32,977 and 75,274 deaths respectively in 1944, 1945, 1946 and 1947. During the years 1910-47 the provinces mainly affected were the United Provinces, Bihar, the Central Provinces, Bombay and Madras. Of these, the United Provinces recorded the highest number of deaths and had epidemic outbreaks in 1940, 1944, 1945, 1946 and 1947 with 11,725, 15,454, 14,024, 18,206 and 51,456 deaths respectively. The incidence in Bihar and the Central Provinces was not of special significance except for the sudden epidemic outbreak in Bihar in 1946 and 1947 with 8,081 and 13,294 deaths respectively as compared with 1,523 deaths in 1945. Bombay had epidemics in 1940 and 1941 and again in 1944, in the last quarter, the total deaths in these years being 5,573, 5,311 and 2,514 respectively. The disease prevailed in severe form in several districts in 1945 resulting in 11,779 deaths. In 1946 and 1947 the mortality came down to 3,405 and 3,081 respectively which was slightly above the normal incidence. Madras had a severe epidemic in 1943 with 4,885 deaths. The incidence in 1945 was about the normal level with 1,043 deaths, while in 1946 and 1947 slightly higher incidence was recorded with 2,254 and 2,718 deaths respectively. Of late, East Punjab is showing heavy infection in Ambala and Karnal districts. In 1947, the number of deaths from Plague was 1,905 against 215 in 1946. There are certain endemic centres situated in the cool and moderately damp areas running from the Himalayas in the north through Central and Eastern India to the Deccan and the province of Madras.

However, the history of plague through the centuries serves as a warning against taking a complacent view of the reduced prevalence of the disease in the country. It is known that the disease can smoulder in its endemic homes for long periods and that on certain occasions, it acquires an increased striking power and spreads far and wide in epidemic waves into distant lands, to retreat again after a while to those areas where it permanently resides. While, therefore, it is gratifying that plague as a public health problem has been of decreasing importance within the past decade, the fact that endemic foci exist makes it imperative that no slackening of effort for its complete eradication should be permitted.

BLINDNESS

In olden days, the blind people were considered as useless members of the society and the treatment they used to get from their sighted counterparts was inhuman. With the popularization of religious principles, the blind began to get more generous treatment. The development of modern welfare services dates back to only about 150 years.

Extent of Blindness.—The total number of the blind in this sub-continent is not accurately known, but the roughest available estimate places it at about 2,000,000. The chief causes of blindness are ophthalmia Neonatorum, keratomalacia, small pox, acute conjunctivitis, myopia, venereal diseases, malnutrition, cataract, etc.

Treatment of Eye Diseases.—The treatment of eye diseases, and its being carried out in the eye wards of Government Hospitals, and Hospitals under the control of Local Authorities in the Provinces and local centres, mission hospitals, a few travelling eye dispensaries, camp eye hospitals and eye fairs, and in small local dispensaries to the limit of their resources.

Schools.—There are at present 38 Institutions for the Blind in India. Most of the Institutions were organised by the philanthropic public and

missionary organisations. The purpose and activities of these Institutions are to educate and train the blind through the medium of Braille and other apparatus and appliances used in the education of the blind. Most of these Institutions are under the management of a Committee consisting of public men, philanthropists and educationists of the country. Most of the Institutions receive grants-in-aid from their respective provincial and State Governments, Municipalities and subscriptions from the philanthropic public. The total number of the blind receiving education and training in the existing Institutions of the country is about 1,200.

In April, 1947 a special unit was established in the Ministry of Education, Government of India to promote the cause of the education of the blind. A common Braille Code for major Indian languages, known as Uniform Indian Braille has been devised by an Expert Committee, consisting of linguists and Brailleists appointed by the Central Advisory Board of Education. The Uniform Indian Braille has finally been accepted by the Government of India. With the introduction of the Uniform Indian Braille, a long standing obstacle in the way of the education of the blind will be removed. To produce literature in Uniform Indian Braille, the setting up of a Braille Printing Press is being undertaken. The establishment of a National Centre for the Blind is also under the contemplation of the Government of India.

A periodical entitled "Deeparani" devoted to the education and welfare of the blind is being published in Braille as well as in ink-print.

Report on Blindness.—The Report of the Joint Committee of the Central Advisory Boards of Education and Health to enquire into the cause and extent of blindness, to recommend measures for the prevention of blindness and welfare of the blind has been released to the public. In accordance with one of its major recommendations all the Provincial Governments and major States have been requested to form Councils on Blindness which will be responsible for the prevention of blindness and welfare of the blind within their respective jurisdiction. The Government of India will co-ordinate the activities of the Provincial and State Councils on Blindness.

YELLOW FEVER

All aircrafts from the west are required to land at Bombay (Santa Cruz), where an elaborate organisation has been set up by the Government of India to deal with them. As the Government of India has placed certain restrictions on account of yellow fever against arrivals in India, persons entering or returning to India are advised to contact their Shipping or Air companies to find out the details of such restrictions.

TUBERCULOSIS

A Diploma Course in Tuberculosis for the training of Graduate doctors in Tuberculosis, was instituted at the Delhi University in 1947. Two of the courses have already been held and the third was scheduled to start in March 1949. Licentiates are not admitted to the course at present.

In order to stabilise the above Diploma Course, the Government have decided to establish a Central Tuberculosis Institute in Delhi. A preliminary grant has already been made to the University for the purpose for the year 1948-49.

The Government of India have entered into an agreement with the United Nations International Fund for aid in the mass B.C.G. Vaccination in India. A laboratory was established at the King Institute, Guindy, Madras, to produce a standardised vaccine sufficient for the needs of India and Ceylon. Two B.C.G. Vaccination centres were started, one at Madanapalle in corporation with the Union Mission Tuberculosis Sanatorium and the other at Delhi, where the B.C.G. vaccination work is being carried on by two trained Indian teams.

The six foreign teams sent out to India by the Scandinavian countries under the auspices of the United Nations International Emergency Fund have been posted one each at Madras, Bombay, Calcutta, Baroda, Amritsar and Lucknow, where besides B.C.G. Vaccination work which they are doing they are also training Indian Teams to carry on this vaccination programme even after their leaving the country. It is hoped that during the course of one year about 60 teams will be trained in various provinces and states.

Another programme set forth by the Government of India to combat the menace of Tuberculosis in the country is the provision of scholarships for study abroad for senior officers with a view to equip them with up-to-date knowledge and experience in the line and to enable them to organise anti-tuberculosis work in the various provinces and states.

CENTRAL ADVISORY BOARD OF HEALTH

In April, 1937, the Government of India acting under Section 135 of the Government of India Act constituted a Central Advisory Board of Health. The aim of the Board is to ensure co-operation between the Centre and the provinces and between provinces and provinces in matters related to health which are of common concern. In addition the Board is designed so as to be representative of the States. Work is done through standing or *ad hoc* committees which permits the Board to act as a central information bureau. It advises on all matters referred to by the Central or Provincial Governments and makes suggestions to the Central Government on any matter affecting public health to which it considers Government's attention should be drawn.

The Public Health Commissioner with the Government of India was Secretary to the Board.

The first meeting was held in 1937 when *ad hoc* committees were appointed :-

- (1) to report on the maternity and child welfare work in the sub-continent including the training of maternity and child welfare workers and the organisation of schemes in urban and rural areas, and
- (2) to examine the question of food adulteration with reference to legislative measures then in force in different provinces and such additions and amendments to these as may be considered advisable.

The Maternity and Child Welfare Committee met in Simla in October, 1938 and its report was widely circulated. The Food Adulteration Committee produced two reports one on the technical aspect dealing with standards for purity in regard to different foods and the standardisation of the technique to be employed in food analysis, while the other dealt with the legislative aspects of the problem including an examination of the various Acts and Regulations with suggestions for their improvement.

The second meeting of the Central Advisory Board of Health was held in Madras in 1939 and recommended the appointment of a sub-committee to examine the possibility of introducing a system of compulsory inoculation of pilgrims against cholera. It also appointed an *ad hoc* committee to prepare a report on leprosy and its control in the sub-continent. The first of these committees met and reported in June, 1939 and the second in October, 1941.

The third meeting of the Board was held in Poona in July, 1940. The meeting recommended the appointment of a special committee to report on the questions of teaching of hygiene in schools and of the Medical inspection of school children. This special committee met in December, 1941 and reported.

The fourth and the fifth meetings of the Board were held in January, 1942 and October, 1943. An important outcome of the fifth meeting of the

Board was the appointment of a joint committee of the Central Advisory Boards of Education and Health to examine the problem of blindness in the sub-continent. A report on this subject was published in 1944 which deals with the two main aspects of blindness, viz., its prevention and cure and the education, employment and general welfare of the blind.

As a result of the recommendations of the Health Survey and Development Committee, the Medical and Public Health Departments were amalgamated on the 15th August, 1947 and consequently the post of the Public Health Commissioner with the Government of India merged with that of the Director-General of Health Services. That Committee has further recommended the establishment of a Central Board of Health which, if and when established, will take the place of the existing Central Advisory Board of Health.

BHORE COMMITTEE'S PLAN

A Health Survey and Development Committee was appointed by the Government of India in October, 1913 under the chairmanship of Sir Joseph Bhore, K.C.S.I., K.C.I.E., C.B.E., to make a survey of existing health conditions in the sub-continent and to formulate plans for future health development. The Committee was quite representative in its composition and consisted of 9 officials and 16 non-officials. The Committee had, further, the advantage of discussing its problems with certain distinguished workers in the field of health from the United Kingdom, the United States of America, the U.S.S.R. and Australia, who came to India for this purpose on the invitation of the Government of India.

The Committee's Recommendations :- In putting forward its recommendations the Committee kept in view certain objectives. They are :-

- (1) the scheme, when fully developed, should provide each individual in the country with adequate medical care, curative and preventive, irrespective of his ability to pay for such services;
- (2) the medical aid made available to the rural is much less than that provided in urban areas;
- (3) the active co-operation of the people should be secured in the development of the health programme.

Taking these objectives into consideration the Committee has drawn up a long-term programme which will provide the country with a modern health service based on the newer and expanding conceptions of modern health practice.

The district health organisation will have as its smallest unit of administration a primary unit which will normally serve a population of 10,000 to 20,000. About 15 to 20 such primary units will together constitute a secondary unit and a varying number of the latter (3 to 5) will form the district health unit, the designation suggested by the Committee for the district health organisation. At each of the headquarters of the district, secondary and primary health units will be established a Health Centre from which will radiate the different forms of health activity into the territory covered by each type of unit. The provision made for medical relief and preventive health work at each of these Health Centres will increase in scope and efficiency from the primary unit to the district health unit.

The District Health Centre will possess general and special hospitals with a total bed strength of about 2,500 and all the consultant and laboratory services required for the diagnosis and treatment of disease on up-to-date lines. The Secondary Health Centre will have a hospital with 650 beds and the primary unit headquarters a 75-bed hospital. A system of ambulances and telephone connections between these three types of hospitals will help to promote the fullest utilisation of the higher types of service available at the larger institutions by the people living in the remoter parts of the district.

Health Environment.—These hospitals will also take an active part in the preventive health campaign. They will be linked with the field health organisations in respect of such services as those for tuberculosis, for mothers and children or for venereal diseases in order to ensure that the remedial and preventive health work carried out in the homes of the people receive the full benefit of the treatment and diagnostic facilities available at the hospitals.

The Committee has stressed that preventive and curative health work should be dovetailed into each other in order to produce maximum results. It has, therefore, suggested extensive changes in the existing training programme for doctors and has laid emphasis on equipping him for preventive health work. It has also made elaborate proposals for a considerable expansion of training facilities for the different types of other health personnel required for meeting the sub-continent's needs.

The Committee has made it plain that no health development plan can produce adequate results unless sufficient measures are taken for the provision of a healthy environment for community life, such as safe water supply, hygienic houses, a satisfactory system of conservancy and proper supervision over the production, distribution and sale of food intended for public consumption. Specific recommendations have been put forward in respect of these.

In order to secure the active support of the people, the establishment of a Health Committee in every village has been recommended. Such Committees are intended to stimulate local effort for the improvement of environmental sanitation, control of infectious disease and the steady development of a programme of health education.

Government of India have accepted in principle all the recommendations of the Bhore Committee, and have started their implementation with regard to the following items :-

1. **Scholarship Scheme.**—A medical scholarship scheme was initiated in 1945. Under this scheme a limited number of medical and dental graduates and nutrition workers are selected annually for post-graduate training abroad at Government expense in medical and allied subjects, dentistry and nutrition. The scheme has further been revised in 1948 and a certain number of Travel Fellowships of shorter duration are being granted to selected officials holding responsible posts in Medical Colleges, Hospitals, Teaching and Research Institutions holding key posts in the Administrative Medical Service.

2. **All-India Medical Institute Advisory Committee.**—A Committee met in January, 1947 with Sir A. L. Mudaliar, Vice-Chancellor, University of Madras, as Chairman to advise on the establishment of an All-India Medical Institute, which will be a multi-purpose medical training centre. This Committee *inter alia* emphasised the need of the urgent development of training and research facilities in particular subjects at suitable medical colleges all over India and suggested the appointment of an Up-grading Committee in the connection.

The Up-grading Committee was accordingly appointed in May, 1948 and has submitted its report to Government.

3. **Provincial Governments' 5 year plans.**—The Provincial Governments' 5 year medical and public health development schemes are being examined in the light of the recommendations of the Bhore Committee and approved for the grant of the Central Government contribution in respect of the approved schemes. The Provincial Governments submit periodical progress reports regarding the execution of these development schemes.

4. **Committee on Indigenous system of Medicine.**—A Committee under the chairmanship of Sir R. N. Chopra, met in January, 1947 to enquire and report on the ways to improve the facilities for research and training on indigenous systems of medicine. The Committee was also entrusted with task of considering the means of effecting a synthesis of indigenous and scientific medicines. The Committee has submitted its report to the Government.

THE MATERNITY AND CHILD WELFARE MOVEMENT

Among the most pressing problems of health is that presented by the appalling maternal and infant mortality. The figures for maternal mortality are not accurately known but the investigations into the causes of maternal deaths carried out in certain areas indicate that over 20 mothers lose their lives each year for every thousand babies that are born as a result of pregnancy and child birth. The number of mothers who suffer from ill health and are disabled temporarily or permanently as a result of the normal physiological function of child bearing is at least 20 times the annual maternal deaths. Every year approximately one-fourth of the children die before the age of 5 years, while many others survive only to grow weak and feeble from hygienic surroundings during infancy and childhood.

The maternity and child welfare movement which aims to promote maternal and child health and to reduce deaths, owes much to the All India Maternity and Child Welfare League initiated by Lady Chelmsford in 1918 and also since 1929 to the Indian Red Cross Society. The amalgamation of these two bodies in 1931 forming the Maternity and Child Welfare Bureau, Indian Red Cross Society, has undoubtedly increased and developed the work.

The Maternity and Child Welfare Bureau, Indian Red Cross Society, is the only body at present working on an all-India basis. The Bureau is managed by a technical committee representing the medical and public health services, the nursing profession and voluntary organisations and individuals working in fields allied to maternity and child welfare. The Director of the Maternity and Child Welfare Bureau, Indian Red Cross Society, an officer of the Women's Medical Service, acts as Secretary. The Bureau administers the Victoria Memorial Scholarship fund for the improvement of midwifery services in rural areas and the Lady Chelmsford League fund for maternity and child welfare. The Director of the Bureau is also the Secretary of the Lady Reading Health School Committee and operates on its funds.

The income from the funds is expended on (1) the maintenance of a central Bureau of information on all aspects of maternal and child health, (2) on training scheme for workers in the maternity and child welfare field, doctors, health visitors, midwives, nursing school teachers and nursery nurses, (3) on propaganda, literature and publicity and (4) on grants-in-aid of experimental scheme. Since there is an acute shortage of teachers and supervisors, the Bureau has lately concentrated on the training of such personnel both in India and abroad.

Army Child Welfare was formerly an activity of the Maternity and Child Welfare Bureau under the Lady Birdwood Fund, but to all rapid expansion of welfare activities for the Indian Troops, a special committee, "The Indian Fighting Forces Maternity Child Welfare" took over the management of Indian Army Centres in the year 1942. The Secretary of the Indian Red Cross Society and the Director of the Bureau are members of this committee. A remarkable feature of the whole movement is the keenness of the men themselves to aid it, realising as they do the benefits to their own women and children. There are very few contentions when some work of this kind is not going on.

In all the provinces and most of the States Unions, welfare activities for the care of mother and child now exist, the activities differ in the nature of the work undertaken, and the amount of organisation displayed. The Health Survey and Development Committee appointed by the Government of India in 1942 has studied the existing Maternal and Child Health services and have made their recommendations for its future developments. The Committee has emphasised the need for organising the services as an integral part of the medical and public health services of the province and state and much emphasis has been laid on the preparation of workers. Much excellent work is still being done by voluntary organisations such as Branches of the Indian Red Cross Society in Assam, East and West Bengal, Madras, Orissa, East and West Punjab, Central Provinces, United Provinces, and Sind. In Bihar the work is undertaken by the Bihar Maternity and Child Welfare Trust and in Bombay two influential bodies the Bombay Mofussil Maternity Child Welfare and Health Council and the Bombay Presidency Infant Child Welfare Society have recently amalgamated their resources under the title "Bombay Mothers and Children's Welfare Society" for the better co-ordination and development of the work. The pace of the transition from voluntary to official direction has been accelerated in recent years and posts of maternity and child welfare officers exist in Madras, East Bengal, West Bengal, Orissa, Assam, Delhi, U. P. and East Punjab, and in the some of the larger States Unions. These developments are noteworthy since the work is best co-ordinated and most energetically carried on where such appointments have been made. The Government of India have recently sanctioned a post of Advisor, Maternity and Child Welfare in the Directorate-General of Health Services and Dr. S. Pandit, Director, Maternity and Child Welfare Bureau, Indian Red Cross Society, has been appointed to that post. Her honorary services have been made available to the Maternity and Child Welfare Bureau, Indian Red Cross Society, and thus the services under the official voluntary organisations will be co-ordinated at the headquarters as well as in the provinces.

WELFARE WORK IN INDUSTRY

The industrial concerns of recent years have realised the importance of providing special facilities for the employees and an increasing number of industries are now maintaining comprehensive welfare schemes for women and children. The Government of India have instructed authorities in the coal mines to establish creches and provide such minimum requirements regarding building staff and equipment as are detailed in their circular. The 'Employers' State Insurance Act 1918, which applies to all factories would further improve social conditions so far as medical care is concerned and the insured person will be entitled to certain benefits, one of them being the maternity benefit which is a special central legislative measure for the protection of mothers and entitles an insured woman to claim maternity benefit for a confinement.

So far the schemes have devoted their attention to educating women in the elements of mothercraft and attempting to preserve infants lives and improve child health. In Western lands the Child Welfare Movement has no more marked characteristic than its inability to stop expanding. Its ramifications know no

bounds. Its inevitable corollaries are endless, and like the banyan tree it will no doubt in the sub-continent also develop innumerable fresh roots such as medical supervision, dental clinics, better housing, open air playgrounds, etc.

VICTORIA MEMORIAL SCHOLARSHIPS

The Victoria Memorial Scholarships Fund was founded in 1903 by Lady Curzon, with the object of securing better standards of midwifery practice. A sum of about Rs. 6½ lakhs was secured by public subscription in 1908.

The Fund is now administered by the Maternity and Child Welfare Bureau, Indian Red Cross Society and the income is expended as grants-in-aid of training schemes for rural midwives maintained by voluntary organisations, generally branches of the Indian Red Cross Societies in the Provinces and States Unions. The Director of Maternity and Child Welfare, I.R.C. Society, is Secretary of the Fund.

In spite of continuous efforts since the beginning of the present century, no appreciable improvement has yet been made in the midwifery services in the rural areas. It is, therefore, necessary to extend the training to rural areas taking care that only the required number are trained and allowed to work under supervision until such time as they can be replaced by properly trained midwives.

INSANITY AND MENTAL HOSPITALS

In India facilities for the care and treatment of persons suffering from mental disorders are very inadequate. To serve a population of over three hundred million, there are about 20 institutions with accommodation for about 15,000 patients. While accurate figures are lacking regarding the actual number of mental patients, even at a conservative estimate of two per thousand of the population, as against 3.5 in England, and 5 in America, the figures run into nearly one million. This does not take into account the mental defectives, who are not less than one and a half millions and the psycho-neurotics, who are about twice this number, needing intensive treatment.

The Bhore Committee has recommended amongst other measures, the starting of new and well-equipped mental hospitals, and these are likely to be given effect to by the Provincial governments concerned, in the near future.

At present, the institutions at Ranchi, Madras, Poona, and Bangalore can be regarded as proper Mental Hospitals. The others function chiefly as places for detention and custodial care of patients.

The Mental Hospital, Bangalore (Mysore State) is the most modern hospital in India, modern in building, outlook, and treatment. Built in 1938 and gradually added to, it consists of a series of pavilions, built of granite and has cost over ten lakhs. It has accommodation for 400 early cases of mental disorder.

All the modern methods of treatment are undertaken, including electric shock, insulin and cardiozal treatment, psycho-analysis, with or without sodium pentothal, and relevant brain surgery, pre-frontal leucotomy, lobectomy, and in epilepsies ventricular puncture and exploration of the brain. While in the other hospitals, several methods of treatment are available, the Mental Hospital, Bangalore is probably the only institution in India where medical, surgical and psychological treatment of patients is so well integrated.

FORESTS

EVEN in the earliest days of the British occupation the destruction of the forests in many parts of the Indian sub-continent indicated the necessity for a strong forest policy, but, whether or not our early administrators realised the importance of the forests to the economic and physical welfare of the whole country, the fact remains that little or nothing was done to check uncontrolled destruction with its inevitable results in erosion and sterilisation of the fertility of the land.

The years between 1850 and 1857 witnessed the first beginnings of forest conservancy in Southern India. It was a Memorandum of the Government of India issued in 1855, arising as it chanced out of the annexation of the Province of Pegu in Burma which first laid down the outline of a permanent policy for forest conservancy in India. Exploration, demarcation and settlement, followed by efforts to introduce protection and some form of organised management, were long and laborious tasks, which are even yet not completed. Nevertheless, large tracts of forest were saved from ruin and were gradually brought under increasingly efficient management. It was in 1862 that the Governor-General in Council submitted to the Secretary of State detailed proposals for the administration of forests as a public estate for the welfare of the country as a whole. With the appointment of Brandis (later Sir Dietrich Brandis) as the first Inspector-General of Forests in 1863 commenced the scientific management of India's forest estate. Whatever may have been the opinions held in the past in some quarters regarding restrictions imposed by forest policy, there can now no longer be any doubt regarding the very substantial benefits which have accrued to the country through the formation of an extensive forest estate and that in her forests India now possesses a property of great value.

TYPES OF FOREST

More than one tenth of the total area of the Indian sub-continent is under the control of the Forest Departments. These areas are classified as reserved, protected or unclassified State forests. In the reserved forests rights of user in favour of individuals and the public are carefully recorded and limited at settlement while the boundaries are defined and demarcated; in the protected forests the record of rights is not so complete, the accrual of rights after settlement not being prohibited, and the boundaries are not always demarcated; while in the unclassified forests no systematic management is attempted, and as a rule the control amounts to nothing more than the collection of revenue until the areas are taken up for cultivation or are converted into reserved or protected forests. The total forest area of India and Pakistan under the control of the old Forest Department on 31st March, 1941, was 98,258 square miles or 11.4 of the total area. This was classified as follows: Reserved 72,936; Protected 6,772; Unclassified State 18,550.

Throughout this vast forest area, scattered over the length and breadth of the sub-continent, from the Himalayan snows to Cape Comorin, and from the arid Juniper tracts of Baluchistan to the Eastern limits of the Assam hills, there is an infinite variety in the types of forest vegetation, depending on climate, topography, soil and other local factors. Vegetationally, the greater part of the sub-continent, including the Indo-Gangetic Plain, must be considered as in the tropics, but wherever there are mountains, such as the Nilgiris in the south, and the Himalayas and Assam-Burma hills in the north, subtropical, temperate and, in the north, alpine zones must be distinguished, each supporting its own forest types.

Next to the major altitudinal effects, rainfall is the most important factor in the determination of the nature of the forests, and within each of the main zones, tropical, subtropical,

temperate and alpine, there can be distinguished wet, moist and dry forest types. In addition, various edaphic and seral types occur, dependent on local conditions, such as littoral (beach), tidal, fresh-water swamp, and riverain forests.

The following is a brief description of the main forest types:—

I.—TROPICAL FORESTS

1. Tropical Wet Evergreen Forests.—These are dense forests, with a large number of tree species all mixed together, but according to their heights forming several canopies or layers. The upper canopy trees, among which *Dipterocarps* are usually characteristic, are often 150 to 200 feet high, and they very often have clear stems of 100 feet before the first branch is reached. These forests are found in the areas with the heaviest rainfall. In the southern or Peninsular region, they occur along the Western Ghats from a little south of Bombay to Timewelly, i.e., in the western parts of Bombay, Madras, Coorg, Mysore, Cochin and Travancore. In the northern or Indo-Gangetic region, the type is to be found in the wetter parts of the Bengal area (the submontane and Chittagong areas), extending into the damper parts of the coastal strip of Orissa, and intermingled with the next two types over almost the whole of Assam. The type also occurs extensively in the Andamans.

2. Tropical Semi-Evergreen Forests.—These form an intermediate type between the wet and the moist types. They are fairly widely distributed in the Northern region, occurring all over Upper Assam and in North and South of East and West Bengal (Buxa, Jalpaiguri, Kurseong, Kalimpong, Chittagong), and in Orissa (Puri, Angul and some of the adjoining States). In the South, however, the type is not extensive, owing to the steep rainfall gradient in the Western Ghats, and it is limited to narrow strips just north of Bombay, near Goa, South Cochin and part of Coorg. Forming a dense forest of several canopies, there are again numerous evergreen species, but mixed with them are many deciduous species, such as the *Ternstroemia*, and the general height is somewhat less than in the wet evergreen forests.

3. Tropical Moist Deciduous Forests.—In these forests the trees are leafless for part of the year, and although the canopy is complete, the forests are not so dense, nor are the trees so tall as in the preceding types. The height of the dominant trees varies from 100 to 150 feet. In the southern region, *Teak* is the chief tree, mixed with *Ternstroemia* and many other species. The type is widely distributed all over the centre and south of India, in the Central Provinces, Bombay, Madras, Mysore, Coorg, Cochin and Travancore. In the North, *Sal* (*Shorea robusta*) is the dominant species, and the type extends extensively through East and West Bengal, Assam, Bihar, Orissa, and the United Provinces up to the eastern border of East Punjab.

4. Tropical Dry Deciduous Forests.—This type is found throughout the Peninsula, in Bombay, Central Provinces, Hyderabad, Mysore and Madras, and in the Indo-Gangetic Plain, from Orissa, through Bihar and the United Provinces to East Punjab, wherever the annual rainfall is from about 30 to 50 inches. In the South, the most important tree is again *Teak*, but there are many associates, which often become the dominant species. In the North, the forest is typically mixed, with *Sal* occurring only locally.

5. Tropical Thorn Forests.—The dry tract throughout the Peninsula, to the lee of the Western Ghats, from the extreme south to Indore and Bhopal, with a rainfall of only 20 to 35 inches per year, is characterised by a low open forest of thorny trees, of which various species of *Acacia* are especially common. The corresponding area in the North has an even

lower rainfall, 10 to 30 inches per year. It extends throughout the western side of Upper India (except for areas of actual desert), from the North-West Frontier Province, through East and West Punjab and Rajasthan, to Sind and Baluchistan, with eastern extensions into the drier parts of the United Provinces, especially on unfavourable soils. *Acacias* are again characteristic, although less prominent than in the south and the related tree *Prosopis spicigera* is also generally distributed.

6. Tropical Dry Evergreen Forests.—A special type is met on the Carnatic coast, where the rainfall is 30 to 50 inches per year, largely from the retreating (north-east) monsoon in October and November. Here there is a low forest 30 to 40 feet high, consisting of small thick leaved evergreen trees, such as *Mimusops hexandra* and *Memecylon edule*.

II.—SOUTHERN SUBTROPICAL AND TEMPERATE FORESTS

These are represented only by wet types on the higher hills, such as the Nilgiris and Palni hills, where the rainfall is relatively high. The subtropical zone, from about 3,000 feet to 5,500 feet, has a dense evergreen forest of medium height (60 feet) in which *Eugenia* is a characteristic genus, with *Lauraceae* and other families also well represented. Above this, in the temperate zone, rolling grassy downs are characteristic, as round Ootacamund, with patches of forest, known as *sholas*, occupying the sheltered folds in the hills. These forests, probably the relics of former much more extensive forests which have been reduced by burning, felling and grazing, are typically a relatively low but fairly dense evergreen type, 50 to 60 feet high, with a great variety of trees, among which *Ternstroemia*, *Eugenia* and *Meliosma* are typical genera.

III.—NORTHERN SUBTROPICAL FORESTS

1. Subtropical Wet Hill Forests.—This type occurs on the lower slopes of the Eastern Himalayas and in the Assam-Burma hills, from a little under 3,000 feet to 6,000 feet. The forests are mostly of good height (up to 150 feet) and density, characterised by many species of evergreen *Oaks* and *Chestnuts*, with many other temperate trees, such as *Alder* and *Birch*, which are deciduous for short periods. *Fir* is typically absent, or are confined to drier sandy soils or well drained ridges, while *Dipterocarps* sometimes extend upwards from the tropical wet evergreen forests.

2. Subtropical Moist Hill Forests.—These extend to the whole length of the Western and Central Himalayas, from the North-West Frontier Province to Yunnan, mostly between 3,000 and 6,000 feet, but descending in places to 2,000 feet, and ascending on southerly aspects to 7,500 feet.

The principal tree is the *Chir* or *Chil* pine (*Pinus longifolia*), which forms almost pure forests over extensive areas. *Oaks*, *Rhododendrons* and other trees may well or replace the *Chir* at the higher levels and in damper situations.

The type extends eastwards into the Khasi, Naga, Manipur hills, but instead of the *Chir* the dominant tree is the *Khasi* pine (*Pinus khasya*).

3. Subtropical Dry Evergreen Forests.—These are open low scrub forests of evergreen trees and thorny shrubs, in which the chief species is the *Olive* (*Olea cuspidata*). They occur from about 1,500 feet to 5,000 feet in the Himalayan foothills, the Salt Range and the Kala Chitta hills in the Punjab area, Kashmir and Hazara, extending westwards into Baluchistan and other countries. The forests have mostly been considerably impoverished by grazing, lopping and felling and with protection the general density becomes much better.

IV.—NORTHERN TEMPERATE FORESTS

1. Wet Temperate Forests.—These are found in the Eastern Himalayas from Nepal eastwards, extending through West and East Bengal into the higher hills of Assam from about 6,000 feet to 9,500 feet. They are typically fairly dense evergreen forest, in which several species of *Oaks* and *Cheshuts* predominate, but many other species are also present, including typically deciduous trees such as *Maple*, *Elm* and *Prunus*.

2. Moist Temperate Forests.—Along the whole length of the Himalayas from the North-West Frontier Province, through Kashmir, West and East Punjab, United Provinces, Nepal and the Darjeeling district to Sikkim and Bhutan, at altitudes from 5,000 to 11,000 feet, and with a rainfall from 40 to 100 inches per year, are to be found extensive coniferous forests similar to the temperate forests of Europe and North America. The chief trees are *Spruce*, *Silver Fir*, *Deodar* (*Dend.*), *Blue Pine* (*Pinus arvensis*), and *Tsuga*. *Cypress* and *Yew* also occur to a less extent. Often these trees are mixed together, but pure crops of one of the other are generally more frequent, depending on the altitude, aspect and other conditions. *Lycopers oak* are also often present, particularly on southern aspects, while in the damper situations are often many broad leaved trees, also typical of European forests, such as *Maples*, *Hornbeam*, *Horse Chestnut*, *Birch*, *Elm*, etc.

3. Dry Temperate Forests. In the inner ranges of the Himalayas, where the south-west monsoon is feeble, and the rainfall is usually less than 40 inches a year, and that is mostly in the form of winter snow, is to be found extending from 5,000 to 10,000 feet a drier and more open type of temperate forest. It consists chiefly of the conifers *Deodar* (*Dend.*), *Pinus gerardiana* and *Juniper* (*J. nana*), with some *Silver Fir* and *Blue Pine* at higher elevations. Broad leaved trees, such as *Maple*, *Ash* and the *Hindu Oak*, occur scattered or in pure patches, while the *Albizia* spreads up from the dry subtropical zone. The type occurs in Hazara, Kashmir, Chamba, Inner Garhwal and Sikkim. Among the herbs and shrubs present are many medicinal plants, such as *Artemisia* and *Ephedra*.

V.—ALPINE FORESTS

The uppermost forests of the Himalayas, from about 9,500 to 12,000 feet, consist of a dense growth of dwarf shrubs and low trees, chiefly *Birch*, *Rhododendron* and dwarf *Juniper* with patches of coniferous overwood of high level *Silver Fir* and *Blue Pine*.

This gives place to an alpine scrub above, consisting of dwarf *Rhododendrons*, *Junipers* and other shrubs, interspersed with patches of grassland, which form excellent grazing areas in summer, when they are covered with a great variety of beautiful alpine flowers.

VI.—SPECIAL FOREST TYPES

Among various special edaphic and seral forest types, the following may be mentioned:—

1. Beach Forests.—All round the coast, wherever a fair width of sandy beach occurs, there is a fringe of forest in which *Casuarina*, originally introduced from Australia, is now often the most characteristic species. Elsewhere, small evergreen and deciduous trees form a low but fairly dense fringe along the shore.

2. Tidal Forests.—In the Sunderbans of the Ganges-Brahmaputra delta, and along the mouths of other large rivers, such as the Mahanadi, Godavari and Indus, are to be found *Mangrove* (*Rhizophora*, *Brougniera*, etc.) and *Sundri* (*Neritiera*) forests, typical of salt water swamps. Many of the trees have stilt roots for support, and "knees" or pneumatophores projecting upwards from the swamps to provide aeration for the roots.

3. Fresh-water Swamp Forests.—These are not very extensive, but are to be found above the salt water limit in the deltas of the large rivers, and also in depressions, often old river

beds, in parts of Assam, West and East Bengal, the United Provinces and Madras. They are subject to prolonged annual flooding and have various species according to the locality. The delta type in Bengal supports the best of the *Sundri* forests, often over 100 feet high.

4. Riverain Forests.—Along all the larger rivers on the banks of new alluvium are to be found stretches of moisture-loving trees, such as *Lagerstromia flos-regina*, *Terminalia myriocarpa* and *Salix tetrasperma*. On recently deposited gravels and sand, extensive stretches of which occur along many river courses both in the North and the South, are often to be found forests in various stages of succession, depending on how new or old is the deposit, on the rainfall and other local factors. Perhaps the most characteristic are the *Khair* (*Euclea catechu*), *Sissoo* (*Dalbergia sissoo*) and *Tamaris* forests found throughout North from Assam to West Punjab. These forests are usually characterised by heavy grass, and with protection they slowly change to a more miscellaneous type of forest by the gradual colonising of other species.

VII.—THE BAMBOOS

No account of the forests of the sub-continent would be complete without a reference to the *Bamboos*, of which there are very many species occurring in the tropical, subtropical and temperate zones. Tall bamboos, such as *Bambusa arundinacea* and *Dendrocalamus hamiltonii*, often form a very dense undergrowth in the tropical semi-evergreen and moist deciduous forests, while *Dendrocalamus strictus* is locally abundant and economically important in the drier parts of the tropical moist deciduous forests and in some of the tropical dry deciduous forests. One of the important results of forest research is the utilisation of bamboos for the making of paper, but there are still extensive areas of forests with a dense undergrowth of bamboos, which are not at present economically exploitable and which often greatly hinder other forest operations.

FOREST POLICY

The general policy of the Government in relation to forests was definitely laid down in 1934 by the classification of the areas under the control of the Department into four broad classes, namely:—

(a) Forests the preservation of which is essential on climatic or physical grounds. These are usually situated in hilly country where the retention of forest growth is of vital importance on account of its influence on the storage of the rainfall and on the prevention of erosion and sudden floods.

(b) Forests which afford a supply of valuable timbers for commercial purposes, such, for example, as the teak forests of the centre and the south, the sal forests of the north, the cedar and the north-east and the deodar and pine forests of the North-Western Himalayas.

(c) Minor Forests, containing somewhat inferior kinds of timber and managed for the production of wood, fodder, grazing and other produce for local consumption; these forests are of great importance in agricultural districts.

(d) Pasture lands.—These are not "forests" in the generally understood sense of the term but grazing grounds managed by the Forest Department merely as a matter of convenience.

These four classes of forest are not always sharply divided from each other, and one and the same tract may to a certain extent be managed with more than one object.

Administration.—The forest business of the Governments of India and Pakistan is carried out in their Departments of Agriculture. The Inspector-General of Forests is the technical adviser to the Government in forest matters. Under the Constitution of 1919 Forests were made a transferred subject in Bombay where they had long been administered by the Provincial Governments, and in 1924 the Reforms Inquiry Committee presided over by Sir Alexander Muddiman, the then Home Member

of the Government of India, recommended that they be transferred to other provinces too, unless any local Government on examination of the position could make out a convincing case against the transfer in its own province. After the Constitution of 1935 Forests were included in the schedule of Provincial subjects throughout India.

Territorial Charges.—The various Provinces are divided into one or more Forest Circles, each in charge of a Conservator of Forests; usually Provinces containing three or more circles also have a Chief Conservator who is the head of the Department for his Province. Circles are divided into a number of Forest Divisions, in charge of members of the Imperial or Provincial Forest Service. Each Division contains a number of Ranges in charge of junior members of the Provincial Service or of Forest Rangers or Deputy Rangers; heavy Divisions are also sometimes divided into Sub-divisions. The Ranges are further subdivided into a number of rounds and beats. These are protective as well as administrative sub-divisions held by Foresters and Forest Guards.

Non-Territorial Charges.—Apart from territorial charges there are various important posts of a non-territorial nature connected with Forest, Research and Education, Silviculture, Utilisation and the preparation of Forest Working Plans.

The Forest Service.—The Forest Service comprises four branches:—

(1) The Indian Forest Service.—The I.F.S. is common with other Secretary of State Services is, on account of the constitutional changes, in the process of liquidation. Recruitment to this service ceased in 1932.

(2) The Indian Forest Engineering Service.—This service was created in 1919 but since 1922 no further recruitment has been made. Some of the Forest Engineers have been transferred to the Indian Forest Service or the Indian Service of Engineers and some have resigned or have retired.

(3) The Provincial Forest Service.—Till 1925, officers for the lower gazetted Forest Service were recruited for direct appointment as Extra Assistant Conservators of Forests, and were known as Provincial Forest Service Officers. They were trained at the Imperial Forest College, Dehra Dun. After the training of Indian officers for appointment to the Indian Forest Service was started at Dehra Dun in 1926, the training of the Provincial Forest Service officers was stopped in 1928.

With the advent of Provincial autonomy in 1935 and the consequent cessation of all further recruitment to the Indian Forest Service, Provincial Governments are now building up new Provincial Forest Services of their own to take the place of the Indian Forest Services. As a result the old Provincial Forest Services will disappear in due course.

(4) The Subordinate Forest Service.—These consist of Forest Rangers, Deputy Rangers, Foresters and Forest Guards.

The training of Forest Rangers for India is concentrated at the Indian Forest Ranger College, Dehra Dun; but in addition to sending candidates to this college, Madras has its own Forest College for training Forest Rangers at Coimbatore.

The training of subordinates below the rank of Rangers is carried out in various local forest schools and training classes.

FOREST EDUCATION

Forest education in India first started with the founding in 1878 of a Forest School at Dehra Dun, for the training of forest rangers. But with the establishment of the new Indian Forest College, probationers are now being trained directly for the Superior Forest Services of the various Provinces and States of India also.

The original Forest School, established in 1878, came directly under the Government of India in 1884, when it became known as the Imperial Forest College, and trained Rangers at first for all the provinces. In 1912 the Madras Forest College was opened at Coimbatore, serving Madras, Bombay, the Central Provinces, Bihar and Orissa, and the South and Central Indian States, the Imperial Forest College at Dehra Dun serving the rest of India. The Madras Forest College was closed on 1st July 1939, but was re-opened for Madras candidates only in 1945. Apart from this Ranger students from all parts of India are being trained at Dehra Dun. The College at Dehra Dun has now been renamed the *Indian Forest Ranger College*, to distinguish it from the new *Indian Forest College* for the training of officers for the Superior Forest Services, opened in 1938.

Research.—The Forest School founded at Dehra Dun in 1878 became also a recognised centre of forest research in 1906.

In 1914 the first Forest Research Institute was opened on the Chaudhagh Estate, Dehra Dun. Within a very few years the war demand for forest produce emphasised the scope and need for extensive research far beyond that for which accommodation had been provided. Plans were therefore made for a new Forest Research Institute on the Kaulagarh (New Forest) estate a few miles out of Dehra Dun, and it was opened on the 7th November, 1929.

The Forest Research Institute is under the administrative control of the President. There are five main branches of forest research, namely Silviculture, Forest Botany, Utilisation, Entomology and Chemistry and Minor Forest Products. Silviculture, which deals with all the production side of forestry, is under the direction of the Silviculturist. Much of the actual research work is, however, decentralised and done by local provincial silviculturists in the provinces, but the Central Silviculturist co-ordinates their work and does all the statistical computing and acts as an information bureau on silvicultural matters for the whole of India.

Forest Products.—Forest produce is divided into two main heads—(1) Major produce, that is timber and firewood, and (2) Minor produce,

comprising all other products such as bamboos, leaves, fruits, fibres, grass, gums, resins, barks, animal and mineral products, etc. The average annual outturn of timber and fuel from all sources averages about 306 million cubic feet. This was undertaken a few years ago at the initiation and development of certain large exploitation schemes, especially in Madras, which had indifferent success. It was hoped in Madras, by utilising modern American methods, to extract and utilise very large quantities of valuable timbers, but the final result proved that this extensive exploitation was justified neither by the stand of timber in the forests nor by the possibilities of satisfying markets. The Provincial Government after this experience adopted a more cautious policy.

In the Andamans notable developments have taken place. In the past, extraction of timber was done by elephant dragging with the result that only a fringe of the forests could be touched. Attempts were made in employing American methods of mechanical logging, for which machinery was bought and an American expert employed to take charge of the work. The costs of extraction, however, by these means proved too high. Recently the problem has been solved by means of light tramways, the trains of trucks being drawn by elephants which have been superannuated from ordinary work, and it has been found possible in this way to work large, hitherto inaccessible areas of forest very cheaply. Elsewhere in the sub-continent a great part of the trade in timber lies in the hands of contractors who are, on the whole, regarded trustworthy if sufficient control over their operations is exercised.

Forest Industries.—The important role which the forests of a country play in its general commercial welfare and in providing employment for its population is not always fully recognised. If accurate estimates were available for India or Pakistan they would no doubt show that apart from the jungle population which is directly dependent on the forests and the large numbers of wood-cutters, sawyers, carters, carriers, raftsmen and others working in and near them, employment on an enormous scale is provided to persons engaged in working

up the raw products. Among these latter may be mentioned carpenters, wheelwrights, coopers, boat-builders, tanners, rope-makers, lac-manufacturers, basket-makers, and many other classes of skilled labourers. The census shows over a million people and their dependents so employed in the two Dominions and nearly a further half million in the States, but these are probably below the actuals, as much forest labour is not whole-time labour, devoting seven or eight months in the year to forest work and the rest to agriculture. With the opening up of the forests, the extension of systematic working, the wider use of known product, and the possible discovery of new products, a steady and extensive development of industries dependent on the forests of India and Pakistan may be confidently anticipated in the future.

Financial Results.—The growth of forest revenue, expenditure and surplus during the past 70 years in India and Pakistan has been steady. Gross revenue, before the late world-wide depression caused a temporary disorganisation of all trades, steadily increased until it amounted to some Rs. 290 lakhs a year for both the Dominions, surplus revenue amounting to upwards of 26 per cent. of gross revenue. Most of the Provinces ordinarily show a steady increase of surplus.

Agencies.—The general practice of the Forest Departments in the Government of India and Pakistan and the various Provinces is to conduct their own sales direct with timber dealers or large consumers though there are notable exceptions. Indian timber marketing in England (especially Andaman timbers) is now done under the direction of a Timber Advertiser who is attached to the Office of the High Commissioner for India. Sales of Indian timbers and especially timbers from the Andamans are steadily increasing.

A large number of bulletins and other publications has been issued by the Forest Research Institute, and of these a list can be obtained from the President, Forest Research Institute and College, New Forest Dehra Dun, U.P.

HYDRO-ELECTRIC DEVELOPMENT

CHEAP motive power is one of the secrets of successful industrial development and the favourable initial conditions caused by the war, the enthusiasm for industrial development which has seized nearly all classes of educated Indians, and the special attention which the circumstances of the war have compelled Government to direct towards the scientific utilisation of Indian natural resources all point to a rapid growth of industrial enterprise in all parts of the sub-continent within the next few years. Indeed, the process, for which sound foundations had been laid before the war, is now rapidly under way. The sub-continent is severely handicapped compared with other lands as regards the generation of power by the consumption of fuel, coal or oil. These commodities are all difficult to obtain, and costly in the sub-continent except in a few favoured areas. Coal supplies for example are chiefly centred in Bengal and Chota Nagpur and the cost of transport is heavy. Water power and its transmission by electricity offer, on the other hand, good possibilities, both as regards the quantity available and the cheapness at which the power can be supplied, in certain parts of the sub-continent.

Water power schemes, pure and simple, are generally difficult because the power needs to be continuous, while the rainfall is only during a small portion of the year. Perennial rivers with sufficient water throughout the year are practically non-existent in the sub-continent. Water, therefore, must be stored for use during the dry season. Favourable sites for this exist in many parts in the mountainous and hilly regions where the heaviest rainfalls occur and the progress already made in utilising such opportunities by the electrical transmission of power affords encouragement for the future. Further, hydro electric schemes can sometimes be associated with important irrigation projects, the water being used for both electricity generation and irrigation.

The Industrial Commission emphasized the necessity for a Hydrographic Survey of the sub-continent. On this recommendation the Government of India in 1918 appointed the late Mr. G. T. Barlow, C.I.E., then Chief Engineer, Irrigation Branch, United Provinces, to undertake the work, associating with him Mr. J. W. Meares, M.I.C.E., Electrical Adviser to the Government of India. Mr. Barlow died before completing the work; but Mr. Meares issued a preliminary Report in September, 1919, and a final Report in 1921, indicating that a minimum continuous water power of nearly 6 million kilowatts with a maximum of 13 million kilowatts could be developed in India. This excluded practically all the great rivers, which were then uninvestigated.

The Government of India has since formed a Central Technical Power Board for developing hydro-electric resources and for carrying out a systematic hydro-electric survey. The present stage of progress and some of the plans under consideration for development of hydro-electric power in the post-war period in some of the major provinces and states are indicated in the following paragraphs.

BOMBAY HYDRO-ELECTRIC WORKS

The greatest Hydro-Electric undertakings in the sub-continent are the three schemes developed and brought into operation by Tata Sons, Ltd., and continued under their management until 1920, when they were transferred to the management of the Tata Hydro-Electric Agencies, Ltd., in which Messrs. Tata Sons retained a substantial interest. These undertakings are:—

- The Tata Hydro-Electric Power Supply Company, Ltd. Supply started in 1915.
- The Andhra Valley Power Supply Company, Ltd. Supply started in 1922.
- The Tata Power Company, Ltd. Supply started in 1927.

The population of Bombay including suburbs at the 1941 census was 1,489,883 with a total population of approximately 4,000,000 in all the areas served by these companies. Its cotton mills and other factories consumed about 160,000 H.P., which until these Hydro-Electric Schemes came into operation, was entirely produced by thermal stations using fuel coming from great distances.

The favourable position of the Western Ghats which rise to a height of more than 2,000 feet above sea-level within a few miles of Bombay City, with their heavy rainfalls was taken full advantage of for providing Bombay City and vicinity with an adequate and economical power supply.

Khopoli.—The hydraulic works of the Tata Hydro-Electric Power Supply Company are situated near Lonavla at the top of the Bhor Ghats. The monsoon rainfall is stored in three lakes, namely Lonavla, Walwan and Shirawta, from which it is conveyed in open masonry canals to the Forcay at Khandala and thence through steel pipes to the Power House at Khopoli at the foot of the Ghats, where the head at turbine nozzles is 1,725 feet or approximately 750 lbs. per sq. inch. The capacity of the Power Station at Khopoli is 57,600 kW on the basis of 20 per cent overload for ten hours. This scheme was formally opened by the Governor of Bombay on the 8th of February 1915.

Investigations in 1917-18 led to the discovery of a site on the Andhra River just to the North of the Tata Hydro-Electric Supply Company's lakes, where additional power could be developed. These investigations resulted in the formation of the Andhra Valley Power Supply Co. and the construction of the schemes, the principal features of which consist of a reservoir formed by a dam about 190 feet high, across the Andhra River and a tunnel 8,700 feet long driven through solid trap rock to the scarp of the Ghats, from which the water is taken in steel pipes 4,600 feet long to the turbines in the generating station at Shivpur. The head of the water at turbine nozzles is 1,740 feet or approximately 750 lbs. per sq. inch. The electrical energy is transmitted to Bombay over a transmission line 58 miles long for augmenting the supply from Khopoli. The present installed capacity at this station is 57,600 kW on the basis of 20 per cent overload for ten hours.

INTEGRATED SYSTEM

The Tata Power Company's scheme on the Nila-Mula River to the South-East of Bombay was investigated and developed along lines similar to the Andhra Valley scheme and has an installed capacity of 105,000 kW on the basis of 20 per cent overload for ten hours. The power is transmitted to Bombay over a transmission line 76 miles long and is used to augment the supply of the two earlier companies to mills, factories and railways.

The Tata Hydro-Electric System, comprising the Tata Hydro-Electric Power Supply Company, the Andhra Valley Power Supply Company and the Tata Power Company, is operated as an integrated electric power system serving an area in the Province of Bombay of more than 1,000 square miles. It is the largest power system in the sub-continent having a fixed capital expenditure in excess of Rs. 16 crores and an annual output representing more than one-third of the total electricity production.

Electric service is rendered to the textile mills and other industries of Bombay and the suburban areas, to the railways for electric traction, to local authorities, and, in bulk for retail distribution, to the electrical undertakings supplying Bombay City and suburban districts, Poona and ten other localities within the area.

During the year 1947-48, the system generated 1,187,000,000 units of hydro-electric energy. The combined generating capacity of the three

hydro-electric stations is approximately 220,200 kW on the basis of carrying normal overload of 20 per cent for ten hours. The system operated a total of 776 circuit-miles of high voltage electric lines and under-ground cables, including 458 circuit-miles of transmission lines of 100,000 volt capacity.

The rate for energy delivered to the Mills, Factories and Railways has, for several years, shown a steady decrease and now averages 0.32 of an anna per unit, the downward trend of which will continue as industries develop and individual consumptions increase. This power supply greatly enhances the natural advantages Bombay has as a great manufacturing, trading and shipping centre.

For the development of industries and agriculture in the northern portion of Bombay Presidency, the Bombay Government has embarked on the provision of an electrical grid scheme somewhat on the lines of the British Grid. Besides taking power from the Tata's Hydro-Electric System and from some of the selected Steam Station, it is also proposed to construct initially two new hydro-electric stations at Bhandarlera and Bhargur for supplying power to this grid.

DEVELOPMENT IN PROVINCE

In the Province of Bombay, there are at present 68 licensees in operation. In the case of three of these, the licensees have hydro-electric stations, their installed plant capacity being 2,35,000 kW. These three licensees serve by bulk supply Bombay City, the Bombay Suburban District, Poona and about six other townships. Almost all the remaining 56 licensees generate their own electric energy. Of these, one has an installed capacity of 67,500 kW another 3,624 kW, the remaining have relatively small power houses. Most of the licensees operate in urban areas.

The objects with which the Government of Bombay have set up the Electric Grid Department are: (1) to rationalise the generation of electricity by generating it at a few selected stations having natural advantages, (2) to make available progressively large amounts of electricity at low rates, and (3) to bring the energy within reach of a progressively increasing number of the urban and rural population.

The objects are to be achieved by the establishment of an Electric Grid System in regions which lend themselves to such development economically under quasi-state control. New power stations—both hydro-electric and thermal—will be established. These and the existing efficient generating stations of licensees, wherever practicable, will be inter-connected by the Grid lines. Inefficient generating stations will be closed down and the licensees concerned supplied bulk power. Wherever possible, rural areas within the Grid regions will be supplied electricity from the system.

It is also intended to establish small Diesel Stations in isolated townships, which have some cottage industries and which cannot, within reasonable time, be served from the Grid.

To promote rapid development of the use of electricity by agriculturists and cottage and small scale industrialists specially in rural areas, it is proposed to assist them financially in acquiring electrical machinery and equipment on hire purchase terms.

ELECTRICITY (SUPPLY) ACT, 1948

Largely, at the initiative of the Government of Bombay, the Government of India introduced in the Central Legislature a Bill entitled "Electricity (Supply) Bill, 1946" during the Budget Session of 1946. This measure was passed and became an Act in 1948. One of the provisions of this Act is that the Provincial Governments have to set up Provincial Electricity Boards within two years. They will be charged with

the work of rationalisation and development of electric supply in the Province. The Bombay Government proposes to set up the Bombay Electricity Board, which will be, under the provisions of the above enactment, charged with the work of rationalisation and development of Electric Supply in the Province.

Meanwhile, a Special Grid Department has been organised under the Electrical Commissioner with the Government of Bombay. The development programme under execution at present consists of: (1) North Gujarat Grid Scheme, (2) South Gujarat Grid Scheme, (3) Rural electrification and small town schemes based on small Diesel Stations.

NORTH GUJARAT GRID SCHEME

This scheme contemplates taking power in bulk from the power station of the Ahmedabad Electricity Company at Saharnati and distributing it to centres of load in North Gujarat Area. The works comprise construction of about 70 miles of 66/110 kV line, 14 miles of 33,000 and 50, miles of 11,000 volt transmission lines and about 480 miles of distribution lines.

Construction of a new power station by the Ahmedabad Electricity Company, initially consisting of two 15,000 kW steam turbo sets, negotiated by Government with the Company in the year 1914-15, is completed. Arrangements have been made with the Company to install two more 15,000 kW sets in the new station as early as possible to meet the anticipated demand three or four years hence.

The construction of 66/110 kV line from Ahmedabad to Baroda is completed. The order for 33 and 11 kV lines has been placed. The required power transformers and sub-station control gear have been ordered out.

The original programme of completion of works has had to be drastically revised in the light of the delivery dates for sub-station control gear and other equipment, now reported by manufacturers in the U.K. According to present indications, it would appear that distribution of electricity in this region can be commenced by the middle of 1950.

SOUTH GUJARAT GRID SCHEME

This scheme comprises installation of a steam power station initially comprising two turbo alternator sets of 7,500 kW each near Surat for supply of power in areas from Surat to Bulsar, and construction of an E.H.T. transmission line over a distance of about 33 miles from Surat to Bilimora.

A site for power station has been selected at Utran near Surat. Construction of the power house building, etc., will be commenced shortly. Work of constructing the railway siding from Utran station to the power house site was completed in March 1949. Work in connection with preparation of designs of transmission lines and sub-stations is in hand.

Orders for two turbo sets of 7,500 kW each and boiler house equipment have already been placed. Order for switchgear and other equipment has also been placed. A part of the machinery was shipped and received in March 1949. The remaining machinery, switchgear, etc., is expected to be shipped completely, by stages, by about the end of 1949.

Owing to the delays in delivery of plant and machinery and other equipments by the manufacturers, the original programme of completion of works has had to be revised. According to present indications the supply from the steam station should commence by the end of 1950.

CO-OPERATION & CO-ORDINATION OF ELECTRIC SUPPLY FACILITIES

Baroda has agreed to co-operate with the Government of Bombay by taking supply in bulk at Koloi, Baroda, Pethal, Navsari and Bilimora for distribution within the State territory. Negotiations are in progress with the B.B. & C.I. Railway for the use of a common power system on a co-operative basis by the

Railway for meeting its power requirements for traction between Ahmedabad and Bombay and by the Bombay Government for supplying electric service to urban and rural population residing within economic distance of the various sub-stations en route. If a mutually satisfactory agreement is reached, it will be necessary further to develop the power stations at Ahmedabad and Surat and the transmission system. The co-operation between Bombay Government, Baroda Government, the B.B. & C.I. Railway and the Ahmedabad Electricity Company is expected to be of appreciable benefit to all the parties and will tend to reduce the cost of electric service in the area covered.

Negotiations are also in progress with the G.I.P. Railway for the use of a common power system in the Nasik and Khandesh areas.

RURAL SCHEMES

The schemes so far sanctioned for execution by Government consist of: (1) Electrification of the towns of Ratnagiri, Malvan, Vengurla, Chiplun, Islampur and Peth, (2) Electrification of 22 villages in the Satura taluka based upon power being taken from the existing power house of the Satura Electricity Co., (3) Electrification of ten villages in the Bulsar taluka, based on bulk electricity being taken from the existing power house of the Bulsar Electricity Co. Later on, when power becomes available from the Government's own station in Surat, power will be supplied from that station, (4) Electrification of rural areas between Lonavla and Talegaon with power, purchased from Talas.

Neither of the first three schemes mentioned above can at present supply any large industrial load, but when item (3) is linked up with the new Surat Steam Station, there will be scope for supplying power for industrial use.

In addition to those mentioned above, small Diesel stations may be established during the next five years in about 19 townships containing about 2,000 dwelling houses or more and having village industries, the production of which can be appreciably increased by the use of electric power. A list of the towns provisionally selected is given hereunder:

| Sr. No. | Division | District | Town |
|---------|----------|---------------|-------------|
| 1 | Northern | Ahmedabad | Dholka |
| 2 | " | " | Dhanduka |
| 3 | Central | East Khandesh | Khandol |
| 4 | " | " | Parola |
| 5 | " | " | Dharangam |
| 6 | " | " | Sheddrum |
| 7 | " | West Khandesh | Shahade |
| 8 | " | Sholapur | Akhij |
| 9 | Southern | Belgaum | Chikodi |
| 10 | " | " | Gokak |
| 11 | " | " | Hukeri |
| 12 | " | " | Konnur |
| 13 | " | " | Sankeshwar |
| 14 | " | " | Bailhongal |
| 15 | " | Bijapur | Gubbidgi |
| 16 | " | " | Ilkal |
| 17 | " | " | Sulebavi |
| 18 | " | " | Bumund |
| 19 | " | Dharwar | Gajendragad |

Out of the above, Government have so far approved administrative schemes for Belgaum, Bijapur and East Khandesh Districts, while schemes are under preparation for the remaining places.

Jog Power.—In consideration of the consent given by the Government of Bombay to the Government of Mysore for the electric development of the waterfall at Jog under certain conditions, the latter has agreed to supply the Bombay Government, electric power upto 11,500 kW at Jog on reasonable terms to be mutually agreed upon. The proposal for the utilisation of this power has been investigated and the report is under the consideration of Government. A special Officer appointed by the Government of Bombay to study the industrial possibilities within an economic distance of the Jog power house has started investigation.

HYDRO-ELECTRIC PROJECTS

Salient features of the hydro projects which are likely to be undertaken within the next few years are given hereunder:

Koyana Project. This scheme when fully developed is capable of meeting a demand of the order of 250,000 kW continuous after reserving part of the storage for irrigation. When finally developed, this would be one of the larger power stations in the sub-continent. Initially, about 48,000 kW could be developed economically for supply to the Districts of Poona, Satara, Sholapur, Bijapur and Ratnagiri as required. Electro-chemical industries and other similar loads could be established near the power station site with advantage and the plant progressively increased.

In December 1946, Government sanctioned detailed investigations and survey work to enable preparation of estimates and designs of works connected with the project. This work was started early in 1947 and is progressing steadily and satisfactorily. A committee has been appointed by the Government to examine the question of utilising part of the storage for irrigation purposes in Bijapur District by high lift pumps located in a suitable position on the banks of the Krishna River. The Chairman of the committee in a preliminary note has estimated that when the lift irrigation scheme is fully worked out, the power requirements would be of the order of about 90,000 kW.

The possibilities of utilising the fallrace waters of the proposed Koyana hydro-electric power station will also be investigated.

Kalinadi Project. Preliminary survey work connected with the scheme was sanctioned by the Government of Bombay in January, 1947. The work has been entrusted to Messrs. Associated Consulting Engineers (India), Bombay. The final report indicates that 325,000 kW continuous is available in the Kalinadi Basin, distributed in four power stations. The final report is awaited. The Districts of Dharwar, Karwar, Belgaum and Bijapur appear to be within economic reach of this source of power.

Bhatgar Hydro-Electric Project. A demand of about 10,000 kW can be met from this source, provided the power station is linked up either with Koyana when it is developed or Tata system at Poona. Consideration of this scheme will be taken up after 2 seasons' work has been put in on the proposed new irrigation dam at Vir, which will provide a balancing and supplementary reservoir.

Bhandardara-Randha Electric Scheme.—A demand of 16,800 kW can be met from this source. In addition to this, a further 7,500 kW can be obtained during the monsoon. This power can be turned up by the establishment of a steam station of the installed capacity of 15,000 kW in this area. The scheme was sanctioned by the Government of Bombay in 1945 but its execution had to be postponed as under the present conditions, development of this source of power cannot be undertaken economically. The question of its execution will be reviewed in due course.

Narbada-Tapti. Governments of Bombay and India have also under consideration the possibility of developing Narbada and Tapi River Basins on multi-purpose basis. The preliminary survey of the Narbada River reveals that about 450,000 kW continuous could be available from the Narbada river at two power stations.

MYSORE HYDRO-ELECTRIC WORKS

The first Hydro-Electric Scheme of any magnitude undertaken in the sub-continent or indeed in the East, was that on the Cauvery River in Mysore State, which with its generating station, transmission line and distributing system was inaugurated in 1902.

The Cauvery River rises in the district of Coorg in the Western Ghats and flows across Mysore State. The principal object of this

scheme was the supply of power to the mining companies on the Koder Gaid Fields about 92 miles from Sivassamudram, the site of the generating station. This transmission line was for a number of years the longest line in Asia. Since 1902 the supply of electrical energy from Sivassamudram has been provided for Bangalore and Mysore (cities and 226 other towns and villages in the State).

The initial undertaking has constantly been expanded and its total normal capacity now stands at 60,000 H.P. With the addition of the Shihshapura Station coming into existence in 1940, an additional 23,000 H.P. installed capacity has been added.

The number of the consumers of all classes continues to increase rapidly every year with greatly increased power demands. The Government of Mysore have encouraged the use of electrical energy and have made a survey of hydro power resources of the State and prepared plans for the construction of a number of generating stations at the most economic sites in future.

Demands for large additional blocks of power made it necessary for Government in continuing its policies for the industrial development of the State, to sanction the construction of Jog Falls Power Station at Jog for the production at the first instance of about 48,000 kW without in any way interfering with the beauty of the Jog Falls on the Sharavathi River which have been famous for their scenic beauty and grandeur.

The first stage of the Project with an installed capacity of 4,800 kW was put into service with four units of 12,000 kW each on February 21, 1948. The work on the second stage is in progress now. With the completion of the second stage at Jog, the total capacity of the station would be 120,000 kW. It would be of interest to note that power at Jog is generated, transmitted and distributed at a frequency of 50 cycles, whereas the other two stations generate and transmit at 25 cycles of which a part of the lighting loads in the cities of Bangalore and Mysore's converted to 60 cycles and distributed. After very careful consideration, Government decided that the standard frequency of 50 cycles should be introduced in the State in conformity with the prevalent practice in the neighbouring regions and also to enable to Mysore systems to be put on the South Indian Grid which is bound to come some time or other if the resources of the country are to be fully and economically utilised. It was for this reason that the Mahatma Gandhi Hydro-Electric Works at Jog was designed to generate power at 50 cycles.

The number of lighting and power consumers of all classes in the cities of Bangalore and Mysore and other towns and villages in the State has increased to more than 70,000.

The transmission system consists of over 900 route-miles of 78,000 and 37,500 volt lines with a total of 1,350 miles of circuits. The transmission system is extended to supply hydro-electric power to the four corners of State. With the construction of the new transmission lines and on the generation of power at Jog, over 600 miles of 110 kV transmission lines will be in service.

The use of electricity for improving the transport facilities in the State forms an important item under the "Post-War Development Scheme" and it is expected that in the next five years, introduction of electric trolley buses in Bangalore and electrification of railways between Mysore and Bangalore will be an accomplished fact.

TRAVANCORE

The first electrical undertaking to operate in Travancore was the Hydro-Electric Station established in the High Ranges by the Kanan Devan Hills Produce Co., Ltd., in 1905 which was intended to meet the power requirements of the Company for lighting and factory drive. It was towards the close of 1927 that Government initiated a programme of electrical development in the State. A start in this direction

was made by the establishment of a thermal station at Trivandrum, the capital of the State, in March 1929. The rapid expansion of the Trivandrum Electric Supply served as an incentive to private enterprise to come into the field. A thermal station was started at Kottayam in 1932 for the supply of power to that town, under a license. Another private agency took up the supply of power at Nagercoil in 1934.

A scheme for the supply of power to Quilon was inaugurated by the Government towards the middle of 1934.

A license for the supply of power to the Taluks of Shencottah and Puthanapuram was granted to a private Agency in 1940 and the supply was inaugurated in 1941.

Expansion.—In view of the very large demand for electric supply being extended to several areas, the Government decided to initiate a large hydro-electric system to meet the growing demand for power. As a first step towards this objective, the Pallivasal Hydro-Electric Scheme was sanctioned by the Government in 1931 and the work was taken up immediately afterwards. The first stage of development was completed by the beginning of 1940 and the supply was commenced in March 1940. The scheme utilises the water of the Mudrapuzha River diverted at Munnar through a tunnel 9 ft. by 8 in. and 10,200 ft. in length. Two parallel steel penstock lines each 7,800 ft. in length take the water to the generating station. The generating plant consists of three 5,000 kVA Alternators generating at 11,000 volts directly coupled to Pelton wheels operating at 1,980 ft. head. Two of the machines are in normal service while the third serves as a stand-by. The normal generating capacity of the station is 9,000 kW, but during peak hours, the third unit is also commissioned to take up loads upto 1,500 kW, thereby raising the objective capacity of the station to 10,500 kW. The capacity of the station has now been increased by the installation of a fourth generating set. Power is stepped up to 66,000 volts for transmission to the plains. The transmission system as now brought under use consists of 420 circuit miles of 66 kV lines on lattice steel towers, 42 circuit miles of 66 kV lines on oak wood and concrete poles, taking power to 5 major 66 kV sub-stations and 26 miles of 33 kV lines, 350 miles of 11 kV single circuit lines and 10.5 miles of double circuit lines connecting all the important centres in North and Central Travancore.

The availability of hydro-electric power in most of the important commercial and agricultural centres coupled with the impetus given to industrial and agricultural operations consequent on the situation created by the Second World War, has resulted in a steadily growing demand for power. The connected load is over 25,000 kW with a maximum peak load of 13,300 kW. The total generation during 1946 was 75.42 million units. About 72.5 per cent of the power generated is used for industrial purposes and the rest for agricultural and domestic needs. Electrolytic production of aluminium, tea factories, fertilisers and chemicals, ceramics, textiles, paper, plywood, oil mills, saw mills, tile factories, mineral factories, engineering workshops, etc., constitute the main industrial load.

Three More Sets.—L. T. distribution is standardised at 400/230 volts. Asen treated teakwood poles supplied by the State Forest Department and wooden cross-arms, have been standardised for all 11 kV lines and a major part of the network.

The demand for power has been so pressing that action for augmenting the power supply was taken as early as 1941. Although the necessary orders for the plant were placed in 1941, the demands of the late War, which had necessarily to be given the highest priority, necessitated the execution of the orders being held in abeyance till 1944. The work on the

installation of 3 more generating sets each of 7,500 kW capacity in the Pallivasal Station is now in progress. One of these units, the fourth set, has been taken into service. Two more pipe lines to supply water to these three generating sets are also being laid. The erection of the third pipe line, 30-in. dia., is already completed and that of the fourth is in progress. The additional power generated is used mainly for aluminium production and for the manufacture of Ammonium Sulphate.

Dams.—To ensure a perennial supply of water for power development at Pallivasal and Sengulam, the construction of dams for storage of monsoon rain water has been taken up. One of these reservoirs, with a capacity of 270 million cubic feet, is located at Sethuparvathyapuram, about 16 miles east of Munnar in the high ranges. The other dam at Madupatty, about seven miles from Munnar has been designed to impound 2,000 million cubic feet of water. It is now under construction.

Owing to the delay in augmenting the generating capacity of the Pallivasal Station, it was found necessary to resort to other arrangements for making available additional power to meet the demands arising out of commitments already made. As a result of the negotiations with the Government of Madras, it has been possible to get a block of 3,000 kW. of power from the Papanasam System. A 66 kV single-circuit line connecting Kundara to Shencottah has been constructed and the supply from Papanasam has been inaugurated from the beginning of September 1946.

The demand for power as foreseen now is so heavy that it has become an urgent necessity to explore the possibilities for further hydro-electric developments. Two more schemes are already under investigation. The first of these, the Sengulam Scheme is proposed to be located 44 miles lower down the present generating station. With the tail water of the main station, it is expected that the station could generate about 48,000 kW.

The other station is proposed to be located further lower down the same river. The tail water of the second station together with the discharge of two other tributaries of the Mudrapuzha River will supply the water for this scheme and the output of this station is estimated to be 40,000 kW. With the construction of suitable reservoirs for the collection of water, it is expected that the generating capacity of this station can be further augmented.

Growing Demand.—Power development from the Pampa River in Central Travancore is also under investigation. Preliminary forecasts show that it will be possible to develop about 100,000 hp. from this Scheme.

The situation created by the Second World War has given a strong impetus to industries in general and on the wake of it, a growing demand for power. During war-time, one of the major industrial concerns supplied with power from the Government System was the Indian Aluminium Co. Power was also being supplied to several industries engaged in war work. Special mention may be made in this connection regarding the role of electricity in food production activities both during and after the war as with the scarcity of fuel oil and oil engines, it has been necessary to resort to electric drive for de-watering operations in rice fields in the back-water areas and also for lift irrigation. Several thousands of acres of land both in Central and North Travancore have been put under cultivation with the aid of electric drive and as experience has shown that this is both economical and convenient, it is proposed to adopt this as a permanent arrangement.

COCHIN

There are four sites on the Chalakudy river suitable for hydro-electric development. These sites are proposed to be developed progressively in five stages. When completed, the project will provide 100,000 kW of continuous power

or 200,000 kW at 50 per cent load factor. The first stage now under execution, consists of the construction of a dam across the river above the Poringalkuthi falls. The reservoir will have a storage capacity of 28,700 acre feet. The total cost of all stages is estimated at 20 crores of rupees. The development of the scheme will also enable some 6,000 acres of waste land to be brought under paddy cultivation.

MADRAS

Hydro-electric development in Madras until 1927 was confined to a few tiny plants in tea estates and to the small installation at Kator in the Nilgiris for making cordite. In recent years there has been significant progress and Madras now ranks next to Bombay in its hydro-electric power output. Three hydro-electric stations are now in operation. Besides extensions to the existing plants, two more stations are under construction.

The water power sites in the province are mostly in the Western Ghats especially in the region of the Nilgiris and the Palnis. Sites in the Eastern Ghats are few and some of them are on border streams. A close estimate of the available power has not yet been made. The continuous power output from the sites which are definitely known to be worth development is over 220,000 kW. It is likely that further survey and investigation would locate more sites. While it is unsafe at this stage to give an estimate of the maximum water power available in the province it may be assumed to be around 500,000 kW continuous. This does not, however, include power that can be developed from future large irrigation dams like those projected at Polavaram on the Godavari.

Electric Power Grid.—To develop the available power resources in an orderly and rational way and make it available over the whole province cheaply and in abundance, an 'Electric Power Grid' for the province was conceived by the Madras Government over 15 years ago. It is a scheme of inter-connected power houses, both hydro and thermal, feeding a network of transmission and distribution lines serving towns and villages. Part of it is already in existence and the rest is to be built in appropriate stages corresponding to the industrial and social advance of the country.

The Grid in the south where it is well formed consists at present of three hydro-electric power stations, viz., those at Pykara, Mettur and Papanasam. A fair part of 12 districts from Chittoor to Tinnevely and Chingleput to Malabar is covered. 45 Municipal towns and 910 villages receive supply. The installed generating capacity of the three stations totals 104,000 kW. The Grid owned by the Government Electricity Department has over 3,000 miles of high tension lines operating at voltages from 11,000 to 110,000 and 1,850 miles of low tension distribution lines. There are 24 extra high tension sub-stations of 110 and 66 kV, and sixteen of 33 and 22 kV, sub-stations with transforming capacity totalling 150,150 kVA, and 770 distribution transformer stations with an aggregate capacity of 39,500 kVA. The total load connected to the Grid is 185,200 kW. Among the important industries which are served are textile mills, cement factories, electro-chemical works, Steel-rolling mills and tea factories.

Rural Electrification.—Rural electrification on a fairly extensive scale has also been carried out with a connected load of over 32,800 kW. There are over 4,900 electric pumps for irrigation and 825 rural factories for ginning cotton, hulling rice, pressing oil seeds, shelling nuts, crushing cane and milling flour.

There are over 101,700 consumers of all classes: 70,800 served through the distributing licensees and 21,900 served by Government direct. The total power generated from the hydro-stations in 1946-47 was 298 million units representing 73 % of the total generation in the Province. The capital investment so far made is nearly Rs. 7.76 crores and the revenue in 1945-46 was Rs. 12 lakhs.

In the central and northern regions of the province the grid is yet to take shape. At present there are number of thermal stations each serving the local area but not inter-connected. When the big hydro-electric stations on the Machkund River in the Vizagapatnam District and other extensions in progress are completed, the Grid will practically cover the whole province.

Pykara Scheme.—The scheme utilises the waters of the Pykara river which drains from the Nilgiri plateau having a catchment area of nearly 38 square miles and a fall of about 3,100 ft. The flow though perennial is very irregular and often drops to values around 20 cusecs during the dry season. The topography however embraces a number of feasible storage sites which could be developed according to the growth of power demand. The estimated potential capacity of the full development is around 40,000 kW continuous.

The first stage of development was commenced at the end of 1929 and was completed at the end of 1932. This stage utilised the regulated flow of the river with small storages of 58 million cubic feet in the forebay and 28 million cubic feet in the Glenmorgan Reservoir. The rapid growth of load necessitated the early construction of the Dam at Mukurti to store 1400 m.c. ft. with open spillways. The work was commenced in January 1935 and completed in June 1938. By installing automatic gates over the spillways the storage capacity has been raised to 1,800 m.c. ft. In April 1940, the final stage now sanctioned will provide a further increase of 2,000 m.c. ft. storage by the construction of a second dam across Pykara river.

Civil Works.—Water from the intake of the river is led by a flume to the forebay from whence it is led through a single 78" diameter steel pipe 1,000 ft. long to a surge tank at the head of the penstocks. In the first stage two pipes each in 3 sections of diameter 27", 21", 21" with a total length of about 9,300 ft. were laid. In the second stage a third penstock of 42", 39", 37" diameter was added.

The initially installed plant comprises three 7,810 kVA, 3 phase, 600 r.p.m. alternators coupled to 10,900 hp. pelton wheels. Power is generated at 11,000 volts 50 cycles and stepped up to 110,000 volts by means of three 7,810 kVA, 3 phase, 11 kV, 66-110 kV. transformers.

In 1939 two 12,500 kVA, generating units and two 12,500 kVA, transformers were added. The Pykara-Colimatore transmission line was changed from 66 kV, to 110 kV, operation to suit the increased load demand. In 1947 two 5,000 kVA, 11/66 kV. transformers were added to feed the 66 kV. lines to the West Coast.

Transmission and Distribution.—Power is transmitted to Colimatore, which is the main receiving station and also the chief load centre by means of a 50 mile double circuit 110 kV line. The line is extended therefrom at 66 kV, to Tiruppur, Erode, Udumalpet, Sembatti and Madurai. At Erode and Madurai it is established with the Mettur and Papanasam Systems respectively. Power is now supplied from Pykara to Calicut and Cannanore through 66 kV. lines.

This system has 1,278 miles of transmission lines of voltage ranging from 11,000 to 110,000 in service. There are 5 extra high tension sub-stations with transforming capacity of 70,750 kVA, and 426 distribution transformer stations with an aggregate capacity of 22,465 kVA.

Mettur Scheme.—The engineering features of the Mettur Hydro-Electric Scheme provide an interesting contrast to the Pykara Hydro-Electric Scheme. The Mettur Dam, one of the largest structures of its kind in the world is 176 ft. high and can impound a total of 93,500 m.c. ft. of water. This storage is primarily for irrigation purposes but part of the water let down for irrigation is utilised to the best advantage for the generation of hydro-electric power.

During construction of the dam 4 cast iron pipes 8'-6" in diameter had been built into the structure and equipped with the necessary valves, gates, screens and other fittings. Each pipe is designed to discharge a maximum of 1,250 cusecs for power purposes.

Work on the initial installation with 3 units of 10,000 kV, each was commenced in the latter part of 1933, and the station started operation in June 1937.

The operating head varies from 160 ft. at full reservoir level to a minimum of 60 ft. The average head is 135 ft.

Power House.—The Power house is situated immediately below the Mettur Dam. The units are 12,500 kVA, 250 r.p.m. generators coupled to overhung type twin horizontal Francis turbines one on each side. The turbines operate under a variable head from 60 to 160 ft., developing a maximum of 16,000 hp. each. Power is generated at 11,000 volts, 50 cycles, 3 phase and stepped up to 66,000 volts (110,000 volts later) for transmission to various load centres.

The fourth generating unit recently added was commissioned into service in October 1946.

Power is transmitted to Singarapet in the north and Erode in the south by means of two 66,110 kV. trunk lines (a total mileage of 100 miles) taking off from the Power Station. At Erode the Mettur System is linked with Pykara network. 66 kV. lines have been extended in the north to Vellore, Tiruvannamalai and Villupuram and in the south to Trichinopoly, Tanjore and Nagercoil. To ensure proper voltage regulation two 2,500 kVA synchronous condensers are installed at Trichinopoly.

Considerable lengths of 11,22 and 33 kV. lines have been constructed for extending power to various places. 1,300 miles of high tension lines of all voltages are now in service. There are 24 E.H.T. sub-stations with an aggregate transformer capacity of 52,100 kVA. The number of distribution transformer stations are 259 and have a total capacity of 12,835 kVA.

The Mettur Station is being linked with Madras thermal station by a 110 kV. line between Singarapet and Madras. This inter-connection will enable diversion of the surplus seasonal power at Mettur to Madras thereby saving coal. During dry months Madras will assist Mettur to enable larger firm demand being met in the Mettur System than is possible at present.

Papanasam Scheme.—This is the third hydro-electric scheme to be undertaken by the Madras Government. The first stage of the scheme was started in 1938 and the station commenced operation in July 1944.

The Tarapuram river drops about 300 ft. over the picturesque Papanasam falls at the foot of the Western Ghats in Tinnevely District. The power development consists in regulating the river flow and harnessing the energy that was wasted over the falls. The catchment is benefited by both South-West and North-East monsoons, the latter generally preponderant.

Six miles above the falls a reservoir of 5,500 m.c. ft. is formed by constructing a masonry dam 170 ft. above river bed and 800 ft. long. About 2 mile above the falls the water is diverted from the river course by a weir 1,350 ft. long and 35 ft. high giving a pondage of 28 m.c. ft. for daily regulation. Water is conveyed by two 9 ft. low pressure steel pipes from the diversion weir to the surge tank at the edge of the cliff and from thence through four 60" penstock pipes 520 ft. long down the hill slope to the power house which is located near the Agastya Temple at the foot of the Papanasam Falls. (One low pressure pipe and 3 penstocks only were installed in the first stage. The gross head developed is 330 ft.

Power House.—The generating plant consists of three vertical alternators of capacity 7,250 kVA, 600 r.p.m. coupled each to a Francis reaction turbine of 9,850 B.P.H. The

generation is at 11 kV., 3 phase, 50 cycle and power is stepped up to 66 kV. by means of three 7,250 kVA., 1,168 kV. transformers.

To utilize fully the water that will be available in good rainfall years the fourth generator along with the second low pressure pipe line and penstock pipe are being installed now. They form the second stage of development at this site.

The transmission system extends to Tuticorin, Kollipatti and Madurai, and is linked with the Pykara Hydro-Electric System at Madurai. For purposes of voltage regulation two 2,500 kVA. synchronous condensers are installed at Madurai.

The system has 350 miles of high tension transmission lines, 8 H.T. sub-stations with transformer capacities totalling 21,750 kVA. and 83 distribution transformer stations with an aggregate capacity of 4,142 kVA.

Bulk power to the extent of 3,000 kW. is being delivered to the Travancore Government at the State borders near Shencottah.

Five-year Programme.—During the war years no progress could be made and there was practical stoppage of all new schemes and extensions. The only work done was to complete with great difficulty the few schemes already started. The Madras Government have sanctioned a five-year programme of construction of the following new schemes and extensions.

1. Machkund Hydro-Electric Scheme including extensions to the Vizagapatnam and Bezwada Thermal auxiliary plants.
2. Nellore Thermal Scheme.
3. Madras Thermal Extension Scheme and inter-connection with Mettur Hydro.
4. Ceded Districts Scheme.
5. Moyar Scheme.
6. Pykara Hydro-Electric Scheme Extensions.
7. Madurai Thermal Scheme.

Machkund Scheme. This Scheme is for harnessing the Machkund river in the Vizagapatnam District on the borders of Madras and Orissa, at the Duduma Falls where a gross head of 840 ft. is available. 100,000 kW. of power could be developed at this site, and the scheme is proposed to be worked out in stages.

The initial stage will comprise a diversion dam across the Machkund river, a flume channel, a 3,000 ft. long low pressure tunnel and three penstock pipes leading to the power house. The power station will have 3 generating sets each of 17,250 kW. In the later stage a dam is to be constructed at Jalaput and in the ultimate stage there would be 6 penstocks with generating units of capacity totalling 100,000 kW.

The civil works and power house have to be constructed in co-operation with the Orissa Government, and Madras has undertaken to execute the project works. The work on the scheme has been commenced and the initial stage is expected to be completed by 1951.

A 300 mile 110 kV. transmission line will carry the Madras share of power to Vizagapatnam, Rajahmundry and Bezwada. This scheme will be adequate to supply the power needs of the Vizagapatnam, Godavari, Kistna and Guntur districts. Pending its completion, additional generating plant totalling 9,000 kW. has been ordered for the Bezwada and Vizagapatnam thermal stations to meet the interim demand of the region.

Nellore Scheme.—For the Nellore area a thermal station is planned at Nellore with two 2,500 kW. transportable power sets initially. The sets have been received and the plant will be working next year. The network of this area will be eventually linked with the Southern Grid.

Madras Thermal Extensions.—Supply for the Madras city area is now inadequate, on account of the load exceeding the capacity of the power house. The Madras city power undertaking of the Madras Electric Supply Corporation was acquired by the Government

in August 1947 and steps have been taken to modernise the plant and increase its capacity. A new 150,000 kW. turbo-alternator set has been ordered as also the associated boilers and they would be in service in 1949-50. To meet the growing demand in the meanwhile, two 2,500 kW. transportable power units have been installed as a temporary measure to supplement supply.

A 110 kV., 124 mile line inter-connecting the Madras Thermal Station with the Mettur Hydro Station has been constructed for mutual exchange of power.

Ceded Districts Scheme. The Ceded Districts are proposed to be supplied with power purchased from the Mysore Jog Hydro-Electric Scheme. When the Tungabhadra hydro power station is built around 1952 it will take over the area and supply from Mysore will be stopped.

Moyar Scheme. The Moyar Scheme for developing power from the tail water of the Pykara power station with a head of about 1,280 ft. available at the Moyar Slope, 9 miles lower down, is now under construction.

The main features of the scheme are: 1. A channel about 7,000 ft. long to divert the tail water from the Pykara power station to the adjacent Avarihalla valley. 2. A regulating reservoir of 28 m.c. ft. at Maravakandi 4 miles lower down. 3. A flume channel about 23,000 ft. long from the reservoir to the forebay and headworks at Guruvu-Gowda Hundi. The forebay is to have a storage of 6 m.c. ft. 4. A 7 ft. diameter low pressure pipe from forebay to the surge tank at the head of the penstocks and 3 penstocks 2,880 ft. long in two sections of 45° and 42° to the power station. 5. A power station with three 12,000 kW. 428 r.p.m. alternators coupled to 18,000 h.p. two nozzle vertical type impulse wheels.

Power is to be generated at 11 kV., 3 phase, 50 cycle, stepped up to 110 kV. and transmitted to Pykara and Erode through 110 kV. double circuit transmission lines. This will be the 4th hydro-electric station of the Grid in the Southern part of the province and will meet the increasing demands of the Pykara and Mettur Systems for a few years.

Pykara Extensions.—The final stage of the Pykara project consisting of a second dam across the Pykara river to provide a storage of 2,000 m.c. ft., a new penstock, and two generating sets of 13,500 kW. each at Pykara station has been sanctioned. This will not only meet the power deficiencies of Mettur and Paramasam stations during periods of unfavourable water conditions but will also meet the demands arising out of the large scale industrial and agricultural developments in the southern districts in the near future.

Madurai Thermal Scheme.—To supplement the output in the Hydro-Grid during water scarcity, a thermal auxiliary station at Madurai with an initial capacity of 4,000 kW. is to be built shortly. The plant is under erection.

To handle the additional power that will be generated, additional transmission lines for reinforcing the Grid have also been sanctioned.

These schemes which are all now under construction cover a major part of the province and will result in doubling the existing generating capacity. They are scheduled to be completed before 1952 and will cost Rs. 15 crores.

BIHAR

The most important scheme in Bihar is the Kosi Project now under investigation with the Central Waterpower, Irrigation and Navigation Commission. It will be a multi-purpose project for irrigation, drainage, reclamation of water-logged areas, malaria control, fish culture and recreation facilities. The project comprises a dam, 750 feet high across the Chitra Gorge in Nepal just above the temple of Barahi Kshetra, to store about 11 million acre feet of water, power plant at the dam site capable of generating upto 1.8 million kW of power at 50

per cent load factor, a barrage in Nepal across the Kosi to control and stabilise the river channel, and to divert its supplies into two canals, one on either bank, for irrigating about a million acres in Bihar territory, and a second barrage near the Nepal-Bihar border with two canals on the left and one on the right bank for irrigating over two million acres of land in Bihar. The project is estimated to cost rupees 90 crores. The execution of the scheme is expected to take about ten years.

ORISSA

The unified development of Mahanadi Valley has been decided upon by the Central Waterpower, Irrigation and Navigation Commission and it comprises three units namely the Hirakud Dam Project, the Tikarpara Dam Project and the Naraj Dam Project, each with its own canal system and hydro-electric power installations. The three units are capable of independent development and also of forming an integrated part of the basin wide plan. It has been decided to make a start with the Hirakud Dam Project.

The Hirakud Dam Project comprises the construction of a dam—150 feet high and gross storage capacity of the reservoir 5.3 million acre feet across the Mahanadi about nine miles upstream of the town of Sambalpur, gravity and lift canals on either side and two hydro-electric installations. The project will provide irrigation to 1,004,953 acres of land, generate 350,000 kW and will also provide navigation facilities. The whole scheme is estimated to cost rupees 47.81 crores and will earn an annual return of 4.29 per cent on the sum-at-charge.

ASSAM

Assam possesses large potentials of hydro-power. It has roughly been estimated that it should be possible to generate upto four million kilowatts of continuous power in that province by developing eleven sites on different rivers. These projects would involve storage by construction of high dams involving a total reservoir capacity, during monsoon, of 68 million acre feet. Most of these projects can be designed as multi-purpose schemes for power generation, perennial irrigation, extension and improvement of navigation and flood control.

KASHMIR

A scheme of much importance from its size, but more interesting because of the developments that may be expected from it than for the part which its current supply already plays in the life of the countryside, is one installed forty years ago in the Kashmir Durbur, utilising the river Jhelum near Baniyar about fourteen miles from Baramulla.

The headworks of the Jhelum power installation is situated six and a half miles from the power house, at Mohora and the main connection between the two is a timber flume. These works and the forebay at the delivery end of the flume have a capacity for carrying water sufficient for the ultimate generation of 20,000 electrical horse-power. Four pipes 792 feet long lead from the forebay to the power house and from forebay to water wheels there is an effective head of 399 feet. There are four horizontal water-wheels, each coupled on the same shaft to a 1,000 kVA., 3-phase, 2,300 volt, 25 cycle generator running at 500 r.p.m. The power house is of sufficient capacity to allow of 15,000 kW. generating plant being installed within it. Two transmission lines run side by side as far as Baramulla, 21 miles from Mohora at which point one terminates. The other continues to Srinagar, further 34 miles. The installation at Baramulla was originally utilised for three floating dredgers and two floating derricks, for dredging the river and draining the swampy countryside and rendering it suitable for cultivation.

The lighting of Baramulla has been taken in hand with satisfactory results and the power load is building up. At Srinagar, the line terminates at the State silk factory, where current is supplied not only for driving machinery and for lighting,

but also for heating. The whole of Srinagar city is now electrically lighted and there are a number of power loads.

New Sources.—Besides the Jhelum power installation, there are two other schemes, the Muzaffarabad hydro-electric installation utilising a tributary of the river Kishan Ganga and the Jammu hydro-electric installation. The Muzaffarabad power house has one 130 H.P. pelton wheel directly coupled to a 110 k.V., 3,300 volt, 50 cycle alternator. This serves Muzaffarabad town and Domel on J. V. Road. The Jammu power house employs five generating sets. Of these, one 265 kW. set is driven by a Diesel oil engine and the remaining four, generating among themselves 1,226.5 kW., are driven by water turbines.

In addition to the above schemes, new sources of power capable of feeding large-scale manufacture are being explored in view of the beginning of large-scale industries in Jammu and Kashmir State, being explored. The State has already provided funds from capital expenditure not charged to revenue for the improvement of the State's electrical system. The necessity for augmenting the power supply in the Jammu area being sunny, a steam turbine driven generating plant of 1,500 kW. capacity is being installed for being located at Miran Sahib and connected with Jammu by a 6,600 volt line. This will enable necessary supply of power being made available for Jammu, Jammu Cantonment and Miran Sahib industrialisation. The cost of the scheme is estimated at Rs. 8,41,200.

A hydro-electric scheme with an ultimate capacity for generating 9,000 kW. by harnessing the Sind River near Gauderhal is also under survey and a smaller scheme for supply of power at Palahalam is now in progress, while other smaller schemes for Anantnag and Udhampur are under investigation. The utilisation of the Chenab River for developing a hydro-electric scheme on a large scale is also under consideration.

UNITED PROVINCES

The Ganges Canal Hydro-Electric Grid supplies power at attractive rates for domestic, industrial and agricultural purposes to 14 districts in the west of the Province and to Shahdara in Delhi Province. Seven of the ten falls available for electrification have been developed and stand by steam power stations at Chaudhri and Harduaganj with installed capacity of 10,000 kW have been constructed. The Grid thus has no less than 38,000 kW of installed capacity. A new hydro-electric station at Mohamadpur with an installed capacity of 9,300 kW is under construction. At Harduaganj steam station additional power plant is under erection which will raise the installed capacity of the station from 10,000 kW to 20,000 kW. Besides supplying some 93 towns with current for light and fans and minor industries, the Grid provides energy for irrigation pumping from tube wells and open wells.

The Ganges Valley State Tube-Well Scheme comprises about 2,000 tube-wells, covering the districts of Moradabad, Bijnor, Budaut, Muzaffarnagar, Saharanpur, Meerut, Bulandshahr, Aligarh and Etah, introducing irrigation on the volumetric system over approximately one million acres hitherto without any source of irrigation. This supply of cheap power from some 2,300 sub-stations is already having an important bearing on the economic disposal of crops and the development of minor industries in the urban centres and rural areas.

Investigations into the electrical and financial possibilities of a number of hydro-electric power generating stations have been completed and the work has already commenced on the Sarda Canal Hydro-Electric Scheme with an installed capacity of 41,400 kW. This station will be ultimately linked up with the large steam station at Kanpur and the Ganges Canal Hydro-Electric Grid.

NEW PROJECTS

There are several other schemes under consideration, the more important of them being the Pipri Dam and Power Station Project estimated to cost over 29 crores of rupees. Rs. 19.25 crores for dams and Rs. 10 crores for transmission lines—the Yamuna Hydro-Electric Project estimated to cost rupees 21 crores, the Nayar Dam Project estimated to cost rupees 21 crores and the Ramganga Project at a cost of some 22 crores of rupees.

PUNJAB HYDRO-ELECTRIC PROJECT

Situated on a spur of the Dauladhar Range at elevations ranging between 6,000 and 4,000 feet above sea-level, and connected by means of a tunnel over 15,000 ft. long, are the works of what is known as the Uhl River Hydro-Electric or Mandi Scheme which is now operated by the E. Punjab P.W.D. Electricity Branch with its Headquarters formerly at Lahore.

This project owes its origin to the need which began to be felt in the old undivided Punjab during the War of 1914-18 for making energy available for industrial and agricultural purposes at rates cheaper than were then prevailing.

The site was discovered in the year 1922. A detailed project was prepared by 1923. Work on the construction of the first stage of this scheme was started in 1926. The total capital outlay on the scheme to the end of the year 1944-45 has been Rs. 730.6 lacs.

Due to the extensive nature of the construction works, it was found necessary to build two small temporary hydro-electric power stations one at Dhehu near Shanan and the other at Thuji near the headworks at Brot which were linked together and the combined installed capacity was 1,440 kW.

Water is withdrawn from the Uhl and the Landat Dug River at Brot and conveyed by a 9.25 ft. internal diameter concrete lined circular pressure tunnel which is one of the longest tunnels in the sub-continent and is the first steel mantle tunnel to be built in Asia. The tunnel is about 3 miles long and is designed for a normal full discharge of 600 cusecs (but it can carry up to 800 cusecs if required). The tunnel leads steel penstocks which run down the slope to the Shanan Power Station near Jogindranagar (Mandi State) so as to utilise 1,800 ft. of the total fall thus converting the snow fed waters of the Uhl and its tributary into electrical energy.

Transmission System.—The initial installed capacity of Shanan Power Station is 48,000 kW. The plant consists of four 17,000 H.P. Pelton wheels, running at 428.5 r.p.m. each driven by a single jet of water and connected to a 12,000 k.V., 11,000 volt, 3 phase, 50 cycle alternator.

From the Shanan Power Station energy generated at 11,000 volts is stepped up to 132,000 volts which is the highest voltage adopted for this purpose in the sub-continent. The transmission system comprises a double circuit 132 k.V. trunk transmission line supported on steel towers 80 ft. high normally set 1,000 ft. apart but with spans extending even up to 3,360 ft. in the hills. This line supplies sub-stations at Kangra, Pathankot, Dhariwal, Amritsar and Lahore.

A single circuit 132 k.V. line also runs from Amritsar to Jullundur and is continued at 33 k.V. to serve Goraya and Ludhiana sub-stations. A 66 k.V. single circuit line starts from Lahore and supplies sub-stations at Kasur and Ferozepur while a similar line from Lahore serves sub-stations at Shahdara, Sheikhpura, Chuharkana, Mohlan, Jaranwala and Lyallpur.

From these various sub-stations 11,000 volt lines radiate to supply between them about sixty towns and villages. In addition to serving 31,000 consumers directly from its own mains, the Branch also furnishes bulk supplies

to the N.W.R. for its own Workshops and to the P.W.D. Central Workshops, to two licensees (the Amritsar Municipality and the Jullundur Electric Supply Co.) and also to the Kapurthala State at two points. The connected load at the end of March, 1945 was 59,289 k.V. the total number of units generated being 125,530,190 and the revenue assessed 60.36 lakhs for the year 1944-45.

POST-WAR SCHEMES

During the last World War, though the construction of any major new schemes could not be undertaken, the question of post-war power development in the Punjab area was seriously engaging the attention of the old undivided Punjab Government. As an outcome of detailed investigations a Five Year Post-War Development Plan was approved.

All these schemes, in addition to providing power for thousands of irrigation tube-wells throughout the area, will provide much needed additional power for industrial and economic development.

The possibility of introducing tube-well irrigation in certain parts of the Punjab area adds to the interest of post-war hydro-electric projects. This would enable thousands of acres of hitherto uncommanded land to be brought under cultivation, thereby increasing food supply and also lower the water table very considerably and tend appreciably to eradicate the menace of water-logging in many parts.

Rasul Hydrel Scheme.—This is a special priority scheme and provides for the development of 22,000 kW. of electric power at Rasul head-works from water to be dropped from the Upper Jhelum Canal to the Lower Jhelum Canal with an available average head of 84.75 ft.

The Scheme is estimated to cost Rs. 818.53 lakhs and provides for the construction of a hydro-electric station at Rasul with two 11,000 kW. Kaplan generating sets. It also provides for a double circuit 132 k.V. line from Shalamar (Lahore) to Rasul via Gujranwala, Gujrat and Jhelum and single circuit 132 k.V. line on double circuit towers from Jhelum to Rawalpindi via Gujarkhan. It also provides for: (i) a double circuit 66 k.V. line from Gujranwala to Lyallpur via Hatibzad, Sukheke, Sangla Hill and Chak Jimra, (ii) a double circuit 66 k.V. line from Rasul to Malakwal, (iii) and 66 k.V. and 33 k.V. single circuit lines between Lyallpur and Chinot, Malakwal and Sarodina via Bhuwal, Rasul and Chakori, Malakwal and Bhakra, Hatibzad and Chinawan, Bhuwal and Bhakra and Gujranwala and Sialkot via Baska.

This scheme is primarily meant for providing tube-well irrigation in some of the districts in the western and central parts and the available power is proposed to be utilised in the following manner: (i) Operation of 1,800 tube-wells to be installed on the channels of the Northern Canals of the Irrigation Branch, (ii) Supply of electrical energy for industrial power and lighting in the 'C' and 'D' towns in the districts of Shahpur, Jhelum, Gujrat, Sialkot, Gujranwala, Sheikhpura, Lyallpur and Jhang, (iii) Supply of power to the Uhl River Grid to the extent of 5,000 kW. during the low water period in the Jogindranagar catchment area.

The construction of this scheme has already started and it is scheduled to be ready for operation before the end of 1949.

NANGAL SCHEME

The old Punjab Government had accorded administrative approval to what is known as the Nangal Power Project.

This project provides for a diversion weir across the Sutlej at Nangal, eight miles downstream of the proposed Bhakra Dam, above which a lined canal of 10,000 cusecs capacity will be taken off for two power houses situated at 12 and 18 miles downstream of the weir. Each power house will be operated by a fall of about 98 feet and will have an installed capacity

of 48,000 kW. in the pre-Bhakra stage. The installation at each power house will be augmented by 24,000 kW. in the post-Bhakra stage. The firm power available will be 80,000 kW. and 140,000 kW. in the pre-Bhakra and post-Bhakra stages respectively. The pre-Bhakra stage of the project, including transmission and distribution is estimated to cost Rs. 22 crores.

The Plan: The project provides for: (i) A double circuit 132 kV. trunk line—on 220 kV. towers—from Nangal to Ambala and single circuit onward up to Delhi via Panipat. The towers between Ambala and Delhi will be designed for 220 kV. and stringing of a second circuit in future, if necessary. (ii) A double circuit 132 kV. line on 220 kV. towers between Nangal and Jullundur. (iii) A single circuit 132 kV. line, on double circuit towers, between Jullundur, Ferozpur, Fazilka and Pakpattan. (iv) 66 kV. and 33 kV. branch lines connecting the 132 kV. trunk line grid sub-stations with Karnal, Ambala, Ludhiana, Patiala, Nabha, Faisalabad, Narangarh (Sirmoor State), Khanna, Jagraon, Mozat, Kot-Kapura, Bhadrinda, Muktsar and Abolhar towns. (v) 11 kV. lines and local distribution network for supplying the irrigation tubewells and towns covered by the Scheme.

The Nangal Power Project has been rendered urgently necessary to provide power for the construction of the Bhakra Dam; to provide power for the industrial and economic development of the area; and to provide for tubewell pumping to increase the irrigation supplies on the Sutlej Valley, Sirhind and Western Jammu Canal Systems as early as possible.

The subsidiary advantages of the Project are that: (i) It will obviate material interference with Rupar Head Works and the Sirhind Canal. Apart from the political difficulties thus escaped, there will be a saving of Rs. 165 lakhs. (ii) It will provide a balance reservoir for the Bhakra Dam releases and, by stabilising diurnal variations, will enable the full development of Bhakra power.

MANGLA HYDRO-ELECTRIC SCHEME

This project provides for the generation of 10,000 kW of hydro-electric power at Mangla near the Irrigation Branch Head Works on the Upper Jhelum Canal from a head of 30 ft. and minimum flow of approx. 5,000 cusecs. in the head reach of the canal. It also provides for the linking of this power station by a double circuit 132 kV. line with the 132 kV. grid sub-station at Jhelum which would be constructed under the Rasul Hydrol Scheme.

Addition of a pipe line and two 12,000 kW. pelton wheel generating sets at Jogindranagar is an extension of the existing hydro-electric works of the Uhl River Scheme at Jogindranagar and is meant for developing additional power which, in cold weather periods during shortage of water at the headworks at Brot, will be supplied by means of the Mangla Hydro-Electric Scheme but, when there is a shut down of that generating plant during summer, it will be supplied by these additional sets at Jogindranagar power station which has an ample supply of water in summer to run five machines.

These two schemes are therefore primarily meant to supplement each other during the low water periods at the respective power stations, thus ensuring a constant supply of additional power all throughout the year. The schemes are estimated to cost Rs. 99.52 lakhs and scheduled to be completed in 1951.

THE BHAKRA PROJECT

This is the major post-war hydro-electric project in East Punjab and has been considered in many shapes and forms since it was first submitted about 30 years ago. The project involved protracted negotiations with various States through which the irrigation canals will run, ascertaining as to which of them would like to participate in the scheme and on what terms.

It was only very recently that these protracted negotiations reached a more or less final stage and serious attention could be given to detailed designs of the dam, canals, power station, etc. The work of designing the Dam has finally been entrusted to a firm of American Consulting Engineers headed by Mr. Savage, who is generally considered the best living authority on high dams and has been responsible for the design of such marvels of modern engineering as the Boulder Dam and Grand Coulee Dam in the U.S.A.

The scheme involves the construction of a 480 ft. high dam across the Sutlej at Bhakra in East Punjab and the creation of a reservoir for canal irrigation and development of hydro-electric power.

The Bhakra storage is estimated to have a live storage of approx. 3.5 million acre feet capable of discharging during the 270 days, when natural river supplies are non-existent, a mean discharge of about 6,600 cusecs. It will irrigate the dry famine stricken tracts of Hisar, Rohtak and the adjacent States where no canal irrigation is available at present. It will also generate about 160,000 kW of power. The generating station will be linked up with the transmission system of the Punjab Grid with extensions in the West Punjab up to Multan.

The construction of so stupendous a scheme is naturally a slow job, if full measures of safety and a reasonable economy are to be provided. The construction work has already been started but the scheme is not expected to be completed before 1956.

PATIALA

Patiala Government have recently sanctioned a hydro-electric project which will generate about 16,000 kW of firm power at a load factor of 70 per cent. The project comprises the construction of a dam near Simla on the Asini Nadi about four miles from Kanaghat capable of impounding 165,000 acre-feet of water. The estimated cost of the project is rupees five crores and it will take some four years to complete.

HYDERABAD

The Hyderabad State has decided to proceed with the Nizamsagar Hydro-Electric Project as an immediate post-war measure for bringing hydro-electric power to Hyderabad city. The scheme is intended to utilise the water stored in the Nizamsagar dam and it is expected that electric power varying from about 1,500 kW. as the minimum to about 11,500 kW. as maximum could be generated. It is proposed to install two 4,000 kW. hydro-electric generating sets and to construct 80 miles of 66 kV. transmission lines for supply to Hyderabad city. In this connection a sum of Rs. 85.20 lakhs has been provided in the budget for 1947-48.

There is another scheme known as the Godavari Valley Authority, which is modelled on T.V.A. It is a combined hydro-electric power-cum-irrigation project under which it is proposed to generate 55,000 kW. continuous and to bring under cultivation an additional acreage of 1.25 millions. The scheme also contemplates the creation of a model industrial town with a number of important industries located in its vicinity. A sum of Rs. 291.95 lakhs has been provided in the 1947-48 budget for this scheme.

Tungabhadra Project. An agreement has been reached on the apportionment of the waters of the Tungabhadra river between the Governments of Madras, Mysore and Hyderabad. For the share of the waters, it will be possible for Hyderabad State to utilise three drops in the irrigation canal for generation of hydro-electric power, giving an initial output of about 15-25,000 kW. For this project a sum of Rs. 98.50 lakhs has been provided in the 1947-48 budget.

There are a number of hydro-electric power sites on the Manjira, Kadam and Purna, tributaries of the Godavari and on river Dindi, a branch of Kistna river as well as on the upper

and lower reaches of the Kistna. The actual power potentialities of these sites need detailed investigation.

These irrigation cum-hydro-electric schemes are making a fairly good progress so far as is permissible under existing limitations.

KOLHAPUR

Kolhapur has embarked on the generation of electric power from the water stored in the Radhanagari dam which has been raised to the height of 82 feet. It will be further raised by 44 ft. for which construction is now in progress. The power house will be situated at the foot of the dam and the installation will comprise four 1,200 kW. Kaplan sets operating on 65/110 feet head. The power will be transmitted by means of 32 miles of 33 kV. lines to Kolhapur city for augmenting the water supply to the city, supply of energy to industrial concerns and take over the load from the existing oil engine station. The Radhanagari station will be supplemented by another thermal 1,300 kW. station at Kolhapur which is already in service and is supplying power for emergency irrigation. Both the stations will run in parallel. The scheme is also intended to provide an assured water supply for existing irrigation and new areas that will be put under cultivation by the installation of about 175 electric pump sets in the area served by the transmission lines. Two units will be installed by December 1949 and with the partial storage available, power will be generated and utilised for works and thus form a nursery scheme to build up the electric load later on. As now programmed, the work will be completed in all respects by the end of 1951.

N.-W. F. P.

The possibility of generating electricity at Malakand was first recognised some 25 years ago. The waters of the Swat River to the north of Malakand are utilised for fertilising the northern part of the Peshawar valley by driving a tunnel known as Benton tunnel under the Malakand pass and constructing a canal. It is recognised that by extending it by another half a mile up to a point above the upper Swat canal, advantage could be taken of a natural fall of some 250 feet for the production of electricity.

This scheme was sanctioned in 1934 and a new tunnel known as Burkit tunnel, 12 feet in diameter was constructed. From the tail of the Benton tunnel, water is discharged over a regulating weir into the new power tunnel from which it emerges through an open channel with silt extractor into the forebay. At the remote end of the forebay, a spillway syphon is provided to allow evacuation of excess water automatically in the event of sudden changes of load. From the forebay the water flows through penstock pipes 515 feet long with external diameter varying from 61 inches at the top to 55 inches at the bottom into the power house situated below at Malakand.

The available discharge is 800 cusecs with a total head of 250 feet. The generating plant consists of three reaction turbine sets each generating 3,200 kW. at 11 kV, 3 phase, 50 cycles. The pressure is stepped up by transformers to 66 kV and power transmitted by a 30-mile double circuit line to Mardan and thence by 74 miles of single circuit ring main to Peshawar Cantonment, one line passing through Charsadda and the other through Risalpur and Nowshera. 140 miles of 11 kV branch lines are also provided for serving important towns and rural areas in the Province. The scheme came into operation in 1938.

The hydraulic works and the power house have been designed for the installation of three more generating sets at a future date. Two additional sets each of 5,000 kW. are on order and will be installed early in 1950.

An extension of the 66 kV transmission system to Wah and Haripur is now in progress and a further extension to Kohat is in hand.

A 33 kV transmission system is also proposed for Swabi and Saidu Sharif, the capital of Swat State.

A second power station at Dargai has been sanctioned and work has already been taken in hand. This station, which will have an installed capacity of 20,000 kW, will utilise the tail race of water from the Malakand station, the fall being 250 feet high.

Preliminary work has also been commenced on a scheme to dam the Kabul River at Warsak near Peshawar. The dam will be 170 feet high and the hydro-electric power station will have an installed capacity of 135,000 kW. The power thus made available will be used to supply a large area of the West Punjab. The scheme is expected to be completed in six years.

WEST BENGAL

The Damodar Valley Project which is the most important scheme in the province will provide perennial irrigation to three quarter of a million acres and generate 300,000 kW of electric power. The irrigation to be provided by this project is anticipated to give the cultivators an additional income of rupees six crores every year. The project comprises a number

of dams. The additional advantage of the scheme will be the reduction in yearly flood damage from the Damodar. The scheme is expected to cost rupees 55 crores. The Central Government have already passed an Act for the formation of a semi-autonomous Damodar Valley Corporation.

BHOPAL

To generate electric power badly needed to help industries develop in Bhopal the Government sanctioned the Kolar Nadi Hydro-Electric-cum-Irrigation Project, estimated to cost rupees four crores. A storage reservoir to be constructed across the Kolar Nadi, a tributary of the Narbada will have a storage capacity of about 390,000 acre feet. The water stored during rains will be utilised, at first, for generating 16,500 kW of electric power. The tail water will be picked up lower down and utilised for irrigating 96,000 acres of land.

JODHPUR

The Jawai River Irrigation-cum-Hydro-Electric project, in Jodhpur now under execution was taken in hand as early as in 1946. The main dam and the masonry gravity structure is almost completed. The reservoir across the river Jawai has a capacity of 0.17 million acre

feet and besides irrigating some 110,000 acres, will supply water for two generating stations, 1,570-kW maximum output at the canal head and 2,530-kW maximum output at the canal tail where a drop of 92 feet occurs. The cost of the scheme is estimated at 1.67 crores of rupees.

RAJPUTANA

The Chambal Hydro-Electric scheme is the first of a series of reservoirs in the contemplated multi-purpose regional development of the Chambal Valley. It comprises the construction of a dam about 200 feet high across the river Chambal near Chaurasgarh. The reservoir will have a storage capacity of 6.89 million acres feet. Power produced will be 28,000 kW continuous.

Two pick-up weirs proposed downstream are one each in Mewar and Kotah territories. It is expected that power stations to be constructed at these weirs will generate 68,000 kW and 56,000 kW respectively at 50 per cent load factor.

The total cost of the whole scheme is estimated at rupees 22.5 crores.

[See also article on power resources in the Pakistan section.]

AGRICULTURE

THE agriculture of the sub-continent with its wide range of physical and climatological conditions, varies considerably in character and scope. There is scarcely any cultivated crop of the Temperate, sub-tropical or tropical zone which cannot be grown in some part of this vast region from the warm humid coasts to the perennially temperate altitudes of its mountain ranges.

The total area of cultivable land in the sub-continent is about 354 million acres, which is exclusive of a forest area of approximately 68 million acres. The total gross cropped area sown annually is roughly 217 million acres. Of this vast area, 198 million acres are under cereal and pulse crops of all kinds which supply food and fodder for a human population of 400 million and an animal population of 350 million head of cattle, sheep and goats.

In the sub-continent's agriculture, the dominant climatological factor is the monsoon and, in most parts of the country, the total annual rainfall is precipitated between the months of June and October. The winter and early summer months are generally dry and high temperatures prevail in the months of March to June, prior to the break of the monsoon rains. Thus the agricultural season is naturally divided into two main sub-divisions: the Kharif season of the monsoon and the Rabi season of the cold weather. Each of these seasons has its own distinctive crops. The greater part of the Indo-Gangetic plain and the northern tracts of the Peninsula are served by the main monsoon which falls between June and October. During these months the average rainfall for the whole of the sub-continent is about 47 inches, varying from 15 (or less) to 60 inches in the main cultivated tracts. Rainfall in the cold weather season between December and March is generally not more than 2 to 4 inches. The bulk of the rainfall in the south of India, including most of the Madras Province and a large part of the territories of the States of Hyderabad and Mysore, is received from the north-east monsoon and falls during the period October to February.

SOILS

Four main soil groups can be recognised in the sub-continent, *viz.*, (1) the red soil derived from rocks of the Archaean system which characterizes Madras, Mysore and the south-east of Bombay and extend through the east of Hyderabad and the Central Provinces to Orissa, Chota Nagpur and the south of Bengal, (2) the black cotton or *regur* soils which overlie the Deccan tract and cover the greater part of Bombay, Betar and the western parts of the Central Provinces and Hyderabad with extensions into Central India and Bundelkhand; the Madras *regur* soils though less typical are also important, (3) the great alluvial plains, agriculturally the most important tract in the sub-continent as well as the most extensive mainly the Indo-Gangetic plain embracing Sind, Northern Rajputana, most of the Punjab area, the plains of the United Provinces, most of Bihar and the Bengal area and half of Assam, and (4) the laterite soils which form a belt round the Peninsula and extend through East Bengal into Assam and Burma.

The increasing demands on the land from a constantly rising population have called forth greater attention to the question of more effective land utilisation. A considerable amount of scientific work is thus being done on all these groups to a greater or lesser extent throughout the sub-continent, both as regards their classification and their crop-producing power. Soil studies have been given a new orientation and have received fresh stimulus due to the concept of the "soil-profit" or entire vertical cut of the soil being taken as the unit of study instead of the superficial layer supporting vegetation.

Survey.—A notable instance of such work is the recent classification of the black cotton soils of the Bombay Canals and the investigations regarding their suitability for sugar cane crop. The importance of soil survey and soil-mapping by Genetic Methods is being gradually recognised in different parts of the country. In the Bombay Province such survey and mapping has been in progress in several sugar factory estates of the Bombay-Deccan since 1940 on a contract basis. The surveys of the estates of 8 sugar factories and 2 gur factories, comprising an area of over 60,000 acres, have been carried out, of which varietal, manurial and irrigational technique for maximising sugar production on economic limits are being worked out. A scheme for land utilisation survey for crop-planning of the Province as a part of Soil Conservation Research has been proposed for the maximum exploitation of the country's resources for making the Province self-supporting in respect of food, fodder and clothing.

At the Indian Agricultural Institute, Delhi, the collection of data on soil survey available in the various Provinces and States has now been completed after three years of work and will be shortly published. The important question of soil conservation and development is receiving greater attention and considerable work on both the aspects has been taken in hand, particularly in the Punjab area and in Bombay. The erosion survey carried over 50,000 acres in the sandy areas of the Bombay Province has revealed that nearly 70 per cent. of the land has already been eroded.

Desert Soils. In addition to the four main groups of Indian soils mentioned above, the desert soils of the sub-continent occupy a large tract in eastern Sind extending over the whole length of that Province, along the edge of the Indus alluvium, Rajputana and the south Punjab area of which the Thar Rajputana desert alone occupies an area of 30,000 square miles. Alkali soils also form an important group of Indian soils which are known as *reh* or *usar* in the United Provinces, *kalar* in Sind, *rakkar* and *thar* in the Punjab and *chopan* or *kari* in Bombay Province. Such soils are characterized by a high degree of impermeability and "stickiness" together with high alkalinity and frequent presence of large excess of free salts. They are usually poor in nitrogen and humus and unsuitable for crop growing without previous reclamation. A considerable amount of working the reclamation of these soils has already been done in the Punjab area, Sind and Bombay which shows the possibility of bringing these unproductive lands back to cultivation. Forest soils occupy a large part of the sub-continent. Investigations on the nature of soil profiles of the Chauthia Hill in U.P. and of the Kulu Forest in the Punjab area indicate that these soils belong to the Brown-Earth and Podsol groups.

AGRICULTURAL EQUIPMENT

In the sub-continent farming is carried on with the minimum of capital and there is practically no outlay on buildings, fencing and agricultural machinery. The cultivators are for the most part illiterate and agricultural indebtedness is high and rates of interest on loans charged by money-lenders are heavy. During the past twenty years, much progress has been made by the co-operative credit movement in many provinces. In recent years, it was found necessary to supplement co-operative credit by the development of non-credit activities through multipurpose societies: Taluka, District and Provincial Purchase and Sale organizations and the establishment of regulated markets with a view to creating an effective link between credit and marketing. For increasing production, co-operative farming, crop protection and irrigation societies are also being organised on a large scale with financial and other assistance from Government. Such societies have proved of great value to the cultivators and in combination with mea-

sures for debt redemption, regulation of money-lending business, prescription of minimum rates of interest, provision of agricultural finance through co-operative societies, central banks and land mortgage banks, liberalisation of tagavi loans, initiation of *Sarvodaya* development schemes, etc., will contribute largely to improvement in the economic condition of the agriculturists. (See article on 'The Co-operative Movement'.)

Livestock.—Practically all cultivation in the sub-continent is done by bullocks and the efficiency and capacity of these in different districts varies considerably. The best types in common use are capable of handling what would be considered as light single-horse implements in Europe. Bullock power is also used for raising water from wells for field irrigation, for driving the chaff-cutter and the sugar cane crusher and for treading out the grain in the threshing yard. In general, the Indian cultivator cares well for his draught bullocks which, in most cases, constitute the most important part of his moveable property.

Implements.—In general, cultivating implements are few and simple and remarkably well suited for the tillage operations for which they have been evolved. The ploughs are usually of wood, tipped with an iron or steel point, and stir rather than invert the soil. Iron ploughs are also extensively used in some districts. A heavy wooden beam is commonly employed to serve the combined purposes of roller, clod-crusher and soil-compactor. In the black cotton soil areas, the *bakhar*, a simple type of broad-bladed harrow, is in general use. In many Provinces, seed drills or seed tubes are utilised for drilling the crops in rows to facilitate inter-cultivation. In less advanced tracts, the seed is merely broadcast and ploughed into the soil. Practically no harvesting machinery is in use, the crops being cut or gathered by hand and threshed—in the case of grain crops—under the feet of bullocks. Cereal crops are winnowed by the agency of the wind although cheap mechanical winnowing machines, designed by agricultural engineers, are receiving attention from the more advanced cultivators.

With reference to the introduction of improved agricultural implements, this work is now being largely done by private business and agencies which are extending rapidly in the rural areas. Work on mechanical cultivation is still largely in an experimental stage though tractor ploughing has proved very effective in the eradication of deep-rooted weeds in the United Provinces, Bombay and certain States. One notable development of recent years in connection with agricultural implements is the large extent to which improved types are now being manufactured and sold by village craftsmen.

Land Development.—Considerable attention is paid in many parts of the country notably in Bombay and the Punjab area to land development measures designed to check erosion from torrential and excessive rainfall and to the preservation of soil and moisture, which are essential for the successful growing of crops. In Bombay a Land Development Section of the Agricultural Department was formed in the year 1943-44 and this has now been renamed as Soil Conservation Section. This section is undertaking large scale projects of Land Improvements which include bunding or terracing of the cultivated lands and trenching and afforestation of uncultivable lands lying in the upper catchments or water-sheds—all on contour alignments. This provides labour for the scarcity or famine areas and will help to protect them from famine or scarcity in the future. The total acreage so far improved and protected in the Province is over six (6) lakhs of acres. The Section now carries out bunding and land improvement works in light and medium soils and attends to the maintenance

of bunds, etc. Investigations are in progress with a view to evolving a technique for carrying out bunding in deep black soil areas.

The Dry Farming Section which attends to the biological part of soil conservation work and also the maintenance of the bunds or terraces. Dry Farming methods are introduced in all such areas which are improved by bunding. Experience gained during the last three years has demonstrated to the cultivators that terracing and dry farming give considerably increased yields both of grain and fodder. These beneficial effects tend to increase with time.

The original Bombay Land Improvement Schemes Act has now been considerably amended in the light of experience gained and is applied to several water-sheds.

CULTIVATION AND TILLAGE

The improvement of the ordinary cultivation and tillage methods in common use in the sub-continent offers a vast field for increasing the yields of field crops and, consequently, the profits of the agriculturists. In many parts cultivation is good but, particularly in the non-irrigated tracts and in areas liable to failure of rainfall, there is much room for improvement. The research work done on dry farming methods conducted under the auspices of the Indian Council of Agricultural Research points to the great benefits accruing from thorough cultivation including occasional ploughing and manuring, repeated harrowings and inter-culturings, wider spacing and lower seed rates.

The main object of tillage methods for *rabhi*, i.e., for cold weather crops, is the conservation of soil moisture and the preparation of a good seed-bed to ensure germination of seeds. To achieve these objects, repeated harrowings are given which produce good surface mulch over a moist sub-soil. The practice of drilling the crops with wider spacings permits inter-cultivation of the crops by hand implements and the use of low seed rates reduces the competition for moisture. For *khurif*, i.e., monsoon crops, the preliminary cultivation of the fields is less intensive. Dry farming researches so far done in the sub-continent deal mostly with cereal crops which are mostly erosion-permitting; and erosion-resisting crops like legumes have not been tried. Recently, these legumes such as groundnut, *Mutki* (*Phaseolus acontifolius*) and *Hulga* (*Dolichos biflorus*), have been found to be very successful in controlling erosion and run-off and in increasing crop yields when grown in strips on contours below the erosion-permitting crops. This technique, known as contour strip cropping, has now been taken up for detailed study in the Bombay Province.

Two economic factors which tend to keep down the standard of cultivation in many Provinces are the fragmentation and sub-division of holdings, resulting from Indian laws of inheritance, and certain systems of land tenure whereby the cultivator, as tenant, has no interest in permanent improvement of his holding. In addition, the agriculturists rarely live on their lands but congregate in villages for mutual protection. Efforts are now being made in many Provinces to eliminate these factors, which contribute to a low standard of cultivation.

IRRIGATION

The chief characteristics of Indian rainfall are its unequal distribution throughout the country, seasonal irregularity of precipitation and liability to failure or partial deficiency in many tracts. The average annual rainfall for the whole country is about 45 inches and there is little variation from this average from year to year. But, within individual tracts, remarkably wide variations in total annual rainfall are found. At many recording stations, annual rainfall of less than half the average precipitation are not uncommon, and in cases of extreme drought, less than one-quarter of average rainfall has been recorded in precarious tracts. Such tracts include the United Provinces except the submontane regions, a large portion of Bihar, most of the Madras and the Bombay Provinces, omitting the coastal belts,

and portions of the Central Provinces. The canal system of the sub-continent is by far the largest in the world. Of the total cultivated area of 217 (1945-46) million acres, about 59 million acres are irrigated annually from one source or another. Of this huge area, 30 million acres are irrigated by canals, 14 million acres by wells and 13 million acres from tanks and other sources. Protective irrigation works have made agriculture more stable instead of precarious in many districts. (For details see article on Irrigation).

About one-quarter of the total irrigation of the country is got from lifting water from wells ranging in depth from a few feet to over fifty feet. Their numbers have greatly increased in recent years largely through Government advances for their construction. The recurring cost of this form of irrigation has, however, greatly increased owing to the high price of draught cattle and the increasing cost of their maintenance.

All agricultural departments are now giving increased attention to the better utilisation of underground water-supplies, existing wells being improved by boring and tube wells of large capacity installed and equipped with pumping machinery. In scarcity areas the large scale bunding operations undertaken by the Bombay Department of Agriculture will lead to the increase in the water-supply of wells. Efficient types of water lifts are rapidly replacing the old-fashioned *nibha*.

Tank irrigation is common in Central and Southern India. Large quantities of rain water are stored in lakes (or tanks) during the rainy seasons and distributed during the drier seasons of the year. Often the indirect effect of the tank in maintaining the sub-soil water level is as important as the direct irrigation.

Construction of temporary Bandharas across streams and small rivers after heavy monsoon period is over is also common in parts of Bombay and Madras Provinces for irrigation during the drier *rabhi* period. The Government of Bombay has recently opened a separate Department for increasing such minor irrigation works throughout the Province. This Department will also be responsible for lift irrigation works at suitable sites along perennial rivers.

Manures and Manuring.—The great bulk of Indian soils are deficient in organic matter. In the other agricultural countries of the world, this want is usually met by the return of farmyard manure to the land or by the use of compost made from crop residues and similar waste organic materials. In India however, cattle dung is largely utilised for village fuel but the practice of composting is now being rapidly developed in many areas. The cultivation of green manure crops is making headway, especially in the irrigated tracts, and many Provincial Governments allow concessions to encourage their extension. The use of certain oil-cakes, especially groundnut and castor cake, is on the increase and this method of manuring is now common with many irrigated crops. With regard to artificial fertilisers, nitrogenous organic manures, e.g., ammonium sulphate and nitrate of soda, are being extended in use through the efforts of departmental and private agencies and the question of the manufacture of such manures is now receiving close attention of the Government of India and Provincial and State administrations. A factory for the manufacture of ammonium sulphate in India has been established at Sindhri in Bihar.

RICE

Rice is the most extensively grown crop in India, and on an average, occupies about 28% of the total cultivated area of the sub-continent. It preponderates in the wetter parts of the country viz., West Bengal, Bihar and Orissa, and Madras. The area fluctuates slightly around 72 million acres in the sub-continent and the yield is about 27 million tons. In 1945-46, total area under rice in the Indian Dominion and States was 58,112,000 acres with a total yield of approximately 18,463,000 tons. The crop requires for its proper maturing a moist climate with well

assured rainfall. The cultivated varieties are numerous differing greatly in quality and in suitability for various conditions of soil and climate.

Rice is either broadcast, drilled or transplanted. Broadcast rice is grown generally on high lands of the paddy areas where moisture is less, and the crop is sown in the beginning of the monsoon with the help of the rain-water. Sprouted seed is also sown broadcast in standing water after the onset of the monsoons, particularly in the salt-land paddy areas.

For transplanted rice the seedlings are raised in the nursery generally located in a high lying portion of the field and the nursery is rubbed or burnt over with cowdung or brush wood and grass. The seedlings get ready for transplanting within 4-5 weeks after sowing. The soil is generally prepared after the arrival of the monsoon and is worked into a puddle before the seedlings are transplanted. The seedlings are planted either singly or in small bunches containing from 4 to 6 plants each and are simply pushed into the mud at distances of 6 to 9 inches apart. The rice-fields are kept more or less under water until the crop shows signs of ripening. The area under improved varieties of rice distributed by the agricultural departments is now over 4 million acres. As a result of various schemes for the intensification of research on rice in all the principal rice-growing provinces financed by the Indian Council of Agricultural Research improved varieties to suit different areas have been evolved and are being distributed now.

The sub-continent consumes more rice than it produces, the balance in the past having been provided almost entirely by Burma. Imports in 1944-45 were 986,000 tons, mainly from Burma, Siam and French Indo-China.

WHEAT

Wheat is grown widely throughout the north as a winter crop the United Provinces and East and West Punjab supplying about two-thirds of the total area, and nearly three-quarters of the total output in the sub-continent. This crop occupies, on an average, about 10 per cent. of the total cultivated area. The majority of the varieties grown belong to the species *Triticum vulgare*. Bombay mostly grows durum wheats in which a number of improved strains are evolved and are spreading rapidly. A new improved wheat, called Nipad-4, having the blood of durum, indurum and discurum wheat species has been recently evolved with exceedingly good baking quality. Indian wheats are generally white, red and amber coloured and are mostly classed as soft from a commercial point of view. Most of the Indian wheats are soft weak wheats but there are some well-known Maccaroni wheats amongst them. The largest wheat acreage of recent years was that of 1933-34, namely, 36 million acres but the yield did not come up to the record harvest of 1939-40 which exceeded 104 million tons. Recent crops have averaged about 9 million tons per annum which is only slightly, if anything, above internal requirements. In 1945-46 the total area under wheat in the Indian Dominion including States was 24,546,000 acres with a yield of 5,912,000 tons. With the development of irrigation in the newer Punjab Canal colonies a further increase in wheat production is certain. The crop is generally grown after a summer fallow and except in irrigated tracts, depends largely on the conservation of the soil moisture from the previous monsoon. On irrigated land 2 to 4 waterings are generally given. The crop is generally harvested in February to April and the threshing and winnowing go on up till the end of May. The total area under improved varieties of wheat is now over 8 million acres. The Indian Council of Agricultural Research has appointed two Standing Committees to advise on problems connected with rice and wheat. The rust epidemic causes great damage to the wheat crop and a comprehensive scheme to check this menace is being financed by the Government of India.

MILLETS AND PULSES

These constitute one of the most important groups of crops in the country, supplying food for the poorer classes and fodder for the cattle. The varieties vary greatly in quality, height and suitability to various climatic and soil conditions. Perhaps the two best known varieties are Jowar (*Sorghum vulgare*) the great millet, and Bajra the Bulrush millet (*Pennisetum typhoides*) which, between them, occupy about 50 million acres in the sub-continent.

In 1945-46, the total area under jowar and bajra in the Indian Dominion including States was 61,754,000 acres excluding the former States. Generally speaking the jowar requires better land than the bajra and the distribution of the two crops follows the quality of the soil. Both the crops are generally sown in the beginning of the monsoon and so they require to be thoroughly weeded. It is often grown mixed with the several pulses especially Arhar (*Canarium cajan*—pigeon pea) and other crops, and is commonly rotated with cotton. The subsidiary crops are harvested as they ripen either before the millet is harvested or afterwards. In some provinces like Bombay *rahi* jowar is also an important crop.

Pulses are commonly grown throughout the sub-continent in great variety and form the backbone of agriculture since even the present moderate degree of soil fertility could not be maintained without leguminous rotations. They are a primary necessity in the food of a vegetarian population. The yields on the whole are fairly good, mixed cropping is common. The principal pulses are Arhar (*Canarium cajan*), gram (*Cicer arietinum*), various species of *Pisum* and *Pisum*. The Indian Council of Agricultural Research is financing co-ordinated schemes with the object of evolving high-yielding disease-free and draught-resistant strains of millet and pulses. These schemes are in operation in various provinces and states.

COTTON

Cotton is one of the most important commercial crops in the Indian Union. The average area under cotton in the triennium ending 1938-39 was 21.0 million acres and the average yield 4.1 million bales of 400 lbs. each. During the three-year period ending 1946-47 the average annual acreage and yield in the Indian Dominion decreased to about 11.7 million acres and 2.1 million bales, respectively. In 1947-48, the estimated area and yield were 10.9 million acres and 2.1 million bales, respectively. The ascertained area under improved varieties of cotton in 1947-48 was about 5.1 million acres. The consumption of Indian and Pakistan cotton in mills in the Indian Union amounted to 3,575,000 bales in 1947-48. The principal export is of medium and short staple cotton below 7/8" in staple. There is no Indian cotton belt; Bombay Province, the East Punjab, the Central Provinces and Berar, Madras Province, and the United Provinces and the State of Hyderabad, all have important cotton tracts producing distinct types. Sowing and harvesting seasons are equally diverse, the former extending from May to December in different parts of the country and the latter from October to May and June. Yields vary greatly in the best irrigated tracts the normal yield is about 200 lbs. of ginned cotton per acre and yields much above this have been recorded, whilst in the poorest unirrigated tracts 60 lbs. per acre is a good crop. Of recent years, as the result of the work of the Agricultural Departments and the Indian Central Cotton Committee, the quality and yield of staple cottons have improved and also the yield and cleanliness of the produce from the short staple tracts.

The Cotton Transport Act, the Cotton Ginning and Pressing Factories Act, the Bombay Cotton Markets Act (now the Bombay Agricultural Produce Markets Act), the Central Provinces Cotton Markets Act, the Madras (Commercial Crops) Markets Act and the Punjab Agricultural Produce Markets Act have all been passed at the instance of the Committee and are doing much

to check adulteration and promote better marketing. In certain Provinces, legislation has been enacted, or is under consideration, with the aim of preventing the growing of very inferior varieties and of stopping certain malpractices which affect the quality and reputation of Indian cotton. Agricultural Departments have continued their campaign of cotton improvement apart from improvements in methods of cultivation.

SUGARCANE AND SUGAR

The Indian Union after the partition, owns as much as 90-95 per cent. of the total cane acreage and sugar production of the undivided sub-continent. The annual output of the industry is over a million tons of white sugar, about a lakh of tons of Khandsari sugar and about 3 million tons of Gur. The area under cane was 3,784,000 acres. In 1947-48, The U.P. and Bihar are the main sugar producing Provinces, which together produce about 70 per cent. of the total sugarcane grown in the country and nearly 70-75 per cent. of the total white sugar.

The history of the modern Sugar Industry in India virtually began in 1932, when the Government of India adopted a policy of discriminating protection which stimulated vigorous activity so that the number of factories increased from 32 to 164. The gain to the country is that from the year 1942-43 onwards almost no sugar has been imported to meet the demand in the country. Today, the number of people engaged in the cultivation of sugarcane, sugar factories, research stations, sugar trade, is well over 2 millions, and the Sugar Industry has grown into one of the largest industries in India and is second in importance only to cotton textiles.

The cultivation of improved varieties of cane has been steadily expanding; old and indigenous varieties have been replaced to the extent of 85 per cent. by canes of high quality, mainly bred at the Sugarcane Breeding Station, Coimbatore. A net of sugarcane research stations has been spread in all sugarcane growing tracts of India for testing out the Coimbatore canes under different sets of soil and climatic conditions.

The minimum quantity of sugar per diem per adult, required in a well-balanced diet is said to be 2 oz., the target of sugar production for the Indian Sugar Industry falls very much short of this requirement and consequently it will have to be very nearly doubled in the near future in order to meet the increasing demand of sugar and Gur. It is estimated that the target of sugar production should be about 16 lakh tons per annum.

The Indian Central Sugarcane Committee was constituted in November, 1944, and is responsible for the improvement and development of the industry connected with sugarcane and its products, marketing and manufacture of sugar and to initiate agricultural, technological and economic research on sugarcane production, distribution, and testing of improved varieties of cane, Gur, sugar, and their by-products, the improvement of crop forecasts and statistics, as well as the adoption of improved cultural and manual practices. There are still the problems of banking and transport of cane and sugar to be studied.

The Indian Central Sugarcane Committee besides financing the Provincial Research and 5-year Development Schemes for the improvement of the Sugarcane Industry at a cost of Rs. 75 lakhs, has planned to establish, at an early date, at Lucknow, a new Institute of Sugar Technology and Sugarcane Research of its own, which is expected to be the largest of its kind in Asia. A model sugar factory will also be erected there to provide opportunities of applying results of research on a factory scale and to impart the much needed technological training on a scientific basis to the post-graduate students for fitting them for future absorption into the industry. This Institute is also expected to provide greater integration and fuller co-ordination in investigations on Sugar Technological and Sugarcane problems which have been lacking to a great extent up to the present moment.

OILSEEDS

The crops classified under the heading are chiefly groundnuts, linseed, sesamum and the cruciferous oilseeds (rape, mustard, etc.). Although oilseeds are subject to great fluctuation in price and the crops themselves are more or less precarious by nature, they cover an immense area. The Indian Council of Agricultural Research has been financing the co-ordination schemes on breeding, control of pests and diseases and storage in different Provinces and States. High-yielding strains have been evolved under these schemes and these are being popularized among the cultivators. Control measures for various diseases and pests embracing all oil seeds are recommended under the co-ordinated schemes. The work relating to oil seeds has now been taken over by the newly created Indian Central Oilseeds Committee.

The sub-continent has the largest area under groundnuts in the world. Madras ranks first, claiming more than 50 per cent. of the acreage and production, and is followed by Bombay and Hyderabad. The area under this crop in the Indian Dominion including States in 1945-46 was 10,273,000 acres. In that year the yield was approximately 3,466,000 tons.

Linseed requires a deep and moist soil and is grown chiefly in the Central Provinces, Bihar and United Provinces. The crop is grown for seed and not for fibre and therefore, has developed a shorter and branching habit of growth. The yield varies from 400 to 500 lbs. per acre. It is grown chiefly for export. The area under linseed was 3,260,000 acres with a yield of 352,000 tons in 1945-46.

Sesamum (Gingelly) is grown all over the sub-continent. In some places it is grown as a non-season crop and in others as a winter crop. In 1945-46, it occupied an area of 3,746,000 acres with a yield of 354,000 tons.

The Cruciferous Oilseeds form an important group of crops in the north of the sub-continent where they grow freely and attain a fair state of development. The area under rape and mustard, including an estimated figure for the area grown mixed with other crop is about 54 to 7 million acres annually. Production in 1945-46 was 714,000 tons from an area of 4,322,000 acres. A large portion of the crop is crushed locally for domestic consumption.

JUTE

Jute is one of the most important cash crops. The fibre is obtained from the bark of two cultivated species of annual plants called *Corchorus capsularis* and *Corchorus olitorius*.

Jute is grown in the alluvial soils of East Bengal (Pakistan), West Bengal, Bihar, Assam, Orissa, the States of Cochin, Behar, Tripura and in parts of U.P. East Bengal now contributes about 71 per cent. of the total acreage. In 1948-49, the acreage in India was 0.77 million acres and in Pakistan 1.9 million acres, the output being 20.3 lakhs and 54.8 lakhs bales (one bale 400 lbs.) respectively for India and Pakistan. It is a kharif crop and is sown broadcast during February to May on well prepared seed beds. Two to three inches of rainfall during sowing and alternate periods of sunshine and moderate rainfall (about one or two inches every week) thereafter, seems ideal for a good growth of the crop. It responds well to weeding and thinning operations which are usually given 2 or 3 times during the growing season.

The plants often grow to a height of 12 feet or more. Four to five months after sowing when they are in flower the plants are cut close to the ground. Cut plants are tied up into bundles and steeped under water for retting. In 12 to 25 days, the retting is complete; the fibre is then carefully separated out from the stalks, washed and dried. It is then ready for various commercial uses. The outturn of dry fibre of jute generally varies from 12 to 25 mds. with an average of 15 md. per acre, depending upon soil fertility and other factors.

Quality in jute is judged by its strength, fineness, colour, lustre, length and uniformity. The types of goods ordinarily manufactured from jute fibre in India are hessians, sackings, canvas and tarpaulins; certain 'specialties' for example, rugs and carpets, linoleum hessians, jute blankets, etc., are also made on a small scale. During the Second World War, jute was put to many new lines of manufacture such as sandbags, union fabrics (jute-cotton), tents, hood-cloth, netting, cords, etc., which were used for war purposes.

Compulsory restriction of jute acreage which came into force in the United Bengal in 1941 is still being continued both in West Bengal and Eastern Pakistan. In the former Province, however, some amount of relaxation has been allowed since 1948 with a view to giving an impetus to the production of more jute. Total areas under the crop in India and Pakistan together during the years 1941, 1945, and 1946 were 2,103,555, 2,421,670 and 1,880,010, respectively, and the corresponding yields were 6,203,255, 7,901,070 and 5,550,465 bales, respectively. The total areas put under this crop in India in 1947 and 1948 were 651,785 and 765,005 acres, respectively, and the yields obtained were 1,695,970 and 2,026,575 bales, respectively. In Eastern Pakistan, the jute acreage in 1947 and 1948 were 2,608,670 and 1,870,565, giving yields of 6,812,605 and 5,479,005 bales, respectively.

The annual world consumption of jute during the period from 1928-39 to 1947-48 varied from 77 to 113 lakhs of bales, the consumption in 1947-48 being 100 lakhs of bales.

During 1947-48, the jute trade was confronted with raw jute supply problem and transport difficulties consequent upon partitioning of India. Good demand was, however, in evidence in all sections of the market with prices rising considerably.

TOBACCO

The tobacco acreage in India is not uniformly distributed but is concentrated in certain areas which form distinct tobacco growing centres of considerable commercial importance. There are 5 zones of concentrated production, viz.:-

(1) *North Bengal Area*. A major portion of this area has gone to Pakistan. It now consists of the districts of Jalpaiguri, Malda, Baranagar, and W. Dinajpur of West Bengal and Cooch Behar State.

(2) *The Churdar (Gujarat) area* comprises the talukas of Anand, Nadiad, Godsad, Petlad and Bhadrach of Bombay Province.

(3) *Nipani area* includes Belgaum, Satara, Kolhapur, Sangli and Miraj in Bombay Province.

(4) *Guntur area*: This is the most important Cigarette Leaf (Virginia Tobacco) producing area which runs along the eastern coast with concentrations in the Guntur District of Madras. In the course of a few years the acreage under tobacco in this area has exceeded one lakh.

(5) *North Bihar area* comprises the districts of Muzaffarpur, Purnea and Darbhanga in Bihar.

Tobacco seed is first grown in raised seed beds for providing good drainage and for preventing stagnation of water. Seedlings are ready for planting in about 6-8 weeks. By then they would have grown to a height of about 4 to 5 inches with 6 to 8 leaves. The seedlings are transplanted in lines, the distance varying from 15"-21" in rows and about 2" to 3" between rows.

Topping is done in the production of Desi or Poorbi Tobaccos grown in North Bihar and U.P. and the Calcutta variety grown in U.P., Punjab and Delhi. It is useful for increasing the strength of tobacco used in hookah and chillum, etc.

The harvesting season varies from place to place depending upon the different climatic conditions and the types of tobacco grown. However, the leaves are cut when fully matured and at this stage they assume a yellowish green colour in the case of *Virginia Tobacco*, brownish

yellow in the case of *Cigar & Cheroot Tobacco*, yellow with reddish brown spots in *Bidi Tobacco*, and yellow with brown flecks in the case of *Hookah, Chewing and Snuff Tobaccos*.

The cut leaf is then dried and cured.

The total area under tobacco in the sub-continent for the year 1943-46 was 784,320 acres and the figure for the year 1946-47 (for Indian Union only) amounted to 515,269.

The total yield of dried leaf was 697,563,000 lbs. for the year 1943-46 and 420,090,480 lbs. for the succeeding year (Indian Union only).

It excludes the quantity retained for personal consumption by the growers—which is estimated at 34,165,000 lbs. for the year 1945-46 and 16,024,858 lbs. for the year 1946-47 (Indian Union).

LIVE-STOCK CENSUS

The report on the 5th quinquennial Census of live-stock in the sub-continent, taken in January 1940, shows that there were then excluding United Provinces, Bihar and Orissa, 119 million heads of bovine cattle, made up roughly of about 87 million heads of oxen and 32 million heads of buffaloes.

For draught purposes mainly cattle are used everywhere though male buffaloes are important as draught animals in the rice tracts and drier parts of the country. For dairy purposes, the buffalo is important, the milk yield being high and the percentage of butter fat considerably above that in cow's milk. The best known breeds are the Murrah buffaloes of the Punjab area, the Jafferbadi buffaloes of Kathiawar, and the Surti and Pandharpuri buffaloes of the Bombay Province. The cattle and buffalo population in the sub-continent is abnormally high amounting to over 60 per cent. of the human population. The spread of cultivation has diminished the grazing grounds, insufficient fodder crops are raised and many of the cattle are small, ill-fed and inefficient. Nevertheless the best Indian breeds have many merits. Of the draught types, the best known breeds are the Hissar (Punjab), Hansi (Punjab), Nellore (Madras), Amrit Mahal (Mysore), Kankrej (Gujarat), Kangazam (Madras), Kheriari (U.P.), Malvi (C.P.), Khillar (Deccan), Nimar (East Khandesh), and Dangri (Konkan). The Dangi and Nimar breeds of the Bombay Province have the potentialities to be developed into dual purpose breeds. The Government of Bombay have established a Dangi Cattle Breeding Farm at Igatpuri (district Nasik) for improving the breed in that direction. Amongst the best milking breeds are the Sahiwal (Punjab), and the Gir (Kathiawar). Of the dual-purpose (i.e. draught and milk combined) the best known breeds are Hissar (Punjab), the Hariana (U.P.), the Kankrej (Gujarat), and the Gir (Kathiawar).

On the Government cattle-breeding farms pedigree herds are being reared and from these selected bulls are issued, preferences being given to special breeding areas, to villages which undertake to exclude 'scrub' bulls and where serious efforts to maintain a good strain of cow are made. Once established such breeding areas rapidly produce a supply of superior bulls for general distribution and in this way valuable bulls from Government herds are used to advantage. The premium bull system is also working well in some tracts.

IMPROVING QUALITY

The sub-continent possesses some very fine breeds of cattle, each breed being peculiarly suited to the area to which it is indigenous. To mention one, there is the heavy fast Kankrej breed in Gujarat, admirably suited to the sandy deep rutted roads found in this part. Then we have the Dangi or Kaleri born and bred in the hilly, heavy rainfall area of the Western Ghats. Rain and water logged conditions do not affect this breed; indeed, the more the rain, the better it thrives.

On the plateau of the Central Deccan we have the Khillar, a light fast draught animal which thrives on very meagre pastures and is essentially suited to the hard stony country in which it is reared.

A good deal has been done for the improvement of cattle. The various Provinces have farms on which pedigree bulls are bred and reared. These are placed out in suitable villages on a premium system. In the Province of Bombay, Herd Registers are maintained for 8 of the breeds of the Province, shows are held annually so that progress is noticed in those areas in which such work has been undertaken. In addition, the Bombay Live-stock Improvement Act of 1933, known as the "Castration Act" which is intended to prevent promiscuous breeding by undesirable male stock in the villages has now been applied to 216 villages in the Province.

It has been estimated that the number of sheep in the sub-continent is in the neighbourhood of 4½ crores and that the total quantity of wool produced is 8½ crores pounds annually. The production of wool per sheep varies greatly in different parts of the sub-continent. In the North-West Frontier Province, Baluchistan, Sind, and West Punjab Provinces of Pakistan, and East Punjab, United Provinces, Rajputana, and Saurashtra Provinces of India, the annual production per sheep is estimated at between 3.4 lbs. and 4 lbs., while in the rest of the Provinces it does not exceed 1 lb. The average for the whole of the sub-continent is in neighbourhood of 1.9 lb. per sheep per year. This would indicate the vast scope for increasing wool production.

The improvement of finer qualities of wool has been engaging the attention of the Indian Council of Agricultural Research since 1933, and a systematic breeding of the five principal Indian breeds of sheep was undertaken in the Punjab area (Hissar), Madras (Hosur) and Bombay (Poona), and promising results achieved.

The breeding programme of the Research Stations is based on the evaluation of wool quality as assessed by factors such as the staple length, fibre, diameter, fleece density, differentiation of fibre types and the studies of the succession of fibres in the lamb coat. A wool Analysis Laboratory has been established at Poona to study the variability of the different attributes of wool fibres and to select stock on the basis of the quality of the fleeces of individual sheep. Schemes for supplying pedigree and test rams to the cultivators and shepherds are also working in the rural areas under the Post-War Reconstruction Programme of the different Provinces.

DAIRYING

India is still far behind other countries in the matter of dairy industry, although many of the Provincial Governments have now been taking keen interest in its development. The main difficulty is the low milk productivity of the Indian dairy animal, which has to be improved by systematic and scientific methods of breeding, feeding and management. Factors such as the climatic conditions and the vastness of the country have, no doubt, been obstacles, but, unless the individual dairy animal is improved and arrangements made to dispose of the milk economically, it would not be possible to put the dairy industry on sound footing.

Most of the provinces have now appointed special Dairy Development Officers for dealing with the problems effectively and, in the Province of Bombay, Government have been considering plans to improve dairying on co-operative lines as well as through private enterprise. For this the Province has been divided into zones such as: (i) the city areas, that is the areas within 30 to 40 miles radius of each town where milk will be produced on co-operative lines and supplied to cities, (ii) concentrated cattle breeding and milk producing areas where there are natural facilities for raising the dairy stock economically and where milk produced can be converted into products through co-operative

creameries, and (iii) the remaining areas where demands of milk would be met by producing milk locally.

If this is done it would be possible to breed more and better dairy animals in the villages and to supply milk to towns more efficiently and at cheaper rates.

In order to relieve the congestion of dairy cattle in Bombay City, Government of Bombay have also established a very large milk colony at AREY near Bombay where about 10,000 animals would be housed under the most modern conditions and milk supplied to Bombay City after pasteurization, etc. Bombay Government have also sanctioned a scheme administered by the Dairy Development Officer to establish large dairies in the other cities of the Province through private agencies by providing loan of Rs. 50,000 in each case.

The different Agricultural Colleges have been imparting instruction in Dairy Husbandry. They have been in many instances carrying out research in Dairy Science, although much of this work is being done at the Indian Dairy Research Institute at Bangalore. This Institute, in addition to research work, also trains students for Indian Dairy Diploma Course and a post-graduate course in Animal Husbandry and Dairying.

There is not a big market in India for western dairy products, such as cream, butter, cheese etc., although their demand is constantly growing. In the absence of more milk, however, and the small units of dairy farming, the Indian peasant manufacturer's small lots of "Desi" butter, Dahi, ghee, etc., purely as a cottage industry.

ANIMAL DISEASES

Details of the steps taken and progress made in the control of disease and improvement of stock are given in a biennial review of animal husbandry in India.

The control of contagious diseases of live-stock is carried out by the Civil Veterinary Departments in the Provinces. The staffs of these departments are, for the most part, recruited from among the graduates of the Veterinary Colleges of which there are six in India, one each at Patna, Calcutta, Bombay, Mather (U.P.), Hyderabad (Deccan), and Aladras, and one in Lahore in the West Punjab Province of Pakistan. One more college is proposed to be opened at Jubbulpore in the C.P. in India. Many of the colleges which have now been affiliated to Universities impart training up to the

graduate standard, as against licentiate training which they have imparted till recently. The chief research centre is the Indian Veterinary Research Institute at Mukteswar in the United Provinces and its branch at Izatnagar, near Bareilly. This Institute is maintained by the Government of India and has recently been considerably expanded, the latest additions being a poultry research station and a nutrition institute and genetics section. A certain amount of research is also conducted at the Provincial Colleges.

In addition to research, the Indian Veterinary Research Institute also manufactures large quantities of sera and vaccines for the use of the Provincial Departments in their fight against disease and until recently was the only manufacturing centre for these products. Serum institutes have, however, been opened in recent years at Madras and Bangalore, mainly for the manufacture of biological products for the use of the Madras and Mysore Civil Veterinary Departments, respectively. Many Provinces are now opening their own vaccine and serum centres. In Bombay Province, a Serum Institute is in the course of being set up.

The chief diseases that the Civil Veterinary Departments have to deal with are glanders and surra in equines, and rinderpest, foot and mouth disease, hemorrhagic septicaemia, black quarter and anthrax in ruminants, while tuberculosis, Johne's disease and contagious abortion are assuming greater importance than in the past. Glanders and surra are both scheduled diseases under the Glanders and Fray Act. Glanders is incurable but surra can now be successfully treated with Naganol. This disease (surra) also affects camels, cattle and dogs and in recent years its importance as a bovine disease has been more widely recognised.

Of the diseases of ruminants mentioned, all, with the exception of foot and mouth disease, can now be controlled either by the inoculation of protective sera or by vaccination.

The successful manufacture of anthrax "spore" vaccine at Mukteswar is another advance of great importance in the fight against live-stock disease.

Indian poultry are also subject to several contagious diseases. The dreaded "Ranikhet" disease is fairly wide-spread and its ravages have seriously interfered with the poultry industry. A chick-passaged vaccine has now been developed at the Indian Veterinary Research Institute and trials conducted in the field

have been very encouraging. Fowl pox and fowl cholera vaccines are available for the protection of poultry against those diseases.

India is protected from foreign infection by the application of the Live-stock Importation Act at all ports at which the landing of animals is permitted.

In addition to their duties in connection with disease control, the Civil Veterinary Departments also conduct the treatment of animals in hospitals and dispensaries. The institutions are for the most part maintained by Local Boards with financial assistance from Government, the professional staff usually being provided by Government. In most Provinces, the Veterinary Dispensaries are now being taken over by Government.

The statistics given in the following statements are the latest available.

AREA CULTIVATED AND UNCULTIVATED IN EACH PROVINCE.

| Provinces | NET AREA (According to village papers) | | |

IMPROVEMENT OF AGRICULTURAL MARKETING

IN view of the importance of agricultural marketing as an aid to the general economic recovery of the country, the Government of India decided to give effect to the recommendations made by the Royal Commission on Agriculture and generally endorsed by the Central Banking Enquiry Committee regarding marketing surveys. After consultation with Provincial Governments, it was decided that the first step should be the appointment of a highly qualified and experienced marketing expert with practical knowledge of agricultural marketing in other countries.

Directorate—In accordance with this decision, the office of the Agricultural Marketing Adviser to the Government of India (recently designated as Directorate of Marketing and Inspection) was constituted with effect from 1st January, 1935, at Delhi, with Mr. A. M. Livingstone as the first Agricultural Marketing Adviser. After more than six years of useful activity in India, he reverted in 1941 to the Ministry of Agriculture of the United Kingdom Government. The present incumbent of the post is Dr. T. G. Shrinani, B.A., Ph.D. (Wales), F.R.S.E.R., F.Econ. (Lond.).

The name of the office has recently been changed into "Directorate of Marketing and Inspection" and it has now taken over all the functions of the Directorate of Inspection of the Ministry of Food.

The Agricultural Marketing Adviser to the Government of India is assisted by a Deputy and this post is at present held by Dr. B. C. Sen, D.Sc. The technical gazetted staff consists of an Agricultural Marketing Adviser, a Deputy Agricultural Marketing Adviser, a Director of Inspection, 3 Senior Marketing Officers, 3 Marketing Officers, 2 Assistant Directors of Inspection, 1 Supervising Officer (Grading Stations) and 15 Assistant Marketing Officers. In addition, the Agricultural Marketing Adviser is assisted, in quality control and inspection work for internal and for export trade under the Agricultural Produce (Grading and Marking) Act, 1937, by 1 Chief Inspector and 27 Inspectors, apart from the large subordinate personnel engaged on quality control work.

With the help of suitable subsidies from the Indian Council of Agricultural Research, the Provincial Governments established similar organisations in their respective areas and have, in some cases, further added to their staffs to meet the growing demand for developmental work of a practical nature.

The subsidies have however been progressively reduced in recent years but realising the advantages that have accrued to the provincial economy as a result of having adequate marketing organisations, some Provinces and States like West Bengal, Bombay, Madras, East Punjab, Hyderabad and Mysore have already made these organisations permanent. With the setting up of a marketing organisation at the Centre and in the provinces in 1935, certain leading Indian States also co-operated by appointing full-time officers in their States and over 200 States nominated officers to deal with marketing questions. In Provinces and States which had no Senior Marketing Officers, the Director of Agriculture supervised the work of the marketing section.

The Central Marketing Staff also undertook survey work in a large number of States which did not have staffs of their own. They also advised and continued to advise and assist the local marketing staffs in carrying out their work.

On account of the recent political changes in India, nearly all the States (excepting a few leading ones) have either merged themselves with the neighbouring province or formed into Unions. In the case of provinces, e.g. Orissa, where the area thus merged is quite appreciable, additional marketing staff has been provided. The Governments of the various Unions have

also either already appointed or are considering the question of appointing suitable marketing staff.

MARKETING SCHEME

During the existence of this Directorate for over 14 years, marketing surveys have been carried out on an All-India basis and 58 reports on various commodities and subjects have so far been published. The more important of these are on wheat, rice, potatoes, gram, barley, grapes, bananas, citrus fruits, linseed, groundnuts, cashewnuts, lac, sugar, coconuts, tobacco, milk, fish, cattle, hides, skins, wool and hair, sheep and goats, eggs, coffee, castor seed, co-operative marketing, fairs, markets and produce exchanges, ghee and other milk products, and cardamom. "A Handbook on the quality of India Wool," which is intended to serve as a guide to wool trade and persons interested in Wool, a "Preliminary Guide to Indian Fish, Fisheries and Methods of Fishing and Curing" and a supplement to the wheat report have also been published. The reports on arcanuts, rapeseed and mustard, stone and small fruits, sun hemp and a revised edition of the milk report are (at the time of writing) in the press. The report on cardamom and cashewnuts are being reprinted as the first edition has sold out completely. Revised editions of the Fish Report and the Preliminary Fish Guide have also been prepared and are being sent to the Press. The reports on some other commodities like maize, millets, sesamum and urdaseed, meat, poultry, mangoes, pulses, fibres and chilies, and a bulletin on agricultural produce exchanges are in different stages of preparation. The Marketing Officers' Conference held in 1948 recommended that having regard to the necessity of devoting more time and energy for undertaking and executing actual marketing improvement work, the preparation of marketing survey reports should be slowed down. No fresh marketing surveys are to be undertaken at present and attention is to be given only to those reports which are under preparation.

During the year 1943, at the instance of the Government of India, rapid marketing surveys were also conducted in respect of (i) certain English vegetables (peas, beans, cabbage, cauliflower, tomatoes and carrots) and certain important pulses; (ii) bones and bonemeals; and (iii) India's requirements of agricultural implements and machinery and relevant reports were submitted to Government. In 1944, the Directorate similarly carried out a rapid survey of milk production and distribution in Delhi Province in connection with a scheme for the supply of milk to Government servants in Delhi and New Delhi and submitted the report to Government. In 1945 a rapid survey on Cardamoms was carried out and the report thereon was notified in 1948. A similar survey was carried out on Arcanuts in 1945-46 and the report is in the press.

Hitherto, the All-India marketing survey reports have dealt with the problem as it related to the entire undivided India. In fact, the earlier reports had included Burma as well. With the partition of the country all these reports have to be revised and brought up-to-date for the Dominion of India. To begin with, the revision of the reports on rice and groundnuts is in progress and material therefore is being collected. The report on milk has already been revised and is in the press. It is also proposed to revise the report on Hides.

The marketing survey reports so far published and those which are in the press are very exhaustive and detailed. For the convenience of the general public and administrators, therefore arrangements have been made to prepare small and handy brochures summarising the principal features of marketing of the various commodities. Two such brochures on fish,

and wool were published in 1948 and a third one on Milk was issued in March 1949. Similar brochures on ishbul, ghee, sugar, lac, hides and skins are expected to be published shortly.

The main survey reports are quite bulky and would not interest a layman. In order therefore to make the survey reports intelligible to the public at large, abridged editions in English of a number of reports have been issued. Translations of these editions in various Indian languages have also been published in the case of certain reports like wheat, linseed and eggs. The translation of the abridged reports on milk, co-operative marketing, potatoes, rice, groundnuts, and bananas has been completed but the reports have not yet been published.

Storage and Transport—A report on cold storage and transport of perishable produce in Delhi Province was published in 1937. With a view to studying the commercial possibilities of cold storage transport of perishable products like fruits, etc., certain refrigerated transport trials were conducted during 1940-41 on two N.W.R. cold storage wagons. All-India survey work on cold storage was also carried out in part during that period. In view, however, of the recent transport difficulties and the consequent shortage of wagons, the experiment and survey on cold storage has had to be postponed for the present. A separate Directorate of Storage and Transport has now been set up by the Ministry of Agriculture to take up immediately on more intensive scale work on ordinary and cold storage construction and refrigerated transport.

GRADING AND MARKING

In discussing steps which might be taken to improve the general level of quality, the Royal Commission thought that organised trade associations in India could give great assistance in applying effective pressure to secure improved quality from the producers. This view was fully borne out by the preliminary marketing surveys and two general lines of action were decided upon: first, the physical grading and packing of commodities such as fruit, eggs, etc., on the basis of statutory standards and, secondly, the standardisation of contract terms for staples such as cereals and oilseeds. The former involved legislation and the Agricultural Produce (Grading and Marking) Act, 1937, was passed in February 1937, for defining standards of quality and methods of marking in respect of prescribed grade designations applied to schedule products.

As a result of consultation with provincial governments and representative trade and manufacturing interests, further commodities were added to the schedule to the Act, which now includes fruit, vegetables, eggs, dairy products, tobacco, coffee, hides and skins, fruit products, *atta*, oilseeds, vegetable oils (including hydrogenated oils and vegetable oil), cotton, rice, *lady*, wheat, sun hemp, sugar-cane, *gur* (jaggery), myrobolans, *hara*, wool and goat hair. The grading and marking rules in respect of most of these commodities have been duly prepared and notified. Tentative grade specifications and rules for several varieties of rice, fruit, cotton etc. have also been drawn. Several States have adopted similar legislation and are applying the AGMARK to the commodities graded in their areas. Arrangements are in hand for the preparation of grade specifications for coconut oil, ginger, curry powder and honey.

The development of trading on the basis of the standard methods of grading is definitely "catching on". In the early stages experimental grading stations are operated on the basis of provisional standards; subsequently the process of grading and marking is done commercially on a voluntary basis by packers holding a Certificate of Authorisation issued by the Agricultural Marketing Adviser. The authorised packer may be the primary producer or co-operative society or an association of

primary producers, village collectors and processors or the individual larger packer or manufacturer holding a key position in the process of distribution.

Standardized Grading—“By the close of the year 1946, the standardised grading and marking of the many commodities referred to above was being carried out commercially by as many as 582 packers. During 1946 alone, more than Rupees 12 crores worth of produce were sold under the Agmark as compared with about Rupees 10 crores in the previous year as per details below :—

| Commodity | Value of quantity graded (in rupees) | |
|------------------|---|--------------|
| | 1947 | 1948 |
| Ghee | 4,72,50,181 | 3,59,50,575 |
| Butter | 28,99,854 | 34,09,811 |
| Edible Oils .. . | 50,61,230 | 95,29,482 |
| Hides | 2,39,920 | No grading |
| Eggs | 6,27,003 | 3,92,913 |
| Tobacco | 3,35,6,109 | 4,99,64,915 |
| Sugarcane gur .. | 1,33,574 | 78,849 |
| Cotton | 25,92,512 | 76,71,275 |
| Sann Hemp .. . | 1,16,61,158 | 1,16,23,135 |
| Fruit | 1,67,129 | 2,31,329 |
| Potatoes | — | 9,129 |
| Total | 10,41,91,670 | 11,86,34,441 |

Among the commodities graded under the Agmark for internal market ghee holds the pre-eminent position. Most of the other commodities also find satisfactory in spite of the abnormal conditions such as scarcity, transport, movement and control restrictions. Grading of certain commodities like rice, atta, and bura which had been suspended in 1944, could not be revived, except in the case of potatoes, the grading of which was resumed in Madras in 1948. The partition of the country was also responsible to a certain extent for giving a set back to the grading schemes for fruit, eggs and hides.

At present, the grading of ghee is most popular in the United provinces and Bihar among the Provinces and in places like Portbandar, Jamnadi, Navanagar, Gwahar and Patnada. Recently, the Government of Madras who had so far banned the grading of ghee under the Agmark in the province have relaxed the ban and it is noteworthy that the grading of ghee has been restarted in that province. Towards the end of 1948, the grading of ghee was extended to Madras, C.P. and Berar and Kataka. In the C.P., the revised ghee grading scheme, on the lines of Bihar and the U.P., a special feature of which is the employment of Government chemists at the laboratories of the authorised packers, was introduced in consultation with the provincial Government and the trade.

A sharp increase in the number of grading stations for ghee has been noted in the U.P. since 1944 consequent on a decision of the Provincial Government to ban all exports of ghee out of the province except for a limited quantity of Agmark graded ghee for civilian consumption in deficit areas like Bengal and Bombay. At present, there is a total ban on the export of all ghee including graded ghee but the grading output in the U.P. is being maintained.

Fruit products are not graded at present under the Agmark, as their quality has been standardised under the Fruit Products Control Order, 1946. The Central Government have recently transferred the responsibility of enforcing the standards of hygiene laid down in the Order to the Provincial and State Governments. They have, however, retained power to lay down standards, and register and license manufacturers of fruit products.

Sometime in 1944, the United Provinces Government also fixed higher prices for Agmark graded mustard oil as against the ungraded oil. The grading output of this commodity, therefore, recorded a certain amount of increase but as such a premium for the graded commodity was not reflected in the price structure allowed

to mustard oil at Calcutta with imports of the bulk of the oil from the United Provinces were directed, the increase in the graded output has not been quite sustained. The grading of gingelly oil has been started in the Province of Madras. The packing of mustard oil has been permitted in railway wagons for the convenience of bulk purchasers.

The Egg Grading and Marking Rules were further amended reducing the number of grades from six to four in order to facilitate rapid marketing. That the advantages of grading marketable produce are being appreciated all over the country has been recently exemplified by the introduction of a scheme of compulsory grading of eggs by the Mysore city municipality within its jurisdiction. An interesting experiment for marking the date of grading on the shell of graded eggs was initiated at Delhi and was attended with a fair amount of success. It has, however, been recognised that such a measure could be practised with advantage only at the stage where the graded eggs are sold out to the consumers. It has accordingly been decided only to persuade egg graders who import eggs for grading to adopt the principle as far as possible.

Staples like rice and atta are not graded at present on account of their being subjected to rationing and controlled distribution. Towards the close of 1943 an experiment was initiated in Madras Province to grade rice according to *ad hoc* war quality specifications and to link up such grading with the activities of the local Civil Supplies Department. The scheme expanded considerably but had to be closed down towards the close of 1944 due to low arrivals in the market of good quality rice. The Department also decided recently to abandon the atta grading scheme as it was not considered to be of direct benefit to the producers. The view has generally been adopted that as far as possible the grading of commodities, the quality of which could not be verified by definite chemical tests, should not be allowed to expand on any considerable scale. An exception has, however, been made in regard to commodities like fruit and vegetables, sugarcane gur and bura, when graded by producers' organisations only. The task of assisting the formation of such organisations is also being pursued vigorously.

Grading of Sann Hemp—Special mention should be made here of the scheme for the grading and marking of sann hemp introduced towards the close of 1942. The scheme was drawn up as a result of complaints received from the Hemp Control in the United Kingdom regarding the low quality of exports of hemp from India. The scheme follows the general lines of all other grading schemes under the Agmark in that grading is done by authorised packers holding certificates of authorisation issued by the Agricultural Marketing Adviser to the Government of India. The Government of India have, by a notification under the Sea Customs Act, prohibited the export of sann hemp not graded under the Agricultural Produce (Grading and Marking) Act, 1937. In order to ensure that grading is done correctly and in accordance with the Act and the Rules, a special inspectorate staff consisting of one Chief Inspector and 8 Inspectors (including 3 Asstt. Marketing Officers temporarily diverted to work as Inspectors) has been appointed at stations at Shampur (Benares), Calcutta, Vizianagaram and Bombay. The major portion of the cost of this staff is recovered from the trade by means of a charge of twelve annas per bale. The Vice-President of the London Hemp Association visited India towards the close of 1944 and discussed the scheme with the Agricultural Marketing Adviser and the Inspectorate staff.

As a result of these discussions and the decisions arrived at the various Conferences held with the trade, certain modifications have been made in the Sann Hemp Grading and Marking Rules, 1942 so as to bring about improvement in the quality of the exported hemp and to establish

a proper and acceptable correlation between the grades represented by private trade marks and the corresponding grades under the Agmark of Sann Hemp exported out of India. These changes were introduced on 1st September 1948. The Department generally takes the advice of importers abroad and the exporters in the country before making any such modification in the scheme.

Tobacco Grading—In the beginning of 1944 a conference of tobacco interests convened at Guntur decided that the quality of exports of all types of tobacco from India should be controlled and that no tobacco should be exported on consignment account unless it conformed to Agmark specifications. Accordingly, early in 1945, the Central Government banned under S.19 of the Sea Customs Act, the export of fine-cured Virginia, Sun-cured Virginia, Sun-cured Natta and Mofidari tobaccos to a foreign country other than the U.K., unless it was graded under the Tobacco Grading and Marking Rules, and certified as such by the Inspectors appointed for the purpose. They also sanctioned the posts of one Chief Inspector and 8 Inspectors to be stationed at Guntur and other centres for purposes of quality control.

Later, at a conference of the trade presided over by the Supply Member of the Government of India and attended by a representative of the Tobacco Leaf Section of the London Chamber of Commerce, it was decided to extend the scheme of restricted exports to the U.K. also, and accordingly the Government of India issued a notification withdrawing the exception allowed in the case of exports to the U.K. from the operation of their former Notification banning the export of ungraded tobacco. The result is that the four varieties of tobacco mentioned above cannot be exported to a foreign country unless they are graded according to Agmark specifications. The ban on the exports of tobacco unless graded under Agmark has further been extended to another three varieties, *viz.* Sun-cured Jati, Sun-cured Jutti and Sun-cured Jati Bishyah.

The Indian Central Tobacco Committee, who were placed in charge of all developmental and marketing schemes concerning tobacco, according to an additional staff of 1 Senior Inspector and 10 Inspectors for exercising quality control. The entire tobacco grading scheme is now being financed by the Committee from the funds placed at their disposal by the Government of India. The Chief Inspector and all Inspectors, except two, are stationed at Guntur, which is an important Virginia tobacco centre, and certain other places situated close to it. Two Inspectors are stationed at Coimbatore and Trichopoly, the former exercising control over the exports from that port and the latter on the exports from the Southern Districts of the Madras Province.

In order to further tighten up control, two posts of Vigilance Inspectors have been created. The scheme has been in operation for more than three years and has brought about definite improvement in the quality of exports which is evidenced by the general appreciation by foreign buyers in the United Kingdom and other countries. It is hoped that this scheme will not only lead to the expansion of India's external trade in tobacco, but also enhance the reputation of the country for delivering goods in the international markets exactly in accordance with standards of grades.

Inspection of Graded Produce—In order to ensure adequate control of quality and proper grading, several persons in the provinces and States were authorised by the Agricultural Marketing Adviser to inspect graded produce and grading centres. The co-operation of agricultural, veterinary and allied departments in all provinces was sought for in this connection and several of their officers were provided with the necessary authority to inspect grading stations and graded produce. Arrangements have also been made for controlling the quality of graded produce by systematically analysing

samples collected by the inspecting staff both from the packers' premises as well as from the markets. Nearly 8,000 samples of ghee and quite a large number of edible oil samples were analysed at the Central Control Laboratory, Cawnpore, during the calendar year 1948. Samples of graded butter and gur are also periodically analysed there by two assistant chemists appointed for the purpose.

In the earlier stages, the analysis ofatta samples was done by the Cerealist, Agricultural College, Lyallpur and to a limited extent by the Agricultural Chemist to the Government of the Central Provinces. In 1943 an Atta Analyst was appointed to assist the Cerealist at Lyallpur in this work. A Rice Analyst was also added to the headquarter staff and the entire analytical work on rice samples was made over to him. Since, however, these two commodities are now rationed and are not graded, no work in this connection is being done. For the purpose of keeping a vigilant watch on the quality of Agmark eggs put on the Delhi market, an Egg Grading Demonstrator was appointed as a result of which the quality standards further improved. But on account of scarcity of eggs and the imposition of controls by the local administration, grading of eggs could not be continued in Delhi and this useful activity had to be suspended. After a lapse of two years, however, the grading of eggs was revived.

The exercise of quality control by examination of samples at these laboratories naturally involves a certain amount of unavoidable expenditure. This is partly offset by the sale of Agmark labels to authorised packers. It was, however, observed that the Agricultural Produce (Grading and Marking) Act, 1937, under which such recoveries were being made, did not permit the levy of any further charges than what the labels, etc., were costing to the Department. In order, therefore, that a portion, if not the whole, of the inspection cost could be recovered from the packers who were the chief beneficiaries from the grading scheme, the Act was amended about the middle of 1943 so as to permit recoveries on labels for this purpose as well as for arranging any special publicity with regard to particular commodities. In the early stages, before the grading of a particular commodity has passed the experimental stage and proved its merit, it has not always been found possible to get the packers to agree to contribute in this way. Steps are being taken, however, to make quality control as far as possible self-supporting, particularly with regard to commodities mainly produced for export, e.g., sann hemp, or commodities like ghee, the grading of which has now become definitely established. With the same view the Edible Oils Grading and Marking Rules were amended in October 1947 so as to provide for an enhanced rate of charges on Agmark labels and to provide for the application of these labels to bazar containers like drums and railway tank wagons.

Expansion in the grading of ghee and the increasing general demand for graded ghee has also committed the Department to ensure that proper arrangements are instituted or existing ones stiffened in order to provide for an adequate check on the quality of the graded products. Certain new measures have accordingly been instituted. Firstly, vigorous tests have been introduced for examining the purity of ghee and ensuring its freedom from adulteration. To detect unmistakably the commonest adulterant—vegetable fat—the Central Control Laboratory, Kanpur, where samples of ghee are analysed, has been equipped with Phytosteryl Acetate test apparatus and arrangements are under way to install this apparatus at the laboratories of the authorised packers. It has been possible to introduce the test only at 3 laboratories so far on account of the difficulties in the procurement of necessary apparatus and chemicals required for the purpose of this test, but the number is increasing steadily. Another test known as Baudouin test was introduced at the laboratories of the packers in 1947, according to which all raw ghee before being purchased for grading purposes is sub-

jected to this test to ensure that it is free from vegetable products (Vanaspath). This test became possible because of the Government of India's decision to mix at least 5 per cent sesame oil in all hydrogenated vegetable fats. The policy of appointing Government Chemists at the laboratories of authorised packers so as to ensure freedom from possible influences, initiated in 1945 has been working satisfactorily in the United Provinces and Bihar, and it has been extended to the C.P. and Bihar recently. At a conference of ghee packers held on the 21st April, 1945 these measures were generally agreed to and the conference further agreed to a proportionate increase in the charges levied on the graded ghee so as to make the scheme self-supporting. The work done under the Agmark Ghee Grading Scheme was reviewed at another Ghee Conference in 1948 which was unanimously of the opinion that the scheme deserved all possible encouragement as it symbolised an attempt to provide pure and superior quality of ghee to the public. The Conference also emphasised the need for a more rigid enforcement of the grading laws so as to ensure the purity of Agmark ghee. In order to recover the increased cost of more effective quality control measures in the case of ghee, the Conference further recommended the raising of charges for Agmark labels from 1 to 10 annas per maund. This was done on 14th January 1949.

As a further measure of improving the existing quality control arrangements, it was also decided to divide the areas in which the ghee grading centres are located into zones, each zone being placed under the charge of an Inspector. For this purpose four posts of Inspectors have been sanctioned. The Inspectors exercise vigilant control on the quality of ghee in their respective areas by visiting the grading stations frequently and by collecting check samples of graded ghee from the premises of the packers and from the market for examination. As a result of the various quality control measures the reputation of the purity of Agmark ghee is on the increase.

Owing to the fact that Saurashtra contributed a large proportion to the ghee graded in the country it was found necessary to establish a Subsidiary Control Laboratory in Saurashtra for doing the immediate work connected with the analysis of samples. The increasing popularity of Agmark products has brought to light ingenious efforts on the part of unscrupulous persons at illegally imitating and counterfeiting the Agmark labels and manipulating and adulterating the contents of graded products. This in its turn, has demonstrated the need for strengthening the quality control measures still further. In order to safeguard against the misuse of Agmark proposals are under consideration for the enhancement of penalties provided for the violation of rules made under the Agricultural Produce (Grading and Marking) Act, 1937.

Standard Contract Terms—The Standard Contracts terms for wheat and linseed, were finally agreed to by the Grain and Oilseeds Conference, 1938, and similar terms for groundnuts were settled at an informal Conference held at Bombay in January 1939. A fairly satisfactory measure of agreement has been obtained regarding the adoption of the terms and while certain trading associations have started trading on this basis, unanimous support was not forthcoming, owing partly to the existence of an excessive number of small "futures" trading associations scattered all over the country and partly to the opposition of one or two important trading institutions and certain influential exporting and importing interests.

With a view to bringing about uniformity in the different contract terms for wheat and linseed (including the Standard Contract) adopted by the trade, an informal Conference of the representatives of 3 important trade associations of Bombay was convened in February 1941. Besides suggesting certain changes in the tolerances and limits of rejection for damaged, slightly damaged and shrivelled grains, the Conference made 2 important recommendations, viz., that (1) 25 tons should be

adopted as an alternative to 500 maunds as the minimum unit of transaction, and (2) that the Cwt. should be adopted as an alternative to the maund as the unit of quotation. In the case of linseed, the Conference further suggested that the cleaning charge under "Refraction" should be lowered. These latter suggestions were circulated to the trade interests concerned and they have been accepted.

In the case of wheat, it has been decided to amend the Standard Contract for wheat as finally agreed to in 1938 and thereby implement the abovementioned recommendations.

The Standard Groundnut Contract was examined at the Bombay Conference, 1941, and several minor changes were suggested. These were afterwards circulated to the trade interests concerned. As regards Hand Picked Selected Groundnuts (kernels and nuts in shell), the Contract terms agreed to at a Conference held in 1940, were further revised and accepted by 2 leading trade associations of Bombay. Three leading exporters of groundnuts in Madras adopted the Standard Groundnut Contract from the beginning of 1942 and they have reported that the Contract terms have been readily accepted both by the sellers and purchasing agents and that they worked very well during the period of adoption. The question of enforcing the standard contract terms for groundnuts by legislation was examined at a conference of groundnut interests convened at Bombay in August 1944 under the joint auspices of the Central Agricultural Marketing Department and the Indian Council of Agricultural Research. The conference agreed upon various terms except in regard to drage and methods for estimating it, and recommended that the point be examined by the Oilseeds Committee of the Indian Council of Agricultural Research and till then the drage clause may be omitted. It was also felt that the trade should adopt the standard contract terms voluntarily, compulsion being introduced only if the trade fails to do so. The question of framing legislation to make the adoption of standard contract terms compulsory was referred to Provincial Governments. The action taken by the provincial governments in this connection including consultations with the interests seems to have convinced the trade that the Government are determined to enforce the standard contracts on a compulsory basis, and this has brought a good deal of change in their attitude. An informal Conference of the leading trade associations held in Bombay in July 1948 suggested that another conference of an All-India character should be called to consider the possibilities of a general adoption of standard contracts by the trade associations on a voluntary basis. The matter is under further examination. Steps have been taken to draw up standard contract terms for vegetable oils, in order to meet the wishes of the trade.

Standard Containers—For most commodities the containers used in the sub-continent are very variable in size. Owing to their fragile nature the contents are subject to appreciable damage which also varies in extent. To overcome these difficulties, trials on a commercial scale were carried out in Madras, Travancore, old undivided Bengal, old undivided Punjab, the North-West Frontier Province, Assam, Kanpur State, United Provinces, etc., with boxes of standard patterns for use in transit of eggs and fruit. Careful records were kept of the results for comparing the standard and the ordinary containers.

In the Travancore experiment conducted during 1939 and 1940, carrying about 300,000 eggs the loss by damaged and broken eggs in the standard boxes was only 0.52 per cent, as compared with damage and loss through pilferage of 1.77 per cent. in the ordinary baskets. As a result of the experiments, almost the entire exports of eggs from Travancore to other markets like Madras were packed in the improved containers in 1941. This was facilitated by the grant of suitable concessions in freight rates by the railway companies. In the Bengal trials

the total wastage in the standard boxes was 0.5 per cent, as compared with 2.5 per cent. In the case of baskets. The experiments conducted in Rampur revealed that in 3 out of 4 containers of eggs consigned to Nainital in August 1941, the contents were absolutely undamaged, while in the case of the fourth, the damage was only about 1 per cent. Such reductions in the physical loss of produce are of small magnitude, but even a saving of 1 per cent. on this score alone would represent an economy of something like Rs. 24 lakhs in the cost of distribution of the eggs put on the market. These experiments, however, provided a set-back during 1942 owing to transport difficulties created by the War.

Regulation of Markets The draft model bill for the regulation of markets circulated by the Agricultural Marketing Adviser in the year 1938 formed the basis for necessary legislation in Provinces and States. Agricultural Produce Markets Acts are now in force in East Punjab, Madras, Bombay, Central Provinces, Mysore, Baroda, Gwalior, Hyderabad, Jodhpur and Patiala. And steps to introduce similar legislation are also being taken in other Provinces and States where no legislation already exists.

Regulation of markets has been given an important place in the post-war development programmes of practically all the provinces and States, and steps are being taken to bring in more markets under regulation as also to cover a larger number of commodities. The Regulated Markets are, however, mostly in respect of particular commodities which are of local importance. For instance, in Amroli, in the C.P., the number of regulated markets for cotton rose from 36 in 1913 to 39 in 1948, and the number of other agricultural markets from 5 in 1912 to 9 in 1948. It is also proposed to regulate within five years the remaining 37 important markets in the Province. In Madras, the Madras Commercial Crops Markets Act, 1933 is in operation, and is applicable to cotton markets in Tirupur, Adoni and Nandyal, to groundnuts at Cuddalore, and to tobacco markets in Guntur district and Bezwada Taluk. The most rapid expansion in the organisation of regulated markets has been in Bombay and Hyderabad. In the East Punjab practically all important markets numbering 50 have been regulated. Hyderabad had 42 regulated markets in 1944 and some more though sanctioned had not started working. Gwalior stands next with 36. It is, however, observed that due to abnormal conditions or reimposition of food control legislation relating to regulated markets is not making the desirable progress. It is however gratifying to note that the necessity for organising regulated markets has recently been stressed by the Central Food Advisory Council and attention of the Provinces and States has been drawn to this important activity.

A bill for the introduction of Regulated Markets in the Centrally Administered Areas was prepared by this Directorate but enactment of such legislation would take time.

Weights and Measures The attempts at regulating the markets were fittingly strengthened and supplemented by the passage on the 28th March 1939, by the Central Government of the Standards of Weight Act, 1939. The Act came into force with effect from the 1st July 1942 and the standards of Weights Rules were promulgated in 1942, and sets of standard weights were prepared by the Mint Master, Bombay and distributed to all provincial Governments. The need for the standardisation of weights and measures is recognised by all concerned and in several provinces and States, including Bombay, Bihar, C.P. and Berar, Coorg, Orissa, East Punjab and the U.P. as also in Baroda, Hyderabad, Mysore and Patiala States, necessary legislation has been passed for enforcing the use of standard weights and measures. Similar enactments are also under consideration in several other provinces and States.

As far as the actual use of standard weights and measures is concerned, a good deal remains to be done even in areas where the necessary legislation is in force. The Marketing Officers' Conference held in 1948 have however proposed that the question should be prosecuted with vigour and the Provincial Marketing staff should be more intimately associated with the administration and enforcement of standard weights and measures. As the Indian Standard Institution is however considering the question of standardisation at a higher level, the above Conference has suggested that the recommendations of this Institution may be awaited, before any final action is taken.

Co-operative Marketing With a view to ensuring to the cultivator, a fair price for his produce, the necessity of developing the marketing of agricultural produce on co-operative lines has been stressed time and again in the survey reports published by the Directorate. A separate survey on the subject has also been published but the actual progress made in the province and States in this direction is not very satisfactory. It is proposed to take up with the Provincial and State Governments the question of making special efforts for organising co-operative sale of agricultural produce. In the meantime, an actual scheme of practical utility was prepared for organising the co-operative sale of vegetables in Delhi Province and it is now under the consideration of the local administration.

Warehouses The establishment of licensed warehouses for agricultural produce in India is yet another direction in which the cultivator can be helped and the wastage of food on account of bad storage saved, but very little work on the subject has been done. Only the provinces of Bombay and C.P. and Travancore have assessed the Warehouses Acts. These have not yet been put into operation and the rules are being framed or finalised. In the other provinces and States, action has still to be taken.

Futures Trading in Agricultural Produce—Futures exchanges, as organised in India, aim at providing facilities for hedging. But there is a good deal of unnecessary speculation and many mal-practices. In some markets there are two, three or more exchanges operating in the same commodity. The financial position of many of the exchanges is not sound and a large number of operators on them have no genuine interest in the trade. It is also known that the contracts and units of transactions prescribed by different associations vary widely and there is no co-ordination. Since the operations of futures exchanges are not generally confined to any one particular province or State, the need for central legislation has been felt. Accordingly, a draft bill for the regulation of futures trading was prepared by the Directorate. Its enactment has been kept in abeyance pending adoption of the new constitution. The matter is however under further examination.

Broadcasting Market Quotations—The dissemination of reliable up-to-date and accurate market intelligence is an essential function of the marketing department. The solution of the problems of food administration and price control would have been facilitated if a properly co-ordinated All-India Market News Service had been in existence from the beginning. Unfortunately, due mainly to lack of funds, the Central Agricultural Marketing Department had to rest content with a skeleton service of limited value. Similarly, except in the case of a few provinces, e.g., East Punjab, Madras, Bihar, and Mysore State where a fairly good market intelligence is run, the other Provinces and States have either no arrangements or have inadequate arrangements.

The Directorate of Marketing and Inspection had arranged for the broadcast of (1) the daily market rates of a number of commodities at Bhopal market, (2) a weekly market report dealing with the fluctuations in important commodities like wheat, rice, oilseeds, pulses and several graded articles at various centres in India. During the year 1943, at the instance of the

Food Ministry arrangements were made to broadcast daily the market rates for coarse grains at a number of selected centres all over India; but this broadcast was discontinued after a short time. The Directorate also issued a monthly review of prices and stocks relating to various commodities. Consequent on the establishment of the Directorate of Economics and Statistics the market news service at the centre is now being attended to by that Directorate.

Publicity for Agmark—The necessity for publicity for any scheme of agricultural improvement should be obvious. Efforts are accordingly being made to keep the public informed of the activities of the Department through the media of newspapers, exhibitions of special posters at railway stations and other suitable public places, and by putting up demonstration stalls at the various agricultural and industrial exhibitions in the Provinces and States. In these exhibitions, public demonstrations are given of the technique of grading by exhibiting illustrative maps, diagrams and charts relating to the production, supplies and prices and by sale of the actual graded commodities. A brief pamphlet on the "Story of Agmark" has also been prepared for distribution to the public. In the recent period, publicity of the above sort has however been modest as it was not considered desirable to increase the demand for Agmark products when it might not be possible to meet it due to scarcity conditions. At the same time it was found necessary to arrange for special publicity if any section of the trade in a particular commodity wanted it and was prepared to contribute towards the cost. The Agricultural Produce (Grading and Marking) Act, 1937, has therefore been suitably amended to recover such cost. In this connection the Directorate's reorganised control, arrangements for graded grain in the United Provinces were extensively advertised in the more important newspapers in the United Provinces, the Bengal area and Delhi Province. A proposal for the preparation of an Agmark Ghee film was considered but could not be fulfilled on account of financial difficulties.

The question of setting up departmental Agmark stalls was examined recently and it was considered necessary that their establishment and efficient running would be best facilitated only if the Agricultural Produce (Grading and Marking) Act, 1937, was suitably amended. Proposals for amending the Act to provide for this and also to provide for more stringent measures for quality control of graded produce are under consideration.

Quality Control of Exports—The Royal Commission on Agriculture and more recently the Indian Government Trade Commissioners abroad have pointed out repeatedly that the main obstacle in the way of attempts at pushing Indian agricultural products abroad was lack of standardisation in the quality and have stressed the need for an organised attempt to improve the quality of exported goods. The Directorate of Marketing and Inspection has from the beginning paid close attention to this problem. A scheme for the grading and marking of seed-lac exported out of India was initiated in 1941 and during the period from July 1941 to January 1942, 2 consignments of graded seed-lac weighing about 2,194 maunds were sent to the United States of America. Though the report on the first consignment was favourable, the experiment had to be abandoned due to the abnormal conditions consequent on the War.

Complaints about uncertainties of quality of lac have been increasing and there has been since recently a tendency on the part of foreign users to go in for substitutes. Proposals for regulating the quality of exports on the basis of standard Agmark grades are therefore under consideration. A scheme for the standardizing of quality and regulating the marketing of lac in India was prepared for the consideration of the Indian Lac Cess Committee. It aims at the establishment of an all-India Board to control the marketing of lac in India. A reference has already been made to the scheme for Agmark grading and marking of sann hemp

and tobacco before export. Both these schemes have been working satisfactorily and assisted in building up reputation of the country for delivering goods in foreign markets according to standards. Markets for tobacco could be extended to many countries and similar results are soon expected for sunn hemp as well.

Goat Hair, Wool—Sometime during 1933, contact was made with the Australian importers of goat skins and information was obtained with regard to their requirements of quality in Indian goat skins. Similar enquiries were also addressed to the Trade Commissioners at New York and London. Samples of goat hair collected from different parts of the country were sent to the Indian Government Trade Commissioner in Australia for being shown to buyers in that country. It was found that while the Australian merchants were generally satisfied with Indian goat hair, they would require it in a specially dressed form if they were to take Indian goat hair on any large scale for commercial use. A specimen of this dressed hair as used in Australia was obtained and shown to the trade interests in India in order to find out whether such dressing could be done as a matter of course before exporting hair from India. The trade in India felt that such dressing was not possible in the absence of the necessary mechanical means and technical knowledge. With great difficulty some more information was secured on the point and a consignment of samples of dressed hair was sent to Australia for evaluation. The samples were greatly appreciated by the trade in that country. As a result of this, tentative grade specifications for goat hair have been drawn up. These have been generally approved by importers in foreign countries and the question of finalising them now in consultation with the trade in India is under consideration.

During 1941 ten bales of cleaned and washed wool were collected by the Directorate from Ajmer and Jodhpur and sent to the Indian Government Trade Commissioner, New York, for purposes of evaluation by the Incorporated Carpet Manufacturers' Association, New York. The quality of this wool sent was highly appreciated by the Association. In view of this success a scheme for the grading of wool under the Agmark with a view to developing foreign markets and bringing about improvement in the local quality and for the appointment of the necessary Inspectorate staff is under consideration. In order to ascertain the views of the trade in the matter a Conference of the important wool traders in the country was convened in January, 1946, and as recommended by the Conference, an *ad hoc* wool committee was constituted by the Government of India in order to examine the question. This Committee could not make much progress in the matter, as opinion on the question of grading was not unanimous.

At the instance of this Directorate, wool and goat hair were included in the Schedule to the Agricultural Produce (Grading & Marking) Act, 1937, in August 1948. Tentative specifications for wool had been prepared a long time back. These were referred to buyers abroad and approved by them. The question of notifying them is under examination. Steps have been taken to induce a few prominent exporters of wool for grading it before export. The possibilities of establishing an auction market for wool at a convenient centre in India was examined with a view to breaking up the monopoly of the Liverpool Auction market and establishing direct contact between exporters in India and foreign buyers. Arrangements have been made recently to collect representative samples of wool for the purpose of classifying the different types of wool produced in India and preparing Agmark specifications for each class.

Edible Nuts—Some time in 1942 the Directorate collected certain samples of edible nuts, such as groundnuts in shell, cashewnuts, almonds and apricot stones, and sent them to the Indian Government Trade Commissioner in Canada in order to find out whether there would be any possibility of their utilisation in Canada for the

preparation of chocolates, etc. The nuts were shown to the importers and were approved. A consignment of similar samples of wool, seedlac, shellac, cashewnuts, peanuts, almonds and walnuts has been sent to the Indian Trade Commissioner in Canada with a view to exploring possibilities of development of trade in these commodities. The samples were received with approval and satisfaction, but the practices of Indian exporters were unfavourably criticised, the more important of which are the lack of uniform standards and quality, continuity of supply and lack of proper inspection of produce before export. The question of the development of the export trade in hand-picked selected groundnuts used for confectionery purposes was examined and steps are being taken to arrange exports on the basis of Agmark grades, especially to Canada where this is in special demand.

Samples of different commodities were sent to the Imperial Institute, London, for exhibition purposes. A few samples of Indian wool were also sent to the Indian Government Trade Commissioner in Australia and New Zealand in May, 1947 for exhibition at the Sydney Show. The samples were considered as 'wonderful collection of Indian wool varieties' and were retained by Sydney Technical College as a permanent collection.

As a result of complaints received from the Indian High Commissioner in London regarding the quality of Indian curry powder and ginger exported to United Kingdom, the desirability of imposing some control on the quality of exports was considered. With a view to including these commodities in the schedule to the Agricultural Produce (Grading and Marking) Act, 1937, and to draw up suitable grade specifications, representative samples were collected and analysed. A survey on the marketing of this commodity is also in progress and as soon as the results thereof are known, the question of fixing down standard grades and specifications will be taken up.

Vegetable Oils The Indian Oil-seeds Committee resolved at its meeting in 1948 that all vegetable oils crushed in power mills should be compulsorily graded. The question is engaging attention and as a preliminary step, a scheme for drawing up Agmark specifications for vegetable oils was prepared. The Government of India were approached to provide for the compulsory grading of these oils under the Agricultural Produce (Grading and Marking) Act, 1937.

Agmark specifications for castor oil were drawn up and approved at an informal conference of the trade interests concerned in July 1948. They were subsequently notified in the Gazette. Steps are also being taken to draw up grade specifications for coconut oil, etc.

In order to safeguard the reputation in foreign markets of all kinds of agricultural produce exported out of the country, a comprehensive Bill styled the Agricultural Produce Exports (Quality Control) Bill to provide for legislation for the compulsory grading of all such produce was prepared by the Directorate of Marketing and Inspection and considered by the Government of India. The question of its enactment has however been postponed for sometime.

Inspection of Foodgrains The present functions of the Directorate in the matter of inspection of foodgrains entering into the basic plan and distribution programme of the Ministry of Food are as under :—

- To devise all-India standards of fair averaged quality for various foodgrains and a system of allowances for deviations from F.A.Q. with a view to gradual improvement of the quality of produce marketed in India and to secure the co-ordination, observance and maintenance of these standards and to draw up F.A.Q. samples for the season ;
- To examine the systems and methods of analyses of foodgrains adopted by various inspecting organisations throughout the

country and encourage, assist and supervise the establishment of efficient grain inspectorates by Provincial and State and States Union Governments and other large consumers such as Railways, Post & Telegraphs and large scale industries ;

- to conduct the inspection of grains purchased by the Government of India for a Central Reserve and/or to supervise inspection of foodgrains moving under the Basic Plan or Rationing Scheme and to carry out check inspections with regard to quality and weight in respect of such movement at convenient points ;
- to maintain a Central Analysis Laboratory in New Delhi for the examination of samples of grain held in Central Storage Depots or distributed under the Basic Plan or Rationing Schemes ;
- to advise on technical matters arising from disputes as between supplying and recipient administrations with a view to bringing about or facilitating an equitable settlement.

In the course of such inspection of foodgrains on behalf of the Ministry of Food, considerable experience has been gained in the matter of classification and handling of different types of foodgrains from the point of view of quality. F.A.Q. standards have already been evolved in respect of wheat, gram, barley, jaggery, paddy and maize for use in connection with the work of the Basic Plan of the Ministry of Food and the procurement and rationing programmes of the different Provincial and State Administrations. Almost all the Administrations concerned have approved these specifications. These have to be further re-organised from the point of view of commercial classification of each foodgrain and determination of definite standards.

Apart from the activities detailed above, the Central Marketing Staff has to deal with numerous enquiries of a general nature. The marketing staffs in several provinces are also closely connected with price control activities and are required to supply useful information regarding the availability of several agricultural commodities in India for the use of the Defence Services. The Central Marketing Staff are frequently called upon to supply information regarding stocks, production, prices, etc., of various commodities to the Ministries of Food and Industry and Supply of the Government of India. The Directorate also offered material assistance to the Defence Services by arranging supplies of various foodstuffs to the military. For instance several thousand mounds of Agmark ghee and butter were purchased by the Ministry of Industry and Supply for the Defence Services during the last few years. Graded eggs in large numbers were supplied to the Army, Interment camps, hospitals, etc.

The above is only a brief sketch of the activities of the marketing staff. The detailed accounts, given in the published annual reports of the Agricultural Marketing Adviser, show that the scheme has recorded steady progress in spite of several difficulties such as lack of adequate funds and personnel and reluctance and hesitation on the part of the trade to follow new methods.

Early in 1945 the Government of India set up a Marketing Sub-Committee of the Policy Committee No. 5 on Agriculture, Forestry and Fisheries to examine the entire question of the improvement of agricultural marketing in India, the maintenance of standards of purity and quality, the establishment of warehouses and the organisation and functions of the Central and Provincial Marketing Departments. The Sub-Committee have submitted their Report to the Government of India which is at present under their consideration. The future policy with regard to agricultural marketing will largely depend on the decisions taken by the Government of India on the various recommendations contained therein.

INDIAN COUNCIL OF AGRICULTURAL RESEARCH

IN Chapter III of their Report, the Royal Commission on Agriculture in India held that agricultural research in the sub-continent was still in its infancy; that however efficient the organisation built up for demonstration and propaganda it could not achieve a full measure of success unless it was based on research that lack of co-ordination in agricultural research had prejudicially affected progress; that there was a wide field open for the co-operation of the Central Government and of Provincial Governments in regard to agricultural research; and that it was the duty of the Government of India in the discharge of the ultimate responsibility for the welfare of the vast agricultural population of the country, to advance research in every way possible without encroaching upon the functions of Provincial Governments in that sphere.

The Royal Commission, after discussing the possible methods by which closer contact might be established between scientific investigators working in the Institutions under the Central Government and investigators employed under the Provincial Governments, recommended the establishment of an Imperial Council of Agricultural Research to which the Imperial Agricultural Research Institutions and the Provincial Agricultural Research Institutions would stand in exactly the same relation.

In the now defunct Department of Education, Health and Lands Resolution No. 826-Agr., dated 23rd May, 1929, the Government of India decided that the Imperial Council of Agricultural Research should be registered under the Registration of Societies Act, XXI of 1860, and the Council was accordingly registered as a Society under the provisions of that Act. The name of the Council has since been changed to "Indian Council of Agricultural Research" and its work is now limited to the Dominion of India.

The Royal Commission on Agriculture envisaged that the primary function of the Council should be to promote, guide and co-ordinate agricultural, including veterinary research in the sub-continent and to link it with agricultural research in other parts of the British Empire and in foreign countries. It should make arrangements for the training of research workers, should act as a clearing house of information in regard not only to research but also to agricultural and veterinary matters generally and should take over the publication work which was being carried out by the Imperial Agricultural Department. In the light of the experience gained during the years the Council has been in existence, it has recently been decided that the Council's functions should be enlarged to include work connected with the application of the results of research to field practice and the Council's function is now to undertake, aid, promote and co-ordinate agricultural and animal husbandry education, research and its application in practice, development and marketing in India by all means calculated to increase scientific knowledge of the subjects and to secure its application in everyday practice.

The Commission recommended that the Council should be entrusted with the administration of a non-lapsing fund of Rs. 50 lakhs to which additions should be made from time to time as financial conditions permitted. The Government of India decided that an initial lump grant supplemented by a fixed minimum grant annually should be made to the Council. They decided that the initial grant should be Rs. 25 lakhs of which Rs. 15 lakhs would be provided in the budget for 1929-30 and from the next financial year onward the annual recurring grant would be fixed at Rs. 7.25 lakhs per annum of which Rs. 5 lakhs would be devoted to the furtherance of the scientific objects of the Council and the remaining Rs. 2.25 lakhs to the cost of its staff and Secretariat. In 1940 the Agricultural Produce Cess

Act was passed under which a cess of 1 per cent *ad valorem* on certain commodities was levied for the purpose of providing funds for carrying out the general research programme of the Council. The proceeds of the cess were expected to yield in a normal year about Rs. 14 lakhs.

Constitution—As regards the constitution of the Council, the Government of India decided that the Council should be divided into two parts, a Governing Body which would have the management of all the affairs and funds of the Council subject to certain limitations and an Advisory Board the functions of which would be to examine all proposals in connection with the scientific objects of the Council which might be submitted to the Governing Body.

The Governing Body of the Council consists of the Hon'ble Minister in-charge of the portfolio of Agriculture who is the ex-officio Chairman, the Vice-chairman I.C.A.R., the Hon'ble Minister in-charge of Agriculture of each Province in India, one representative elected by the Upper House and two representatives elected by the Lower House of the Dominion Legislature in case the Dominion Legislature consists of two Houses or three representatives elected by the House of Dominion Legislature, in case the Dominion Legislature consists of a single House, two representatives of the business community in India, two members of the Advisory Board, the Secretary to the Government of India in the Ministry of Agriculture and such other persons including nominees of States as the Hon'ble Minister for Agriculture, Government of India, may from time to time appoint.

The Advisory Board consists of the Vice-Chairman of the Society (ex-officio Chairman), the Agricultural and Animal Husbandry Commissioners, the Directors of the I.A.R.I. and I.V.R.I. and the Indian Institute of Science, Bangalore, the Director of Agriculture and the Director of Veterinary Services of each Province in India, a representative of minor Administrations, a representative of the Forest Research Institute, a representative of the Co-operative movement, a representative of the India Research Fund Association, four representatives of Indian Universities, a representative of the Indian Tea Association and the United Planters' Association of Southern India, a representative each of All-India Commodity Committees, persons not exceeding five in number nominated as members on the ground of scientific knowledge or other special qualifications and such other persons including nominees of States, as the Hon'ble Minister for Agriculture, Government of India, may from time to time appoint.

At present the following States are affiliated to the Council: Hyderabad, Mysore, Travancore, Bhopal, Cochin, Kasimbar, Baroda (now in Bombay Province), Gwalior (Malhya Bharat), Bikaner, Patiala (Pulhian Union), and Jaipur. With the merger of some of the States, suitable adjustments may follow. (For personnel see under Government of India).

Indian Institute of Sugar Technology, Kanpur

The Indian Sugar Committee of 1920 recommended *inter alia* the establishment of a Central Research Institute as necessary for the proper development of the Sugar Industry.

The recommendation of the Sugar Committee was accepted and the Imperial Institute of Sugar Technology was started at Kanpur by the Government of India on 1st October, 1936, to carry out research in the different branches of Sugar Technology and to help the Indian Sugar Industry in various ways by rendering technical assistance to Sugar Factories, by training students in all branches of Sugar Technology, by providing short term courses to technical men already

engaged in the Industry, etc. On the 1st March, 1945, the control of the Institute passed to the Indian Central Sugarcane Committee, formed by resolution of the Governor General in Council and registered under the Registration of Societies Act XXI of 1860. The Committee is constituted by members from every section of the Industry, viz., cane growers, sugar manufacturers, sugar merchants and Sugar Technologists.

The Institute is financed by grants from the Sugar Excise Fund.

The work of the Institute has been organized under two broad heads, (a) office work including general administration and (b) research and teaching. The former includes the technical, the statistical and general sections; the latter consists of three main sections—Sugar Technology, Sugar Engineering and Sugar Chemistry, the last comprising Sugar Chemistry, Organic Chemistry, Physical Chemistry and Bio-Chemistry. The laboratories are well equipped with instruments required for research on sugar and allied products. Attached to the Institute are the Experimental Sugar Factory, workshop, Sugar Engineering and Chemical Engineering laboratories, Sugar Research and Testing Station, Bilari, Bureau of Sugar standards and the research scheme for the manufacture of sugar candy in India.

The functions of the Research and Testing Station at Bilari are (i) testing of existing plants and processes in use. In the open pan industry for the manufacture of gur and khandarsari sugar, (ii) undertaking research work for introducing improvements in the plants and processes, (iii) giving demonstration of new machines and improved processes. In this connection it may be mentioned that the Indian Central Sugarcane Committee have since 1945 constituted a gur and khandarsari sub-committee for advising on the lines of work to be carried out at the Research Station.

The functions of the Sugar Candy Research Scheme at Ravalgaon are (i) testing the indigenous methods of Candy manufacture (ii) collecting technical data (iii) initiating researches for introducing new and improved plants and processes for the manufacture of Sugar Candy with a view to developing it as a subsidiary industry to the modern vacuum pan industry thereby increasing consumption of sugar in India and (iv) giving demonstration of new machines and improved processes. Facilities also exist at the centre for imparting training in the manufacture of Candy by the improved process. Besides the above the Indian Central Sugarcane Committee have recently initiated two new schemes which are functioning at the Institute (I) Scheme for the survey of Excessive fuel consumption in Indian sugar factories (II) Scheme for extension lectures. The object of the former scheme is to carry out a survey of the causes of excessive fuel consumption in sugar factories and to make them self-sufficient on bagasse fuel only, while under the latter scheme eminent persons are invited each year for delivering a series of two to four lectures on subjects relating to sugar and allied industries.

Technical Assistance—Apart from the technical work under the Sugar Production Rules (1935) technical assistance and advice on various aspects of the sugar industry are given by the Institute to sugar factories, private parties and Provincial Governments within the Indian Dominion and the States acceding to it. The Institute endeavours to meet all technical requirements of factories so far as its staff and equipment permit. The more important types of work which the Institute undertakes for rendering technical assistance to sugar factories are (a) advice to promoters of new factories, (b) advice relating to extensions and alterations of existing factories, (c) advice relating to improvements in working of plant (d) advice relating to improvements in

curing process, (e) technical control of manufacturing operations, (f) advice regarding working expenses and cost of production, (g) investigations into special problems and (h) analytical work.

The Indian Sugar Trade Information Service run by the Director issues a daily and a weekly sugar market Bulletin, which contains useful information regarding Sugar, Gur, and Khandsari market rates wholesale and retail and stocks and despatches—for principal sugar markets in the Indian Union; Indian and foreign sugar news; official notifications are also given therein. The Annual subscription for these services are Rs. 180.- for daily and Rs. 75/- for weekly Bulletins.

The scope of the work of the Institute was brought to the notice of all persons interested in the sugar industry through a booklet entitled "Functions and Activities". In order to establish and maintain contact with the sugar factor-

ies and enable them to be in touch with research work carried out at the Institute and developments elsewhere, arrangements have been made for issuing brief summaries on matters of technical interest under the title of "Sugar Notes". Description and results of various experimental and research work carried out in the Institute are being published annually in the publication entitled "Annual Report of the Indian Institute of Sugar Technology".

The Institute trains a limited number of men every year and gives them a thorough and up-to-date training. For most courses, a period of factory training is an essential condition for the grant of diploma or certificate. There are six regular courses of training for students desiring to qualify for technical posts in sugar factories, (a) Fellowship and Associateship courses in Sugar Technology and in Sugar Engineering and the Sugar Engineering Certificate Course, the Sugar Boilers Certificate Course. From the year 1948 the Institute has been recognized by the

Agri University for purposes of research work for the Ph.D. Degree of the University in Chemistry. Facilities are also provided for men already engaged in the industry to have the necessary technical training during the off-season provided they have the requisite educational qualifications. The off-season courses are (a) Chemical Control, (b) Bacteriology, (c) Pan Boiling, (d) Fuel and Boiler Control, (e) Statistical Methods (for research students), (f) Statistics (for sugar students), (g) Milling Plant operation and control.

In order to afford adequate facilities to the Sugar Factories in India for selecting properly qualified staff and at the same time to reduce unemployment among the educated technical workers in the sugar industry, the Institute maintains an Employment Bureau which collects authentic information about the qualifications and experience of persons seeking employment in the Sugar industry and makes it available free of charge to factories on receipt of enquiries.

FOOD AND FAMINE

INDIA'S seven-year food shortage seemed likely to reach its worst phase in 1949 in which year the Central Government planned to import 44 million tons of food grains compared with less than 3 million tons in 1948. Steadily increasing dependence on imports and the consequent drain on India's dollar resources caused Pandit Nehru to make a dramatic announcement early in the year that there must be "freedom from food imports" after 1951.

This statement was elaborated in an official two year plan calling for an extra production of 4.4 million tons of grain annually, the reclamation of 800,000 acres of waste land, more tube wells, more intensive cultivation, a tightening of grain procurement methods and the diversion of 400,000 acres of sugarcane land to food.

Since practically all the features of this grow-more-food plan followed closely the pattern of previous plans, the likelihood of the target being reached seemed remote unless official methods were radically changed.

The "Freedom from Imports" plan followed more than 18 months' of rapid food policy changes. After Partition it was assumed that the Indian Union was little affected food-wise because Pakistan's surplus areas had to feed the deficit provinces of N.W.F.P. and East Bengal. Actually India was worse off by 750,000 tons of food a year to which had to be added her pre-war deficit of 14 million tons and the extra food—some 500,000 tons—required each year to feed the increasing population. Even under existing low nutrition standards the deficit was 4½ million tons by the end of 1948.

The history of India's "managed" food supply began during 1943 when Bombay pioneered food rationing. This system was extended during 1944 and 1945 when rationing, supported by good crops, prevented a serious crisis from developing.

However, hopes that rice imports would be resumed very soon after the Far Eastern War ended failed to materialise and a poor crop in India made 1946 a critical year and both rationing and crop levies were extended in many parts of the country. Early in the year the standard cereal ration was reduced to 12 ounces a day and by February scarcity areas had been announced in the Bombay Deccan and other southern areas. India sent a Food Mission to London and Washington in an attempt to secure better imports than the totally inadequate allotments made by the Combined Food Board. Main shipments of food were wheat from Australia and mostly coarser grains from the Americas. A ray of hope came when rice began to arrive from Burma and Indonesia.

Towards the end of the year Dr. Rajendra Prasad, the then Minister for Food and Agriculture, said in a review of the situation that a further cut in cereal rations might be necessary to tide over the country till the *khurif* harvest. Grave difficulty had been experienced in obtaining supplies from overseas and there had been a serious shortfall in the arrival of promised shipments. His review was not altogether well received, owing to an impression that Central Government officials had not exerted the maximum amount of pressure to obtain overseas supplies, and that provinces with surpluses were holding unnecessarily large reserves. Owing to high prices of imported food, the Central Government spent Rs. 15.5 crores on subsidising the sale of imported food during 1946.

The year 1947 opened with prospects of severe shortages of both wheat and rice owing to the failure of the *khurif* and *rabi* crops in 1946. To some extent this gloom, was offset by the allocation of 410,000 tons of rice to India by the International Emergency Food Council, the bulk to come from Burma. Dr. Prasad put forward a five year plan for better agriculture, intended to wipe off India's annual deficit of 1.5 million tons of cereals which was expected to increase to 7 millions by 1951. His aim was to raise average production from 10 mounds an acre to 11½ mounds. Approximately 150 million people were subject to cereal rationing at the beginning of the year.

In May, it was announced that India had demanded 4 million tons of cereals from overseas. It was estimated that the Central India wheat crop had suffered a million tons damage due to rust, and that there had been a total deficit of 2 million tons on the *khurif* crops and the same amount on the *rabi* crops. This state of affairs necessitated reduction in the proportions of wheat and rice available in rations in many areas.

Though a period of acute shortage was officially expected in the latter half of the year, before the *khurif* crop came in, it also became apparent that there were considerable supplies of grain available wherever an open market enabled it to reach consumers. In view of this, the United Provinces Government lifted rationing from 15 towns.

FOOD GRAINS COMMITTEE

Early in 1948 the Food Grain Policy Committee, under the Chairmanship of Sir Purshottamdas Thakurdas, recommended stepping up cereal production by 10 million tons in the next five years by means of more irrigation, more cultiva-

tion of waste lands, more manure, better seed and the formation of a Central Land Reclamation Organisation with a capital of Rs. 50 crores subscribed by the Central Government.

Direction of food production would be in the hands of a Central Board of Agricultural Planning on which provinces and states would be represented. Agriculture was to remain a provincial subject, though the responsibility for feeding the country rested with the Centre.

These plans were put forward at a moment when it seemed as though the food crisis was easing. In December 1947, the Government of India accepted the Food Grain Policy Committee's preliminary recommendation that there should be gradual decontrol of cereals and limitation of imports. To this end, governments of provinces and states were advised to reduce their commitments under controlled distribution and rationing. They were left free to devise their own means of procurement and to fix their own prices. These steps were taken in the belief that decontrol would make it possible for hoarded grain to come to market. During the first six months of the revised policy it seemed likely that the experiment would be a success.

Rural rationing ceased over large areas, but by the middle of 1948 there was no sign that the 12-ounce ration in the larger towns of the deficit areas could be abolished or even increased.

By September 1948 it was apparent that earlier official optimism had not been justified. The monsoon had been delayed, cereal prices rose rapidly and hopes of promised supplies from Pakistan and Burma vanished. During that month the Central Government announced the re-imposition of food control, covering prices, procurement and distribution. Rationing was to cover 70 million people, compared with the 30 million still affected in 1948. The return of full control was to be completed by October 1949. The provinces were directed to reduce cereal procurement prices in order to combat inflation. The Central Government which had hoped during 1948 to build up an adequate grain reserve found that under decontrol, it had to distribute greater amounts to the provinces: 3,150,000 tons in 1948 against 2,550,000 tons in 1947.

It would appear that control was reimposed only just in time. Official crop calculations soon proved to be hopelessly optimistic: the 1948-49 rice acreage fell and the rice and millet *khurif* crop was one million tons below the previous year. The 1947-48 grain procurement scheme was a long way below target and during early 1949 official procurement drives ran into

a good deal of rural opposition, though the results were reportedly satisfactory owing to the strong measures taken in many areas.

By April 1919 a good *rabi* crop had been reported in North India, but there were signs that the provinces were not willing to standardise their methods. The Central Provinces refused to introduce rationing and there was disagreement over the reduction of procurement prices. Several Provincial Ministers claiming that such a step would adversely affect production.

FAMINE

Food production in the sub-continent has through the ages periodically failed to meet the needs of the people. The sub-continent's history has consequently been punctuated by disastrous famines, the worst of which have killed millions of people and left wide tracts of country desolate. Famines may be said to arise when large groups of people fail to produce enough food for their own needs and lack the means of obtaining it from other sources. Such conditions may be precipitated either by successive failures of the monsoons, on which four-fifths of the sub-continent's agriculture depends even today; by natural disasters such as floods or earthquakes or by human agencies such as war and grain market speculation.

References to famine are found early in the sub-continent's history. Little is known of these early disasters; details are based on tradition and until late in the eighteenth century such visitations were regarded as natural calamities which man was powerless to prevent. The first definite outbreak known to historians was in 630 A.D. when famine raged throughout the country. There was another series of famine in 941, 1022, and 1033, when whole provinces were depopulated and men were driven to cannibalism, according to tradition. The year 1148-1159 saw almost continuous famine. In 1344 famine was rampant in Upper India. The Emperor Muhammad Tughlak was unable to obtain necessities for his own household and ordered the evacuation of Delhi's population to Deogiri (modern Daulatabad) in the Deccan. From 1396-1407 the Durra Devi famine devastated the Deccan and reduced the population that land went out of cultivation for years. The years 1595-98 saw famine in the north.

The Gujarat famine, one of the first about which precise details have survived, broke out in 1630. Towns and districts were stripped of inhabitants. In 1631 a Dutch merchant reported that only 11 of the 260 families at Swally had survived.

In 1769 70 ten million people (one-third of the population) are estimated to have perished in a famine in the Bengal area. In 1783 came the Chalisa famine in the north, followed by the Daji Bura, or Skull, Famine in the Deccan in 1790-92. The Daji Bura is reputed to have been the severest famine ever known in the sub-continent. It extended over Bombay, Hyderabad and the northern districts of Madras where relief works were opened, the first of their kind in the country. That is only a brief list. Between 1660 and 1750 there were 14 major famines about which little is known.

The causes of these famines were those already stated. Practically the whole of the food production was dependent on the vagaries of the monsoon. Internal wars were common and often coupled with them were widespread pillage, trade dislocation and general devastation. The last communications of the nineteenth and twentieth centuries were not available for relief to be brought from outside the famine area. Between 1838 and 1890 there were eight major disasters. The famines of 1838 and 1861 were in the U.P. In 1838, 800,000 people are estimated to have perished. In 1861 relief was provided in time.

SOUTH INDIAN FAMINE

Orissa was the scene of the next famine, in 1865-67. It affected 180,000 square miles and 47,500,000 people. The Bengal Government was slow in appreciating the need for

action, but later food was poured into the area in prodigious quantities. Thirty-five million units were relieved (a unit is one person supported for one day) at a cost of Rs. 95 lakhs. The mortality was very heavy, and it is estimated that a million people or one-third of the population died in Orissa alone. This was followed by the Madras famine of 1866, and the famine in Western India of 1868-70. The latter famine introduced the sub-continent to the great migration from Marwar which was such a distinguishing feature of the famine of 1899-1900; it is estimated that out of a total population of a million and a half in Marwar, one million migrated. There was famine in Behar in 1873-74, then came the great South Indian Famine of 1876-78. This affected Madras, Mysore, Hyderabad and Bombay for two years and in the second year extended to parts of the Central and United Provinces and to a small tract in the Punjab. The total area affected was 257,000 square miles and the population 58,500,000. Warned by the excessive expenditure in Behar and actuated by the desire to secure economy, the Government relief programme was not successful. The excess mortality in this famine is said to have been 5,250,000 in British territory alone. Throughout British India 700,000,000 units were relieved at a cost of Rs. 84 crores. Charitable contributions from Great Britain and the Colonies aggregated Rs. 81 lakhs.

THE FAMINE CODES

The experiences of this famine showed the necessity of placing relief on an organised basis. The first great Famine Commission which sat under the presidency of Sir Richard Strachey, elaborated the Famine Codes which, amended to meet later experience, form the basis of the famine relief system today. They recommended: (1) that employment should be given on the relief works to the able-bodied at a wage sufficient for support, on the condition of performing a suitable task; and (2) that gratuitous relief should be given in their villages or in poor houses to those who are unable to work. They recommended that the food supply should be left to private agency, except where that was unequal to the demands upon it. They advised that the land-owning classes should be assisted by loans, and by general suspensions of revenue in proportion to the crop failure.

Provincial codes were drawn up, and were tested by the famine of 1896-97. In that disaster 207,000 square miles were affected, with a population of 69,500,000. The numbers relieved exceeded 4,000,000 at the time of greatest distress. The cost of famine relief was Rs. 7½ crores. Revenue was remitted to the extent of Rs. 1½ crores, and loans given aggregating Rs. 1½ crores. The charitable relief fund amounted to about Rs. 1½ crores, of which Rs. 1½ crores were subscribed in the United Kingdom. The actual famine mortality in British India was estimated at 750,000. The experiences of this famine were examined by a Commission under Sir James Lyall, which reported that the success attained in saving life and the relief of distress was greater than had ever been recorded in famines, comparable with it in severity, and that the expense was moderate. But before the Local Governments had been given time to digest the proposals of this Commission, or the people to recover from the shock, the great famine of 1899-1900 began.

THE FAMINE OF 1899-1900

This famine affected 475,000 square miles with a population of 59,500,000. In the Central Provinces, Berar, Bombay, Ajmer, and the Hissar district of the Punjab famine was acute: it was intense in Rajputana, Baroda, Central India, Hyderabad and Kathiawar and was marked by several distinctive features. The rainfall over the whole of India was in extreme defect, being eleven inches below the mean. In several localities there was practically no rain. There was in consequence a great fodder famine, with a terrible mortality amongst the cattle. The water-supply was deficient; and brought a crop of difficulties in its train.

Then districts like Gujarat, where famine has been unknown for so many years that the locality was thought to be immune, were affected. The people clung to their villages, in the hope of saving their cattle, and came within the scope of the relief works when it was too late to save life.

A very large area in the Indian States was affected, and the Marwaris swept from their impoverished land right through Central India like a horde of locusts, leaving desolation in their train. For these reasons relief had to be given on an unprecedented scale. At the end of July, 4,500,000 persons were supported by the State, Rs. 10 crores were spent on relief, and the total cost was estimated at Rs. 15 crores. The famine was also marked by a widespread acceptance by Indian States of the duty hitherto shouldered by the Government of India alone—the supreme responsibility of saving human life. Aided by loans to the extent of Rs. 34 crores, the Indian States did a great deal to bring their administration into line with that in British India. Although actual deaths from starvation were insignificant, the extensive outbreaks of cholera, and the devastating epidemic of malaria which followed the advent of the rains induced a famine mortality of approximately a million.

1943 BENGLA FAMINE

Localised famine conditions have recurred fairly frequently since 1901, but until 1943 it seemed that the procedure laid down by the Famine Codes was capable of dealing with all eventualities. Unfortunately, conditions in which the difficulty of obtaining relief supplies would be so great that the Codes' provisions could not be filled, were not envisaged. This state of affairs, however, arose in Bengal early in 1943. The province is estimated to be 83 per cent. self-sufficient for food and before 1942 imported most of the balance of its needs from Burma. The cutting off of this supply was followed by a series of natural disasters, including the Midnapore hurricane which late in 1912 devastated a wide area and is estimated to have destroyed 1,500,000 tons of rice. During the monsoon of 1943, when famine was already present in Bengal, floods in the Damodar river held up relief supplies from the U.P. and Punjab at a critical period. Public nervousness over the fall of Burma, the denial policy, by which boats and the larger stocks of rice were removed from East Bengal to prevent their use by the Japanese, and the general shortage of food in most consuming centres in the country were all contributory causes of the famine. When shortages became apparent in Bengal their effect was intensified by speculation on a most outrageous scale. A few areas such as Midnapore, were short of food from natural causes. Most of the other famine-stricken districts suffered because rice prices were far beyond the reach of the people, because speculators had drained the area of stocks, or because the available grain was hoarded by its owners.

According to the Famine Codes, assistance should have been provided from outside. In 1943 the problem was two-fold. Very large supplies were not readily available elsewhere owing to the general dislocation of Indian grain markets; the movement of supplies into Bengal was difficult owing to the congested state of the railways. A fairly steady stream of grain did, however, reach Calcutta from July onwards, but the Bengal Government did not evolve a satisfactory plan of distribution. Many famine areas in the province were virtually without relief until the army assisted the civil authority to organise food distribution and medical relief in November, 1943. This relief, coupled with a record rice crop, which became available in January-February, 1944, overcame the immediate crisis.

Famine conditions were accompanied by epidemics of cholera, malaria, smallpox and dysentery which probably caused as many deaths as starvation itself.

ENQUIRY COMMISSION

The Famine Inquiry Commission, headed by Sir John Woodhead, was appointed in 1944 and published a separate report on Bengal. The Commission estimated that 1,500,000 people died in Bengal as a result of the famine and its accompanying epidemics. They considered 6,000,000 people, or one-tenth of the population of the province, were affected—practically all of them belonging to the poorer classes in the rural areas. Though the basic cause of the famine was the failure of the 1942 winter rice crop, the Commission considered that high prices were at least as important as crop failures in causing starvation. Their report clearly exposed the failure of both the Bengal Government and the Government of India to take timely measures to keep the province's food situation under control. Not only was control of the procurement and distribution of food defective, but even medical relief, which

could otherwise have mitigated the epidemics, was inadequate.

During 1943 famine broke out in the Bijapur district of Bombay and in the Ceded Districts of Madras. There were also acute food shortages in Orissa, in Travancore and Cochin and the Madras district of Malabar. In none of these areas did conditions approach the severity of the Bengal famine, mainly owing to the energy of the local authorities in organising relief and in controlling supplies and prices of food.

GUJERAT FAMINE

Scarcity areas were again notified in the Decan districts of Bombay and Madras in 1946, owing to poor monsoons. Relief centres were opened and no loss of human life was reported.

Late in 1948 the whole coastal belt of Gujarat and parts of Saurashtra and Cutch were threatened with acute famine owing to the failure of

the south-west monsoon and the consequent destruction of both *kharif* and *rabi* crops. In Gujarat some 250 relief works, principally for tanks and other water supplies, were opened and 60,000 labourers employed. Provision was made for 18,000 other famine victims, chiefly the crippled and aged. In Saurashtra 80,000 people were on relief works, while 11,000 received doles.

While rail-borne food supplies saved human life, the worst problems were fodder for the cattle and drinking water, the latter being sent 40 miles by road to some areas. Vast quantities of fodder were sent by rail or country craft and a large number of cattle migrated eastward, but up to the outbreak of the 1949 monsoon, the prospects for Gujarat's cattle were so critical that a large number of tractors were specially brought into the area to assist ploughing. In Broach district detachments of troops undertook well-boring. Nearly one million people were affected by this famine.

FISHERIES

THE fisheries of the sub-continent, potentially rich, as yet yield a mere fraction of what they could were they exploited in a fashion comparable with those of Europe, North America or Japan. The fishing industry, particularly the marine section, has certainly expanded considerably within the last 50 years concurrently with improvement in the methods of transport and increase in demand for fish, cured as well as fresh, from the growing population of the great cities within reach of the seaboard.

The caste system, however, exerts a blighting influence on progress. Fishing and fish trade are universally relegated to low caste men who alike from their want of education, the isolation caused by their work and caste and their extreme conservatism, are among the most ignorant, suspicious and prejudiced of the population, extremely averse to changing the methods of their forefathers and almost universally without the financial resources necessary for the adoption of new methods, even when convinced of their value. Higher caste capitalists have hitherto fought shy of associating with the low caste fishermen, and except in larger operations on new lines, the capitalists cannot be counted upon to assist in the development of Indian fisheries. As in Japan, it appears that the general conditions of the industry are such that the initiative must necessarily be taken by Government in the uplift and education of the fishing community and in the introduction and testing of new and improved apparatus and methods.

BARODA

[This section was prepared before Baroda merged with Bombay.]

The fishery resources of the Baroda State today, while mainly relating to true fish both marine and freshwater, include the crustaceans and molluscs, among the latter are the conchies and the oysters, one species of oyster being valued for the cheap pearls yielded. To tap these resources a Department of Fisheries, started in 1937, is being organised by Dr. S. T. Moses, the Director, whose services have been lent by the Government of Madras. Apart from fishery and biological surveys conducted, the main achievements so far are the successful departmental working of the Winiowpane Oyster Pearl Fishery for two seasons and the subsequent revival of the lease, along with that of the conch fishery; the demonstration of the utilisation of these 'Pinctada' pearls, previously used only in medicine, for making jewellery; preparation of oystergrit for poultry from the shells of the edible oyster; conservancy of manure from (1) fish offal, (2) prawn and other crustacean offal and (3) marsh plants (samphire and seabirds); preparation of prawn meal dust and the manufacture and sale of Shark Liver Oil with vitamin content of 2,000 international units per gramme of A and 200 of D. Okhamandal fishery from Kurana to Okha has been leased out since 1947.

Attempts to introduce gradually freshwater fish culture as a subsidiary occupation for the ryot are being made and studies of larval and cyclopoidean fish, both local and imported, have been started. In Baroda City a Fish Market was erected and the Aquarium in the Public Park was revived. Alterations and additions to the aquarium as to include Laboratory facilities have been included in the post-war scheme started in 1947. Schemes now functioning are a "Prawn Farm" in the Badhar River, the curing, pickling and smoking of fish in the Kodinar area, and the biological studies of our marine fauna and flora and experiments in their industrial uses and in emulsification, deodorisation, etc., of Shark Liver Oil and by-products.

As the famous fishing grounds off Kodinar, which supply almost all pomfrets for Bombay are exploited mainly by outside fishermen who

merely camp in the State during the season, a colonisation scheme has just been begun under which the fishermen are induced to settle permanently at Kodah by grant of concessions (residential huts, curing yards, salt and even lands for cultivation) ashore and (use of motor launch and loan of nets, etc.) aloft. The first batch of fishermen arrived from Reyt in March 1944. A co-operative society was recently started for the benefit of the Kodinar Machharas who are now for the first time for many years working the Pomfret and Hilsa Fisheries on their own. 3 other societies have been organised, 2 for Bhoyis in Baroda and 1 for Uchis in Navsari.

Schemes held up by the War include the Velan Backwater Fishfarm for mullets, salmon and edible oysters, the Muldwara Fish Hatchery for Hilsa and a five-year plan of fishery development in Port Okha, which included the erection of a Biological Station; an Aquarium; a fish liver oil factory and cold storage station; a fish meal factory; a cannery and the starting of power fishing. Recently a company, the Western India Fisheries Ltd. has been floated with a capital of 5 lakhs, 20 per cent of which will be contributed by the State Government with the intention of launching large-scale fishery operations under departmental guidance installing cold storage stations, cannery, smokehouse, manure and meal factories, etc., putting up huts for fishermen, supplying their vocational requirements such as boats, nets and tackle including modern equipment down to power vessels for quick transport and deep sea fishing. This company when it starts working will take over power fishing in its entirety and the preservation of fish and industrial experiments in part. The departmental activities under the post-war scheme costing 44 lakhs will thus, besides industrial activities at other centres comprise: 1. Training of men both in India and abroad, 2. biological and technological research in aquaria, tanks and laboratories and 3. fish, prawn, oyster, etc. culture including measures aiming at fish conservation and reduction of depletion. The running of 2 fishing units one in Kodinar and the other in Okhamandal with power vessels and trucks, a scheme to be jointly worked with the Government of India has also been approved by Government.

BOMBAY

The fisheries of Bombay are almost entirely concerned with the exploitation of the wealth of the sea. Bombay is favoured with a coast line abounding in excellent harbours for fishing craft, a fair-weather season lasting for some seven months, and a fishing population more alive to their opportunities and more daring than those of the sister Presidencies.

The more important sea-fish in Bombay are pomfrets, sole and sea-perches, among which are included the valuable Jew-fishes (*Sciaen* spp.) often attaining a very large size and notable as the chief source of "fish-maws" or "sounds," largely exported for eventual manufacture into isinglass.

FISHING BOATS

The finest of the Bombay fishing boats are from the coast between Bassein and Surat. These boats are beautifully constructed, attain a considerable size, and are capable of keeping in the sea for weeks together. In the season the men fish principally off the Cutch and Kathiawar coasts and in the month of the Gulf of Cambay. Their main method of fishing is by means of huge anchored stow-nets, which are left down for several hours and hauled at the turn of the tide. The chief catches are bombil (Bombay duck), pomfrets and Jew-fishes. The first named are dried in the sun after strung through the mouth upon lines stretched between upright posts.

South of Bombay the fishermen of Ratnagiri and Rajapur make use of another and lighter class of fishing boat specially designed for use

in drift-net fishing. Fine hauls of *bonito seer* (a large form of mackerel) and allied fishes are often made during the season from September to January. Later sharks and rays predominate. For the latter specially large and powerful nets are employed. For part of the fair season, when fishing is not usually remunerative, many of the larger Bombay fishing boats are employed as small coasters, a fact which shows how big their size is.

FRESHWATER FISHERIES

With a view to developing freshwater fisheries of the Province a survey of different sheets of water and their fish fauna was undertaken which revealed that although there were extensive irrigation reservoirs and tanks for commercial fish culture, there was hardly any indigenous fish suitable for the purpose.

Experiments on growing both indigenous and exotic varieties of fish in natural tanks and a study of their rate of growth, feeding and breeding habits, have revealed that selected varieties of carps occurring in the rivers of Northern India fatten satisfactorily under local conditions and are most suitable for stocking ponds, lakes, etc. The experiments have shown that a suitable tank of about four acres in area can grow about 2,000 lb. of fish and that the financial returns are most encouraging.

The main difficulty, however, in undertaking stocking operations on a large scale is that fry and fingerlings of suitable carps have to be imported from such distant places as Patna, Calcutta, etc. and consequently there is great uncertainty about the supplies. The future of the freshwater fisheries in this Province, therefore, depends on whether a reliable source of supply can be established at hand. In order to obviate the difficulty of importing fry and fingerlings from outside the Province, perennial sheets of water are being annually stocked. These waters include the Ulhas River, Visapur Reservoir, Tata Lakes and Powai Lake.

SORLEY'S REPORT

A special department exists in Bombay for the development of the fisheries of the Province and their organisation on progressive lines. The department is in charge of the Director of Fisheries and has been specially constituted with effect as from the financial year beginning April 1, 1945.

No survey of the fishing industry can be complete without a reference to the so-called Sorley's Report (published in 1933) which is a store-house of information and also the starting-point of all subsequent measures for the improvement of the industry. Amongst its more important recommendations were 1. the establishment of a marine aquarium, 2. the opening of a bureau of fisheries information, 3. the encouragement of marine biological research and 4. the employment of motor launches for the transport of fish to consuming centres.

The experiment in mechanical transport was first conducted at Danda in co-operation with the head of the local fishing community. A launch obtained on loan from the R.N. was used with suitable modifications. The experiment was such a great success, the fishermen were so highly impressed with the speed with which fish could be transported that today there are no less than 30 vessels engaged in the carrying trade. The launches operate between Bombay and the fishing fields both in the north and south of it, and the total quantity of fish brought into the city during 1947-48 was 3,500,000 lbs.

DEEP-SEA FISHING

Something even more important, however, is a scheme financed on a 50:50 basis by the Governments of India and Bombay for deep sea fishing. For this purpose a vessel Japanese has been put into operation, manned entirely by the members of the fishing community. The

Government of India are also independently operating a steam trawler in which improved fishing methods such as trawl nets, purse-seine nets and Danish seine nets are being tried out along the Bombay coast.

Certain private concerns are also conducting experiments, of whom two may be mentioned. Messrs. India Fisheries Ltd. with a capital of over Rs. 20,00,000 are operating a purse-seine fishing vessel owned in America and manned by an American Master Fisherman and a crew of four. And second, Messrs. Western Fisheries Company who are using a 71 footer motor fishing vessel purchased from the Navy for trawler experiments conducted with the help of three Italian experts. Yet another private trawler 'Tongkol' which arrived in Bombay from Karachi in July made five voyages during the monsoon and landed about 23 tons of fish during 1947-48. The vessel continued its fishing voyages till June 1948 when the Proprietors suspended operations as uneconomic and opened negotiations for a drifter-cum-trawler vessel fitted with winch and other up-to-date tackle for fishing with drift nets and other trawl.

The Fisheries Department have designs for vessels with a much wider cruising range than was possible before. In accordance with the wishes of the fishermen these vessels will be deckless but will have arrangements for the installation of engines and the storage of fish. Two of such 45 vessels which are now ready have been allotted to the fishermen's co-operative societies on a subsidy-cum-loan basis. If the vessels prove popular it is proposed to build 30 more at a cost of Rs. 8,00,000 in the next five years and make them available to as many fishing centres as possible.

It is clear that any experiment with the trawlers will be worthwhile if they have to be operated by technicians who do not belong to the fishing community. So part of the whole scheme is to train youths of the fishing community to run and maintain motor launches so that the whole trade can be confined to the community itself. Schools have been started for this purpose and an apprentice gets as much as Rs. 30 a month as stipend.

REFRIGERATING FACILITIES

Larger supplies of fish made available by the launches have induced the flow of private capital into channels intimately bound up with the fishing trade. Several ice factories and cold storage plants have since been set up at Malvan on the Ratnagiri coast and Chendla on the Karwar coast. In Bombay, a quick-freezing plant employing the Z-process has been installed by a Russian technician at the Kormali market at Delisle Road and an ice factory and a cold storage plant have also been set up on the east side of Crawford Market (Bombay). A feature of the plant mentioned last is that it has a number of small chambers which are hired out at small fees either to one individual or to several collectively. This plant also provides for the quick-freezing of fish.

As a result of the erection of new ice factories, the output of ice has increased vastly in the past few years, being today 700 tons per day, compared with 300 tons during the war. The production of ice can still be increased. In addition to the existing cold storage plant with a capacity of 54 tons, the Bombay Municipality is putting up a new plant with additional 13 tons capacity. The Government of India have also plans ready for a cold storage plant of 600 tons capacity at Sassoon Dock, Bombay. Ice-making plants are also being erected at Santa Cruz, Lalbaug, Kurla and Worli as well as at Ratnagiri. In Poona two cold storage plants of 200 and 100 tons have been put up for storing fish. The Department of Fisheries has also under its active consideration proposals to erect ice and cold storage plant at Karwar (District North Kanara) and at Satpati (District Thana). The plants will be allotted to fishermen's co-operative societies.

FISH CURING

The control of the fish curing yards was transferred to the Department of Industries on July 1, 1936, prior to which they were administered by the Salt Department of the Government of India. There are 34 such yards in Bombay, 20 in the Ratnagiri District and 14 in the Kanara District. At these yards duty-free salt is stored in salt godowns from where it is issued to fish curers to cure fish. The total quantity of fish cured and the salt issued at the fish curing yards in 1947-48 was 252,066 Mds. and 92,827 Mds. respectively.

Government have sanctioned a scheme for the improvement of curing facilities at the fish curing yards in the Ratnagiri and Kanara Districts, which provides for the construction of cement concrete platforms, permanent fish curing sheds over the platforms, compound walls and sinking of new wells for adequate water supply. The total non-recurring outlay on the project will be Rs. 8,45,950. Part of the expenditure on these works will be subsidized by the Government of India under the 'Grow More Food Scheme'. The scheme is already put in operation and the works are in progress at several yards. The provision of these facilities should greatly benefit the fish curers and the fish curing industry as experience has shown that about 20% economy can be effected in the quantity of salt used under the present insanitary method of curing. This is also bound to improve the quality of the cured product.

Smoking of fish is another method of preserving fish which has recently been introduced.

CO-OPERATIVE SOCIETY

The value of co-operative societies cannot be gainsaid. And as a result of vigorous propaganda several co-operative societies of fishermen have come into existence at Janza, Ankola, Nandgaon and Kodikar in the Kanara District, Bagmandla, Vengurla, Jaitapur, Vihyadurga and Shiroda in the Ratnagiri District, Satpati, Murbe, Kharekuran, Shirgaon and Utan in the Thana District, Danda in Bombay Suburban, Lower Colaba in Bombay City, Majaji, Harwada, Kem, Honaver and Gancavali (Dist. Kanara), Karla, Mithbav, Malvan (District Ratnagiri), Datavre, Kharekuran (Thana District), Bhadeli, Kodak and Badsar (District Surat) and two at Versova in the B. S. D. In addition, a Provincial Co-operative Association has also been formed with its headquarters in Bombay. The society will market the fish caught by its members in the mofussil, and the profits which hitherto went to middlemen, will now accrue to the fishermen. These Societies will receive Government help for the acquisition of motor launches, trucks, ice plant and also financial help in the form of loan or subsidy.

The education of fisher-children has been kept in the forefront among the activities of the Department of Fisheries. Accordingly, fisheries schools have been established in the Province: three in the Kanara District, four in the Ratnagiri District, one in the Thana District and two in the Surat District. Proposals for the establishment of four more schools are under consideration.

Five other items which need to be mentioned are the fisheries information bureau, the marine aquarium, the fish farm, the marine biological station and technological laboratory at Sassoon Dock and the exploitation of the by-products of the fishing industry. The last item will be dealt with at some length, while the others will be dealt with briefly.

A fisheries information bureau has been set up. The function of this bureau is to collate and supply information connected with the local and other fisheries. The information collected by the bureau is useful to the fishing industry, as it furnishes information not available to them before.

The establishment of marine aquarium has been made possible by a munificent donation of Rs. 2 lakhs by Mr. and Mrs. Vijaji D. B. Taraporwala. The Government has accepted the

donation and allotted a commanding plot of land for it along the Marine Drive. A feature of the aquarium will be that the exhibits will include both fresh water and marine forms found along the coast of the Province. In addition, the aquarium will have facilities for marine biological research and investigations. The building is expected to be completed by the end of 1949.

A scheme for setting up of a fish farm to remedy the lack of precise scientific data regarding the breeding habits of various indigenous and exotic food fishes, their rate of growth, food requirements, etc., has been sanctioned by the Government. The farm which will be established at Khopoli on the Tata tail race is expected to come into existence early next year. A scheme to establish two marine biological stations at Ratnagiri and Karwar respectively has also been sanctioned. This is a part of a five-year plan of post-war development programme involving a capital expenditure of Rs. 2,30,000 and an average annual expenditure of Rs. 73,500.

FISH OILS

A Fisheries Technological Laboratory has been established at Sassoon Dock for conducting research on problems relating to ancillary industries like shark-liver oil, gelatin, glue fish meal, etc. To ensure quick and clean extraction of oil a sharpie's super centrifuge, a fish liver boiler, and a steam boiler have been imported. A deodorizer will also be installed to eliminate the disagreeable fishy odour of the oil. One piece of work which the Laboratory does is to test samples of shark-liver oil from the public for their vitamin A content, the number of samples so tested average over 300 a year.

The Second World War led to an investigation of the possibilities of the utilization of oil from shark-livers to replace the dearth of supplies occasioned by the stoppage of imports of Cod-Liver Oil from Norway.

A simple process of oil extraction, not involving the use of any complicated machinery, was devised and demonstrated by the Department to the local fishermen and to the fishermen of Ratnagiri, Jaitapur, Malvan and Shiroda. The demonstrations were largely attended and the fishermen were greatly impressed by the fact that a new occupation and fresh source of income had been opened out to them. As a result of the demonstrations the fishermen earnestly took up the work of oil extraction and have regularly been sending to the Fisheries Department oil extracted by them. This is refined by the Department and later sold to chemists in Bombay.

During 1947-48 the output of neat shark-liver oil delivered to the Department was 3,000 gallons with an average vitamin A potency of 15,000 International Units per gramme. The oil when processed was capable of yielding 400,000 lb. of Orum vitaminatum of B.P. standard. Besides this there is the oil disposed of by the fishermen directly which will be about 2,000 gallons.

The characteristic odour of fish liver oil is an obstacle to its popularity with the consuming public. To overcome this drawback and encourage the use of the vital health giving commodity, the department has put on the market 3 minin pearls containing 3,000 international units of vitamin 'A' and 300 international units of vitamin 'D'. A pearl per day supplies the minimum daily requirements of an average individual.

The superiority of Bombay's shark-liver oil over other varieties is unquestioned. Oils from *Caracharias melanopterus* and *Prisicis perrelli*, for instance, yielded a vitamin A potency of 140,000 and 40,000 international units per gramme respectively. This is many times more potent than cod-liver oil which, according to the British Pharmacopoeia standard, is between 500 and 1,500 international units per gramme.

Fish glue: The manufacture of adhesives is a valuable industry from the by-products of the fishing industry and the department has recently taken to its manufacture on a commercial scale. The product is sold under the trade name 'Adhesive' in tubes, 1 lb. bottles and one gallon tins.

Fish meal: Another important by-product of fisheries is fish meal. The production of fish meal has been undertaken at the departmental laboratory on a semi-commercial scale. 12,000 lb. of fish offal mostly from the Municipal markets was converted into fish meal.

The Fisheries Technological Laboratory is also conducting research on problems related to the fishing industry and trade such as the preservatives for nets and the drying of Bombay Ducks by a special process, which will eliminate the risk of deterioration during shipment. The experiments are in progress. The laboratory will soon be getting special equipment required to conduct these experiments.

COCHIN

[This article was prepared before the formation of the Travancore-Cochin Union was announced.]

The maritime State of Cochin, South India, has three types of fisheries, namely, marine, estuarine and freshwater. Its 35 mile coastline includes 19,700 acres of backwater abounding in different varieties of fish, brought in through the natural openings in Cochin and Cranganore. Thanks to the heavy monsoon rains beating down rich feed from the mountain and forest tracts of the interior, the State has its best sea-fishing during the rainy season.

Marine and Estuarine Fishing:—The State has over 500 sea-going boats which bring in on an average 2½ lakhs maunds of fish every year, consisting of Sardine and Mackerel (through gillnets), miscellaneous varieties like butter fish, ribbon fish, sole fish, silver bellies and horse mackerel (caught by boat seine) and sharks, rays, seer and other bigger varieties (by hauling).

The bulk of the monsoon catch is needed to meet the demand within the State itself, while a fraction is salt-cured and exported to the markets of Travancore and other parts of the sub-continent. The annual export trade in cured fish amounts to about Rs. 5 lakhs.

Prawn Fishing:—The sea, the extensive lagoons and the paddy lands on the coast produce various types of prawn during different parts of the year. All the varieties are nourishing and tasty. Before the war Burma in general and Rangoon in particular used to provide the best market for hard-dried prawn pulp from the State, the annual export amounting to Rs. 15 lakhs. The Department of Fisheries has now resources for preserving prawns in air-tight tins which keep the product well preserved for periods ranging from 8 months to one year. In the post war era it is quite likely that the State's rich crop of prawns may form raw materials for building up a canning industry within the State.

Preservation:—Salt curing is the most widespread and perhaps the only preservation process which is dependent on the sun. Artificial drying or dehydration is generally resorted to during the monsoon. Smoking of fish is also encouraged as there is a demand for smoked fish. The Department has devised a plan for using smoke and heat from a common oven for smoking and dehydrating separate lots of fish in different chambers.

Fish Oil Industry:—Shark-liver oil and Ray-liver oil are now being produced by the Department. The hammer-heads and saw fishes are famous for the healing qualities of their oil, particularly in ophthalmic and pulmonary troubles. Shark-liver oil which has a very high percentage of Vitamin A has an exceedingly

good market in the State. The cruder form of this oil is used for caulking boats and polishing leather. The stearin is made into insecticidal soaps and lotions.

Shell Fish Industry:—This industry is confined to the collection of little heaps of shells washed ashore. Shells are calcined in kilns to produce lime as a cottage industry. Near Wellington Island in the State, oysters are available, their meat being used as a specific in wasting diseases and also as a delicacy. The Fishery Department is now exploring the possibilities of making face powder out of oyster shells.

Fish Farming:—Estuarine fish farming is another contribution made by the Department in the development of the fishing industry. A splendid ground for the culture of mugsils and milk fish has been discovered by transforming the unused land for paddy or coconut into a sort of nursery. Separate areas for fishes such as the Ikkhiti, the Indian salmon and Jew Fish which appeal to the sporting angler and the eel-like, are also marked and planned for systematic operations.

Deep Sea Fishing:—The State is working on a scheme for the operation of the boat-seine of Malabar with the basal platforms of net for mackerel; and of drift nets and hook and line for bigger fishes like seer, chornimus, rays and sharks.

The socio-economic activities of the Department are directed towards the liquidation of illiteracy amongst fishermen, by establishing fishery schools manned by teachers from the fisher community trained in fisheries technique. Canals and roads for facilitating transport of fish are also being opened by the Department. Co-operative Societies have also been established and are being run under the auspices of the Department.

EAST PUNJAB

The permanent staff consists of a Warden of Fisheries, two Deputy Wardens of Fisheries, one Fisheries Research Assistant, fifteen Assistant Wardens of Fisheries, one Laboratory Attendant, eighteen peons, and sixty-five watchers.

The changes which resulted due to the vissection of the province, have had their effect on the working of the Department. No office records were available after the partition. All the laboratory apparatus, equipment and other valuable collections, etc., went to the West Punjab Government. The 'Thuma' truck, which belonged to the Government of India and was used for stocking operations, also remained at Lahore.

Mass migration of the fishing population from the East Punjab to Pakistan, was another draw-back which put a heavy strain on the working of the Fisheries Department. Except Kangra and certain portions of Gurdaspur, Hoshiarpur and Ambala districts, where Hindu fishermen were found in considerable numbers, nearly 99 per cent. of the fishing population in the plains, along the rivers Beas, Sutlej, Ghaggar, Jannuna and their tributaries, consisted of Muslim fishermen, who migrated to the West Punjab. The few Hindu fishermen who came in to fill their place from Pakistan had lost their fishing implements. What is worse these fishermen were reluctant to settle along these rivers and to take to fishing as a whole-time profession as the Ravi and the Sutlej were on the border. Hence, the old traditional system of issuing individual fishing licenses had to be given up, and the fisheries of the province had to be exploited under the direct supervision and guidance of the Fisheries Department.

The unprecedented heavy floods in the rivers and streams, which occurred in September, 1947, washed away most of the fish, and thus added still more to the difficulties of the Department.

The activities of the East Punjab Fisheries Department were directed to:—

1. **Conservation**—comprising conservation by legislation, providing fish-ladders at the canal head-works, creating fish-sanctuaries, and the eradication of fish-enemies.
2. **Culture and Propagation**—comprising culture of exotic species, e.g., Trout, etc., and culture of Carp, etc.
3. **Catching and Marketing fish.**
4. **Research.**

CONSERVATION

The number of fishing licenses issued during the year, 1947-48, was 6,179, and the receipts from license-fee amounted to Rs. 21,162-8-0. The records of Gurdaspur, Ferozpur and Hissar Districts were not available. Hence the number of licenses issued in these districts, as included in the above figures, was from August 15, 1947 to March 31, 1948.

During the year 1948-49 the number of fishing licenses issued was 5,012, and the receipts from license-fee amounted to Rs. 28,745-10-0. The issuing of individual licenses, except for rod and line, was dispensed with in the Hissar, Karnal, Ambala and Gurgaon Districts of the Ambala Division.

In 1948 further amendments to the rules framed under the Punjab Fisheries Act, II of 1914, were made, under which the issuing of individual fishing licenses, except for rod and line, was dispensed with in the districts of Hissar, Karnal, Ambala and Gurgaon. Draft amendments to the fishing rules of Rohtak District, dispensing with the issuing of individual licenses, except for rod and line, were sent to Government for publication in the Government Gazette, for inviting objections, if any. Draft amendments to the fishing rules of the Shamsar Khan's Tank at Batala, were also published in the Government Gazette and objections entertained.

The decrease in the number of licenses, as compared with the previous years, was thus caused first by the mass-migration of fishermen and second because of the fact that the issuing of individual fishing licenses, except for rod and line, was dispensed with in a great number of Districts.

The total number of fishing offences reported and compensated during the year, 1947-48, was 83.

During 1948-49 the total number of fishing offences was 584 and the receipts as compensations amounted to Rs. 2,606-8-0.

No violation of the rules in the sanctuaries was reported either in 1948 or 1949. The existing sanctuaries for 'Mahseer' in Kangra district proved of great help in the conservation of fish, but the two sanctuaries at Andretta and Bheral were silted up.

The fish-ladder at the Madhopur Head-works was completely washed away by the floods which came in September 1947. The Executive Engineer, Project Division, Ambala, agreed to include a fish-ladder in the dam to be built across the Eastern Behn, near Malaysian Shahkot, in Jullundur district. After the plan was prepared by the Executive Engineer, Upper Bari Doab Canal, Gurdaspur Division, Gurdaspur, the site was inspected and the plan discussed and approved. It is hoped that the new fish-ladder will soon be constructed and that it will be more beneficial for the free movement of fish, than the old one.

A stretch of twelve miles of the Sutlej river, below the Rupar Head-works was closed for fishing for two years.

CULTURE AND PROPAGATION

The heavy floods in the river Beas changed its course and washed away everything at the hatchery, including the stock of breeders.

In spite of the heavy damage done to the hatchery and mass mortality of the breeding stock, the stripping operations were carried out. Sixty-five Brown Trout (*Salmo fario*) hens were stripped, and 38,976 eyed ova were obtained. But all the ova and the fry got from some of them were washed away during the floods which came six months later in March, 1948.

The stripping was also continued during 1948-49. Eighty-two Brown Trout (*Salmo fario*) hens were stripped and 58,078 ova were obtained. Fry numbering 19,378 were planted in the natural fry rearing pond at Bahang Bihal. Fry numbering 13,469 were also planted in the Sanctuary in the Katrain Bihal.

The scheme of "stocking with fish a large number of impounded waters in the Punjab" terminated with the partition of the province. A fresh scheme for "stocking with fish a large number of impounded waters in the East Punjab" was submitted to the Government and put into operation on December 1, 1948. The scheme is of three-year duration and is jointly financed by the East Punjab Government and the Central Government on a 50:50 basis. The following staff was sanctioned—one Deputy Warden of Fisheries (Stocking), five Assistant Wardens of Fisheries, ten Fishery Muqaddams, forty Fieldmen, six peons, one Mechanic Driver and one Cleaner. It is proposed to stock 400-500 acres of impounded waters in the East Punjab, under this scheme, in order to meet the heavy demand of fish and to augment the fish-resources of the province.

No Deputy Warden of Fisheries who is officer-in-charge has so far been appointed, and no motor vehicle for transporting fry and fingerlings from the fry-farms to the impounded waters has been supplied. A survey of the suitable impounded waters in the East Punjab has however been carried out. These impounded waters will be stocked with fish when the vehicle is received.

CATCHING AND MARKETING FISH

In order to make fish more easily available to the public in the absence of professional fishermen, catching and marketing of fish in the six Districts of the Jullundur Division was brought under the control and supervision of the East Punjab Fisheries Department. Under this scheme, fishing parties were organized by the Assistant Wardens of Fisheries, and the fish was caught on a share-basis. Government fish shops were opened at Amritsar, Jullundur, Ludhiana and Ferozepore. A Government Fish stall was also opened at Simla. Commission Agents, mostly belonging to the fishermen class were appointed.

In spite of the fact that the work was started when more than half the fishing season had already passed and that there were very heavy floods, fish weighing 34,604 lbs. was caught and marketed under this scheme. A sum of Rs. 10,307-7-3 was credited into the treasury as Government share in the sale of fish, and an equal amount went to the fishermen.

The scheme was later extended to Hissar, Karnal, Ambala and Gurgaon Districts, as well. Government fish shops were opened at Ambala, Karnal, Panipat, etc. In the Districts in which the scheme was in progress new fishing parties were organised. "Rai-Sikhs" in Amritsar and Ferozepore Districts were reclaimed and parties of them were initiated into the fishing trade.

During 1948-49 fish weighing 298,605 lbs. was caught and marketed under this scheme, in addition to the fish caught by license-holders. Out of this amount Rs. 62,254-6-11 on account of Government share in the sale of fish, was credited into Government treasury.

The rules framed under the Punjab Fisheries Act, II of 1914, were amended to suit the changed conditions in the districts of the East Punjab, in which the scheme of catching and marketing fish was introduced. Draft amendments to the fishing rules of Rohtak District were sent to Government, for publication in the Government Gazette, and for inviting objections, if any.

RESEARCH

After the partition East Punjab was left without any laboratory or equipment. A miniature laboratory was however fitted up at Batala, and research in various branches of fisheries carried out. Observations on the spawning of Carp under controlled conditions were made at the Government Fish Farm, Batala, during 1947-48. Another scheme which is of All-India importance, one on the "investigation of the factors influencing the spawning of the Indian Carp" was submitted to the Indian Council of Agricultural Research with a view to obtaining sanction and financial aid.

HYDERABAD STATE

The Hyderabad Fisheries Department was established in 1941. Since then investigations and preliminary surveys of many tanks and reservoirs have been carried out and about 100 varieties of fishes have been collected.

The chief sources of fish are the perennial rivers Godavari, Kistna and Manjira, but their tributaries are not so useful as most of them dry up during the summer. There are also many big reservoirs and more than 35,000 big tanks besides thousands of small ones, in which fishing is done.

Murrel is the most common and popular fish and it is obtained in large numbers during the hot season. But there is always a scarcity during the other parts of the year.

Breeding and culture of fishes is the most important part of the work, which is done by the Fisheries Department. Fish-farms where besides indigenous fishes, other fishes like Gourami, Etroplus and Mullet are kept for breeding, are being established in certain parts of the State. Hosainagar fish-farm, for instance, is already functioning; and three others in Nizamabad, Medak and Atraf-e-Balda are under way. In the near future, fishfarms will be opened in other Districts too. The stocking of tanks has also started and a large number of them have already been stocked with fingerlings of fishes to increase production.

Besides breeding and culture the Department is concerned with improving the technique of fishing. Deep-water netting, for instance, has been introduced in one of the reservoirs as an experimental measure and if successful it will be extended to other reservoirs in the near future. An item in the post-war programme is the preservation of fish through refrigeration.

Incidentally the Fisheries Department is helping the Health Department to fight malaria by larvicidal fishes as at Trimalapur in the Nizamabad District.

The Fisheries Department is active not only on the production side but also on the marketing side. It supplies the Hyderabad city markets with fish in conjunction with the Hyderabad Co-operative Central Trading Society, Ltd. The needs of the District, however, are not overlooked for it is only the fish which are in excess of the needs of the District that are being sent to the City. The money for the purchase of the fish is provided by the Department but part of the idea is to encourage the growth of co-operative enterprise. The ultimate object is to entrust the whole work of supply as well as of sale to the Co-operative Society. With this end in view Societies are being formed in the Districts, and tanks instead of being given to individuals are now being leased out to these Societies on nominal payments.

In the near future when the Hyderabad Government receives its shares of Tungabhadra waters on a 50:50 basis with Madras Government a Biological Station will be established in the vicinity of its own territorial waters. The Biochemical Laboratory of the State has already succeeded in preparing peptone, glue and gelatine on a large scale.

MADRAS

The Madras coastline of 1,750 miles is marked by a shallow-water area within the 100 fathom line of 40,000 square miles; outside of the mere fringe inshore, this vast expanse of fishable water lies idle and unproductive. The surf-swept east coast is singularly deficient in harbours whereon fishing fleets can be based, and so from Ganjam to Negapatnam, the unsinkable catamaran, composed of logs tied side by side is the only possible easy-going fishing craft. Its limitations circumscribe the fishing power of its owners and consequently those men are poor and the produce of their best efforts meagre compared with what it would be if better and larger boats were available and possible.

The west coast is more favoured and contributes to more than three-fourths of the total landings of sea fish in the Province. From September till April weather conditions are good enough to permit even dugout canoes to fish daily. No difficulty is found in beaching canoes and boats throughout this season.

The fishing population is a large one. The last census was taken as early as in 1930-31 when the fisher-population on the west coast totalled 138,294.

Kinds of Fish.—During 1917-48 about 30 lakhs of maunds of fish were landed on the west coast of which important varieties were as follows:—

Mackerel 8,02,566 maunds; Silver-bellies 1,80,626 maunds; Soles 2,78,504 maunds; Prawns 1,67,520 maunds; Catfishes 1,79,725 maunds; Sharks 38,010 maunds.

On the east coast Sardines, White-bait, Ribbon fish, Jew fish, Prawns, Catfish, Pomfret and Seer form the bulk of the fishery.

Fishing on both coasts is mainly by seine nets, drift nets and wall nets and also by hooks and lines. The most common craft used are the dugout canoe on the west coast and the Catamaran and masula boat on the east coast. Fishing outside the 5 fathom line is little in evidence save by Bombay boats (Ratanagri) which are engaged in drift netting for bonito, seer and other medium-sized fishes. These strangers are enterprising fishers and bring large catches into Madras and Mangalore and other convenient centres; the material is largely cured for export.

The Department.—As Government attention has been given in Madras over a longer period to the improvement of fisheries, and a larger staff concentrated upon the problems involved than elsewhere, this Presidency has now the proud position of knowing that her fisheries and collateral industries are better organised and more progressive than those in other provinces. It was as early as 1907 that a fisheries bureau was created. Later it developed into a separate Department of Government. In 1940 it was amalgamated with the Department of Industries and Commerce, but a separate Fisheries Department is to be reconstituted very shortly.

The activities of the Department are so varied that it is difficult even to enumerate them in the space available, much less to give details.

Madras practically led the way in developing the shark-liver oil industry in the country. Oil from a South Indian shark-liver is ascertained to be about thirty-five times richer in Vitamin A than an average sample of medicinal cod-liver oil. When cod-liver oil could not be imported in any quantity during the war, an opportunity was provided for developing an indigenous industry for the production of fish liver oil rich in Vitamin A, and also for manufacturing malt extracts and emulsions and various preparations of this kind. The manufacture of shark-liver oil is undertaken at the fish curing yards and oil extraction centres and in 1947-48, 7,006 gallons of crude oil were manufactured and sent to the Government

Oil Factory, Calicut, for purification and blending. The amount of refined oil manufactured was 12,475 gallons. The product, both in the blended and standardised bulk form and in the vitamin concentrated form of "Adamin" has stood its test very well and is now finding new channels of utilization as "Veterinary oil" for administering to livestock.

Fish Curing.—Fish curing is practised extensively everywhere on the Madras coasts. Its present success began some eighty years ago with Dr. Francis Day who, after an investigation during 1866-71 of the fisheries of the whole of the sub-continent, pressed for the grant to fishermen of duty-free salt for curing purposes within fenced enclosures. His salt suggestions were accepted by the Madras Government, and from 1882 a gradually increasing number of yards or bounded enclosures were opened at which powdered salt was issued as and when necessary to the curers.

In 1947-48 there were 114 fish curing yards along the east and west coasts of the Province. 11,11,927 mannds of fresh fish were brought to these yards for curing and 2,27,373 mannds of salt were issued for the purpose. With the abolition of the duty on salt, however, there was a fall in the transactions in the yards as the fishermen resorted to curing outside the yards. During 1948-49, 26 yards which were not working satisfactorily were closed so that now there are only 88 yards.

Besides salt curing, the Department started in 1941, the smoking of fish, mainly for supplying the Army. During the year 1944-45, 124,320 lbs. of smoked mackerel, pomfret and seer were supplied to the Army and 5,482 lbs. to the civilian population, from the seven centres of production. The supply to the Army was stopped some time back and at present smoking of fish is done on a small scale at the Fisheries Technological Station, Calicut, where researches on the efficient and economic methods of preserving and transporting fish are being carried out.

Two fish factories for processing prawns are subsidised by the Indian Council of Agricultural Research; they manufacture semi-dried prawns from inland lakes.

Pearl Fisheries.—Off the coasts of Tinnevely and Ramanad Districts of the Presidency lie the valuable pearl oyster beds which, owing to a complex of causes yield at long intervals, an irregular supply of the oysters. With a view to elucidating and controlling the fluctuations to the best advantage, the life history of the oyster with correlation to oceanographic factors is studied by the Marine Biological Section of the Department. The rearing of pearl oysters in captivity, started in 1933 at the Krusasadi Biological Station, Pamban has been very successful and a highly promising technique of pearl production by artificial inducement is being developed here. During 1946-47 the stock of Oysters at Krusasadi were replenished with 1,000 Oysters from the Tuticorin banks.

Allied to the Pearl fisheries are the Chank fisheries of the maritime districts, both being Government monopolies. Besides the precious sacred chanks, the ablation chanks and Pooja chanks, lakhs of chank shells feeding the flourishing chank ornament industry in the north come mostly from the seers of this Province. A total of 7,43,232 chanks were fished during the year 1947-48. Experiments in marking chanks started in 1931 to study the rate of growth and migration of the chank in its natural haunt is continuing and up to 30th June 1946, 5,374 chanks have been marked and liberated.

The Marine Aquarium.—Perhaps a word is necessary about the Marine Aquarium in Madras. Ever since its opening, being the first institution of its kind in Asia, it was immensely popular with the public. On account of war emergency, the Marine Aquarium was closed on 8th March 1942. The opening of a larger Aquarium on more up-to-date lines is now under active consideration.

Deep Sea Fishing.—It is well known that Indian fishing requires improvement so as to cover more of ground as well as of catch. The survey of deep sea fisheries by the trawler "Lady Goschen," though brief, disclosed the existence of important off-shore fisheries unsuspected before. The wealth of fish off Negapatnam reported by the trawler was of sufficient importance to attract the notice of Japanese fishermen thousands of miles away. Even then it was realised that if Madras was to benefit by the survey, the allied duty of enabling the local fishermen to exploit the off-shore fishing grounds by suitable craft and tackle must be shouldered by the Department.

In 1944, the Department initiated deep sea fishing operations in different centres in the Presidency, mainly to augment the output of sharks to feed the growing shark-liver oil industry and also to demonstrate off-shore fishing. The operations resulted in a catch of over 300 tons of fish in 1947-48. Meanwhile, in December 1945, a new fishing method was attempted, viz., slooping fishing. The Pearl Fishery Inspection Vessel, "Lady Nicholson" was engaged in off-shore fishing with handlines and longlines and took four local fishing boats on tow. The catches made during the 4 months of the trial were 29,549 lbs. of fish. Further experiments are under way. The Department has acquired 8 motor fishing vessels from the Navy and they are now operating at Vizagapatnam, Coimbatore, Madras, Adirampattam, Pamban, Tuticorin, Calicut and Mangalore. Recently the fishing fleet operated on the Wader Bank off Cape Comorin and 20 tons of fish were caught by 12 days' fishing.

A special craft and tackle section has been established to devise, demonstrate and popularise improved fishing methods for different types of water, including inland waters. This section has opened boat-building and net-making yards for departmentally manufacturing boats and nets of improved design. Recently a mechanised inshore fishing boat was constructed by this section at a cost of Rs. 5,000.

The Inland Fisheries.—The fisheries of the numerous, extensive backwaters along the coastal belt of the Peninsula, the various rivers and the innumerable irrigation tanks, wells, canals, artificial reservoirs, natural lakes and domestic ponds distributed all over the land are of considerable magnitude, though in several cases the non-perennial nature of the water causes their fisheries to be ignored except during the summer drought when the streams shrink to pools and the tanks to puddles and the owners or the lessees of the fishing rights turn out to catch fish. The major waters are, however, provincialised, and their fisheries systematically developed and exploited directly or through a lease system. With a view to conserving fish seed, great congregations of breeder carps and their young below the Mettur Dam and the Hogenakal falls on the Cauvery, of spawning Hilsa below the ancient in the Godavari, Krishna, the Cauvery and the Coleroon rivers and of immature mullets in the coastal backwaters, are protected by legislation against their indiscriminate capture. Destructive methods of fishing such as poisoning, dynamiting, etc., are also penalised.

The chief freshwater fishes of economical importance are, the ubiquitous Murre (*Ophicephalus striatus*, *O. murinus* etc.) notable for its ability to live for a considerable period out of water, the various carps (*Catla catla*, *Cirrhina cirrhosa*, *C. reba*, *Labeo calbasu*, *L. fimbriatus*, *L. kottius*, *Danios* *dubius*, *B. carniaticus* and the well known favourite of sportsmen in India, the Mahseers), the catfishes (*Wallagonia attu*, *Mystus seengala*, *M. aor*, *M. punctulatus*, *Pangasius pangasius*, *Clarias magur*, *Succo-branchius fossilis*, *Silonia silindia* the eel (*Anguilla*) the spiny eels (*Mastacembrus* *Spi.*), *Notopterus notopterus*, the climbing perch (*Anabas scandens*) and the Hilsa (*Hilsa* *tishia*). To these have been added a number of valuable exotic fish which have been successfully acclimatised to the waters of the Province.

Thus the giant Gourami, acclaimed as the best freshwater table fish in the world has been introduced from Java and successfully reared and bred in the Departmental farms from where it has been distributed to Bombay, E. and W. Bengal, the E. and W. Punjab and other places. In the Nilgiris the English Carp, the Tench and the Rainbow Trout have been acclimatised and thrive well. The Government working in conjunction with the Nilgiri Game Association maintain a hatchery at Avalanche where quantities of trout fry are hatched and reared for replenishment of the streams of the plateau. The Mirror Carp which was introduced from Newara, Elaya, Ceylon, in 1939, is thriving well in the Nilgiris and is now extensively used for sowing other upland waters of the Presidency. From Madras it has now been distributed to Bangalore, Bombay and the Kumaon Hills in the United Provinces. Semi-exotic forms like the Rohu (*Labeo rohita*) have been recently introduced from the delta of the Ganga. The attempts of the Department to introduce Catla, the quick growing carp, into the Cauvery river were successful and this fish which was unknown to the south of the Kistna is now established in the Cauvery System.

Methodical attempts to augment the stock by local fingerling collection and distribution, acclimatisation of salt water forms like the mullets (*Mugil spp.*), the Pearlsip (*Etroplus suratensis*), the milkfish (*Chanos chanos*), the cock-up (*Lates*), etc., and hatchery operations for Hilsa, carps and the Trout have all been very successful in the building up of the inland fisheries of the Province.

In addition to the existing departmental fish farms, a scheme of District Rural Fishery Demonstration has been put in operation in all the districts for a systematic survey and utilisation of every piece of cultivable water for aquaculture and, through Demonstration Fish Farms to educate the ryots and make them interested in fish farming as well as to maintain and distribute fish seed.

For the biological control of "water-borne" diseases like malaria, filariasis and guinea worm, small mosquito-cidal and cyclospicidal fishes are collected, reared and distributed in thousands to municipalities and other local authorities at a nominal price for introduction into mosquito-haunted sheets of water; these anti-malarial operations have proved successful in places where the local authorities have given proper attention to the directions issued. A special Public Health Fish Unit is attending to this item of work.

Research.—Marine Biological Research with special reference to applied fisheries Science is being carried at the three Research Stations, one on the west coast at West Hill and the other two on the east coast at Tuticorin and Krusasadi. Krusasadi is a small coral islet situated near the island of Rameswaram and has been popularly called the "Biologists Paradise". Every year biology students from various institutions in India visit this station for field studies. Investigations on the occurrence, migrations, spawning and spawning habits and development of the various food fishes as also the physico-chemical factors which influence their life are being carried out at all the three stations. Research on the life history of the Pearl Oyster and Chank is an important item of work at Krusasadi and Tuticorin. Experiments are also being conducted at the Krusasadi biological station in the culture of pearls under controlled conditions.

An estuarine research station has been set up at Ennore, near Madras to study important fishes like Mullet, Kelti and Threadfins which generally frequent the estuaries.

After an experimental stage in Rural Pisciculture a regular Freshwater Biological Research Station, perhaps the first of its kind in India, has been functioning in Madras since 1942, with a subsidy from the Indian Council of Agricultural Research. The work of the station is

directed towards the investigation of the bio-nomics, feeding and breeding habits and biometry of the important food fishes of the Province and the varied aspects of Ecology and Hydrology with a view to determine and promote the optimum conditions for maximum fish production. Two special wings, one Hydrological and the other Phytological have been added to the Research station for special attention to physico-chemical and floral studies towards the increase of aquatic productivity and the solution of pollution problems. The foundation stone of the new Hydrobiological Laboratories proposed for the Station was laid by Dr. Rajendra Prasad.

A Bill Fishery Research Station has been established at Ootacamund on the Nilgiris to study the problems relating to the improvement of the trout and carp fisheries of the plateau. A research station for the investigation of the valuable Hilsa fisheries and a Hilsa hatchery are located on the Godavari river near Rajahmundry. A study of the fisheries of the Tungabhadra river with a view to assess the probable effects of the dam on fishery has been started at the dam-site near Hospet. Research on fish passes in collaboration with the Irrigation Research Station at Poondi has been planned.

Welfare Work.—A remarkable feature in the work of the Madras Fisheries Department is the energy which it devotes to the improvement of the condition of the fisherfolk. The Department has always recognised the duty of spreading among them education and the habits of thrift, temperance and co-operation. The work has been specially successful on the west coast. The number of fishermen's co-operative societies in 1944-45 on the west coast was 59.

The Committee on Fisheries recommended that all co-operative work among fishermen both on the west and east coasts in the Presidency should be done by the Fisheries Department and that, on the analogy of the system in vogue in the Labour Department, the Inspectors of Co-operative Societies should work under the Fisheries Department, the Co-operative Department supplying trained Inspectors and auditing the books of the societies. The Government partially accepted the recommendations and sanctioned the deputation of a Sub-registrar of Co-operative Societies and 3 Inspectors for exclusive work among fishermen under the department. Recently three more Inspectors have been sanctioned for similar work among fishermen on the east coast. There are more than 100 Co-operative Societies of Fishermen working at present.

To promote the education of fisherfolk, the Department runs a number of schools for fisher children where free education and midday meals are given. There are at present 60 Fishery schools with a strength of over 10,000 pupils. A unique feature of this movement is a Fisheries Technical High School, which is perhaps the only one of its kind in India.

While these service institutions of the department have been catering to the needs mainly of marine fishermen, the diffused distribution of the inland fishermen has been one of the difficulties in the way of equally rapid progress in their rehabilitation work. Preparatory statistics of inland fisherfolk are however, being collected.

The educational work of the Department is becoming one of its most important branches in training men in the technology of curing, oil manufacture, etc., in co-operative propaganda and in general fisheries science. In the past Fisheries Officers of most Provinces and States have received training in the Madras Fisheries. Till recently the Fisheries Training Institution in Madras, under the subsidy of the Government of India, trained batches of graduates and post-graduates in a half-yearly course of general fishery work, while a Popular Short Term Course trained interested persons in the art of fish farming, to enable them to run private farms on efficient lines. Arrangements are made for the training of skilled workers at the

Marine Fisheries Technological Institute, Tuticorin, while Fisheries Technology has been included in the subjects taught in the Polytechnic recently opened at Kakinada and Madras. The Fisheries Station at Ennur supplies zoological specimens for the use of college classes and museums throughout India and even abroad and is contributing materially to the advancement of the study of Zoology throughout India.

A Fisheries Information Bureau has recently been set up by the Department to disseminate information on all fishery matters, to answer enquiries and for popularising scientific methods of fish farming, production, exploitation and utilization. Besides, the Bureau maintains a Central Fisheries Museum and a well equipped Library. A Fishery Marketing Unit has been opened recently with a view to effecting a speedy survey of the existing marketing conditions of fish and fishery products, to draw up a working plan for the rational utilisation and equitable distribution of the produce assuring a fair return to the producer and to arrange necessary transport facilities, by road, rail and water.

MYSORE STATE

The Fisheries Section in Mysore is an adjunct to the Department of Veterinary and Animal Husbandry Services and was started in 1940. A survey of the fisheries of the State was first of all undertaken with a view to studying the existing condition of the fisheries, i.e., the extent of fishing done at present, and the scope for the improvement of the fishing industry.

Fisheries development work, namely the adoption of conservation measures, the establishment of fish-sanctuaries and the stocking of tanks and river with good species of food fishes has been organised in three suitable areas of the State. They are Shimoga, Krishnarajasagar and Kolar Fish Sanctuaries. The results achieved have been sufficiently striking to justify expansion of the scope of the work to the whole State.

Two Fish Farms have been established one at Markandali and the other at Markandeya where fishery investigations are being carried out. Three varieties, *viz.*, Catla, Pearlspot and Gowami were first introduced into the nursery ponds of these farms and after sufficient rearing disseminated into selected fisheries of the State. Fingerlings of the Mirror Carp (Cyprinus Carpio) imported from the Nilgiris are being cultured in the State waters.

Mysore State is also noted for its game fishing resources. The famous large carp "Masheer" is the main game variety. Measures are being devised to conserve and develop game fisheries in the State.

The Fisheries Department today has two objects in view: one is to effect proper conservation on scientific lines, so as to increase production of food fishes and the other is to ameliorate the economic condition of the fishermen of the State.

ORISSA

The fishery wealth of Orissa is enormous. The East Coast line, the Chilka lake and large areas of inland waters yield all the 3 types of fish, i.e. (i) marine, (ii) estuarine, (iii) inland.

(i) **Marine.**—Due to lack of communication facilities, the fishing is scattered along the sea coast, the most important fishing centres being Chandbali, Chandipur, Talpada, Puri, Aryipalli, Gopalpur, Markandi and Sonapur. Fish is consumed locally, the surplus being simply sun-dried or salted. Whitebait, sardine, mackerel, sea hilsa and pomfrets, are the principal varieties. Fish curing yards have been replaced by Fishermen's Co-operative Stores administered by a Central Union. Fishermen get their daily requirements of salt, etc., from these stores.

Catamarans are used throughout the year, the sea being too rough for larger boats. Polows, i.e., country boats, are used in winter for the

shore-seine net. Fishing gear employed are hooks and lines, drift nets, drag nets and seines of crude types. These are made locally. Middlemen control the fishery but are being eliminated by co-operative societies who are taking up joint marketing of produce.

Lack of harbour and cold storage facilities and capital to introduce better fishing methods make improvement of marine fisheries a very difficult problem. The standard of living of the sea-fisherman is extremely low and calls for improvement. In some fishing centres the fishermen live on fish alone for days together. Improvement of the financial position of the co-operative societies, legislation limiting the middle men's activities, establishment of fishery schools are some of the measures which Government has to take. At the moment Government are considering the introduction of pilot scheme for deep-sea fishing.

(ii) **Estuarine.**—The Chilka lake forms a compact fishing area and yields extremely tasteful fish and prawns. The lake is leased out by zamindars to merchants who have built up an organised fishing industry. The export averages 30,000 mds. per annum and consists of mullets, bhekti, pomfrets, mackerel, Indian salmon, etc. The fish is packed in ice and exported mainly to Calcutta. Other estuarine fishing centres are Kutanakhat, Kuanaz, Chowmuhari and Sonapur. Within the last 2 years 14 Co-operative Societies have taken up the trade and last year did business worth Rs. 18,00,000 making a profit of Rs. 1,40,000. A bio. and tech. station has been set up at Balugan to work on life histories of fish and utilise the resources of the lake. Government transport has been provided from Kuanaz (Mahanauli estuary) to Cuttack to market the catches.

(iii) **Inland.**—The rivers and tanks form a great potential source of fishing though Hilsa in Orissa is not as tasteful as that in the Ganges, Brahmaputra and Irrawaddy are the economic species. These breed only in rivers and in large ponds which resemble rivers during rains as in the Sambalpur District. Collection of fry is carried on every year in Balasore, Cuttack and Sambalpur. An organised fry trade exists in Lakhmanath in the Balasore District. Government have nurseries in 56 fry distribution centres and supply 20,00,000 fingerlings annually.

The fisheries are owned mostly by private individuals. Government fisheries are controlled by the Revenue Department. Although people realise that pisciculture is profitable, the multiple owners of water areas prevent active development. The activities of the Fishery Department have been confined to propaganda which, without executive authority, has not led to appreciable results. The prohibition of killing of fry in canals, paddy fields, etc., by legislation and of letting of sewage into inland waters, the construction of dams with fish ladders and the placing of Government fisheries under the control of the Fisheries Department are all under consideration. The post-war inland fisheries development scheme now in operation envisages rapid cleaning and stocking of tanks by forming co-operative fish farms. 20 such farms are now in operation on the results of which would depend the large scale establishment of collective fish farms.

TRAVANCORE

[N. This article was prepared before the formation of the Travancore-Cochin Union was announced.]

The Department of Fisheries An independent department is now under the direct control of Government.

The coast line of Travancore is 172 miles long and is marked by a shallow water area, within the 100 fathom line, of nearly 3,000 square miles. Out of this vast expanse of fishable waters, only a distance of 5-7 miles is exploited at present and the value of the industry to the State at present is estimated at about Rs. 1,20,00,000 per year. The surf swept coast is singularly

deficient in harbours and during the monsoon months the fury of the breakers is a source of great hindrance to fishing. From Cape Comorin to Travandrum the unsinkable catamarans composed of logs tied side by side is the only possible craft going fishing craft. From Quilon to the northernmost boundary of the State, small country made canoes are used and from October to June, when weather conditions are favourable seine nets are extensively employed.

The esteemed table fish of the coast consists of pomfrets, seer fish, several species of horse-mackerel, tunny, Jew fish, whiting, mackerel and thread fins. In economic importance however, shoal fish and fish of inferior quality such as butter fish, sardines, white bait and ribbon-fish take precedence. Butter fish, sardines and prawns are abundant in the northern half of the coast, while cat-fish, white bait and ribbon-fish are predominant in the southern half. This conspicuous difference in the distribution of shoal fish has been found to be mainly due to the differences in the nature of the sea bottom. During favourable seasons, butter-fish, white bait, ribbon fish and cat fish are so greatly in excess of the local food requirements that large quantities are salted and dried both for inland consumption and for export. The value of exports annually about Rs. 55,00,000 worth of salted fish, the greater part of which is sold in the adjoining Tamil districts and Ceylon.

As the important shoal fish are seasonal in their appearance certain months are more favourable for fishing than others. During these favourable seasons large catches are landed daily along the coast and the only method of conservation of the large unsaleable surplus is salting and drying. But realizing that salted fish is devoid of some of the essential properties of fresh fish, the Government opened a refrigerating plant for the preservation and storage of fresh fish.

The Department also succeeded in devising a cheap and efficient method of packing frozen fish for transport over distances within 72 hours by rail. Although, by this means, it was found possible to send frozen fish to all important inland towns in South India, the method did not prove a commercial proposition owing to its high cost and the competition of lead fish from Malabar; consequently it had to be abandoned for the duration of the war. Now there are proposals to work the Cold Storage Plant.

Fish Curing.—The prevalent methods of fish curing being imperfect and very often unhygienic, the salted and dried fish produced in India are usually inferior in quality, which accounts for the low prices they fetch and the limited demand. In order to stimulate demand by improving the quality, the Department of Fisheries has prepared a scheme of hygienic methods of curing; and experiments on dehydration of fish are also in progress.

Shark Liver Oil.—The Department started the manufacture of shark-liver oil in 1939, and the oil is offered in the market under the trade name 'Sharkiverol'. The oil is roughly standardized to ensure Vitamin 'A' potency of 6,000-8,000 international units and is sold in the pure form after eliminating traces of free acids and sterine. Since maintenance of a high standard is the guiding principle of the Department, only oil extracted by special methods is used in the manufacture of shark liver oil and no attempt is made to blend it with cheap vegetable oils. During the last twelve months, about 14,500 lbs. of oil was produced, the greater part of which was exported to India and Ceylon. Though some degree of success has been achieved in the manufacture of Shark liver oil, the need for further improvement has not been overlooked. Researches on oil technology and determination of the specific properties of the oil obtained from various species of sharks are in progress in collaboration with the Department of Industrial Chemistry, with a view to improve methods of manufacture and suitable standardization.

The demand for other marine oils has also been steadily increasing. Sardine oil was very scarce for some time but it was more or less supplemented by turtle oil and the oil extracted from Balistia, popularly known as leather jackets.

Other marine products also came into prominence. The war situation stimulated investigation of the commercial possibilities of some of the common sea weeds found along the coast of Travancore. The extraction of iodine from Sargassum and of Agar from Gracilaria was attempted by the Department of Industrial Chemistry which undertakes a survey of the distribution of sea weeds, as a result of which the manufacture of Agar has been started on a commercial scale.

Lake Fisheries.—The lake fisheries constitute an important section of the industry. A chain of interconnected lakes extends from the borders of Cochin to Travandrum. The largest of them is about 30 miles long and ten miles across, at its broadest part. A great advantage is their proximity to the sea and their temporary or permanent communication with the sea, which bring them under tidal influence. Certain varieties of fish and prawns migrate into these lakes periodically either in search of some special type of food or suitable spawning grounds. The most important of these migratory forms is prawn, the annual catch of which is estimated at Rs. 25,00,000, out of which about Rs. 15,00,000 worth of dried prawn pulp was being exported to Burma and Singapore. But after the fall of Burma, the prawn industry was confronted with an unprecedented slump which threatened the economic welfare of a large section of the fishing population who depended mainly on prawn fishing; but the crisis was averted to some extent by discovery of new markets in India and Ceylon through Departmental propaganda. Experiments were also conducted for improving methods of preservation and for the preparation of new products out of prawn. As a result of these endeavours, a new product called powdered prawn, suitable for making prawn cutlets, chutnies, pastes and curries has been produced and will soon be placed on the market. A better method of preservation which will prolong the keeping qualities from two months, which is the normal period now, to eight months is also being demonstrated to the public.

Shell Fish Industry.—The shell fish industry of the lakes is now confined mainly to the collection of lime shells from certain regions of two of the major lakes. These supply all the lime required for building purposes in the State and recently a scheme has been drawn up for exploiting these extensive resources for the manufacture of cement.

Large beds of edible oysters are also found in three of the lakes. At present these are not very popular as an article of food but investigations are under progress for culturing them on the same principles as those followed in Europe and for finding markets for liver oysters outside the State.

While in the rest of India inland fisheries are very unfavourably situated as many of the rivers and tanks dry up in summer, in Travancore fresh water fisheries are a source of perennial fish supply. There are about 120 varieties of fresh water fish some of which grow to very large size.

Research Activities.—A combined Aquarium and Marine Biological Laboratory was recently completed under the auspices of the University of Travancore. The Aquarium which is one of the largest in Asia is open to the public and the Laboratory, in addition to training students for post-graduate research degrees also functions as a bureau of fisheries.

The Marine Biological station of the Department has so far completed seven pieces of research relating to marine and backwater fisheries, the most noteworthy of which are the "Food habits of the Shoal fishes of the coast," "A survey of

the prawn fisheries" and "The causes of spoilage in dried prawns." The Department also read three papers at the last session of the Science Congress and contributed a few short notes to Current Science. At present there are a small number of research students working in the Marine Biological Laboratory.

UNITED PROVINCES

Fisheries investigations in the United Provinces date back to the sixties when Dr. Day, as Inspector General of Fisheries made a survey of the inland fisheries of India. His report on the freshwater fisheries of India (1876) includes replies to his questionnaire to District and Taluq officers in the United Provinces which contain valuable information, most of which still holds good. One of the results of Day's investigation was the enactment of the Government of India Fisheries Act of 1897.

The possibilities of developing fisheries in the U.P. however was for the first time considered by the Government of the U.P. in 1920 in connection with a reference from the Punjab Government about the regulation of fishing in the Jumna. The Government decided to institute an investigation into the possibility of establishing a Fisheries Industry in the U.P.

An inquiry was conducted by Mr. Edey whose report was published in 1923. Despite the general impression that Mr. Edey dealt mainly with sporting fish and not with fish as food for the general public, his investigations were comprehensive and his recommendations sound. Due to this general misunderstanding resulting from Edey's own imperfect summary of his recommendations in the report and his unrealised hope that extensive imports of sea fish were about to commence which might render the development of inland fisheries unnecessary, no serious attention was paid to his report.

In 1943 as part of the programme for post-war reconstruction and more immediately to provide against the prevailing shortage of food caused by the War, the development of fisheries received consideration. It was, however, felt that exploitation of the fisheries to increase the supply of fish to towns and the Army was the immediate need and should take precedence of fisheries survey and fisheries research. The Government therefore decided to take immediate steps to provide a regular, abundant and cheap supply of reasonably good quality fish in the market in Lucknow and other important cities. Energetic action was taken by the Government through the Co-operative Department, War Supply staff:—

To improve the existing sources of supply by encouraging market contractors to increase supplies and where this was not possible by directly recruiting fishermen, supplying them with boats and nets and intensively fishing rivers, tanks and jhils, to seek and develop new sources of supply hitherto unexploited;

To improve transport by the provision of ice and refrigeration vans;

To improve the marketing of fish by direct sale to the public and the Army at equitable rates far below the ruling market prices.

Post-war.—The scheme which was put through at Lucknow, Allahabad, Benares and Naini Tal was extended to other large consuming centres in 18 out of 48 districts.

In March 1944 the need for a technical expert was felt and a Fisheries Development Officer was appointed in the Department of Animal Husbandry to help immediately in the proper expansion of the supply scheme which had been launched and ultimately to plan a Scientific Department of Fisheries for the United Provinces.

A comprehensive five years' plan of post-war development was drawn up by the Fisheries Development Officer and was approved by the Government.

In response to the general demand to grow more food a scheme for stocking as many suitable tanks as possible in the 6 districts of Benares, Mirzapur, Jaunpur, Allahabad, Banda and Jhansi was sanctioned jointly by the Government of India and the U.P. Government early in 1945 and has proved a success. The scheme has since been extended to 31 districts.

Rivers being the primary source of supply of food fish it was realized that side by side with intensive culture and exploitation the conservation and control of river fisheries should receive attention. A staff of 6 wardens, 15 assistant wardens and 21 watchers is being recruited to patrol the rivers. A fisheries research laboratory at Lucknow has been established for continuous study of conditions obtaining in the rivers and tanks and to initiate suitable measures of fish conservation and culture which will keep pace with intensified exploitation. A suitable site at the Tanda Falls (Mirzapur) has been selected for a research fish farm. As waters above 3000 ft. are devoid of food fish the well-known mirror carp of Europe which has done remarkably well in Ceylon and on the Nilgiris has been brought to the Kumaon Division for stocking rivers.

A comprehensive Fisheries Act to control and develop the fisheries of the Provinces has been passed this year. For the socio-economic uplift of the fishermen war time controls were utilized to benefit both the producer and the consumer. A voluntary Fishermen Association on a new model has been formed at Allahabad for a stretch of 80 miles of the Ganges. The members have contributed over 4,000 Rupees towards their benevolent fund for providing credit and amenities.

WEST BENGAL

Before the year 1920, there was one Fisheries Department to serve the needs of the two provinces of Bengal and Bihar and Orissa. Separation was effected in 1920 after which fisheries in Bengal were administered by the Director of Agriculture. Three years later in 1923 the Bengal Fisheries Department was abolished under retrenchment measures.

During the 14 years after the closure of the Fisheries Department, the price of fish in Calcutta soared consequent on the rapidly increasing demand and the unhealthy monopoly exercised by a small group of vested interests. The economic condition of the fishermen gradually became worse due to exploitation, and the fisheries in general were getting depleted owing to various causes. As a result the public began to demand the re-establishment of the Fisheries Department to protect the fisheries interests and to organize and develop the fishing industry on modern lines. The Bengal Government therefore appointed a Fisheries Expert to survey the existing condition of the fishing industry in the Province and to suggest schemes for development with a view to augmenting the fish supply, to examine ways and means to bring down the existing price of fish, to stimulate commercial enterprise in speedier transport and better marketing, and to establish cold storage plants for short-term preservation and factories for the utilization of fish by-products. On the basis of the survey report submitted by the expert, the Fisheries Department of the then United Bengal was re-established in May 1942, with a view to organize the fish trade under war emergency conditions and to conserve the existing supplies.

The Province of Bengal was partitioned in August 1947 into East Bengal and West Bengal; the former came under the Pakistan Dominion

and the latter under the Indian Dominion. The technical personnel were also divided. After the partition of the Province, the Fisheries Department of the West Bengal Province was re-organized under the administrative control of the Director of Agriculture, Animal Husbandry and Fisheries, the technical control being vested in the Technical Assistant Director in charge of the Department.

Production and Supply.—On the basis of present population figures, which have been estimated at about 25 millions, West Bengal needs about 32,000 maunds of fish per day, calculating on the basis of 2 ounces per adult per day, as against an estimated production of 2,000 maunds and an uncertain import varying from 1,000 to 2,500 maunds per day according to season.

Potentialities.—As a result of the partition of the Province, most of the potential fisheries—fresh water, riverine, estuarine and coastal—have fallen to East Bengal, leaving to this Province only about 12 lakh acres of upland water area excluding the few big rivers, creeks and canals, and a limited coast line of about 25 miles where foreshore fishing is in existence, though not on an extensive scale.

Of the 12 lakh acres of upland water area for fresh water fish cultivation, over two-thirds remain practically dry during several months of the year. They will have to be improved by desilting, re-excavation, etc., before they can be utilized for fish production. The remaining areas consisting mostly of large tanks and beels are also found in a large majority of cases to be filled up with submerged and floating vegetation including water hyacinth, necessitating a long-term programme of development.

Most of the small rivers of West Bengal are in a dying condition and the scope for the development of riverine fisheries, consequently, is very poor.

Due to the partition of the Province, the scope for the development of foreshore fisheries is also very limited as the major portion of the coastal areas are now within East Bengal, leaving to this Province the Moore, Frazerganj and Sangar Islands near the mouth of the Hooghly River and the coastal area of Contal sub-division in the district of Midnapore where about 1,000 fishermen usually catch fish during the cold weather months (November to February).

The only area within this Province where fishing may be undertaken, more or less on an extensive scale by helping the fishermen with nets and boats, and by organizing quick transport system under refrigerated condition, is the rivers, creeks and canals of Sunderban estuaries in the district of 24 Parganas.

Lack of Gear and Men.—Statistics indicate that fish production in West Bengal has been steadily falling since 1942-43 due to the following reasons:—

(a) Death of a large number of fishermen in the famine of 1943 and subsequent epidemics. Departmental survey made in the year 1945 indicated that the number of fishermen actually engaged in fishing was about 1,08,000 in West Bengal. Assuming that the average per capita catch of fish per day is 3 seers, the total output of fish per day would be about 8,000 maunds as against the need of about 32,000 maunds for the whole of the Province. About 10,000 fishermen have so far migrated to West Bengal from East Bengal as refugees. Their rehabilitation in their own profession would solve the problem to some extent.

(b) Destruction of a large number of fishing boats owned by fishermen due to the Denial Policy adopted by the Government during the last war years, and subsequent diversion of an appreciable percentage of fishermen to non-fishing occupation.

(c) Serious scarcity and abnormal rise in the prices of yarn for nets, timber for boats, and other capital goods, the essential pre-requisites for fishing, have compelled the fishermen to have recourse to fishery owners and fish merchants with consequent danger of exploitation. Thus the profession is losing some of its old attraction.

Fresh Water Schemes.—A scheme has been undertaken which aims at developing some of the vast water areas locally known as beels with financial and technical help to owners from Government, the financial help being in the form of loan. The estimated capital expenditure of the scheme is about Rs. 11,73,000 as against the expected production of 94,000 maunds of fish within a period of 5 years.

Another project aimed at the opening up of nursery units in the rural areas of the Province for nursing of carp spawn and subsequent distribution to pond culturists at cost price has been put into operation at an estimated cost of Rs. 3,10,700. It is expected that about 21,500 maunds of extra fish would be available within a period of 5 years.

Side by side with the above schemes, two more schemes have been undertaken—one for stocking the culturable tanks in different Unions with carp fry at Government cost at the start, the cost being recoverable from the tank owners with interest, and the other for the improvement of the partially derelict tanks in the dry districts of the Province by de-silting and re-excavation at Government cost and subsequent leasing out for fish cultivation to fish culturists on rental basis. The cost of the first scheme has been estimated at Rs. 8,70,000 against an estimated production of 27,000 maunds of extra fish and the second at Rs. 28,50,000 as against an estimated production of 4,50,000 maunds of fish.

Estuarine Scheme.—To help in the exploitation of the estuarine areas of the Province on an extensive scale, a refrigerated power-craft carrier scheme has been undertaken at an estimated cost of about Rs. 12,00,000 as against an estimated extra production of 2,50,000 maunds of fish.

Foreshore and Off-shore Scheme.—This scheme aims at the extensive exploitation of foreshore and off-shore fisheries of the Bay by organizing fishermen groups on share catch basis, the nets, boats and other requisite accessories being supplied by Government free. The estimated cost of the scheme is about Rs. 4,00,000, and the expected outturn of fish about 36,000 maunds.

Technological Industries.—A project aimed at the production of shark liver oil, fish meal, processed fish, etc., has been put into operation by using the existing Government Fish Curing Yard at Jomput (Contal) as the shark catching base and the field station for processing of the by-products. The Departmental Technological Laboratory in Calcutta is being used for final refining and standardization of the produce. The total cost of the scheme has been estimated at about Rs. 4,00,000.

In addition to the aforesaid development schemes, another project has been undertaken for distributing nets and boats to the needy fishermen of the Province at subsidized rates, at a total cost of Rs. 13,25,000. The extra production is estimated at about 1,25,000 maunds.

POSTS AND TELEGRAPHS

THE control of the Posts and Telegraphs of India is vested in an officer designated Director-General of Posts and Telegraphs whose office is attached to the Ministry of Communications of the Government of India. For financial and budget matters there is a Joint Secretary, Ministry of Finance (Communications). The superior staff of the Directorate in addition to the Director-General himself, consists on the postal side of one Senior Deputy Director-General, one Deputy Director-General, Postal Services, one Deputy Director-General (Complaints), 4 Directors, 1 Assistant Directors-General and 4 Assistant Deputy Directors-General.

For postal purposes, India is divided into ten circles, namely, West Bengal, Bihar, Bombay, Central Madras, East Punjab, United Provinces, Assam, Orissa and Delhi. Each of the first seven is in charge of a Postmaster-General and the Assam Circle is controlled by a Director, Posts and Telegraphs. Orissa and Delhi are under Additional Postmaster-General. The Central Circle comprises roughly the Central Provinces, the Rajasthani, Madhya Bharat and Vindhya Pradesh Unions.

The Heads of Circles are responsible to the Director-General for the whole of the postal arrangements in their respective circles, including those connected with the conveyance of mails by railways, inland steamers, and air services. All the Postmasters-General are provided with Directors of Postal Services, Assistant Postmasters-General and Assistant Directors while in the Assam Circle the Director is assisted by a Deputy Director and an Assistant Director. The Postal Circles are divided into Divisions, each in charge of a Superintendent of Post Offices or Railway Mail Service as the case may be and each Superintendent is assisted by a certain number of officials styled Inspectors.

Generally there is a head post office at the headquarters of each revenue district and other post offices in the same district are usually subordinate to the head office for purposes of accounts. The Presidency Postmasters of the

Calcutta, Bombay and Madras General Post Offices, are directly under Directors of Postal Services. When the duties of the Postmaster of a head office become so onerous that he is unable to perform them fully himself, a Deputy Postmaster is appointed to relieve him of some of them, and if still further relief is required, one or more Assistant Postmasters are employed.

The more important of the offices subordinate to the head office are designated sub-offices and are usually established only in towns of some importance. Sub-offices transact all classes of postal business with the public, submit accounts to the head offices to which they are subordinate incorporating therein the accounts of their branch offices, and frequently have direct dealings with Government local treasuries. The officer in charge of such an office works it either single-handed or with the assistance of one or more clerks according to the amount of business.

Branch offices are small offices with limited functions ordinarily intended for villages, and are placed in charge either of departmental officers on small pay or of extraneous agents, such as school-masters, shop-keepers, landholders or cultivators who perform their postal duties in return for a small remuneration.

The audit and accounts work of the Post Office is entrusted to the Accountant-General, Posts and Telegraphs, who is an officer of the Indian Audit Department and is not subordinate to the Director-General. The Accountant-General is assisted by Deputy Accountant-General, all of whom, with the necessary staff of clerks, perform at separate headquarters the actual audit and accounts work of a certain number of postal circles.

In accordance with an arrangement which has been in force since 1883, a large number of sub-post offices and a few head offices perform telegraph work in addition to their postal work, and are known as combined offices. The policy is to increase telegraph facilities everywhere and especially in towns by opening a number of cheap telegraph branches of sub-post offices.

INLAND TARIFF

Inland Tariff is applicable to Aden, Pakistan, Nepal, Ceylon and Portuguese India except as indicated below and is as follows:—

| | When the postage is prepaid | When the postage is wholly unpaid | When the postage is insufficiently prepaid |
|---|-----------------------------|--|--|
| Letters | Annas Pies | | |
| Not exceeding one tola | 2 0 | Double the prepaid rate (chargeable on delivery) | Double the deficiency (chargeable on delivery) |
| And every additional tola | 1 0 | | |
| Book and pattern packets. . . . | | | |
| For the first five tolas or fraction thereof | 0 9 | | |
| For every additional two and a half tolas, or fraction thereof, in excess of five tolas | 0 3 | | |

Postcards

| | |
|----------------|----------|
| Single | 9 pies |
| Reply | 1½ annas |

(The postage on cards of private manufacture must be prepaid in full. Reply postcards cannot be sent to Nepal.)

Parcels (prepayment compulsory)

Parcels not exceeding 12½ seers (1,000 tolas) in weight:—

| | Rs. a. |
|--|--------|
| Not exceeding 40 tolas | 0 6 |
| For every additional 40 tolas or part of that weight | 0 6 |
| Registration is compulsory in the case of parcels weighing over 440 tolas. | |

All parcels to Aden and Pakistan should be registered. There is no parcel service to Nepal. These rates are not applicable to parcels for Ceylon and Portuguese India.

Registration fee

Rs. a.
For each letter, postcard, book or pattern packet, or parcel to be registered 0 4

Ordinary Money Order fees

For every sum of Rs.10 or fraction thereof 0 2

In the case of money orders for Ceylon and Portuguese India, the rates prescribed for foreign rupee money orders are applicable. There is no money order service to Nepal.

Telegraphic Money Order fees.—The same as the fees for ordinary money orders plus a telegraph charge calculated at the rates for inland (the cost of the telegraphic advice to Aden and Ceylon in respect of those countries)

telegrams for the actual number of words used in the telegram advising the remittance, according as the telegram is to be sent as an "Express" or as an "Ordinary" message. In addition to the above a supplementary fee of two annas is levied on each telegraphic money order.

There is no telegraphic money order service to Nepal or Portuguese India. In the case of Ceylon the telegraph charge is calculated at the rates shown below:—

Express.—Rs. 2-8-0 for the first 12 words and 3 annas for each additional word.

Ordinary.—Rs. 1-4-0 for the first 12 words and 2 annas for each additional word.

Value-payable fees.—These are calculated on the amount specified for remittance to the sender and are the same as the fees for ordinary money orders.

Insurance fees

| | Rs. a. |
|---|--------|
| Where the value insured does not exceed Rs. 100 | 0 4 |
| Where the value insured exceeds Rs. 100 but does not exceed Rs. 200 | 0 5½ |
| Where the value insured exceeds Rs. 200 but does not exceed Rs. 300 | 0 8 |
| For every additional Rs. 100 or fraction thereof over Rs. 300 and upto Rs. 1,000 .. | 0 2 |
| For every additional Rs. 100 or fraction thereof over Rs. 1,000 | 0 1 |

As regards Aden, Ceylon and Portuguese India see Foreign Tariff.

Acknowledgment fee.—For each registered article 1 anna.

FOREIGN TARIFF

Foreign Tariff is not applicable to Aden, to Ceylon, to Nepal, to Pakistan or to Portuguese India except as indicated below and is as follows:—

Letters.—To Aden, Pakistan, Ceylon, Nepal and Portuguese India—Indian inland rates.

To all other countries. { 3½ annas for the first ounce and 2 annas for each additional ounce or part of that weight.

Postcards, Single 2 annas.
" Reply 4 annas.

Printed Papers.—½ anna for every 2 ounces or part of that weight.

Business Papers.—For a packet not exceeding 10 ounces in weight 3½ annas.

For every additional 2 ounces or part of that weight ½ anna.

Samples.—1½ annas for first 4 ounces and ½ anna per 2 ounces thereafter.

Parcels

Parcel postage varies for different countries as shown in the Foreign Post Directory included in the Post and Telegraph Guide. Information relating to the rates of postage on parcels for Great Britain and Northern Ireland is given below:—

(i) Parcels not exceeding 22 lbs. in weight and addressed to Great Britain and Northern Ireland are forwarded as mails to the British Post Office, the rates of postage applicable to such parcels being as follows:—

| | Via Gibralt. | Rs. a. p. |
|------------------------------------|--------------|-----------|
| For parcel | | |
| Not over 3 lbs. | 1 11 0 | |
| Over 3 lbs. but not over 7 lbs. .. | 3 5 0 | |
| " 7 " " " 11 " .. | 5 2 0 | |
| " 11 " " " 22 " .. | 8 5 0 | |

These parcels are delivered by the post office and the postage paid carries them to destination.

Limits of weight

Letters.—4 lbs. 6 oz.

Printed Papers and Business Papers.—To Great Britain and Northern Ireland, and Ireland, British Australasian Colonies, Togo (British), the Union of South Africa, Rhodesia, and the Bechuanaland Protectorate—5 lbs.

To Aden or Ceylon—No limit.

To all other destinations—4 lbs. 6 oz.

Samples.—To Great Britain and Northern Ireland, and Ireland, Togo (British), the Union of South Africa, Rhodesia, and Bechuanaland Protectorate—5 lbs.

To Aden or Ceylon—200 tolas.

To all other destinations—1 lb. 2 oz.

Parcels.—11 lbs. 20 lbs. or 22 lbs.

Limits of Size

Letters.—35 inches in length, breadth and thickness taken together and 23½ inches in any one direction. If in form of roll, 30 inches in length plus twice the diameter and 31 inches in any one direction.

Printed Papers and Business Papers.—To Aden and Ceylon—2 feet in length by 1 foot in width or depth. If in form of roll, dimensions are 30 inches in length and 4 inches in diameter.

To all other destinations—35 inches in length, breadth and thickness taken together and 23½ inches in any one direction. If in form of roll, 30 inches in length plus twice the diameter and 31 inches in any one direction.

Note.—Printed papers sent open, i.e., without a cover or wrapper in the form of cards, whether folded or not should not measure less than 4 inches in length and 2½ inches in width.

Samples.—To Great Britain and Northern Ireland, and Ireland, Togo (British), the Union of South Africa, Rhodesia, and the Bechuanaland Protectorate—2 feet in length by 1 foot in width or depth. If in form of roll, dimensions in all cases are 30 inches in length plus twice the diameter and 31 inches in any one direction.

To all other destinations—35 inches in length, breadth and thickness taken together and 23½ inches in any one direction. If in form of roll, dimensions in all cases are 30 inches in length plus twice the diameter and 31 inches in any one direction.

To Aden or Ceylon—2 ft. in length by one foot in width and depth.

Money Orders

To countries on which money orders have to be drawn in rupee currency, the rates of commission are as follows:—

| | Rs. a. |
|---|--------|
| On any sum not exceeding Rs. 10 | 0 3 |
| On any sum exceeding Rs. 10 but not exceeding Rs. 25 | 0 7 |
| On any sum exceeding Rs. 25 | 0 6 |
| On each complete sum of Rs. 25 and 6 annas for the remainder, provided that if the remainder does not exceed Rs. 10, the charge for it shall be only 3 annas. | |

To countries on which money orders have to be drawn in sterling, the rates are as follows:—

| | Rs. s. |
|--|--------|
| On any sum not exceeding £1 | 0 4 |
| " " exceeding £1 but not exceeding £2 | 0 7 |
| " " " £2 | 0 10 |
| " " " £3 | 0 13 |
| " " " £4 | 1 0 |
| " " " £5 | 1 0 |
| for each complete sum of £5 and 1 rupee for the remainder, provided that if the remainder does not exceed £1, the charge for it shall be 4 annas; if it does not exceed £2, the charge shall be 7 annas; if it does not exceed £3, the charge shall be 10 annas; and if it does not exceed £4, the charge shall be 13 annas. | |

Registration fee

For each letter, postcard and packet of printed or business papers and samples .. 4 annas.

Insurance fees (for registered letters and parcels only).

For insurance of letters and parcels to Aden and Ceylon and of letters to Portuguese India.—Insurance fees mentioned under "Inland Tariff."

For insurance of letters and parcels to Burma, British Somaliland, Mauritius, Seychelles, and parcels to Portuguese India.

Where the value insured does not exceed Rs. 300 8

For every additional Rs. 300 or fraction thereof 8

Note.—Insurance service to Burma and British Somaliland has been temporarily suspended.

For insurance of letters and parcels to Great Britain and Northern Ireland and to British Possessions and foreign countries (other than those mentioned above) to which insurance is available.

Where the value insured does not exceed £20 8

For every additional £20 or fraction thereof 8

Acknowledgment fee.—3 annas for each registered article. 1 anna in the case of registered article addressed to Aden, Ceylon or Portuguese India.

AIR MAILS

Letters and postcards are as a general rule, sent by air as far as possible in the inland post without payment of any air surcharge. Packets can be sent by air in the inland post and letters, postcards and packets can be sent by air to certain foreign countries on payment of special Air Mail fee. Such letters can be registered. Insured articles cannot be sent by Air Mail except to Burma and Ceylon. The inland air fee for packets is one anna for each tola or part in addition to ordinary postage.

For Air fees to Foreign countries see the Post and Telegraphic Guide.

Registered and unregistered parcels can also be sent by Air Mail on certain air routes. The charges are one rupee for the first 40 tolas and 8 annas for every additional 20 tolas or part thereof.

Air Letter Service.—A new light weight "Air Letter" service for use by civilians has been introduced from the 1st December 1944, which is available for writing to most of the Empire countries and H.M.'s Forces overseas. It has been extended to U.S.A. from 1st June 1947. The postage rate is 6 annas per air letter, except for U.S.A., Canada and Newfoundland for which the rate is 8 annas.

A special air letter form is available from post offices at a cost of 6 annas per form. Similar forms of private manufacture, bearing an indication that they have been approved by the Head of a Circle, can also be used, but they should be prepaid with the prescribed charge.

Air letters cannot be registered or insured, nor are any enclosures permitted. No other facility, such as express delivery, is available.

AMOUNT OF BUSINESS

At the close of 1946-47, there were 131,634 permanent and 37,977 temporary Post and Telegraph officials, 26,130 post offices, and 165,885 miles of mail lines. During the year, 2,263 million articles, including 68.4 million registered articles were posted; stamps worth Rs. 15.3 crores were sold for postal purposes; about 52.1 millions of money orders of the total value of Rs. 171.7 crores were issued; 1,224 thousand Indian Postal orders to the value of Rs. 56 lakhs were sold; a sum of Rs. 30.50 crores was collected for tradesmen on V.P. articles, about 3.1 million insured articles valued at 133 crores of rupees were handled. Customs

duty aggregating over 272 lakhs was realised on parcels and letters from abroad; pensions amounting to about 412 lakhs were paid to Indian Military pensioners and over 5,000 lbs. of quinine and 7,308,400 tablets of substitutes for quinine (e.g. Meparine) were sold to the public. On 31st March 1947, there were 3,973,000 Savings Bank Accounts with a total balance of Rs. 112 crores and 92,490 Postal Life Insurance Policies with an aggregate Insurance of Rs. 19 crores.

TELEGRAPHS

Up to 1912 the telegraph system in the sub-continent was administered as a separate department by an officer designated Director-General of Telegraphs who worked in subordination to the Government of India in the Department of Commerce and Industry. In that year it was decided to vest the control of Posts and Telegraphs in a single officer as an experimental measure with a view to the eventual amalgamation of the two Departments.

In pursuance of this policy an experimental amalgamation of the two services was introduced in the Burma and Central Circles on the 1st July 1912. The fundamental principles of this scheme which followed closely the system in force in the United Kingdom and several other European countries were that the traffic and engineering work of the Telegraph Department should be separated, the former branch of work in each Circle being transferred to the Postmaster-General assisted by a Deputy Postmaster-General and a suitable number of attached officers and the engineering branch being controlled by a Director of Telegraphs. Subordinate to this officer there were several Divisional Superintendents who were assisted by a number of attached officers.

Amalgamation.—In 1914 the complete amalgamation of the two Departments was sanctioned by the Secretary of State and introduced on 1st April. The superior staff of the Direction, in addition to the Director-General himself, now consists of the engineer-in-charge (including wireless) side of a Chief Engineer, Post and Telegraphs, with two Deputy Chief Engineers and four Asst. Chief Engineers. For Engineering Construction work, there is one Asst. Chief Engineer with three Directors of Telegraphs, and some Divisional Engineers, Telegraphs. For traffic work there is a Deputy Director-General with one Controller of Telegraph Traffic, and one Assistant Deputy Director-General. To assist in Telephone work there is one Deputy Director-General (Telephones) and two Assistant Deputy Directors-General, Telephones, and in Wireless matters there is one Assistant Dy. Director-General (Wireless). There are also one Assistant Deputy Director-General (Maintenance) and two Asst. Divisional Engineers, Telegraphs under the Deputy Chief Engineer (Maintenance).

In the Circles the scheme which has been introduced follows closely on the lines of the experimental one referred to above. For telegraph engineering purposes the sub-continent was formerly divided up into five Circles, each in charge of a Director. These five Circles were divided into eighteen Divisions each in charge of a Divisional Engineer. In 1922 Sind and Baluchistan Circle was formed with its headquarters at Karachi. This Circle is now under the charge of a Director of Posts and Telegraphs in the Pakistan P. & T. Dept. On the 31st March 1921 there were 7 Circles and 20 Divisions. With a view to complete fusion of the three branches of work, the engineering work of the Bombay and Central Circles was brought under the control of the respective Postmaster-General in 1925 and this unification was gradually extended to other Circles. The fusion was completed in March 1930. In 1946 the Bengal and Assam Circle was divided into two Circles, namely Bengal Circle and Assam Circle, in charge of a Postmaster-General, and a Director, with headquarters at Calcutta and Shillong respectively. The telegraph traffic and the engineering branches

In the Circle are controlled by the Postmaster-General, Calcutta and the Director of Posts and Telegraphs, Shillong the former officer now having under his control the West Bengal P. & T. Circle, which lies within the Indian Dominion. There is also one Deputy Director of Telegraph Traffic each at Calcutta, Bombay and Madras to look after the speedy disposal of traffic. There are now 18 Engineering Divisions. With effect from 1-7-1939, the Superior Telegraph Engineering and Wireless Branches have been amalgamated into a Single Service, viz., Telegraph Engineering Service - Class I.

There has been much expansion on the Telephone side of the Department consequent on the acquisition of the telephone systems at Bombay, Calcutta, Madras, Karachi and Ahmedabad by Government. Separate Telephone Districts which are quite independent of the respective Postmaster-General were created at Bombay, Calcutta and Madras with effect from 1st April 1943. The Ahmedabad Telephone system has been placed under the administrative charge of the Bombay District. The Chief Officers of the Bombay and Calcutta Districts are designated General Managers, Telephones. Recently a new Telephone District has also been formed at Delhi where there has been considerable telephone expansion during the war.

The audit and accounts work of the Telegraph Department is, like that of the Post Office, entrusted to the Accountant-General, Posts and Telegraphs, assisted by a staff of Deputy and Assistant Accountants-General.

INLAND TARIFF

Telegrams sent to or received from places in India, Burma, Ceylon or Pakistan are classed as Inland telegrams. The tariff for Inland telegrams is as follows:

| For delivery in India | | | |
|---|--------|--------|--|
| <i>Private and State Express, Ordinary.</i> | | | |
| | Rs. a. | Rs. a. | |
| Minimum charge .. | 1 10 | 0 13 | |
| Each additional word over 8 .. | 0 2 | 0 1 | |

| For delivery in Burma & Pakistan | | | |
|---|--------|--------|--|
| <i>Private and State Express, Ordinary.</i> | | | |
| | Rs. a. | Rs. a. | |
| Minimum charge .. | 2 12 | 1 6 | |
| Each additional word over 8 .. | 0 4 | 0 2 | |

Note:—Ordinary telegrams for Burma are not accepted at present.

| For delivery in Lhasa (Tibet). | | | |
|--|-----------|-----------|-----------|
| <i>Private and State, Private and State.</i> | | | |
| | Ex-press. | Ordinary. | Ex-press. |
| | Rs. a. | Rs. a. | Rs. a. |
| Minimum charge .. | 2 0 | 1 0 | 2 8 |
| Each additional word over 12 .. | 0 2 | 0 1 | 0 3 |
| The address is charged for. | | | 0 2 |

| Additional charges | | | |
|---|------------------------------------|---|--|
| | Minimum for reply-paid telegram .. | Minimum charge for an ordinary telegram except in the case of Burma, for which the minimum amount payable is Rs. 2-12-0 for Express and Rs. 1-6-0 for Ordinary. | Minimum charge for an ordinary telegram. |
| Notification of delivery .. | | | |
| Multiple Address telegrams, copying fee for each 100 words or less in each copy beyond the first .. | | | 4 annas. |

Collation One half of the charge for an ordinary telegram of same length.

| | Rs. |
|--|-----|
| If both the offices of origin and destination are closed .. | 2 |
| If only one of the offices is closed .. | 1 |
| If the telegram has to pass through a closed intermediate office, additional fee in respect of each such office. | |

For acceptance of an Express telegram during the hours when an office is closed.

| Boat hire Amount actually necessary. | | | |
|--|------------------------|-------------------------|-----------|
| Press telegrams | | | |
| | For delivery in India. | For delivery in Ceylon. | |
| | Ex-press. | Ordinary. | Ex-press. |
| | Rs. a. | Rs. a. | Rs. a. |
| Minimum charge .. | 1 8 | 0 12 | 1 8 |

Each additional 5 words over 40 in respect of India, Pakistan and Burma, each additional four words over 32 in respect of Ceylon .. 0 2 0 1 0 2

The address is free.

| Number of words | | | |
|--------------------------------------|---------|-----|-----|
| | (a) | (b) | (c) |
| Name of the addressee and address .. | 4 words | | |
| Greeting indicated by a number .. | 1 word | | |
| Name of sender .. | 1 word | | |
| Total .. | 6 words | | |

EXTRA

Each additional word over 4 words in item (a) or over one word in (c) or each additional word indicating number in item (b) above.

The sender of a greeting telegram selects a suitable phrase from the list of stock phrases and writes it on an inland telegram from either in full or the corresponding number in words (not in numerals) and tenders the same to the telegraph office. The number denoted by the sender is signalled and at the office of destination the corresponding phrase is reproduced on the special form and delivered to the addressee.

The sender of a greeting telegram should write the words "Greetings telegram" in some conspicuous place on the telegram form.

A multiple greeting telegram is accepted at the specified above plus a copying fee of 4 annas for each address after the first.

Greetings telegrams are accepted by telephone for onward transmission but will not be delivered by telephone. If the address contains a telephone number, the telegram is delivered according to the address given against the number in the Telephone Directory.

Greetings telegram forms and envelopes are also available for sale in all Government Telegraph Offices at a cost of annas two a form and an envelope for transmission through the post as letters or as book packets if the conditions laid down in Clause 57(a) of the Post Telegraph Guide, including the restriction about five words in manuscript, are fulfilled.

A list of phrases which have been adopted with corresponding numbers for the use of the sender in the text of the telegram will be found below.

For delivery in Pakistan and Burma

| Express. | Ordinary. |
|----------|-----------|
| Rs. a. | Rs. a. |
| 2 8 | 0 4 |
| 1 4 | 0 2 |

Note:—Ordinary Press Telegrams for Burma are not accepted at present.

GREETINGS TELEGRAMS

Greeting telegrams at specially reduced rates may be sent on the following festive occasions from or to any Telegraph Office in India and Jammu & Kashmir State but not Licensed (Railway and Canal) and Portuguese Government Telegraph offices:—

- (1) New Year
- (2) Christmas
- (3) Diwali
- (4) Birthday
- (5) Id
- (6) Conferment of title
- (7) Marriage
- (8) Examination
- (9) Bijoya
- (10) Journeys
- (11) Elections
- (12) Acknowledgment for greetings
- (13) Miscellaneous.

These greetings telegrams are sent out for delivery in specially printed pictorial forms and envelopes. If tendered on Sundays and Telegraph holidays and during the period when the booking of ordinary telegrams is suspended, they are accepted at Express rates and on payment of Late fees, when due.

| Rate | | Express | | Ordinary | |
|--|---------|-----------|--|-----------|--|
| | | Rs. a. p. | | Rs. a. p. | |
| (a) Name of the addressee and address .. | 4 words | | | | |
| (b) Greeting indicated by a number .. | 1 word | | | | |
| (c) Name of sender .. | 1 word | | | | |
| Total .. | 6 words | 1 4 0 | | 0 10 0 | |
| Each additional word over 4 words in item (a) or over one word in (c) or each additional word indicating number in item (b) above. | | 0 2 0 | | 0 1 0 | |

STOCK PHRASES FOR GREETINGS TELEGRAMS

| Number | Phrases |
|--------|---|
| One | Diwali. .. My heartiest Diwali greetings to you. |
| Two | Id. .. Id Mubarak. |
| Three | Bijoya. .. Heartiest Bijoya greetings. |
| Four | New Year .. A happy New Year to you. |
| Five | Birthday. .. Many happy returns of the day. |
| Six | .. Best congratulations on new arrival. |
| Seven | Conferment of Title. .. Congratulations on the distinction conferred on you. |
| Eight | Marriage. .. Best wishes for a long and happy married life. |
| Nine | Christmas. .. A merry Christmas to you. |
| Ten | Examination. .. Heartly congratulations on your success in the Examination. |
| Eleven | Journeys. .. Best wishes for a safe and pleasant journey. |

Elections.

Twelve .. Hearty congratulations on success in Election.

Miscellaneous.

Thirteen .. Many thanks for your good wishes.
Fourteen .. Congratulations.
Fifteen .. Loving Greetings.

Inland De Luxe Telegrams.

Senders of Greeting-telegrams to or from offices in India may use their own phraseology in such telegrams on payment of 2 annas in addition to the charge appropriate to the class of message (Express or Ordinary).

These telegrams will be delivered in specially printed artistic forms and envelopes.

This De Luxe service is not applicable to telegrams for Burma.

The sender of a De Luxe telegram should write before the address the special instruction — LX — which will not be charged for.

FOREIGN TARIFF

The charges for foreign telegrams vary with the countries to which they are addressed. The rates per word for telegrams to countries in Europe, America, etc., are as follows:—

| | Ordry. | Defd. | D.L.T. |
|--|--------|--------|--------|
| Europe via I. B. C.— | Rs. a. | Rs. a. | Rs. a. |
| Great Britain and Northern Ireland .. | 0 13 | 0 6½ | 0 4½ |
| Ireland .. | 0 13 | 0 6½ | 0 4½ |
| Belgium .. | 1 2 | 0 9 | 0 6 |
| Holland .. | 1 2 | 0 9 | 0 6 |
| Germany .. | 1 4 | 0 10 | 0 7 |
| Switzerland .. | 1 4 | 0 10 | 0 7 |
| Spain .. | 1 4 | 0 10 | 0 7 |
| France .. | 1 3 | 0 9½ | 0 6½ |
| Italy, City of the Vatican .. | 1 5 | 0 10½ | .. |
| Other Offices .. | 1 4 | 0 10 | 0 7 |

| Havana .. | 2 5 | 1 2½ | 0 14½ |

Urgent Telegrams—

Rate double of ordinary rate.

Daily Letter Telegrams—

One-third ordinary rate with a minimum charge for 25 words.

CODE TELEGRAMS.

Code telegrams (except for the U.S.A. and countries within the British Empire) are accepted at 3/5th of the ordinary rate. Code telegrams for countries within the British Empire and for the U.S.A. are accepted at 2/3rds of the ordinary rate (Vide clause 425, P. & T. Guide..)

Telegrams are accepted at all Government Telegraph Offices.

Usual rules apply regarding Registration of abbreviated addresses, Reply Paid, etc.

Full lists published in Post and Telegraph Guide.

Radio Telegrams

For radio-telegrams addressed to ships at sea from offices in India and transmitted via the coast stations at Bombay, Calcutta or Madras the charge is thirteen annas per word (ordinary) or eight annas per word (code) in nearly all cases.

The following are the charges (excluding supplementary charges) for radio-telegrams from offices in India transmitted to ships at sea through the coast stations mentioned in the preceding paragraph:—

| | Total charge per word | Ordinary. | Code |
|--|-----------------------|-----------|--------|
| | Rs. a. | Rs. a. | Rs. a. |
| (1) All Government or Private Radio-telegrams, excepting those mentioned in (2) and (3) below .. | 0 13 | 0 | 8 |
| (2) Radio-telegrams to His Britannic Majesty's Ships of War or Ships of the Royal Indian Navy .. | 0 8 | 0 | 5 |
| (3) Radio-telegrams to Spanish or Swedish ships .. | 0 12 | 0 | 7½ |

The sender of a radio-telegram may prepay a reply. He must insert before the address the instruction "R.P." followed by mention in Rupees and annas of the amount prepaid, e.g., R.P. 7-8. This expression counts as one word.

Daily Letter-Telegrams

Daily Letter-Telegrams in plain language, which are dealt with telegraphically throughout are accepted for non-Empire countries and Australasia on any day of the week, and are ordinarily delivered to the addressee on the morning of the second day following the day of booking. They are subject to the conditions prescribed for Deferred Foreign telegrams with certain exceptions as stated below.

The charge for a Daily Letter-Telegram is ordinarily one-third of the charge for a full rate telegram of the same length and by the same route subject to a minimum charge equal to the charge for 25 words at such reduced rate including the indication DLT.

The late fee system does not apply to Daily Letter-Telegrams and such telegrams are not accepted during the closed hours of an office.

On Indian lines Daily Letter-Telegrams are transmitted after Deferred Foreign telegrams.

The only special services admitted in Daily Letter-Telegrams are Reply paid, Poste Restante, Telegraph restante, Multiple addresses, de Luxe and telegraph redirection under orders of the addressee.

The class prefix for Daily Letter-Telegrams will be DLT.

Night Letter-Telegrams

Night Letter-Telegrams (NLT) are accepted for all Empire countries, except Australasia, with which the Daily Letter-Telegram Service (DLT) remains in force, at the same rates and under the same conditions as prescribed for Daily Letter-Telegrams, except as follows:—

(i) They will be delivered on the morning of the day following the day of booking.

(ii) The special instruction and the class prefix for Night Letter-Telegrams will be NLT.

Empire Social Telegrams

Empire Social Telegrams (GLT) conveying solely greetings, family news or non-commercial personal affairs can be availed of throughout the year at special reduced rates, for all Empire countries except Sudan.

Empire Social Telegrams (GLT) for the purpose of telecommunication and delivery to a territory or place to which NLT service is available is deferred until the morning of the day following

the day of acceptance: where there is no NLT service but a DLT service is available, an Empire Social Telegram is deferred and delivered on the second day following the day of acceptance or as soon as possible thereafter. Minimum charge for an Empire Social Telegram is Rs. 3-6-0 for the first 12 words (excluding the Special Instruction-GLT which will not be charged) and 4½ annas for every additional word.

The only Special Services admitted in Empire Social Telegrams are "Reply Paid" and "De Luxe."

De Luxe Telegrams

Telegrams relating to happy events or greetings may be sent to certain foreign countries for delivery on an artistic form in an envelope of the same character. A supplementary charge of four annas per telegram in addition to the charge at the appropriate rate according to the class (i.e., Urgent, Ordinary, Code, Deferred, DLT, etc.), is charged for such telegrams.

Greeting Telegrams (Foreign)

Telegrams conveying Christmas and New Year wishes are accepted for most non-empire countries from the 14th of December to the 6th Jan. inclusive at special reduced rates, subject to a minimum charge for 10 words per telegram. To all Empire countries except Sudan, such greetings may be conveyed by means of Empire Social Telegrams.

GROWTH OF TELEGRAPHS

At the end of 1897-98 there were 50,306 miles of line and 155,088 miles of wire and cable. Compared to this, there were 122,000 miles of line including cable and 1,277,800 miles of wire including conductors on the 31st March 1947. The numbers of departmental telegraph offices were 257 and 80 respectively, while the number of telegraph offices worked by the Post Office rose from 1,634 to 4,020.

The increase in the number of paid telegrams dealt with is shown by the following figures:—

| | 1897-98. | 1945-46. |
|-------------------------|-----------|------------|
| Inland .. { Private .. | 4,107,270 | 22,165,500 |
| State .. | 860,382 | 3,688,984 |
| Press .. | 35,910 | 840,558 |
| Foreign .. { Private .. | 735,679 | 3,229,761 |
| State .. | 9,896 | 151,637 |
| Press .. | 5,278 | 103,540 |
| | 5,754,415 | 30,179,980 |

The outturn of the workshops during 1946-47 represented a total value of Rs. 1,36,76,000.

The number of messages handled during the year 1945-46 by departmental wireless stations in India was nearly 579,000. This shows an increase of about 232,000 over the previous year.

With effect from 1st April 1943 the Licensed Telephone Systems at Calcutta, Bombay and Madras and with effect from September 1, 1943, the Licensed Telephone Systems at Ahmedabad and Karachi were acquired by Government. On the 31st March 1947, there were about 2,600 exchanges and 126,964 telephones operated by the department and licensed system. About 4.7 million trunk telephone calls were handled during the year 1946-47.

The capital outlay of the Indian Posts and Telegraphs Department during and to the end of the year 1946-47 was Rs. 38,96,85,000. The receipts for the year ended 31st March 1947 amounted to Rs. 31,65,29,600 and charge (including interest on capital outlay) to Rs. 26,48,85,300, the result being a net gain of Rs. 5,16,44,300.

BROADCASTING

FOR several years limited broadcasting services were maintained by radio clubs in Calcutta, Bombay and Madras. Although the transmitting sets employed by them were of very low power, the broadcasts were popular. The clubs were assisted financially by a government contribution based upon the revenue from licence fees, but this did not suffice to cover the cost of the transmissions, and great credit is due to the members of those clubs for the sporting manner in which they provided additional funds and undertook the entire responsibility for the programmes.

After negotiations extending over several years, an Indian Broadcasting Company was granted a licence to establish broadcasting services upon lines similar to those of the British Broadcasting Corporation, and transmitting stations were erected at Bombay and Calcutta, the service from the former being inaugurated by the Viceroy in July 1927 and the latter by the Governor of Bengal a month later. These stations had each an aerial input of one and a half kilowatts, the same as that of the 2LO station in London, of which they were practically duplicates. The programmes were so arranged that both Indian and European music were broadcast daily and the news, bulletins and market and weather reports were read in two languages.

Owing to financial difficulties the Indian Broadcasting Company went into liquidation with effect from March 1, 1930. Since then the Government of India have been controlling broadcasting in this country. Government for this purpose formed an Indian State Broadcasting Service, now called All-India Radio, and instituted a Central Broadcasting Advisory Committee.

In 1931, Government felt justified in embarking on a policy of development and, as a first step, a sum of Rs. 2,50,000 was granted for a 20-kW mediumwave station to be established at Delhi. This station was actually opened on January 1, 1936.

In the year 1936 a special fund of Rs. 40,00,000 was created for the development of Broadcasting in India. At that time there was, in addition to the mediumwave centres at Bombay, Calcutta and Delhi, a 0.25 kW mediumwave centre at Peshawar which was being operated by the N.-W. F. P. Government.

Orders for extensive new equipment for implementing the scheme of expansion were placed in January 1937. It included 10 transmitters which were put into operation as follows:—

Lahore 5-kW mediumwave: December 16, 1937; Delhi 10-kW shortwave: December 16, 1937; Bombay 10-kW shortwave: February 4, 1938; Lucknow 5-kW mediumwave: April 2, 1938; Delhi 5-kW shortwave: June 1, 1938; Madras 10-kW shortwave: June 16, 1938; Madras 0.2-kW mediumwave: June 16, 1938; Calcutta 10-kW shortwave: August 16, 1938; Tiruchirappalli 5-kW mediumwave: May 16, 1939; Dacca 5-kW mediumwave: December 16, 1939.

Peshawar, which was taken over from the N.-W. F. P. Government on April 1, 1937, was converted into a 10-kW mediumwave centre on July 16, 1942.

In the year 1942, the Government of India decided to install a high power shortwave transmitter which would be capable of providing broadcasting service to foreign countries.

A 100-kW transmitter was opened on May 1, 1944 forming an important landmark in A.I.R.'s development programme.

Later at the request of the Government of

the U.K. five shortwave transmitters including one 100-kW shortwave transmitter were installed as an urgent war measure. These were subsequently taken over by the A.I.R.

After the partition of India, the regional stations at Peshawar, Lahore and Dacca were handed over to the Pakistan Broadcasting Service.

All-India Radio.—All-India Radio is an "attached" office of the Department of Information and Broadcasting of the Government of India. Its head is the Director-General, All-India Radio, whose office is located in Broadcasting House, Parliament Street, New Delhi. Other officers at headquarters: Chief Engineer, four Deputy Directors-General, two Deputy Chief Engineers, Director of Programmes, Director of Programme Planning, Director of Public Relations, Director of Staff Training School, Director of Listener Research and two Assistant Directors of Administration.

Air Stations.—The broadcasting stations are situated at Delhi, Lucknow, Patna, Calcutta, Cuttack, Madras, Tiruchirappalli and Bombay. Shillong-Gauhati, Nagpur, Varanasi, Baroda, Allahabad and Jullundur. Each regional centre consists of studios and office buildings, transmitter installations and receiving centre installations. The technical facilities at the studios provide for simultaneous programme transmissions, channels for rehearsals and tests, listening rooms, recording facilities, etc. The studios at Delhi, Bombay, Madras and Calcutta are air-conditioned. All the centres are equipped with mediumwave transmitters which furnish a first-grade service in their vicinity and second-grade service in the Province in which they are. At Delhi, Bombay, Madras and Calcutta, shortwave transmitters have also been provided for serving areas within a radius of about 500 miles from the centres. The receiving centre at each station is the link between the News Service Division at Delhi and the station itself, and is used for relaying news bulletins and important broadcasts from Delhi.

The stations transmit for about seven to eleven hours a day. This is generally split up

into three transmissions, morning, afternoon and evening. Programmes are planned by Station Directors with the assistance of their Programme Executives and Programme Assistants. Details are worked out well in advance of their schedule dates and are published in the fortnightly journals of All India Radio. Programmes are broadcast in 13 Indian languages and in English. The general programme consists of music, talks, plays, feature programmes and programmes for women and children. Rural programmes are broadcast from all stations with the exception of Calcutta which broadcasts a special programme for industrial areas. Educational broadcasts are radiated from Bombay, Calcutta, Tiruchirappalli and Delhi.

Broadcasting House.—Probably the largest centre of broadcasting activity in the East Broadcasting House was completed in 1943. Architecturally, it is one of Delhi's newest and most striking sights. It represents from the point of view of equipment, the latest practice in radio engineering. With its air-conditioned studios, each with an individual acoustic pattern to suit every variety of sound reproduction, its control room—a model of scientific efficiency—its dramatic control panels and effects and echo rooms it constitutes a landmark in every sense of the word in the history of Indian broadcasting.

New Service Division.—This occupies a wing of Broadcasting House in Delhi and provides a total of 22,980 news bulletins for (a) Home Service (in English and fifteen Indian languages) and (b) external programmes (in English, three Indian languages and eight foreign languages). All the news bulletins are prepared in the News Service Division and broadcast from the transmitters at Delhi set apart for news. Each station relays the bulletins suitable for its listening areas. A few minutes are set apart at each station for local news. This period accommodates news of purely local interest.

The News Service Division has a Monitoring Service to watch foreign broadcasts and will shortly have correspondents at the principal provincial centres in India.

CENTRAL HOME NEWS SERVICES

| Language | Broadcasts from | Number of bulletins | Total duration of news (in hours) |
|---------------------|---|---------------------|-----------------------------------|
| English | All stations of AIR .. | 1,460 | 304 |
| Hindustani | Delhi, Bombay, Lucknow, Jullundur, Amritsar, Patna, Nagpur, Allahabad | 1,460 | 304 |
| Tamil | Madras, Tiruchirappalli, Delhi | 1,095 | 243 |
| Telugu | Madras, Delhi Vijayawada .. | 1,095 | 243 |
| Bengali | Calcutta, Delhi | 1,095 | 243 |
| Marathi | Bombay, Delhi, Nagpur .. | 1,095 | 243 |
| Gujerati | Bombay, Delhi, Baroda .. | 1,095 | 243 |
| Kannada | Bombay, Delhi | 730 | 243 |
| Punjabi | Jullundur, Amritsar, Delhi .. | 730 | 243 |
| Assamese | Delhi, Shillong-Gauhati .. | 730 | 243 |
| Kashmiri & Dogri .. | Delhi, Srinagar | 730 | 182 |
| Gurkhali | Delhi | 350 | 41 |

External Services.—The broadcasts from these are radiated from Delhi but they are distinct from the programmes of the Delhi (regional) station. Altogether twenty-four news bulletins a day in twelve languages—nine foreign and three Indian—are broadcast. The languages used in External Services are Burmese, Kuoyu, Cantonese, Arabic, Persian, Afghan-Persian, English, Hindustani, Tamil, Gujarati, Pushtu, Indonesian.

EXTERNAL NEWS SERVICES

| Language | Area covered | Number of bulletins (in the year) | Total duration of news in hours (in the year) |
|------------------------|--|-----------------------------------|---|
| English | East & South-East Africa, East and South-East Asia, Mauritius, Reunion .. | 1825 | 350 |
| Hindustani | East & South-East Asia, East and South-East Africa, Mauritius, Reunion .. | 1095 | 182 |
| Tamil | East & South-East Asia | 730 | 122 |
| Gujarati | East & South Africa, Madagascar, Mauritius and Reunion | 365 | 61 |
| Pushtu | North-West Frontier | 1095 | 135 |
| Afghan-Persian | Afghanistan, North-West Frontier | 365 | 61 |
| Persian | Iran | 365 | 61 |
| Arabic | Persian Gulf, Saudi Arabia, Iraq, Syria, Lebanon, Palestine, Transjordan, Egypt, East Africa, Southern Coast of Arabia | 365 | 91 |
| Burmese | Burma | 730 | 122 |
| Indonesian | Indonesia & Malaya | 730 | 152 |
| Kuoyu | Far East, Central and East China | 365 | 61 |
| Cantonese | Far East, Burma, Malaya and South China | 365 | 61 |

| Language | Area covered | Total Duration (hours) | No. of News Bulletins | Total Duration of News (hours) | Talk & Commentaries (hours) | Music & Entertainment (hours) |
|---------------------------|--|------------------------|-----------------------|--------------------------------|-----------------------------|-------------------------------|
| 1. English | East & South-East Asia, East and South Africa, Mauritius, Reunion | 720 | 1800 | 348 | 32.4 | 339.6 |
| 2. Hindustani | East & South-East Asia, East and South Africa, Mauritius, Reunion | 630 | 1080 | 180 | 36 | 414 |
| 3. Tamil | East & South-East Asia | 540 | 720 | 120 | 39.6 | 380.4 |
| 4. Gujarati | East and South Africa, Madagascar, Mauritius and Reunion | 180 | 360 | 60 | 20.4 | 99.6 |
| 5. Pushtu | North-West Frontier | 360 | 1080 | 126 | 10.8 | 223.2 |
| 6. Afghan-Persian | Afghanistan, North-West Frontier | 210 | 360 | 60 | 19.2 | 130.8 |
| 7. Persian | Iran | 270 | 360 | 60 | 26.4 | 183.6 |
| 8. Arabic | Persian Gulf, Saudi Arabia, Iraq, Syria, Lebanon, Palestine, Transjordan, Egypt, East Africa, Southern Coast of Arabia | 270 | 360 | 72 | 32.4 | 165.6 |
| 9. Burmese | Burma | 180 | 720 | 120 | 27.6 | 32.4 |
| 10. Indonesian | Indonesia & Malaya | 270 | 720 | 132 | 19.2 | 118.8 |
| 11. Kuoyu | Far East, Central and East China | 180 | 360 | 60 | 24 | 96 |
| 12. Cantonese | Far East, Burma, Malaya and South China | 180 | 360 | 60 | 24 | 96 |

Research and Maintenance Departments.—These two departments are located in New Delhi. The Research Department deals with all technical problems, concerning reception and transmission. Special studies are undertaken on ionospheric data and forecasting transmission conditions, field strengths of short and medium wave stations, atmospheric noise levels prevalent in various parts of India, studio and recording characteristics and development of cheap receivers. The Department also maintains a field station at Todapur near Delhi where the frequencies of All-India Radio Stations are constantly checked. The Maintenance Department handles problems which arise in the upkeep and day-to-day operation of the engineering equipment used by All-India Radio in addition to maintaining Central Stores Depot.

Radio Journals.—A. I. R. publishes programme journals in English (Indian Listener), Urdu (Awaz) and Hindi (Sarang) from Delhi, Bengali (Betar Jagat) from Calcutta, Tamil (Vanoli) from Tiruchirappalli and Gujarati

(Nabhovali) from Baroda taken over on December 16, 1948. The following figures give the circulation of the journals. The fall in the circulation in 1947-48 is ascribed to the partition of the sub-continent.

| | Indian Listener | Awaz | Sarang | Betar Jagat | Vanoli | Total |
|-------------|-----------------|--------|--------|-------------|--------|---------------------|
| 1930-31 | 2,750 | .. | .. | 1,520 | .. | 4,270 |
| 1931-32 | 2,750 | .. | .. | 2,000 | .. | 4,750 |
| 1932-33 | 3,600 | .. | .. | 1,700 | .. | 5,300 |
| 1933-34 | 4,500 | .. | .. | 1,700 | .. | 6,200 |
| 1934-35 | 8,000 | .. | .. | 1,750 | .. | 9,750 |
| 1935-36 | 13,500 | 500 | .. | 1,900 | .. | 15,900 |
| 1936-37 | 16,500 | 2,100 | .. | 2,400 | .. | 21,000 |
| 1937-38 | 18,500 | 5,500 | .. | 2,800 | 500 | 27,300 |
| 1938-39 | 21,250 | 6,000 | 2,500 | 3,100 | 1,250 | 33,100 |
| 1939-40 | 18,500 | 8,250 | 5,000 | 3,900 | 3,230 | 38,880 |
| 1940-41 | 20,000 | 13,250 | 7,500 | 4,350 | 6,250 | 51,350 |
| 1941-42 | 24,000 | 14,750 | 8,500 | 5,500 | 8,800 | 61,550 |
| 1942-43 | 23,500 | 14,500 | 7,250 | 6,650 | 9,150 | 61,050 |
| 1943-44 | 22,750 | 15,000 | 7,250 | 7,000 | 10,150 | 62,150 |
| 1944-45 | 23,200 | 17,250 | 8,250 | 6,900 | 11,150 | 66,750 |
| 1945-46 | 25,500 | 17,500 | 8,250 | 6,825 | 12,100 | 67,175 |
| 1946-47 | 28,900 | 24,000 | 11,000 | 8,603 | 17,496 | 90,089 |
| 1948 (Dec.) | 21,638 | 3,533 | 8,760 | 16,185 | 29,550 | 78,079 (1947-48) |

Monitoring Office.—The Monitoring Service keeps a watch on transmissions from all the main broadcasting systems of the world, monitors news commentaries and selected talks transmitted from those stations in English, in Indian languages and in some foreign languages, totaling 12 different languages from as many as 24 different countries.

Public Relations.—For establishing and maintaining contact between All-India Radio and its listeners there is a Director of Public Relations at Headquarters and a Public Relations Officer attached to each Station.

Listener Research.—The primary purpose of Listener Research is to determine the listening habits and programme preferences of radio listeners by ascertaining from time to time their reactions to programmes broadcast. This information is necessary for planning programmes calculated to have the maximum listening appeal. Collection of authentic information on this subject is the task which the Listener Research Department of AIR has to fulfil. Although Listener Research in this country is still in its infancy, a good deal of information on the listening audience and on trends of listening has already been collected and more light is constantly being shed on this absorbing subject. For this purpose, contact with listeners is maintained by a system of listening panels, postal enquiries and sample surveys. By utilising all recognised methods of assessing listener reactions, AIR is trying its best to provide programmes suited to the needs of its listening audience. There is one Director and one Assistant Director of Listener Research at Headquarters and one Listener Research Officer at each station in charge of this work.

Advisory Committees, established at the broadcasting centres in consultation with the Provincial Governments, keep the Director-General, All-India Radio, in touch with local public opinion in the matter of programme construction and advise him on such matters. For advising the Director-General, All India Radio, on the choice of a generally acceptable vocabulary for Hindustani, a Hindi-Urdu Standing Advisory Committee was formed in 1946. The first meeting of the Committee was held in May and June of the same year.

Post-War Development.—Towards the end of the war, the development of broadcasting in India was actively considered. Taking into account the overall requirements of the country, the capacity of the average listener to afford a radio set and the paramount necessity for keeping in touch with the ordinary citizen, a

plan of development over a period of eight years was evolved. The plan has as its aim the provision of a broadcasting service throughout the country which would, in due course, enable any listener in any part of the country to receive a programme on a cheap receiver.

The Government of India have formulated an eight-year plan which has been taken up for immediate implementation.

Installation of three 20 kW medium wave transmitters for rural programmes, one each at Bombay, Calcutta and Madras.

Installation of two high-power and one 20 kW medium wave transmitters at Allahabad.

Installation of 20 kW medium wave transmitters one each at Nagpur, Vijayawada, Ahmedabad, Cuttack, Dharwar, Gauhati (Shillong), The Capital of East Punjab and Calicut.

Installation of eight high-power medium-wave transmitters for urban programmes, two each at Delhi, Bombay, Madras and Calcutta.

Construction of studio buildings at Madras and Calcutta.

Provision of additional studio facilities at the existing broadcasting centres.

In their choice of new centres, the Government of India have been guided by the following factors:

- Demands of the linguistic areas hitherto unprovided with a service and the importance of the language from the literary point of view and from the size of population speaking the language.
- Demands of the various provinces.
- Density of urban and rural population within the service area of the broadcasting centre and its potentialities in bringing in increased revenue.
- Importance as an educational and cultural centre, and availability of programme talent at the centre or within easy reach.
- Density of rural population and distribution of villages and hamlets within the service area, which will determine the centre's usefulness as a rural centre.

Because of the various factors involved in the opening of new stations, such as, acquisition of sites, construction of new buildings, etc., a

certain amount of delay is inevitable. In order to provide an interim service until the complete plans for each centre are carried out, the Government of India have undertaken the construction of "pilot" stations. These pilot stations are to form the nucleus of the future services and, in addition to the meeting of the immediate needs of the areas concerned, they would help to cultivate the potential talent at the centre and also make the people more radio-minded. Such a pilot station has already been opened at Cuttack, Shillong-Gauhati, Nagpur and Vijayawada and two more are under construction at Ahmedabad and Jullundur.

Licences.—Broadcast receiver licences are issued at all head and sub-post offices at a fee of ten rupees per year, and cover the use of receiving sets throughout India. Licences for fixed stations for transmitting and experimental purposes are much sought after, and despite a careful scrutiny of the applications, a considerable number have been issued. The number of traders in wireless apparatus who are required to take out special import licences has increased considerably during recent years.

Broadcast Receiver Licences are issued to Municipalities or other public bodies for the reproduction of broadcast programmes in public places by the Postmaster-General of the Province. A licence issued for this purpose covers the use of one wireless receiver and any number of loudspeakers at one place only but does not cover any external wiring erected outside the premises of the licensee.

A Commercial Broadcast Receiver Licence is, however, necessary in the case of clubs, institutions, messes, etc., for reproducing broadcast programmes at subscriptions, dances, concerts, bazaars, etc., to which the public are admitted. This licence is also issued by the Postmaster-General at a fee of Rs. 25 and is valid for one year. The number of wireless receiver licensees in India has increased, the total for India numbering 281,998 in November 1948.

The growth of Broadcast receiver licences at the end of each year beginning with 1937 is given below:

| Year | Licences | Year | Licences | Year | Licences |
|------|----------|------|----------|----------------|----------|
| 1937 | 50,680 | 1941 | 1,47,121 | 1945 | 2,02,829 |
| 1938 | 61,480 | 1942 | 1,65,675 | 1946 | 2,32,368 |
| 1939 | 92,772 | 1943 | 1,76,061 | 1947 | 2,38,274 |
| 1940 | 1,19,417 | 1944 | 1,93,585 | 1948 (Nov.) | 2,81,998 |

It would be seen from the above that the 12 years between 1937 and 1948 saw an increase in the licence figures from 50,680 to 2,81,998. The rate of increase might have been even higher but for the limited supplies during the war and production bottlenecks and import restrictions in the post-war years.

Radio Imports.—The imports of wireless receivers into India have increased rapidly in recent years, though lately there has been some decline.

RADIO RECEIVERS IMPORTED (upto 31-3-1947)

| Year | Number | Value Rs. |
|---------|----------|--------------|
| 1936-37 | 26,925 | 25,17,442 |
| 1937-38 | 29,567 | 28,11,415 |
| 1938-39 | 28,110 | 25,85,528 |
| 1939-40 | 43,684 | 40,62,138 |
| 1940-41 | 38,866 | 35,31,956 |
| 1941-42 | 52,416 | 41,73,266 |
| 1942-43 | 18,930 | 19,70,027 |
| 1943-44 | 5,384 | 7,43,919 |
| 1944-45 | 895 | 1,50,947 |
| 1945-46 | 5,982 | 7,04,197 |
| 1946-47 | 1,07,111 | 1,69,61,790 |

EFFECTIVE FROM THE 16th MARCH 1949 TO 31st MAY 1949.

| S. No. | Station | Type | Power K.W. | Call Sign | Frequency Kc/s | Wavelength Metres | Transmission Time (IST)* |

British Broadcasting Corporation

THE British Broadcasting Corporation maintains a small office in New Delhi, to act as a liaison point between its broadcasting headquarters in London and the broadcasting organisations of India, Pakistan and Ceylon, as well as to maintain contact with listeners in these countries to the B.B.C.'s Overseas Programmes.

Its function is purely one of liaison. No transmitting of programmes takes place outside London.

The office in New Delhi was first established in 1947 with the then primary object of conducting listener research for the B.B.C.'s Overseas Programme, broadcast from London, in both English and in five Eastern languages.

Early in 1947 the scope of the office was slightly expanded with the appointment of a senior B.B.C. Representative from London, to handle all matters of co-operation, interchange of ideas and material and public relations, between the B.B.C. and its sister broadcasting organisations in India.

Pakistan and Ceylon have since been added to the scope of its contacts, but the general shape of the office remains the same, with as its two main strands of work, Listener Research and Public Relations.

With Listener Research, the office helps to form a liaison between listeners to the B.B.C. Programmes in these countries and the broadcasting planners and artists working in London. It aims to ensure that the B.B.C.'s Eastern Services—which is broadcast especially for the three

Dominions and when can be heard daily between 7 p.m. and 9 p.m., satisfies the needs of its audience, keeps up-to-date with changing opinions and requirements. It aims to keep listeners in touch with news and trends of thought in the Western countries; and by reporting back to London the views of listeners, helps to introduce new features and programmes which meet with the interests and needs of the listeners in these communities.

It aims too to maintain a similar contact between the planning departments in London and the listeners in these countries to the B.B.C.'s General Overseas Service broadcast in English over the twenty-four hours daily and which is directed specially to India, Pakistan and Ceylon every day from 6.30 a.m. to 10.30 p.m.

In carrying out this work, the B.B.C. Listener Research Officer has toured most areas in the three Dominions enquiring at first hand into the reception of the programmes and assessing from suggestions, appreciations and frank criticisms, how far they are fulfilling the listeners' needs.

EXCHANGE OF IDEAS

One method of promoting cordial relations is by a constant interchange of ideas, scripts and through reciprocal arrangements for the re-broadcasting of news, cultural items and great public occasions. So, through such co-operation, the B.B.C. was enabled to re-broadcast the ceremonies of August 14 and 15 and similarly, there were re-broadcasts in the Dominions on such occasions as the Royal Wedding in November, 1947.

Such re-broadcasts often require careful planning in terms of timing and technical facilities and the work of the B.B.C. Office in New Delhi helps to meet these arrangements.

Also, by means of recordings made by the B.B.C. Transcription Service, of programmes broadcast in London on any of the Home or Overseas Services, the B.B.C. can offer broadcasting concerns all over the world, records of outstanding items such as concerts, Western Music, or talks given by authorities on matters of general cultural and educational interest. Being in recorded form, other broadcasting concerns can use them in their programmes at times best suited to the habits of their audiences.

So a link can be formed between the East and the West especially in the spheres of thought and culture.

Similarly through the co-operation of such broadcasting organisations as All India Radio the B.B.C. Office can also send recordings of the Indian Scene back to London for broadcast to the English people and so foster and maintain an exchange of ideas between the Dominions and Great Britain.

The B.B.C. also maintains a News Correspondent in New Delhi whose work is to report to London for inclusion in B.B.C. News Bulletins, news items from the three Dominions. The present holder of this post is Douglas Stuart. The present B.B.C. Representative is B. W. Cave-Browne-Cave.

The address of the B.B.C. Office is: Post Box 109, New Delhi.

CIVIL AVIATION

THE development of internal air services in the sub-continent was first essayed by Lord (then Sir George) Lloyd during his Governorship of Bombay (1918-23). The first air service was organised by the then undivided Government of India between Karachi and Bombay and was operated by the Royal Air Force. It was a purely Government venture and was established as a temporary and experimental measure during the hot-weather season of 1920, with the object of testing the extent to which air mail service was likely to be used by the public. It was closed down as soon as sufficient data as to running expenses had been collected and its continuance as a purely commercial concern was not advocated.

The general attitude of the Government for some time after this was that as no air services in the world had yet been run without a Government subsidy and as India had no money available for such a purpose, a general development of air services must await more prosperous times. The pressure of external conditions in favour of Indian aviation enterprise gradually increased. The inauguration of French and Dutch air services across the sub-continent, as well as the institution of a regular weekly service between England and Karachi, and the general increase of civil aviation in all parts of the world and of visits of flyers of different nations to sub-continent stimulated both Government and public opinion. India had become a party to the International Commission for Air Navigation and under this she was under an obligation to provide ground facilities for aircraft from other countries.

The problem of internal air services was taken up after this by the Government of India in the Department of Industries and Commerce when Sir Joseph Bhore, then a member of Government holding that post, led.

Non-official members of the Assembly, under the leadership of Mr. Moonje, then a member, for some time strongly pressed Government to institute a practical system for the training of young Indians in civil aviation.

With the intervention of the war, flying had to be confined to war work but this enabled India to skip over two generations of gradual progress, since numerous aerobomes originally built for defence purposes passed into use as civil aeroplanes. The network of radio and meteorological facilities established during war served as a nucleus in building up post-war services on a much more expanded scale. As a result of this on 1st Jan. 1919 it became possible to commence the operation of daily air services on many trunk air routes in the sub-continent, not operated before the war, with aircraft obtained from dispersal stocks and suitably converted to meet the requirements of scheduled air services.

HISTORY OF AIR SERVICES

To take up the thread from where we left Sir Bhupendranath Mitra was in due course obliged to reconsider the question, and arrangement was made by which the Imperial Airways' Services between Croydon and Karachi was, on 30th December, 1929, extended to New Delhi, mails from and for Lahore being carried to and from each week. This convenience of mails between New Delhi and Karachi was performed under a special arrangement, the chief feature of which was that the service was conducted by the Government of India and that Imperial Airways chartered to them machines for the purpose. This meant, in effect, that the western service of Imperial Airways continued to Delhi, but technically the service from Karachi eastwards belonged not to them but to the Government of India. Passengers as well as mails were carried.

On the expiration of the period for which the contract on these lines was arranged, the Government of India decided not to renew their charter

with Imperial Airways and adopted the alternative course of contracting with the Delhi Flying Club to carry the weekly Karachi-Delhi air mail. Passengers were also carried by this service. This, like the earlier special arrangement with Imperial Airways, was obviously a transitional plan. It came into operation early in 1932. Sir Bhupendranath Mitra was succeeded by Sir Joseph Bhore and the latter entered with enthusiasm into his task. The solution of the problem was largely assisted by a great deal of spadework carried out by Col. Sheldermine before he resigned his appointment as D.C.A. in order to take up the corresponding post in England. A scheme was worked out under the direction of Sir Joseph Bhore for the institution of a weekly air service between Karachi and Calcutta in connection with the weekly arrivals and departures of air mails conveyed by Imperial Airways Ltd. from and to England.

The acute financial stringency following on the world depression necessitated the abandonment of the Government Karachi-Calcutta service in 1931.

TRANS-CONTINENTAL AIRWAYS

Efforts to attain the desired result were revived successfully in 1932. Arrangements were made with the British Government and Imperial Airways Ltd. for the extension of the London-Karachi air service across the sub-continent from Karachi to Singapore, as a link in the England-Australia air service. A private company called the Indian Trans-Continental Airways Ltd. was formed with a majority of Indian Directors, in which Imperial Airways Ltd. held 51 per cent of the shares, Indian National Airways Ltd. 25 per cent and the Government of India 24 per cent. This company then operated jointly with Imperial Airways a weekly service from Karachi to Singapore, where it connected with Qantas Empire Airways' weekly service from Singapore to Australia.

Indian National Airways Ltd. was established largely through the efforts of Mr. R. E. Grant-Cowan, C.B.E., to participate as a shareholder in Indian Trans-Continental Airways and to develop feeder and other internal air services in the north of the sub-continent. They opened a bi-weekly service between Calcutta and Rangoon and a daily service between Dacca and Calcutta with prospects of extension to Assam. Under a ten-year contract with the Government of India, they also instituted a weekly service from Lahore to Karachi, to link with the Imperial Airways London-Karachi services. The Rangoon and Dacca services from Calcutta were abandoned in 1935 owing to lack of public support.

Before all these developments, however, the first move had taken place in the west of the sub-continent through the enterprise of Tata Sons Ltd. Under a ten-year contract with the Government of India, a feeder service was started in 1932 between Karachi, Bombay and Madras, connecting at Karachi with the London-Karachi services. From the beginning of 1935, Imperial Airways London-Karachi service, and with it the Trans-India service to Calcutta and the feeder services, Karachi-Lahore and Karachi-Bombay-Madras, were operated twice weekly. The second Trans-India service was extended to Australia in 1936.

EMPIRE AIR MAIL SCHEME

The initiative in this development was taken by the British Government. In September 1936 an agreement was reached with the Government of India and the Government of India simultaneously negotiated with the Government of Ceylon for the extension of the Karachi-Madras service to Colombo. The new services were inaugurated on 28th February 1938, with four services a week each way from London to Calcutta. The frequency of the two feeder

air mail services in India, viz., Karachi-Madras-Colombo and Karachi-Lahore was simultaneously increased to four, each service maintaining connection with the easterly and westerly flights of the main trunk service. The frequency was increased to five when the services in the Australian section were augmented at the end of July 1938 and all first class mails to Empire participating countries were conveyed by air. On the Empire system of air services, Imperial Airways and its associated companies, including Indian Trans-Continental Airways Ltd. flew a total distance of approximately 7,000,000 miles in 1938 as against 4,300,000 in 1937 and the total load carried rose from 6,315,400 to 12,392,000 ton-miles. In the early months of 1939, 550 tons of mail consisting of 50,000,000 letters were carried, each letter travelling on an average of 4,750 miles.

The Empire Air Mail scheme was suspended in September 1939 on the outbreak of the war with Germany, but a restricted service was maintained until June 1940 when, on Italy's entry into the war, air mails to the United Kingdom were totally suspended. In December 1940 the possibilities of introducing a direct air link between Britain and Durban were investigated and a "short circuiting" route was inspected by Major J. R. McIndrie, Deputy Director General of the British Overseas Airways. Air Service to England was renewed in August 1945. The Empire Air Mail scheme was finally abandoned with effect from 1st April 1947.

India-England Airgraph Service This new service was inaugurated on February 2, 1947. The airgraphs were photographed on a miniature film measuring about half an inch square. The films were sent throughout by air, and a photograph (one-inch, measuring about five inches by four inches, of the original letter, was made from the film and delivered to the addressee. The rate of postage originally fixed at fourteen annas was reduced to eight annas on March 2. The airgraph service was discontinued in July 1945.

INTERNAL AIR SERVICE

In 1937 Messrs. Tata Sons Ltd. established a service between Bombay and Delhi, calling at Indore, Bhopal and Gwalior. This service operated twice weekly during the fair season.

Air Services of India Ltd., Bombay, inaugurated in November, 1937, an air service from Bombay to Bhavnagar, Barod, Jamnagar and Porbandar in the former Kathiawar States. The service was terminated in 1940. The twice weekly Bombay-Pooné-Kolhapur line was also terminated owing to war conditions in 1940.

During the period of the war and up to the end of 1945 Tata Airlines, Bombay, and Indian National Airways, New Delhi, the only active operating companies in the sub-continent at that time were operating a number of trunk and feeder air services with lend-lease aircraft loaned to them under wartime contracts with the Government of India who controlled the entire load capacity on the said air services to meet the cost of operations from defence and other civilian traffic was carried only when space was available after meeting military demands.

Concurrently work had been proceeding during the war years and Sir Frederick Tynnes was placed as Officer-in-Charge for preparing a Post-War Plan for the development of Civil Aviation in the sub-continent. Soon after the termination of the war, on 1st January, 1946, the lend-lease aircraft loaned to the two companies were withdrawn and replaced by surplus Dakota type aircraft purchased from the United States Army and Navy Liquidation Commission. With these aircraft the two companies commenced commercial operations under agreements with the Government of India. Under these

agreements Government guaranteed the companies a fixed percentage of the capacity revenue on their services. In return control was exercised over a portion of the load capacity required for Government priority traffic. The following services were operated under the terms of this contract:

TATA AIRLINES

Karachi-Ahmedabad-Hyderabad (Dn)
Madras-Colombo daily.
Bombay-Ahmedabad-Delhi, daily.
Bombay-Nagpur-Calcutta (from 1st April 1946, twice a week).

INDIAN NATIONAL AIRWAYS

Delhi-Cawnpore-Allahabad-Calcutta, daily.

Delhi-Jodhpur-Karachi, daily.

Delhi-Lahore-Rawalpindi-Peshawar, three times a week.

Apart from these services, operated under the guarantee arrangements, the following new services were also commenced:

AIR SERVICES OF INDIA LTD.

Bombay-Jammagar-Lahore (from 25th June 1946, three times a week).

Bombay-Bhopal-Nagpur-Lucknow (from 25th June 1946, once a week).

INDIAN NATIONAL AIRWAYS

Delhi-Rampur-Lucknow (from 7th February 1946, daily).

DECCAN AIRWAYS LTD.

Delhi-Gwalior-Bhopal-Nagpur-Hyderabad-Madras (from 1st July 1946, three times a week).

Hyderabad-Bangalore (from 1st July 1946, twice a week).

In pursuance of the provision made in Rule 135 of the Indian Aircraft Rules 1937, an Air Transport Licensing Board was constituted in July 1946, since under rule 131 of the said rules no scheduled air services could be operated after the 1st October 1946 except under a licence granted by the Board.

Up to 31st December 1948, the Air Transport Licensing Board had granted temporary and provisional licences for the operation of the following air services:

| S. No. | Name of the Company | Route |
|--------|---|---|
| 1. | Air India Ltd., Bombay | Delhi-Jaipur (temporary licence) Bombay-Calcutta Bombay-Ahmedabad-Jaipur-Delhi Bombay-Karachi Ahmedabad-Karachi Ahmedabad-Bombay-Hyderabad-Madras-Colombo Madras-Bombay-Bhopal-Bombay-Tiruvandrum |
| 2. | Indian National Airways Ltd., New Delhi | Delhi-Lucknow Lahore-Faransi-Jodhpur-Ahmedabad Delhi-Lahore Delhi-Jodhpur-Karachi Delhi-Calcutta Calcutta-Rangoon Karachi-Madras-Lahore Deori-Amritsar |
| 3. | Air Services of India Ltd., Bombay | Bombay-Jammagar-Lahore Lahore-Karachi Bombay-Lahore-Gwalior-Agra-Delhi Bombay-Bhavnagar Jammagar-Bhavnagar-Ahmedabad Jammagar-Madras Bombay-Indore-Kanpur |
| 4. | Indian Overseas Airlines Ltd., Bombay | Bombay-Nagpur-Calcutta Nagpur-Jubbulpore-Ahmedabad-Kanpur-Lucknow Nagpur-Hyderabad-Bangalore-Madras |
| 5. | Airways (India) Ltd., Calcutta | Calcutta-Bombay-via-Vizagapatnam-Madras-Bangalore Calcutta-Bombay |
| 6. | Bharat Airways Ltd., Calcutta | Calcutta-Patna-Benaras-Lucknow-Delhi Calcutta-Cuttack-Kalahabad-Kanpur-Delhi Delhi-Amritsar Calcutta-Chattagram |
| 7. | Dalmia Jain Airways Ltd., Calcutta | Delhi-Amritsar-Jammu-Srinagar Srinagar-Amritsar (Freight only) |
| 8. | Deccan Airways Ltd., Hyderabad (Deccan) | Madras-Hyderabad-Nagpur-Bhopal-Delhi Hyderabad-Bangalore Hyderabad-Bombay Madras-Bewara (temporary licence) |
| 9. | Orient Airways Ltd., Calcutta | Calcutta-Akyab-Rangoon |
| 10. | Air India International Ltd., Bombay | Bombay-Cairo-Geneva-London |
| 11. | Jupiter Airways Ltd., Madras | Madras-Vizagapatnam-Nagpur-Agra-Delhi |

A total of 97 applications from 20 air transport companies for operating air services on 78 routes covering the whole of the sub-continent was received by the Air Transport Licensing Board during the year 1946. During the years 1947 and 1948, 107 fresh applications were received, of which 93 were for new routes and the total number of air transport companies which had submitted such applications rose to 23.

The grant of provisional licences by the Board was continued during 1948-49 and the following further provisional licences were granted. In addition various changes in the frequencies and routes of scheduled air services were authorised:

| S. No. | Name of the Company | Route |
|--------|---|--|
| 1. | Deccan Airways Ltd., Hyderabad (Deccan) | (i) Hyderabad-Bewara-Vizagapatnam (ii) Nagpur-Jubbulpore |
| 2. | Air Services of India Ltd., Bombay | (i) Bombay-Poona-Bangalore (ii) Bombay-Rajkot-Morvi |
| 3. | Air India Ltd., Bombay | Bombay-Baroda-Ahmedabad |
| 4. | Airways (India) Ltd., Calcutta | Calcutta-Gauhati-Bagdogra-Molanbati |
| 5. | Indian Overseas Airlines Ltd., Bombay | (i) Bombay-Nagpur-Calcutta (Night Airmail) (ii) Madras-Nagpur-Delhi (Night Airmail) (iii) Calcutta-Bangkok-Singapore (iv) Patuxia-Sourabaya-Darwin-Sydney (v) Bombay-Karachi-Zaidan-Tehran |
| 6. | Bharat Airways Ltd., Calcutta | Calcutta-Bangkok-Saigon Hongkong-Shanghai |

POSITION ON 1st JANUARY, 1949.

|-------------|-----------|----------------------|

EXTERNAL AIR SERVICES

The question of India starting her own external air services to other countries had occupied the attention of the Government of India ever since the end of the war, but the first concrete step was taken only about the end of 1947, when the Government approved a scheme for the establishment of an Indian air service between India and the United Kingdom. A new company was formed for this purpose under the name of Air India International Ltd. The Government of India held 49 per cent of the share capital with an option to increase this to 51 per cent at any time. On the Board of Directors of this company, Government have their own nominee as a "Special Director" who has certain over-riding powers. During an initial period of five years any losses incurred by this company will be made good by Government but any payment so made shall have to be repaid out of subsequent profits made by the company. The India United Kingdom service, equipped with the most modern type of Lockheed Constellation 40-seater aircraft, commenced operation on June 8, 1948 on the route Bombay-Cairo-Geneva-London when the 'Malabar Princess' took off from the Santa Cruz airport with 35 passengers, and 164 bags containing about 1,700 lb. of letter mail.

This service now operates twice weekly between Bombay and London.

Plans for the development of air services to the Far East are also nearly complete. Provisional licences for this purpose have been issued to two companies, *i.e.*, Bharat Airways Ltd., Calcutta and Indian Overseas Airlines Ltd., Bombay. These services will operate on the following routes:

- (1) Calcutta-Bangkok-Saigon-Hongkong-Shanghai (Bharat Airways Ltd.)
- (2) Calcutta-Bangkok-Singapore-Batavia-Sourabaya-Perth-Sydney (Indian Overseas Airlines Ltd.)

The proving flights of these services have already been completed satisfactorily and it is expected that the services will be soon operating on a regular basis. For the present the Indian Overseas Airlines would operate only as far as Singapore but as soon as conditions permit, it is planned to run the service upto Sydney in Australia.

As a result of bilateral air transport agreements negotiated with various countries, foreign air services passing through India have largely

increased in number. At the present time services to and across India are operated by Pan American Airways, Trans World Air Lines, British Overseas Airways Corporation, Air France, K.L.M., Qantas Empire Airways, China National Aviation Corporation, Orient Airways, Pak Airways, Siamair Airways, Philippine Airways, Iranian Airways and Ethiopian Airways.

AERODROMES

In 1939 there were only 12 civil aerodromes in India with aerodrome staff and other necessary facilities. During the war, the Defence Department took over the control of all civil aerodromes and the services of all Air Traffic Control Officers were loaned to the Air Force. The Air Forces continued to exercise control over these aerodromes till 1945 when, due to improvement in the war situation, gradual transfer of the aerodromes to civil aviation commenced. During the war, the development of aerodrome was rapid, with the result that at the end of the war India had several hundreds of aerodromes, many with 2,000 yard paved runways.

Under the post war plan of the Government of India, framed before the partition, it was proposed to develop 4 International, 10 Major, 32 Intermediate and 57 Minor aerodromes in India. Because of the partition in August 1947, these plans had to be modified and under the revised scheme it was proposed to have 3 International, 7 Major, 13 Intermediate and 22 Minor aerodromes in the Indian Dominion. At present all these aerodromes except 14, mostly Minor, are already staffed and equipped to deal with aircraft operations. In addition, there are 20 aerodromes in the various States which have acceded to India.

Since partition, Bombay Airport (Santa Cruz) has become the first port of entry from the West for the Indian Dominion and is provided with customs, immigration and health facilities. Extensive development works are in progress at Bombay Airport to cope with the anticipated increase in air traffic. To meet the demands of the increasing international air traffic through the Calcutta (Dum Dum) Airport, India's gateway to the East, considerable expansion of the airport is planned.

Night Lighting Equipment Twenty-four aerodromes are at present equipped for night-flying operations. The night flying equipment in use at some of the stations at present is of the emergency type consisting of paraffin flares, lanterns and glim lamps. Portable electric

flare paths are provided at two stations and it is proposed to acquire more of these sets to be installed at other stations. Schemes are in hand to provide permanent electric runway lighting, taxiway lighting, and approach lighting, etc., at all the Major and International airports.

Operations At the close of war, the Civil Aviation Department took over by stages operational control of a number of aerodromes including those originally belonging to it before the war. The technique of Air Traffic Control during the war was developed to a very high standard to ensure safety of aircraft operations. Air Traffic Control was brought under three heads, namely, Area Control, Approach Control and Airfield or Local Control. Of these, with a view to minimising the staff, Approach and Local Controls have, for the present, been combined together. Area Control Centres have been established at Delhi, Calcutta, Bombay and Madras.

AERONAUTICAL COMMUNICATION SERVICES

Forty-three Aeronautical Communications Stations, 36 of which are operated by the Director General of Civil Aviation and 7 by Airline Operating Companies on an agency basis, have been established by the Government of India.

On an average, there are at present seven Navigational Aids and seven Air Ground Communication Channels available at the International airport in conformity with the pattern laid down by International Civil Aviation Organisation. Provision has been made in the future plan for further augmentation of navigational aids by the installation of up-to-date methods of Instrument Landing System, Ground Control Approach System, Air Ground Control Radar at all International airports. Long range navigational aids have also been planned for Bombay, Calcutta and Madras to give coverage to an aircraft flying over the sea. At the other airfields, almost all the navigational aids and aircraft communication channels recommended by the International Civil Aviation Organisation have been provided. In addition, facilities exist for point to point communication on both radio telegraphy and telephony between the adjacent airfields and also between the International airfields. These need to be point links have been further expanded to improve communication between the stations in India as well as between the International airports in India with those in the adjacent countries. It has been planned to provide aerodrome service in the nature of Inter-communicating Tele-Talk System, Public Address System and Speech Recording Apparatus at Control Towers for recording the telephone communication with aircraft.

There are three important ancillary units within the Communication organization of the Civil Aviation Department. These Units are known as Radio Construction Unit, Radio Stores Depot, and Radio Development Unit. The new installations and major repairs are carried out by the Construction Unit. Radio Stores Depot is the central stores responsible for the distribution of all equipment to the stations. Radio Development Unit, which came into existence in January, 1948, is engaged in carrying out research and development work on problems pertaining to the Aeronautical Communication Service.

During the year 1947, a handbook entitled "AERADIO" giving details of radio facilities and other useful information was compiled. The first edition of this handbook was published in July, 1947.

In order to facilitate exchange of ideas and to co-ordinate the requirements of Airline Operating Companies with regard to Navigational Aids and Communication facilities in Civil Aviation, a body known as Communication Consultative Committee was formed at the end of 1946. The Civil Aviation Department and Airline Operating Companies are represented in this Committee.

The meetings of this Committee are held every year and it has already proved its usefulness in co-ordinating the requirements of Navigational Aids and Communication facilities in the country.

AIR TRAINING

Facilities are available in the aeronautical communications service for the training of operators and service personnel at the Civil Aviation Training Centre at Saharanpur. During the year 1948, this Centre trained nearly 285 trainees. It is considered to be the best equipped establishment of its kind in South-East Asia. Various instructional courses are provided and these cater for persons with varying attainments and experience.

In order to meet the shortage of pilots in the country the Government of India sanctioned in 1949 a Scheme for training about 300 pilots in a period of 3 years. Preliminary training upto 100 hours experience is provided at the Flying Clubs and completion of the training provided at the C.A.T.C., Allahabad. The Centre will also provide for training of Air Traffic Control Officers and other similar personnel principally for employment in the Civil Aviation Department. The entire Scheme is estimated to cost Rs. 74 lakhs on Capital account and Rs. 25 lakhs as recurring expenditure.

The Flying School at Allahabad started operations on September 23, 1948. Four Asst. Pilot Instructors have so far been trained and another batch of 8 is under training at present and will finish the course shortly. Arrangements are in progress for the recruitment of trainees for the pre-entry stage of Flying Training Scheme and for the completion course at this School. Plans are also in progress for the opening of a school for training of Ground Engineers.

Flying Clubs—Flying Clubs provide facilities for ordinary citizens to learn to fly at concessional rates. To a limited extent they also give flying training for commercial aviation and are now integrated in the new Flying Training Scheme. There are, at present 9 subsidised Flying Clubs in India with Headquarters at Delhi, Bombay, Madras, Barrackpore, Patna, Bhubaneswar, Lucknow, Jullundur Cantt. and Nagpur and three non-subsidised Flying Clubs, viz., the State Aviation, Jodhpur, Hyderabad State Aero Club, Hyderabad and Mysore Flying Clubs, Bangalore. It is proposed to open and subsidise our more Flying Club in Assam during 1948-49. During the year 1948, the Clubs carried out 24,096 hours flying.

Some progress has been made in organising gliding activities. The Indian Gliding Association at Poona has been subsidised with effect from December 1, 1948. A capital grant of Rs. 60,000 has been given to the Association in addition to a recurring grant of Rs. 20,000 per annum and a bonus of Rs. 250 for each pilot trained.

Details for the establishment of an Indian Aeronautical Society for the advancement of aeronautical science and engineering have been finalised and the society was inaugurated by the Prime Minister, the Hon'ble Pandit Jawaharlal Nehru at Bangalore on 27th December, 1948. The headquarters of the society is at New Delhi. It is hoped that the society would help a great deal in the expansion and development of aeronautical science.

Aeronautical Maps—The preparations of a series of aeronautical maps on the scale of 1:1,000,000 has been undertaken by the Survey of India. Hitherto, there have been two series of general maps in this scale, namely the "Carte Internationale" Series and the "India and Adjacent Countries" Series. In order to facilitate the work of keeping the maps up-to-date, it was decided to concentrate on "Carte Internationale" Series only. The Government have also undertaken to print aeronautical maps

covering Indian territory conforming to the I.C.A.O. recommendations. The 4th Session of Map Division Meeting of I.C.A.O. was held at Brussels in March 1948 in which India participated. The recommendations made therein are awaiting approval of the I.C.A.O. Council.

India is a member of the International Civil Aviation Organisation and has been elected to its Council. Mr. K. M. Bhaia was the first Representative of India on the Council of I.C.A.O. followed by Mr. B. M. Gupta and Mr. D. Chakravarti. India took part in all the Assembly meetings and was represented in important Committee and Division meetings.

At the invitation of the Government of India, the ICAO South East Asia Regional Air Navigation Meeting was held in New Delhi during November-December, 1948. Over two hundred delegates from 14 States and two International Organisations, viz., the International Meteorological Organisation and International Air Transport Association, attended.

The Government of India have concluded bilateral air transport agreements with U.S.A., Netherlands, France, Sweden, Pakistan and Ceylon. Bilateral agreements are also under negotiation with other countries including U.K., Australia, Switzerland, Norway and Egypt.

MANUFACTURE

There were no aircraft manufacturing activities in India before the last World War and engineering activities were limited to the overhaul and repair of aircraft and engines by various Companies such as Tata Airlines, Bombay, now Air India Limited, Indian National Airways Ltd., Delhi, Air Services of India Ltd., Bombay, Indian Air Survey and Transport Co. Ltd., Calcutta and De Havilland Aircraft Company, Karachi.

An Aircraft Factory for the manufacture of aircraft became a strategic necessity after the outbreak of War. The Hindustan Aircraft Company was started in the Year 1940 as a commercial venture, by Mr. Walchand Hirachand in association with the Government of Mysore, initially for the assembly and ultimately for the manufacture of aircraft. In the year 1941 the Government of India decided that they should themselves take a more active part in the Company's affairs and equal shares were held by the Government of India and Government of Mysore and Messrs. Walchand Hirachand. The scheduled manufacturing programme could not progress very much, as the material was not reaching the factory due to shipping difficulties. A limited number of aircraft were constructed from the material and components imported between the period 1940-43, and the Director General of Civil Aviation was responsible for the inspection of this project on behalf of the Government of India.

With the Allied Air Forces in India making increasing demand for service and overhaul work, it became necessary for the Government of India to secure the control of the Aircraft Factory. Subsequently the Government of India bought Walchand's interest. Later on the Factory was handed over to the U.S.A.A.F. under a managing agent's agreement for the duration of the War. At the end of 1945 the management reverted to the Government of India and Mysore State. During the War this Factory carried out repair, overhaul, maintenance and servicing of American Air Force aircraft and engines. At one time it employed about 13,000 people. On the conclusion of the war with Japan in 1945, the Factory was re-organised by the Government of India under the Department of Industries and Supply for the conversion and overhaul of Army Dakotas for the use of Civil Airlines. It is now engaged on the conversion and overhaul work both for Civil Aviation and the Air Forces. It has also a programme of assembling and manufacturing of Trainer aircraft for the Air Forces. It is the policy of the Government of India to develop this Factory into a manufacturing concern.

The following other aero-material and parts are now being manufactured by the under-mentioned Companies in India. They are approved for this purpose by the Director General of Civil Aviation in India. The inspection of the manufacture is carried out in accordance with standard aeronautical practice in U.K. and U.S.A.

Aero-Aluminium Sheets—The Aluminium Production Company of India Ltd., P. B. 361, 5 Council House Street, Calcutta is approved for the manufacturing, storage and distribution of Aircraft Aluminium Sheets to British Standard Specifications 214, 216, and 217.

Aero-Tyres and Tubes—The Dunlop Rubber Company (Ltd.), Saneet, Hooghly District, is approved for the manufacture, repairing and remoulding of aircraft tyres and tubes.

The Firestone Tyre and Rubber Company of India Ltd., Hay Bunder Road, Sewree, P.O. Box No. 197, Bombay, is approved for the manufacture of Aircraft Tyres and Tubes.

Aircraft Solders—The Eyring Smelting Co., Ltd., Hile Road, Kaddipore, P.O. Box No. 10007, Calcutta, is approved for the manufacture, storing and distribution of Aircraft solders.

Wooden Aircrews—The Forest Research Institute, Dehra Dun, is approved for the manufacture and repair of Wooden Aircrews.

Aircraft Gaskets—Messrs. Handcastle, Wanda Co., Ltd., Allee Buildings, Hornby Road, Bombay, is approved for the manufacture of Gaskets.

Plywood—Plywood-Products, Singapore, is approved for the manufacture of aircraft Plywood to Aeronautical Specification D.T.D. 427.

Aeroplane Cotton Fabric—To specification D.T.D. 407 will be undertaken by Messrs. Buck-Incham & Gamble Co., Ltd., and Bunn & Co., Madras Ltd. as soon as the new machinery which has been received by them has been installed.

RESEARCH

Research and development work in Aeronautics is still in its infancy in India. The pressing need for it has not been felt so far since aircraft operations in this country in the past have been of limited scope and the aircraft industry remained in an undeveloped state. The position has changed today and aircraft design and manufacturing activities have been started in Hindustan Aircraft Limited and elsewhere, and as a consequence the necessity has arisen for initiating research on advanced problems of aircraft design, for developing materials of indigenous origin and for the introduction of advanced aeronautical engineering training in universities and technical institutions. Recent advances in civil air transport design and practice have also brought in their wake complicated problems relating to air-worthiness and safety in operations. In view of these developments, the necessity for a separate research and development branch in the Civil Aviation Department was anticipated even during the war. A small Research and Development Organisation was created in April, 1946. The work of this organisation so far has been mainly concerned with engineering problems relating to modification and repair of aircraft, operational problems concerning aircraft performance at various altitudes, development and use of Indian materials for aircraft construction, advice on advanced aeronautical education and training, the encouragement of fundamental research in aeronautics and the formation of an aeronautical society for the advancement and diffusion of knowledge of aeronautical science.

A post-graduate course in aeronautical engineering was introduced in the Indian Institute of Science, Bangalore, in December, 1942 and since then the Institute has been the only advanced training centre for aeronautical

engineers in India. The Department of Aeronautics of the Institute is equipped with a wind tunnel and apparatus for structural research. The Institute will be the centre of fundamental aeronautical research in this country. Wind tunnel research at the Institute is being supported by an annual grant from the Department of Civil Aviation.

It is proposed to establish a research laboratory under the aegis of the Civil Aviation Department where practical problems of particular interest to Civil Aviation will be investigated. One such experimental problem is the collection of data on flight loads by means of V.G. Recorders installed in transport aircraft. There are many other problems of tropical operations such as temperature accountability in aircraft performance, power plant protection, development of special safety devices, the evaluation of the effects of turbulence, etc., which could advantageously be investigated in the research laboratory with a view to ensuring greater safety in operations. The research laboratory will also be engaged in certain aspects of civil aircraft design development work and will eventually have to undertake the examination of "prototype" aircraft for purposes of type certification.

Considerable progress in original aircraft design work is being made at Hindustan Aircraft Limited, Bangalore and advances in this field will require the services of a research and development establishment organised on the lines of the Royal Aircraft Establishment in England and the N.A.C.A. Laboratories in America. The proposed research laboratory of the Civil Aviation Department is intended to serve as the nucleus around which future aeronautical research and development activities may grow in such a manner as to be of maximum benefit to the aircraft industry for evolving original aircraft designs and for developing and perfecting the methods of fabrication.

CIVIL AVIATION DEPARTMENT

In view of the anti-inflation policy of the Government the development programme has had to be slowed down this year, and the provision for next year also is on a considerably restricted scale.

The budget estimates for the year 1949-50, under the two demands, Revenue and Capital, pertaining to Civil Aviation, as compared with the budget estimates and the revised estimates for the current year are as follows:—

| | B.E. for 1948-49. | R.E. for 1948-49. | B.E. for 1949-50. |
|--|-------------------|-------------------|-------------------|
| | Rs. | Rs. | Rs. |
| Aviation | 2,13,98,000 | 1,93,00,000 | 2,53,00,000 |
| Capital Outlay on Civil Aviation | 4,08,84,000 | 3,00,00,000 | 2,92,00,000 |

The following table shows at a glance the budget estimates for 1949-50, compared with the budget estimates for 1948-49:

| Sub-heads. | B.E. for 1948-49. | R.E. for 1948-49. | B.E. for 1949-50. |
|---|--------------------|--------------------|--------------------|
| | Rs. | Rs. | Rs. |
| A. Direction and Inspection | 27,12,400 | 25,39,800 | 29,85,800 |
| B. Aerodromes and Air Route Service .. | 26,67,000 | 27,64,200 | 42,77,400 |
| C. Aeronautical Communication Service .. | 53,20,000 | 44,55,000 | 57,85,800 |
| D. Grants for Aviation purposes | 3,00,200 | 6,25,000 | 3,00,000 |
| E. Works | 54,24,500 | 59,76,000 | 51,11,200 |
| F. Aeronautical Training and Education .. | 46,20,600 | 26,80,000 | 55,95,000 |
| G. Air Transport Development | 10,00,000 | .. | 10,00,000 |
| H. Special Services and Miscellaneous Expenditure | 22,300 | 22,000 | 30,000 |
| I. Deduct lump cut for economy | 8,00,000 | .. | .. |
| J. Charges in England | 1,22,000 | 2,38,000 | 2,15,000 |
| Total Rs. | 2,13,98,000 | 1,93,00,000 | 2,53,00,000 |

A. DIRECTION AND INSPECTION :

B.E. for 1948-49 27,12,400 { Increase
Rs. 2,73,200
B.E. for 1949-50 29,85,800.

The provision under this head is intended to meet the pay and allowances of the officers of the Headquarters Organisation and the Inspection Organisation. The Headquarters Organisation co-ordinates the activities of the various services of the Civil Aviation Department whereas the Inspection Organisation carries out the important responsibility of assuring the airworthiness of aircraft, which entails the supervision of materials from their origin to their incorporation in the aircraft and the daily maintenance of aircraft and the licensing and supervision of the personnel and organisation

engaged in the work. The increased provision for the next year is partly due to the strengthening of the Headquarters Organisation necessitated by the all round increase in the activities of the Civil Aviation Department, and partly by the increase in the salary of the existing officers consequent on the drawal of yearly increments, etc.

B. AERODROME AND AIR ROUTE SERVICE.

B.E. for 1948-49 26,67,000 { Increase
Rs. 16,10,400
B.E. for 1949-50 42,77,400

The Aerodrome and Air Route Service deals with (i) Aerodrome Operations, (ii) Estate and Equipment and (iii) Aerodrome Planning

With the growth of air transport in India, the responsibilities of this Organisation have considerably increased. There are at present 46 civil aerodromes in operation in India, besides a number of aerodromes in States, which are maintained by the State authorities. A few additional aerodromes, the exact location and number depending on the development of air transport, will have to be opened next year for which additional staff will have to be sanctioned. Besides, the Aerodrome Organisation is at present without adequate transport facilities. As there are a number of installations at an aerodrome which, for technical reasons are situated far away from the main aerodromes and also from each other, it is necessary that adequate transport facilities should be provided at each aerodrome for the conveyance of staff and stores from one place to another. The increased provision for the next year is partly due to the provision of these facilities and partly to the provision of additional staff for the existing aerodromes and a few new aerodromes which are proposed to be opened during the course of the next year.

C. AERONAUTICAL COMMUNICATION SERVICE.

B.E. for 1948-49 53,20,000 { Increase
Rs. 4,65,800
B.E. for 1949-50 57,85,800

As a result of revolutionary developments in the technique of radio for aviation, it became necessary to organise a service in 1946 exclusively for providing radio communication facilities to aircraft in flight. The organisation is still being built up, and the expenditure on this organisation will naturally continue to be comparatively high for some years to come. There are at present 46 Communication Stations controlled by the Director General of Civil Aviation in India throughout India including certain States. In order to ensure the maintenance of a uniform and efficient service, the communication stations on the important aerodromes situated in States are also maintained and controlled by the Director General of Civil Aviation in India.

D. GRANTS FOR AVIATION PURPOSES.

B.E. for 1948-49 Rs. 3,00,200 { Decrease
Rs. 200
B.E. for 1949-50 Rs. 3,00,000

The provision under this head is only an appropriation for the Civil Aviation Fund. It does not in fact constitute an item of expenditure but is only a transfer to a fund.

E. WORKS.

B.E. for 1948-49 Rs. 54,24,500 { Decrease
Rs. 3,13,300.
B.E. for 1949 50 Rs. 51,11,200.

The provision under this head is intended to meet the expenditure on (i) minor works and (ii) maintenance and repairs, etc., of Aerodromes, buildings, landing grounds and roads. A reduced provision has been made in the estimates for the next year as only those works will be undertaken which are absolutely essential and cannot be postponed.

F. AERONAUTICAL TRAINING AND EDUCATION.

B.E. for 1948-49 Rs. 46,29,600 { Increase
Rs. 9,65,400
B.E. for 1949-50 Rs. 55,95,000

The amount shown above includes a provision of Rs. 15-25 lakhs for the payment of subsidies to Flying and Gliding clubs which also assist in the training of civil aviation personnel.

For 1949-50, the provision of Rs. 15-25 lakhs is expected to just cover ten clubs and the Aero Club of India. Funds permitting, it is also proposed to grant subsidies to some flying clubs in the States and to other flying centres which are growing in some of the major Provinces as satellites of the existing clubs. Subsidy has

also been granted to the Indian Gliding Association, Bombay, from the 1st December 1948, to enable it to revive its activities and organise gliding clubs in India. For schemes devised to foster air-mindedness among the younger generation, a provision of Rs. 36,000 was made during 1948-49. A sum of Rs. 50,000 has been provided in the estimates for 1949-50. Steps are being taken to start Model Aeroplane Clubs in Universities and Colleges. An aeronautical Society has been formed for promoting the advancement of the profession of Aeronautics in India. The society includes among its members scientists, engineers and technical personnel of the Civil Aviation Department.

G. AIR TRANSPORT DEVELOPMENT.

B.E. for 1948-49 Rs. 10,00,000

B.E. for 1949-50 Rs. 10,00,000

During last year, the number of passengers travelling on Indian air services increased from 2.6 lakhs in the previous year to 3.42 lakhs and the mileage flown by scheduled services increased from 94 millions to 134 millions. The provision of Rs. 10 lakhs shown above is intended for subsidising Air India International if this becomes necessary.

H. SPECIAL SERVICES AND MISCELLANEOUS EXPENDITURE.

B.E. for 1948-49 Rs. 22,300

B.E. for 1949-50 Rs. 30,000.

The provision under this head is for meeting the expenditure incurred on flights undertaken by aerodrome officers in the performance of their duties and special training of these officers. The increase in the provision is due to more flights necessitated by the increasing activities of the Civil Aviation Department.

I. CHARGES IN ENGLAND.

B.E. for 1948-49 Rs. 1,22,000

B.E. for 1949-50 Rs. 2,15,000

The increase under this head is on account of increased requirements of leave and deputation salaries and sterling overseas pay to be paid to certain officers.

J. CAPITAL OUTLAY ON CIVIL AVIATION.

The table below shows the provision made in 1949-50 budget as compared with the provisions made in the Budget Estimate for 1948-49 :-

| | B.E. for 1948-49. | B.E. for 1948-49. | B.E. for 1949-50. |
|------------------------------|-------------------|-------------------|-------------------|
| | Rs. | Rs. | Rs. |
| Aviation Works | 3,49,19,400 | 2,25,60,000 | 2,11,48,700 |
| Meteorological Works | 30,600 | 30,600 | 47,500 |
| Equipment | 59,34,000 | 74,69,400 | 80,03,800 |
| Total Rs. .. | 4,08,84,000 | 3,00,60,000 | 2,92,00,000 |

A. AVIATION WORKS.

B.E. for 1948-49 Rs. 3,49,19,400 { Decrease
Rs. 1,37,71,400
B.E. for 1949-50 Rs. 2,11,48,000

India being a member of the International Civil Aviation Organisation, has to develop her aerodromes to conform to the standards laid down by them. This involves a huge programme of construction which will take a number of years to complete. In view of the anti-inflation policy, it is proposed to slow down the programme for the present and the provision for the next year therefore has been considerably reduced. The programme for the next year includes the construction of terminal buildings, residential buildings, W.T. and Receiving Stations, Hangars, etc. at the three International airports and also other aerodromes, e.g., Madras, Alibabad, Ahmedabad, Lucknow, Nagpur, Gaya, Dhursuguda, Banaras, Patna, Bagdogra, Gauhati, Amritsar, Bhubaneswar, Mangalore, Trichinopoly, Coimbatore, Jubbulpore, Ajmer, Bezwada, Belgaum, etc.

B. METEOROLOGICAL WORKS.

B.E. for 1948-49 Rs. 30,600 { Increase
Rs. 16,900
B.E. for 1949-50 Rs. 47,500

The provision under this head is required for buildings, etc. for the Meteorological services. The increase in the provision is due to slight anticipated increase in the number of such works.

C. EQUIPMENT.

B.E. for 1948-49 Rs. 59,34,000 { Increase
Rs. 20,69,800
B.E. for 1949-50 Rs. 80,03,800

The provision under this head is made up of equipment required for (a) The Training School, (b) Air Routes and Aerodromes and (c) Communications Service. Most of the equipment required replacement. For effecting this, such equipment as is available from the Disposals Directorate is being taken over. It is also proposed to buy from abroad certain important items which are not available with the Disposals Directorate.

RAILWAYS

It was only after the railways had proved to be a definite asset to the nation in England that their construction in the sub-continent was contemplated. And then to test their applicability to Eastern conditions three experimental lines were sanctioned in 1845. These were from Calcutta to Raniganj (120 miles), the East Indian Railway; Bombay to Kalyan (32 miles), Great Indian Peninsula Railway; and Madras to Arkonam (39 miles), Madras Railway.

Indian Railway building on a serious scale dates from Lord Dalhousie's great minute of 1853; wherein, after dwelling upon the great social, political and commercial advantages of connecting the chief cities by rail, he suggested a great scheme of trunk lines linking the Presidencies with each other and the inland regions with the principal ports. This reasoning commended itself to the Directors of the East India Company, and it was powerfully reinforced when, during the 1857 flare-up the barriers imposed on free communication were severely felt by the authorities as there was no private capital in the sub-continent readily available for railway construction. English Companies, the interest on whose capital was guaranteed by the State, were formed for the purpose.

By the end of 1859 contracts had been entered into with eight companies for the construction of 5,000 miles of line, involving a guaranteed capital of £52 millions. These companies were: (1) the East Indian; (2) the Great Indian Peninsula; (3) the Madras; (4) the Bombay, Baroda and Central India; (5) the Eastern Bengal; (6) the Indian Branch, later the Oudh and Rohilkhand State Railway and now part of the East Indian Railway; (7) the Sind, Punjab and Delhi, now merged in the North-Western Railway; and (8) the Great Southern of India, now the South Indian Railway. The scheme laid the foundations of the whole railway system of the sub-continent as it exists today.

EARLY DISAPPOINTMENTS

The main principle in the formation of these companies was a Government guarantee on their capital, for this was the only condition on which investors would come forward. This guarantee was five per cent. return coupled with the free grant of all the land required, in return the companies were required to share the surplus profits with the Government, after the guaranteed interest had been met; the interest charges were calculated at 2 1/2% to the rupee; the Railways were to be sold to Government on fixed terms at the close of twenty-five years and the Government were to exercise close control over expenditure and working.

The early results were disappointing. Whilst the Railways greatly increased the efficiency of the civil administration, the mobility of the troops, the trade of the country, and the movement of the population, they failed to make profits sufficient to meet the guaranteed interest. Some critics attribute this to the unusually high standard of construction adopted, and to the engineers' ignorance of local conditions. The result was that by 1859 the deficit on the Railway budget was Rs. 1,66,4 lakhs. Seeking for some more economical method of construction, the Government secured sanction to the building of lines by direct State Agency, and funds were allotted for the purpose, the metre-gauge being adopted for cheapness.

Funds soon lapsed and the money available had to be diverted to converting the Sind and Punjab lines from metre to broad-gauge for strategic reasons. Government had therefore again to resort to the system of guarantee, and the Indian Midland (1862-85), since absorbed by the Great Indian Peninsula; the Bengal-Nagpur (1863-87); the Southern Mahratta (1882); and the Assam-Bengal (1891) were

constructed under guarantee, but on easier terms than the first companies. Their total length was over 1,000 miles.

FAMINE AND FRONTIERS

In 1879, embarrassed by famine and by the fall of the exchange value of the rupee, Government again endeavoured to enlist unaided private enterprise. Four companies were promoted:—the Nilgiri, the Delhi-Umballa-Kalka, the Bengal Central, and the Bengal and North-Western. The first became bankrupt, the second and third received guarantees, and the Tirhut Railway had to be leased to the fourth.

A step of even greater importance was taken when the States were invited to undertake construction in their own territories, and the Nizam's Government guaranteed the interest on 330 miles of line in the State of Hyderabad. This was the first of the large system of Indian State Railways. In the first period up to 1870, 1,250 miles were opened, of which all save 45 were on the broad-gauge; during the next ten years there were opened 4,239, making the total 8,494 (on the broad-gauge 6,562, the metre 1,805, and narrow 67).

Then ensued a period of financial ease. It was broken by the fall in exchange and the costly lines built on the frontier. The Punjab incident, which brought Great Britain and Russia to the verge of war, necessitated the connection of our outposts at Quetta and Chaman with the main trunk lines. The sections through the desolate Harial and Bolan Passes were enormously costly, it is said that they might have been ballasted with rupees; the long tunnel under the Khopar Pass added largely to this necessity, but unprofitable outlay.

REBATE TERMS ESTABLISHED

This induced the fourth period—the system of rebates. Instead of a gold subsidy, companies were offered a rebate on the gross earnings of the traffic interchanged with the main line, so that the dividend might rise to four per cent, but the rebate was limited to 20 per cent. of the gross earnings. Under these conditions, there were promoted the Ahmedabad-Banquet, the South Behar, and the Southern Punjab, although only in the case of the first were the terms strictly adhered to.

The Bard Light Railway, on the two feet six inches gauge, entered the field without any guarantee, and with rolling stock designed to illustrate the carrying power of this gauge. The rebate terms being found unattractive in view of the competition of 4 per cent. trustee stocks they were revised in 1896 to provide for an absolute guarantee of 3 per cent. with a share of surplus profits, or rebate up to the full extent of the main line's net earnings in supplement of their own net earnings, the total being limited to 3 1/2 per cent. on the capital outlay. Under these terms, a considerable number of feeder line companies was promoted, though in none were the conditions arbitrarily exacted. As these terms did not at first attain their purpose, they were further revised, and in lieu was substituted an increase in the rate of guarantee from 3 to 3 1/2 per cent. and of rebate from 3 1/2 to 5 per cent. with equal division of surplus profits over 5 per cent. in both cases. At last, the requirements of the market were met, and there was for a time a mild boom in feeder railway construction and the stock of all the sound companies promoted stood at a substantial premium.

Conditions changed after the war and the Acworth Committee so far from approving of this system, considered that the aim of the Government should be to reduce by amalgamation the number of existing companies and that it should only be in cases where the State cannot

or will not provide adequate funds that private enterprise in this direction should be encouraged.

The existing Branch Line Companies have ceased for some time to raise additional capital for capital requirements. They have either obtained overdrafts from various Banks for this purpose at heavy rates of interest or issued debentures at special rates of interest (usually about 7 per cent.) or in several cases asked for money to be advanced to them by the Railway Board. So far, therefore, from reducing the amount that the Government of India have to raise in the open market, they were increasing the amount. For the above reasons, the Government of India have abolished this system and are now prepared themselves to find the capital required for the construction of extensions or branches to existing main line systems. They have also announced their readiness to consider the question of constructing branch or feeder lines which were not expected to be remunerative from the point of view of railway earnings upon a guarantee against loss from a Local Government or local authority which might desire to have such lines constructed for purely local reasons or on account of administrative advantages likely to accrue in particular areas.

This proposal was put forward as affording a suitable method of reconciling the interests of the Central and the Local Governments and of providing for local bodies and for Local Governments a method of securing the construction of railways which may be required for purely local reasons and which, while not likely to prove remunerative on purely railway earnings, are likely to give such benefits to Local Governments and local bodies as will more than repay the amounts paid under the guarantee. Some such arrangements have already been made with Local Governments in Madras, the Punjab area, Assam and Bombay.

RAILWAYS BEGIN TO PAY

Meantime a much more important change was in progress. The gradual economic development of the sub-continent vastly increased the traffic, both passenger and goods. The development of irrigation in the Punjab area and Sind transformed the North-Western Railway. Owing to the burden of maintaining the unprofitable Frontier lines this was the Cinderella of the Railways in the sub-continent—it had become the chief target of the critics who protested against the wisdom of constructing railways from borrowed capital. But with the completion of the Chenab and Jhelum Canals, the North-Western became one of the great grain lines of the world, choked with traffic at certain seasons of the year and making a large profit for the State. In 1900 the railways for the first time showed a small gain to the State. In succeeding years the net receipts grew rapidly. In the four years ended 1907-08 they averaged close upon £2 millions a year.

In the following year there was a relapse. Bad harvests in India, accompanied by the monetary panic caused by the American financial crisis, led to a great falling off in receipts just when working expenses were rising, owing to the general increase in prices. Instead of a profit, there was a deficit of £1,240,000 in the railway accounts for 1908-09. But in the following year again there was a reversion to a profit, and the net railway earnings continued to increase steadily till they reached a figure of over £10 millions in 1918-19. This era of profits ended with the close of the year 1920-21 and in 1921-22 there was a loss of over £6 millions.

These changes in the fortunes of the railways affected the Budget of the Central Government rather seriously and in 1924-25 the Railway finances were separated from the General Budget. The terms of the separation are

referred to in a later paragraph while the profits of the railway in the years from 1924-25 onwards are given below:

| Year. | Contribution to General Revenues. | Transferred to Railway Reserve Fund. | Total Gain or Loss. |
|---------|-----------------------------------|--------------------------------------|---------------------|
| | Rs. | Rs. | Rs. |
| 1925-26 | 5,49,00,000 | 3,79,00,000 | 9,28,00,000 |
| 1926-27 | 6,01,00,000 | 1,49,00,000 | 7,50,00,000 |
| 1927-28 | 6,28,00,000 | 4,57,00,000 | 10,85,00,000 |
| 1928-29 | 5,23,00,000 | 2,58,00,000 | 7,81,00,000 |
| 1929-30 | 6,12,00,000 | 2,08,00,000 | 4,04,00,000 |
| 1930-31 | 5,74,00,000 | 10,95,00,000 | -5,19,00,000 |
| 1931-32 | — | -4,95,00,000 | -9,20,00,000 |
| 1932-33 | — | — | -10,25,00,000 |
| 1933-34 | — | — | -7,96,00,000 |
| 1934-35 | — | — | -5,06,00,000 |
| 1935-36 | — | — | -4,00,00,000 |
| 1936-37 | — | — | 1,21,00,000 |
| 1937-38 | 2,76,00,000 | — | 2,76,00,000 |
| 1938-39 | 1,37,00,000 | — | 1,37,00,000 |
| 1939-40 | 4,33,00,000 | — | 4,33,00,000 |
| 1940-41 | 12,16,00,000 | 6,30,00,000 | 18,46,00,000 |
| 1941-42 | 17,00,00,000 | — | 28,08,00,000 |
| 1942-43 | 20,13,00,000 | 8,86,00,000 | 45,07,00,000 |
| 1943-44 | 37,64,00,000 | 13,25,00,000 | 50,84,00,000 |
| 1944-45 | 32,00,00,000 | 17,88,47,200 | 49,88,47,200 |
| 1947-48 | 32,00,00,000 | 6,20,03,676 | 38,20,03,676 |

† Figures preceded by a - indicate a withdrawal from the Railway Reserve Fund.

1933-34 is the first year to show some signs of recovery since the depression. The earnings of the State-owned lines increased from Rs. 84 crores in 1932-33 to Rs. 86 crores in 1933-34 and to Rs. 95.48 crores in 1936-37; but the net result of the year's working showed a gain of Rs. 12.12 lakhs.

CONTRACTS REVISED

One factor which helped to improve the financial position was the revision of the original contracts under which the guaranteed lines were constructed. The five per cent dividend guaranteed at 22½ per rupee, and the half-yearly settlements made these companies a drain on the State at a time when their stock was at a high premium. The first contract to fall in was the East Indian, the great line connecting Calcutta with Delhi and U.P. and Bihar. When the contract lapsed, the Government exercised their right of purchasing the line, paying the purchase-money in the form of terminable annuities, derived from revenue, carrying with them a sinking fund for the redemption of capital. The railway thus became a State line; but it was released to the Company which actually worked it.

Under these new conditions the East Indian Railway Company brought to the State in the ten years ended 1909 after meeting all charges, including the payments on account of the terminable annuity by means of which the purchase of the line was made, and interest of all capital outlay subsequent to the date of purchase, a clear profit of nearly ten millions. No other railway shows results quite equal to the East Indian, because in addition to serving a rich country by an easy line, it possesses its own collieries and enjoys cheap coal.

But with allowance for these factors, all the other guaranteed companies which have been acquired under similar conditions as their contracts expired, have proportionately swelled the revenue and assets of the State. It is difficult to estimate the amount which must be added to the capital debt of the sub-continent's railways in order to counter-balance the loss during the period when the revenue did not meet the interest charges. According to one estimate it should be £50 millions. But even if that figure be taken, Government have a magnificent asset in their railway property.

IMPROVING OPEN LINES

These changes induced a corresponding change in railway policy. Up to 1900 the great work had been the provision of trunk lines. But with the completion of the Nagda-Mutta line, providing an alternative broad-gauge route from Bombay to Delhi through Eastern Rajputana, the trunk system was virtually complete.

There does not exist any through rail connection between India and Burma, although several routes have been surveyed: the mountainous character of the region to be traversed, and the easy means of communication with Burma by sea, rob this scheme of any living importance. Further survey work was undertaken between 1914 and 1929; the three routes which were surveyed being the coast route, the Manipur route, and the Imkong valley route.

These works are, however, subordinate to the necessity for bringing the open lines up to their traffic requirements and providing them with feeders. The sudden increase in the trade of the sub-continent found the main lines totally unprepared. Costly works were necessary to double lines, improve the equipment, provide new and better yards and terminal facilities and to increase the rolling stock. Consequently the demands on the open lines altogether overshadowed the provision of new lines. Even then the railway budget was found totally inadequate for the purpose, and a small Committee sat in London, under the Chairmanship of Lord Inchcape, to consider ways and means. This Committee found that the amount which could be remuneratively spent on railway construction was limited only by the capacity of the money market. They fixed the annual allotment at £12,000,000 a year. Even this reduced sum could not always be provided.

GOVERNMENT CONTROL

As the original contracts carried a definite Government guarantee of interest, it was necessary for Government to exercise strong supervision and control over the expenditure during construction, and over management and expenditure after the lines were open for traffic. For these purposes a staff of Consulting Engineers was formed, and a whole system of checks and counter-checks established, leading up to the Railway Branch of the Public Works Department of the Government of India. As traffic developed, the Railways outgrew this dry nursing, and when the original contracts expired, and the interests of Government and the Companies synchronised, it became not only vexatious but unnecessary.

Accordingly in 1901-02 Thomas Robertson was deputed by the Secretary of State to examine the whole question of the organization and working of the Indian Railways, and he recommended that the existing system should be replaced by a Railway Board, consisting of a Chairman and two members with a Secretary. The Board was formally constituted in March 1905. The Board was made subordinate to the Government of India in which it was represented by the Department of Commerce and Industry. It prepared the railway programme of expenditure and considered the greater questions of policy and economy affecting all the lines. Its administrative duties included the construction of new lines by State Agency, the carrying out of new works on open lines, the improvement of railway management with regard both to economy and public convenience, the arrangements for through traffic, the settlement of disputes between lines, the control and promotion of the staff on State lines, and the general supervision over the working and expenditure of the Company's lines.

Certain minor changes have taken place from time to time since the constitution of the Railway Board. In 1904, to meet the complaint that the Board was subjected to excessive control by the Department of Commerce and Industry, the powers of the Chairman were increased and he was given the status of a Secretary to Government

with the right of independent access to the Viceroy; he usually sat in the Imperial Legislative Council as the representative of the Railway interest. In 1912 in consequence of complaints of the excessive interference of the Board with the Companies, an informal mission was undertaken by Lord Inchcape to reconcile differences. Various changes were introduced during the years 1912-1920 such as the modification of the rule that the President and members of the Railway Board should all be men of large experience in the working of railways due to the importance of financial and commercial considerations in connection with the control of railway policy. This decision was, however, revised in 1920 and an additional appointment of Financial Adviser to the Railway Board created instead. The question of the most suitable organization was further fully examined by the Acworth Committee in 1921 and a revised organization which is described later was introduced on 1st April 1924.

Some Difficulties. Some of the difficulties involved in the constitution of a controlling authority for the railways may be realized from a study of the "Notes on the Relation of the Government to Railways in India" which was being printed as appendix 'B' to Volume I of the Annual Report by the Railway Board on Indian Railways upto the Report for the year 1938-39. These notes bring out the great diversity of conditions prevailing which involve the Railway Department in the exercise of the functions of—

(a) the directly controlling authority of the State-owned systems aggregating 21,356 miles on the 31st March 1943.

(b) the representative of the predominant owning partner in systems aggregating 19,163 miles.

(c) the guarantor of many of the smaller companies and

(d) the statutory authority over all railways in the Dominion.

Moreover in all questions relating to railways or extra-municipal tramways in which Provincial Governments are concerned, the Railway Department is called upon to watch the interests of the Central Government and is frequently asked to advise the Local Governments.

Its duties do not end there. The future development of railways depends largely on the Government of India and the Railway Department is therefore called upon to plan out schemes of development, to investigate and survey new lines and to arrange for financing their construction.

The evolution of a satisfactory authority for the administration of these varied functions has proved extremely difficult and the question was one of those referred to the Railway Committee (1920-21) presided over by Sir William Acworth who recommended the early appointment of a Chief Commissioner of Railways whose first duty should be to prepare a definite scheme for the reorganization of the Railway Department and Mr. C. D. M. Hindley, formerly Agent of the East Indian Railway and Chairman of the Calcutta Port Trust, was appointed Chief Commissioner on November 1st, 1922.

THE RAILWAY BOARD

The principal constitutional change involved in this appointment is that the Chief Commissioner who takes the place of the President of the Railway Board is solely responsible—under the Government of India—for arriving at decisions on technical matters and for advising the Government of India on matters of railway policy and is not, as was the President, subject to be out-voted and overruled by his colleagues on the Board. The detailed reorganization of the Railway Board in accordance with the Chief Commissioner's proposals required careful consideration but one of the most important of his recommendations namely the appointment of a Financial Commissioner was considered of particular urgency and the Secretary of State's sanction was therefore obtained to the appointment with effect from 1st April 1923.

The Railway Board as then reconstituted consisted of the Chief Commissioner, the Financial Commissioner and two members. The proposal of the Acworth Committee that the Indian Railways should be sub-divided into 3 territorial divisions with a Commissioner in charge of each was not accepted and the work of the Members of the Board was divided on the basis of subjects.

The reorganization carried out in 1921 has for one of its principal objects the relief to the Chief Commissioner and the Members from all but important work so as to enable them to devote their attention to larger questions of railway policy and to enable them to keep in touch with Local Governments, Railway Administrations and public bodies by leading to a greater extent than they had been able to do in the past.

This object was effected by the following new posts which in some cases supplemented the existing ones and in other cases replaced them. Directors of Civil Engineering, Mechanical Engineering, Traffic, Establishment and Finance and 11 Deputy Directors and 2 Assistant Directors are working under them.

SUBSIDIARY BODIES

The necessity of some central organisation to co-ordinate the publicity carried out on railways and to undertake work on the many forms of railway publicity which can be best organised by one central body led to the inauguration of the Central Publicity Bureau under a Chief Publicity Officer in 1927. The Bureau was a great success and the organisation was made permanent from January 1st 1929. In the slump of the 4th decade of the present century, however, it was found difficult to maintain the Bureau over the war of 1939 came on, it had its own chief. The Central Publicity Bureau was ultimately shifted to Calcutta on 1st July, 1940, and amalgamated with the Publicity Offices of the East Indian and Eastern Bengal, now the E. & A. Railways.

The growing importance of labour questions necessitated the organisation of a new branch in the Railway Board's office and to the appointment in 1929 of a third member whose main duties are connected with the satisfactory solution of labour problems and the improvements of the conditions of service of the staff generally and of the lower paid employees in particular.

During the depression which began with the thirties it was decided to hold in advance many superior posts including those of Member, Traffic; Member, Engineering; Director, Civil Engineering and Director, Mechanical Engineering. Some of these posts have since been revived and on the recommendations of the Indian Railway Enquiry Committee presided over by Sir Ralph Wedderburn the Central Accounts organisation of railway was taken over by the Railway Board. The present superior staff in the railway Board, therefore, consists of the Chief Commissioner, the Financial Commissioner, 3 Members, 10 Directors, a Secretary and 33 deputies and assistants.

Under the Railway Board's policy of progressive standardisation, a Central Standardisation Office was established in 1930 under a Chief Controller of Standardisation to provide the means whereby such standardisation would be progressively effected in accordance with changing conditions and as the result of practical experience. The Technical Officer under the Railway Board was transferred to this office as a Deputy Controller. This office was made permanent in 1932.

ACCOUNTS

The question of transferring the supervision of railway accounts of State Railways from the Finance Department to the Railway Board was under consideration for some time and in accordance with a resolution adopted

by the Legislative Assembly in September 1925, a start was made with the transfer of the supervision of railway accounts on the East Indian Railway. At the same time a separate Audit Staff was appointed reporting directly to the Auditor-General. As it was found that the separation of Audit from Accounts led to greater efficiency, a similar organisation was introduced on other State-managed railways during 1929. The supervision of Accounts Officers was placed under a Controller of Railway Accounts reporting to the Financial Commissioner of Railways and that of Audit Officers under a Director of Railway Audit reporting to the Auditor-General. These two duties were previously combined under the Accountant-General, Railways, reporting to the Auditor-General. The Chief Accounts Officers on railways are now under the General Managers and the Controller of Railway Accounts has been made a Director under the Railway Board.

There are two important systems of administration organisation on the Railways—the Divisional system and the Departmental system. In the divisional system the railway is divided into divisions, each under a Divisional Superintendent who in turn has officers of all departments like Civil Engineering, Transportation, Commercial, Accounts, Stores, the running and operation portion of Mechanical Engineering and on some railways even the Medical, working under him in his division. In the departmental system the railway is divided into smaller portions called districts by each department (and districts of the various departments need not be coterminous) and each of these districts is under a District Officer reporting directly to the head of his department in the Headquarters Office.

Railway Conference.—A Clearing Accounts Office with a Statutory Audit Office attached thereto, was opened in December 1926 to take over work relating to the check and apportionment of traffic interchange between State-managed Railways. The work of the different railways was gradually transferred to this office, the North Western Railway being taken over first on the 1st January 1927, the East Indian Railway following on the 1st April, the Eastern Bengal Railway on the 1st January 1928, and the Great Indian Peninsula and E. B. & C. I. Railways later.

During 1927-28 demonstrations explaining the Clearing Accounts Office procedure were given to the representatives of the Press as well as to the representatives of the various railways who visited the office to study the new procedure.

In order to facilitate the adjustment of domestic questions, the Railway Conference was instituted in 1876. This Conference was consolidated into a permanent body in 1903 under the title of the Indian Railway Conference Association. It is under the direct control of the railways, it elects a President from amongst the members, and has done much useful work.

THE GAUGES

The standard gauge is five feet six inches. When construction was started the broad gauge school was strong, and it was thought advisable to have a broad-gauge in order to resist the influence of evenclock. But in 1870, when the State system was adopted, it was decided to find a more economical gauge; for the open lines had cost £17,000 a mile. After much deliberation, the metre-gauge of 3 feet 3½ inches was adopted, because at that time the idea of adopting the metric system for India was in the air. The original intention was to make the metre-gauge lines provisional; they were to be converted into broad-gauge as soon as the traffic justified it; consequently they were built very light. But the traffic expanded with surprising rapidity, and it was found cheaper to improve the carrying power of the metre-gauge lines than to convert them to the broad-gauge. So, except in the Indus

Valley, where the strategic situation demanded an unbroken gauge, the metre-gauge lines were improved and they became a permanent feature in the railway system.

Now there is a great metre-gauge system north of the Ganges connecting Assam with the Rajputana lines and Kathlawar and another system in Southern India serving large tracts of the Bombay and Madras Presidencies and the States of Hyderabad, Mysore and Travancore. These two systems are not yet connected, but the necessary link from Khandwa by way of the Nizam's Hyderabad-Godavari railway, cannot be long delayed.

Certain feeder and hill railways have been constructed on the 2' 6" and 2' 0" gauges and since the opening of the Barsi Light Railway which showed the possible capacity of the 2' 6" gauge, there has been a tendency to construct feeder lines on this rather than on the metre-gauge.

RAILWAY MANAGEMENT

The relative advantages and disadvantages of State and Company management of the railways owned by Government which comprise the great bulk of the railway mileage in the sub-continent have been the subject of discussion in official circles and the public press for many years. Here the question is complicated by the fact that the more important companies have not in recent years been the owners of the railways which they manage and the headquarters of their Boards are in London.

The subject was one, perhaps the most important, of the terms of reference of the Acworth Railway Committee. That Committee was unfortunately unable to make a unanimous recommendation on this point, their members being equally divided in favour of State management and Company management. They were, however, unanimous in recommending that the present system of management by Boards of Directors in London should not be extended beyond the terms of the existing contracts and this recommendation has met with general public acceptance. During the year 1922-23 the question was again referred to certain Local Governments and public bodies and opinions collected and discussed.

The subject has also been discussed on many occasions in the Central Legislature. The old undivided Government of India, however, followed a uniform policy of increasing the scope of direct State management. The East Indian Railway was taken over for State management on 1st January, 1925, and from then on the policy continued, the latest additions to State management being the Bengal and North Western and R. B. and K. and K. and N. railways which were taken over on the 1st January 1945. From the same date the two were amalgamated and the combined system named as the Oudh and Tibet Railway.

At the end of 1929 30 the Nizam's Guaranteed State Railways system which was the property of the Company, was acquired and its management taken over by His Exalted Highness the Nizam's Government and is now known as His Exalted Highness the Nizam's State Railway.

SEPARATE FINANCES

The question of the separation of the railway from the general finances was under consideration for some time and as a result of the recommendations of the Acworth Committee in 1921, the question was further examined by the Railway Finance Committee and the Legislative Assembly but it was decided to postpone a definite decision for the present.

The question was examined afresh in connection with the recommendation of the Retrenchment Committee in 1923, that the railways should be so worked as to yield an average return of at least 54 per cent. on the capital at charge and it was decided that a suitable time had arrived when this separation could be carried out. A resolution was accordingly introduced

in the Assembly on the 2nd March 1924, recommending to the Governor-General in Council—that in order to relieve the general budget from the violent fluctuations caused by the incorporation therein of the railway estimates, and to enable the railway to carry out a continuous railway policy based on the necessity of making a definite return over a period of years to the State on the Capital expended on railways:—

(1) The railway finances shall be separated from the general finances of the country and the general revenues shall receive a definite annual contribution from railways which shall be the first charge on railway earnings.

(2) The contribution shall be a sum equal to five-sixths of 1 per cent. on the capital at charge of the railways (excluding capital contributed by Companies and Indian States and Capital expenditure on strategic Railways) at the end of the penultimate financial year plus one-fifth of any surplus profits remaining after payment of this fixed return, subject to the condition that if any year railway revenues are insufficient to provide the percentage of five-sixths of 1 per cent. on the capital at charges surplus profit in the next or subsequent years, will not be deemed to have accrued for purposes of division until such deficiency has been made good. From the contribution so fixed will be deducted the loss in working, and the interest on capital expenditure on strategic lines.

Reserves.—(3) Any surplus profits that exist after payment of these charges shall be available for the Railway administration to be utilised in—

(a) forming reserves for,

(i) equalising dividends, that is to say, of securing the payment of the percentage contribution to the general revenues in lean years.

(ii) depreciation,

(iii) writing down and writing off capital,

(b) the improvement of services rendered to the public,

(c) the reduction of rates.

(4) The railway administration shall be entitled, subject to such conditions as may be described by the Government of India, to borrow temporarily from capital or from the reserves for the purpose of meeting expenditure for which there is no provision or insufficient provision in the revenue budget subject to the obligation to make repayment of borrowings out of the revenue budgets of subsequent years.

(5) In accordance with present practice the figures of gross receipts and expenditure of railways will be included in the Budget Statement. The proposed expenditure will, as at present, be placed before the Legislative Assembly in the form of a demand for grants and on a separate day or days among the days allotted for the discussion of the demands for grants the Member in charge of the Railways will make a general statement on railway accounts and working. Any reductions in the demand for grants for railways resulting from the votes of the Legislative Assembly will not ensure to general revenues, i.e., will not have the effect of increasing the fixed contribution for the year.

(6) The Railway Department will place the estimate of railway expenditure before the Standing Finance Committee for Railways on some date prior to the date for the discussion of the demand for grants for railways.

STANDING FINANCE COMMITTEE

This resolution was examined by the Committee appointed by the Legislative Assembly on 3rd March 1924 to examine the proposals for the separation of railway from general finances. The final resolution agreed to by the Assembly on September 20th, 1924, and accepted by Government differed from the

original resolution in that the yearly contribution had been placed at 1 per cent. instead of 5/6th per cent. on the capital at charge and if the surplus remaining after this payment to General Revenues should exceed 3 crores, only 2rd of the excess over 3 crores were to be transferred to the Railway Reserve and the remaining 1rd was to accrue to General Revenues.

At the same time a Standing Finance Committee for Railways was to be constituted to examine the estimate of railways expenditure and the demand for grants, the programme revenue expenditure being shown under a depreciation fund. This committee was to consist of one nominated official member of the Legislative Assembly as Chairman and 11 members elected by the Legislative Assembly from that body. This would be in addition to the Central Advisory Council which would include the Members of the Standing Finance Committee and certain other official and non-official members from the Legislative Assembly and Council of State.

These arrangements were to be subject to periodic revision but to be provisionally tried for at least 3 years. They would, however, only hold good as long as the E. I. Railway and the C. I. P. Railway and existing State Managed Railways remain under State management and if any contract for the transfer of any of the above to Company management was concluded against the advice of the Assembly, the Assembly would be at liberty to terminate the arrangements in this resolution.

The Assembly in an addendum recommended that the railway services and the Railway Board should be rapidly Indianised and that the stores for the State Managed Railways should be purchased through the organisation of the Indian Stores Department.

Reorganisation Problems.—The principal allocation of surplus laid down in the above resolution has since been amended by a subsequent resolution passed by the Legislative Assembly on 2nd March 1923 which provided, *inter alia* that from 1st April 1923 so much of the convention as provides for the contribution and allocation of surplus to general revenues ceases to be in force and until a new Convention is adopted by the Assembly, the allocation of the surplus on commercial lines—between the railway reserve and general revenues shall be decided each year on consideration of the needs of the railways and general revenues, the loss, if any, on strategic lines being recovered from general revenues.

The growing complexity of railway administration and the evolution of new methods of controlling traffic have given a stimulus to the efforts of various railways to revise their organisations. The general direction in which this reorganisation is being considered is that of consolidation into one department of the operating or transportation work of the railways, including the provision of power. This system is invariably in existence on those railways which have adopted the Divisional organisation. It is also being adopted by some railways where the general organisation is still on the Departmental basis.

THE POPE COMMITTEE

When the railway finances were in a bad way, a Committee under the Chairmanship of Mr. P. A. Pope, General Executive Assistant to the President of the L. M. S. Railway, was formed to investigate and inaugurate a detailed analysis of every important achievement of railway operation. The Committee started work during 1932-33 and among other things, perfected a system of detailed investigation into individual items of railway working which came to be known as 'Job Analysis'.

Mr. Pope returned to India in 1933-34 and prepared a second report based upon the progress of the work and on further possibilities of economy.

The most important recommendations of the second report related to:—

1. Intensive use of locomotives,
2. Intensive use of coaching stock,
3. Intensive use of machinery and plant,
4. Disposal of uneconomical wagons,
5. Combining resources between railways,
6. Handling and transport of smalls traffic and of traffic to be transhipped at break of gauge stations,
7. Ticketless travel,
8. Methods of increasing earnings.

As a result of the 1st report of the Pope Committee, special 'Job Analysis' Organisations were set up on most of the important Railways. Their main purpose was to investigate in detail by special methods individual aspects of railway working and suggest means whereby economies may be achieved or the efficiency of operation increased.

Now that the methods of working on the railways by stages have been overhauled these organisations have been abolished.

RAILWAY ENQUIRY COMMITTEE, 1937

As a result of the recommendation of the Public Accounts Committee, the Railway Enquiry Committee was appointed in October 1936. This Committee was under the Chairmanship of Sir Ralph L. Wedgwood, C.B., C.M.B., Chief General Manager of the London North Eastern Railway. Its terms of reference were:

To examine the position of State-owned railways and to suggest such measures as may otherwise than at the expense of the general budget,

(a) secure an improvement in net earnings, due regard being paid to the question of establishing such effective co-ordination between road and rail transport as will safeguard public investment in railways, while providing adequate services by both means of transport; and

(ii) at a reasonably early date, place railway finances on a sound and remunerative basis.

The report was submitted in June 1937 and duly considered by the Railway Board. Early action was taken to implement such of the recommendations as could be accepted without further examination. Where special investigation was considered necessary this was arranged for by E. C.

RAILWAY ENQUIRY COMMITTEE, 1947

As a result of the recommendations of the Railway Standing Finance Committee, the Government of India appointed the Railway Enquiry Committee, 1947 which assembled on 24th of April, and consisted of:—

Chairman: Hon'ble Mr. K. C. Neogy, then M.L.A. Central and **Members:** Khan Mohammed Yamin Khan, then M.L.A. Central; Prof. Humayun Kabir, Labour Leader; Col. N. D. Bahadur, American Railroad Consultant; Sir George Cuthie, Ex-General Manager; J. N. Nanda, Ex-General Manager; K. R. Rama Iyer, Additional Financial Commissioner and **Secretary:** M. N. Chakravarti, Railway Traffic Officer.

The following were the terms of reference:— (1) Suggesting ways and means of securing improvement in net earnings by (a) economies in all branches of railway administration, and (b) by any other means. (2) Ascertaining the extent of staff surplus to requirements and suggesting practical methods of absorbing them in railway service.

Within a few months of the assembly of the Committee, the sub-continent entered a period of unprecedented political and communal unrest and the climax was reached when Partition was decided upon. As conditions were not at all favourable for arriving at firm and useful conclusions, in regard to staff surpluses and measures for economy and securing improvement in net earnings, it was decided to disperse the Committee temporarily by the middle of October, 1947. It was also decided that when conditions became more favourable the Government would reassemble the Committee to enable them to complete their report.

K. C. Neogy, the Chairman, had to leave the Committee on his appointment as the Minister, Relief and Rehabilitation of Refugees. The new Chairman is Pandit Bhubayanath Kunzru.

RATES ADVISORY COMMITTEE

The Railway Rates Advisory Committee continued during the year 1947-48 with Khwaja Sir Mohamed Nout as its President.

The functions of the Committee are to investigate and make recommendations on—

- (1) Complaints of "undue preference" Section 42(A) of the Indian Railways Act.

- (2) Complaints that rates are unreasonable in themselves;
- (3) Complaints or disputes in respect of terminals—Section 46 of the Indian Railways Act;
- (4) Complaints in respect of conditions as to packing of articles specially liable to damage in transit or liable to cause damage to other merchandise;
- (5) Complaints in respect of conditions as to packing attached to a rate; and
- (6) Complaints that railways do not fulfil their obligations to provide reasonable facilities under Section 42(B) of the Indian Railways Act.

The closest possible contact between the Railways and the business community was maintained by means of the Central and Local Advisory Committees, which were first introduced in 1923, meetings with Chambers of commerce, Trade Associations and personal contact by railway officers with business firms.

POSITION IN 1946

All Railways

Open Mileage.—The total route mileage on 31st March 1946, was made up of—

| | |
|--------------------|------------------|
| Broad gauge | 20,686.60 miles. |
| Metre gauge | 16,001.23 " |
| Narrow gauge | 3,827.08 " |

Under the classification adopted for statistical purposes, this mileage is divided between the three classes of railways as follows:—

| | |
|-----------------|------------------|
| Class I | 36,899.48 miles. |
| Class II | 2,557.08 " |
| Class III | 1,061.35 " |

During the year 1945-46 no new constructions were undertaken though some new surveys were sanctioned.

| Class I Railways. | Number of seats in passenger carriages—1944-45. | | | |
|-------------------|---|--------|--------|---------|
| | 1st | 2nd | Inter. | 3rd |
| 5' 6" | 20,658 | 40,696 | 56,593 | 615,741 |
| 3' 3½" | 9,054 | 11,324 | 16,864 | 289,286 |

Finances.—The gross traffic receipts of the Indian Government Railways (including worked lines) amounted to Rs. 225.71 crores in 1945-46 or an increase of 9.36 crores over the previous year.

Statement showing calculation of contribution to General Revenues and appropriation to Railway Reserve Fund during the year 1945-46.

| | Commercial. | Strategic. | Total. |
|--|-------------------|----------------|-------------------|
| (i) Receipts (1945-46) Gross traffic receipts | 2,23,11.79 | 2,31.97 | 2,25,73.76 |
| Subsided Companies, Govt. share of surplus profits, etc. | 3.01 | .. | 3.01 |
| Interest on Depreciation Reserve Funds and Reserve Fund Balances | 4,77.30 | 15.29 | 4,92.59 |
| Railway Miscellaneous Receipts | 23.93 | .. | 23.93 |
| | <u>2,28,40.03</u> | <u>2,47.26</u> | <u>2,30,93.29</u> |
| Expenditure Working expenses | 1,58,51.40 | 3,62.22 | 1,62,13.62 |
| Payments to worked lines | 2,36.30 | .. | 2,36.30 |
| Indian States and Railway Companies' share of surplus profits | 1.28 | .. | 1.28 |
| Interest | .. | .. | .. |
| On capital outlay | 25,99.01 | 1,10.32 | 27,09.33 |
| On capital contributed by Railway Companies | 8.38 | .. | 8.38 |
| Land and Subsidy | —29 | .. | —29 |
| Miscellaneous Railway Expenditure | 1,03.03 | 1.51 | 1,04.54 |
| | <u>1,87,99.20</u> | <u>4,74.05</u> | <u>1,92,73.25</u> |
| (ii) Surplus | 40,46.83 | —2,26.79 | 38,20.04 |
| Payments to General Revenues | 34,26.79 | —2,26.79 | 32,00.00 |
| Transferred to Railway Reserve | 6,20.04 | .. | 6,20.04 |

ACCIDENTS

The following table shows the number of passengers, railway servants and other persons killed and injured in accidents on the Railways excluding casualties in railway workshops, during the year 1947-48 as compared with the previous years —

| Cause. | Killed | | | | Injured. | | | |
|---|---------|---------|----------|----------|----------|---------|----------|----------|
| | 1944-45 | 1945-46 | 1946-47* | 1947-48* | 1944-45 | 1945-46 | 1946-47* | 1947-48* |
| A. — Passengers. | | | | | | | | |
| In accidents to trains, rolling-stock, permanent way, etc. | 40 | 89 | 103 | 299 | 251 | 253 | 375 | 763 |
| In accidents caused by movements of railway vehicles exclusive of accidents to trains | 664 | 716 | 707 | 607 | 2,346 | 2,309 | 3,002 | 2,979 |
| In accidents on railway premises not connected with the movement of railway vehicles | 2 | .. | 4 | 2 | 56 | 4 | 11 | 27 |
| Total | 706 | 805 | 814 | 908 | 2,653 | 2,566 | 3,388 | 3,769 |
| B. Railway servants. | | | | | | | | |
| In accidents to trains, rolling-stock, permanent way, etc. | 46 | 53 | 33 | 21 | 183 | 211 | 217 | 195 |
| In accidents caused by movements of railway vehicles exclusive of accidents to trains | 271 | 286 | 265 | 171 | 6,714 | 7,384 | 7,993 | 6,274 |
| In accidents on railway premises not connected with the movement of railway vehicles | 43 | 42 | 31 | 21 | 16,655 | 19,565 | 21,249 | 15,602 |
| Total | 360 | 381 | 329 | 213 | 23,552 | 27,160 | 29,459 | 22,071 |
| C. — Other than passenger and railway servants. | | | | | | | | |
| In accidents to trains, rolling-stock, permanent way, etc. | 71 | 61 | 41 | 39 | 153 | 153 | 95 | 111 |
| In accidents caused by movements of railway vehicles exclusive of accidents to trains | 3,072 | 3,167 | 3,270 | 2,968 | 1,297 | 1,017 | 1,402 | 1,163 |
| In accidents on railway premises not connected with the movement of railway vehicles | 27 | 21 | 15 | 15 | 136 | 116 | 114 | 93 |
| Total | 3,170 | 3,252 | 3,326 | 3,012 | 1,586 | 1,286 | 1,611 | 1,367 |
| Grand Total | 4,229 | 4,438 | 4,469 | 4,133 | 27,771 | 31,012 | 31,458 | 27,507 |

* NOTE: Figures for 1946-47, and for previous years are inclusive of ex Bengal, Assam and North Western Railways. While those for 1947-48 are exclusive of ex Bengal, Assam and North Western Railways, but inclusive of Eastern Punjab and Assam Railways for the period August 15, 1947 to March 31, 1948.

The Chief Railways

Bengal-Assam

The Bengal-Assam Railway (now divided between India and Pakistan; the part of the railway in India is called Assam Railway) is constructed on the metre-gauge, starting from Chittagong and running through Surma Valley across the North Cachar Hills into Assam. It was worked under a limited guarantee by a company.

The Eastern Bengal Railway was promoted under the original form of guarantee and was constructed on the broad-gauge. The first portion of the line running to Calcutta over the Ganges was opened in 1862. In 1874 sanction was granted for the construction on the metre-gauge of the Northern Bengal State Railway, which ran from the north bank of the Ganges to the foot of the Himalayas on the way to Darjeeling. These two portions of the line were amalgamated in 1884 into one State Railway.

The Assam-Bengal Railway came under State-management and was amalgamated with the E. B. Ry. with effect from 1st January 1942 and the combined system was named as Bengal-Assam Railway.

The Dibru-Sadiya Railway was purchased by the Government and amalgamated with the Bengal-Assam Railway from 1st April 1945.

1945-46

| | |
|--------------------------|------------------|
| Mileage open | 3,554.81 |
| Capital at charge | Rs. 87,31,35,000 |
| Net earnings | Rs. 4,73,11,000 |
| Earnings per cent. | 5.42% |

Bengal-Nagpur

The Bengal-Nagpur Railway was commenced as a metre-gauge from Nagpur to Chhatishgarh in the Central Provinces in 1887. A company was formed under a guarantee which took over the line, converted it to the broad-gauge and extended it to Howrah, Cuttack and Katni. In 1901 a part of the East Coast State Railway from Cuttack to Vizagapatnam was transferred to it and in the same year sanction was given for an extension to the coal-fields and for a connection with the Branch of the East Indian Railway at Hariharpur.

The State took over the line from October 1, 1944.

1945-46

| | |
|--------------------------|------------------|
| Mileage open | 3,388.14 |
| Capital at charge | Rs. 81,91,26,000 |
| Net earnings | Rs. 1,69,67,000 |
| Earnings per cent. | 2.07% |

Bombay, Baroda and Central India

The Bombay, Baroda and Central India Railway is one of the original guaranteed railways. It was commenced from Surat via Baroda to Ahmedabad, but was subsequently

extended to Bombay. The original contract was terminable in 1880, but the period was extended to 1905; and then renewed under revised conditions. In 1885 the Rajputana-Malwa metre-gauge system of State railways was leased to the Company and has since been incorporated in it. On the opening of the Nagda-Muttra, giving broad-gauge connection through Eastern Rajputana with Delhi the working was entrusted to this Company. On the acquisition of the Company in April 1907 the purchase price was fixed at £11,685,581.

The State took over the management with effect from January 1st, 1942.

1945-46

| | |
|--------------------------|------------------|
| Mileage open | 3,404.23 |
| Capital at charge | Rs. 77,45,65,000 |
| Net earnings | Rs. 7,10,04,000 |
| Earnings per cent. | 9.17% |

East Indian

The East Indian Railway is one of the three railways sanctioned for construction as experimental lines under the old form of guarantee. The first section from Howrah to Pandua was opened in 1854 and at the time of the 1875 upheaval ran as far as Raniganj. It gives the only direct access to the port of Calcutta from Northern India and is consequently fed by all the large railway systems connected with it. In 1880 the Government purchased the line,

paying the shareholder by annuities, but leased it again to the company to work under a contract which was terminable in 1919.

The contract was not terminated until January 1st, 1925, when the State took over the management. From July 1st, 1925, the Oudh & Rohilkund Railway was amalgamated with it.

1945-46

| | |
|--------------------------|--------------|
| Mileage open | 4,063.55 |
| Capital at charge .. Rs. | 1,56,88,000 |
| Net earnings .. Rs. | 12,47,34,000 |
| Earnings per cent. .. | 7.95% |

Great Indian Peninsula

The Great Indian Peninsula Railway is the earliest line undertaken in India. It was promoted by a Company under a guarantee of 5 per cent. and the first section from Bombay to Thana was open for traffic in 1853. Sanction was given for the extension of this line via Ponná to Ranchur where it connects with the Madras and Southern Mahratta Railway, and to Allahabad where it meets the East Indian Railway. The feature of the line is the passage of the Western Ghats, these sections being 153 miles on the Bhoré Ghat and 94 miles on the Thul Ghat which rise 1,131 and 972 feet. In 1900 the contract with the Government terminated and under an arrangement with the Indian Midland Railway that line was amalgamated and leased to a Company to work.

The contract was terminated on June 30th 1925, when the State took over the management.

1945-46

| | |
|--------------------------|----------------|
| Mileage open | 3,531.26 |
| Capital at charge .. Rs. | 1,18,50,99,000 |
| Net earnings .. Rs. | 11,34,38,000 |
| Earnings per cent. .. | 9.57% |

Madras and Southern Mahratta

The Madras Railway was the third of the original railways constructed as experimental lines under the old form of guarantee. It was projected to run in a north-westerly direction in connection with the Great Indian Peninsula Railway and in a south-westerly direction to Calcutta. On the expiry of the contract in 1907 the line was amalgamated with the Southern Mahratta Railway Company, a system on the metre-gauge built to meet the famine conditions in the Southern Mahratta Country and re-leased to a large Company called the Madras and Southern Mahratta Railway Company.

The contract was terminated and it was decided to bring the railway under State management on the 1st April 1911.

1945-46

| | |
|--------------------------|--------------|
| Mileage open | 2,910.31 |
| Capital at charge .. Rs. | 56,17,31,000 |
| Net earnings .. Rs. | 8,22,26,000 |
| Earnings per cent. .. | 15.71% |

North-Western Railway

That part of the North-Western Railway which lies in Indian Union territory is now called the East Punjab Railway. The North-Western Railway began its existence as the Sind-Punjab-Delhi Railway, which was promoted by a Company under the original form of guarantee and extended to Delhi, Multan and Lahore and from Karachi to Kotri. The interval between Kotri and Multan was unbridged and the railway traffic was exchanged by a ferry service. In 1871-72 sanction was given for the connection of this by the Indus Valley State Railways and at the same time the Punjab Northern State Railway from Lahore towards Peshawar was begun. In 1886 the Sind-Punjab-Delhi Railway was acquired by the State and amalgamated with these two railways under the name of the North-Western Railway. It was the longest railway in the sub-continent before the partition under one administration.

1945-46

| | |
|--------------------------|----------------|
| Mileage open | 6,881.27 |
| Capital at charge .. Rs. | 1,53,04,70,000 |
| Net earnings .. Rs. | 9,02,32,000 |
| Earnings per cent. .. | 5.90% |

Oudh-Tirhut

The Bengal and North-Western Railway was constructed on the metre-gauge system by a company without any Government assistance other than free land and was opened to traffic in 1885. The system was begun in 1874 as the Tirhut State Railway. In 1890 this line was leased by Government to the Bengal and North-Western Railway. Since then extensive additions have been made in both sections. It is connected with the Rajputana metre-gauge system at Cawnpore and with the Bengal and Assam Railway at Katihar and the East Indian Railway at Benares and Mokameh Ghat.

The Rohilkund and Kumaon Railway was constructed on the metre-gauge and opened for traffic in 1884. Later on extensions were added between 1906 and 1916.

The Bengal and North-Western and the Rohilkund and Kumaon Railways came under State-management from 1st January 1913. From the same date the two were amalgamated and the combined system was named as Oudh-Tirhut Railway.

1945-46

| | |
|--------------------------|--------------|
| Mileage open | 2,679.67 |
| Capital at charge .. Rs. | 30,54,75,000 |
| Net earnings .. Rs. | 5,07,13,000 |
| Earnings per cent. .. | 16.60% |

South Indian

The South Indian Railway was one of the original guaranteed railways. It was begun by the Great Southern India Railway Company as a broad-gauge line; but was converted after the seventies to the metre-gauge. This line has been extended and now serves the whole of the Southern India, south of the south-west line of the Madras and Southern Mahratta Railway.

The contract was terminated on 1st April 1944, when the State took over the management.

1945-46

| | |
|--------------------------|--------------|
| Mileage open | 2,549.25 |
| Capital at charge .. Rs. | 46,92,94,000 |
| Net earnings .. Rs. | 5,78,71,000 |
| Earnings per cent. .. | 12.33% |

Bikaner

The line was owned by the former Bikaner Government. It was worked by the Jodhpur-Bikaner Railway Administration upto 31-10-1924 when it was taken over by the Bikaner Government.

Total mileage open 883.05

Jodhpur

The railway was worked at first by the Jodhpur-Bikaner Railway Administration upto 31-10-1924, and was later worked by the Jodhpur Durbar. At present the Railway consists of 318.74 miles of Indian section and 506.95 miles of Durbar lines.

Total mileage open 1,125.69

Mysore

These lines are the property of the Mysore Government. Of the 9 lines 5 sections were worked by the Madras & Southern Mahratta Railway. Of these 3 lines were taken over by the Mysore Government from 1-10-1919 and the other two from 1-1-1938. The Railway consists of 609.47 miles of metre-gauge and 128.80 miles of narrow-gauge lines.

Total mileage open 738.27

Hyderabad

The Railway was constructed by a company under a guarantee from the Hyderabad State, which took over the management from 1-4-1930. It consists of 57.82 miles of Indian sections and 1,302.16 miles of Hyderabad State lines.

Total mileage open 1,359.98

AFTER PARTITION

The year 1947-48 that brought about the division of the country into India and Pakistan created unimaginably huge problems for the Indian Railways in many directions. The most serious of all these problems was that of partitioning two main railways, North-Western and the combined Bengal-Assam Railways. The division took place formally on August 15, 1947. On that day the Indian portion of the North Western was constituted into Eastern Punjab Railway, and the parts of the Bengal-Assam in the province of Assam were formed into Assam Railway. As a result of the partition the Assam Railway was completely cut off from all railways in India. Some sections of railway lines in Western Bengal were merged partly in East Indian and Oudh-Tirhut Railways, and partly in Assam Railway.

Before we proceed it may be explained that the term 'Indian Railways' when used with reference to the period after 1947-48 includes all the railways that lie in Indian Union Territory, that is to say, all the railways except the North-Western and the Bengal-Assam, but including the newly formed Eastern Punjab and Assam Railways.

There was a marked decline in military traffic during 1947-48 as compared with the previous year. The quantum of goods traffic also registered a considerable decrease. The passenger traffic, however, marked an appreciable increase. The earnings from passenger traffic on all Indian Railways increased by over 7 per cent and excluding the North-Western, Bengal-Assam, Eastern Punjab and Assam Railways, goods traffic also showed an increase of 3.1 per cent. The gross traffic receipts of the Indian Government Railways amounted to Rs. 163.13 crores.

The following tables show the position of earnings, traffic, etc. of all the Indian Railways during 1947-48 :

ALL INDIA RAILWAYS, 1947-48.

| Items. | Indian (I and II) Govt. Railways (including P. & Assam Railways and N.G. of E.I. Railway). | |
|---|--|-----------|
| | 1947-48 | 1947-48 |
| Gross earnings (Crores) Rs. | 183.69 | 166.23 |

| Passenger miles (Millions) | 33,644.34 | 30,086.47 |
| Earnings from carriage of passengers (Crores) Rs. | 73.25 | 65.10 |
| Average earnings per passenger mile (Pies) | 4.18 | 4.15 |
| Freight tons originating (Millions) .. | 73.46 | 65.68 |
| Freight ton miles (Millions) | 20,398.30 | 19,250.99 |
| Earnings from carriage of goods (Crores) Rs. | 86.33 | 79.18 |
| Average earnings per freight ton mile (Pies) | 8.13 | 7.90 |
| Total train miles (Millions) .. | 157.01 | 139.68 |
| Gross earnings per train mile .. Rs. | 11.70 | 11.90 |
| Working expenses per train mile .. Rs. | 9.97 | 10.88 |
| Net earnings per train mile .. Rs. | 1.73 | 1.02 |
| Net earnings per mean mile worked .. Rs. | 7.989 | 5.440 |

INDIAN GOVERNMENT RAILWAYS.

The figures include statistics of worked lines of Indian Government railways, but exclude Indian Government portions worked by the Jodhpur and H.E.H. the Nizam's State Railways and N.-W. and E.B. Railways and E.P. and Assam Railways.

| Items. | 1938-39 (pre-war) | 1939-40 | 1944-45 | 1945-46 | 1946-47 | 1947-48 |
|--|----------------------|-----------|-----------|-----------|-----------|-----------|
| Gross earnings .. (Crores) Rs. | 73.98 | 77.63 | 152.38 | 160.40 | 149.45 | 157.42 |
| Total working expenses .. | 47.49 | 48.04 | 99.93 | 108.10 | 117.88 | 142.92 |
| Operating ratio .. Per cent. | 64.19 | 61.88 | 65.58 | 67.39 | 78.88 | 90.79 |
| No. of passengers originating .. (Millions) | 355.26 | 349.05 | 597.02 | 675.39 | 752.03 | 902.26 |
| Passenger miles .. (Millions) | 12,588.13 | 12,321.12 | 24,917.30 | 27,518.55 | 27,910.13 | 29,012.57 |
| Earnings from carriage of passengers .. (Crores) Rs. | 20.41 | 20.10 | 49.82 | 56.45 | 57.46 | 62.23 |
| Average earnings per passenger mile (Pies) .. | 3.11 | 3.13 | 3.84 | 3.94 | 3.95 | 4.12 |

| Net earnings per train mile .. | 1.96 | 2.15 | 4.14 | 4.10 | 2.35 | 1.08 |
| Net earnings per mean mile worked .. | 11.212 | 12.550 | 23.030 | 22.947 | 13.851 | 6.256 |

Standing Finance Committee: The Standing Finance Committee for Railways met seven times during the financial year 1947-48 and examined the various proposals of the Government with regard to capital and revenue expenditure, to be incurred in 1948-49. These proposals had to be scrutinized as usual by the Committee prior to their being placed before the Constituent Assembly, and related to the purchase of locomotives and spare boilers from North America, notice of special purchase of the Darjeeling-Himalayan Railway Extensions, provision of a through direct route between Assam and India, doubling of lines between Buddi-Barkhaga Chat on the G.I.P. Railway, a hospital for G.I.P. and B.B. & C.I. at Bombay, and purchase of ferry steamers for the O.T. Railways. The Committee also discussed many other problems.

Advisory Council: The Central Advisory Council met twice during the year and discussed a number of points. Apart from the C.A.C., Local Railway Advisory Committees also held 58 meetings and discussed a great number of important subjects, such as additional facilities to public, train-timings, catering on trains, etc.

Amenities for Public: No marked improvement was noticeable in this direction during the year.

Total Mileage: The total route mileage at the end of the year was 33,985 inclusive of Assam and Eastern Punjab Railways.

Trade Dispute: Mr. Justice Rajadhyaksha's award on the trade dispute between Indian Government Railway Administrations and their workmen was received by the Government on May 15, 1947 and published for general information in March 1948.

Strikes: During the year 1947-48 there were no major strikes on the Railways. The total number of man-days worked during the year came to 24,694,994, and the man-days lost to 565,495, or approximately 2.29 per cent of the man-days worked. These figures, however, do not include those for North Western or the Bengal Assam Railways from April 1, 1947 to August 14, 1947, but they include those for Eastern Bengal or Assam Railways from August 15, 1947 onwards upto March 31, 1948.

Cost of Staff: On March 31, 1948, the total number of staff of all grades employed on the open line of Indian Government Railways, exclusive of Bengal Assam, North Western, Assam and Eastern Punjab Railways, stood at 747,947, marking an increase of 47,923 persons over the figures of the previous year. The total cost of the staff was Rs. 59,81,25,746, showing an increase of Rs. 10,56,59,017 over the preceding year. The total number of employees on all Indian Railways and in the office of the Railway Board and other offices subordinate thereto, excluding the staff employed on construction, and those employed on Bengal

Assam, N.-W., E.P. and Assam Railways stood at the end of 1947-48, at Rs. 23,712 as compared with 771,993, at the end of 1946-47.

Grain Shops: There were 647 grainshops at the close of the year. The loss incurred on maintaining these shops for purposes of affording relief in kind to the staff came to Rs. 22.79 crores for the year.

Acquisition of lines: During the year the Government decided to buy the following lines from the companies which owned them.

1. A rebate-aided narrow gauge, 12.61 miles, Matheran Hill Light Railway, owned and worked by the Matheran Steam Light Tramway Co. Ltd., with effect from April 1, 1948.

2. Pachora-Jamner Railway, rebate-aided narrow gauge, 34.62 miles owned by the Pachora-Jamner Railway Co. but worked by G.I.P. Rly., with effect from April 1, 1948.

3. The 66.35 mile Kishanganj Extension and the 29.09 mile Teesta Valley Extension, both narrow gauge owned by the rebate-aided Darjeeling Himalayan Railway Extensions Company and worked by the Darjeeling Himalayan Railway Co., with effect from October 20, 1948.

POST-WAR PLANNING

Schemes regarding electrification of 1,302.50 miles of certain sections of Indian railways were considered during the year.

Construction of 8 new lines, aggregating 547.49 miles was under progress during the year; and 5 new lines, 102.45 miles in all, were opened. During the same period sanction was given for the construction of two new sections, namely, Barwadih-Sarnadih section a length of 41.28 miles, and a line to connect the Assam Railway with the rest of India, involving 68.5 miles of conversion from narrow gauge to metre gauge and about 76.5 miles of fresh construction in West Bengal and Assam. Besides, 8 surveys, aggregating about 1,000 miles, were sanctioned during the year.

As for further development, it was decided to concentrate on the 12 high priority projects mentioned below.

| Project. | Length in miles. |
|-----------------------------------|---|
| 1. Indian-Assam connection | 145 miles M.G. (68.5 miles conversion, and 76.5 miles new construction) |
| 2. Barwadih-Chirimiri (Bijuri) | 151 B.G. |
| 3. Barwadih-Manikpur | 250 B.G. |
| 4. Umaria Branch | 7 B.G. |
| 5. Champa Branch | 26 B.G. |
| 6. Ghoradongri-Pathekhara Branch | 12 B.G. |
| 7. Barwadih-Talcher | 272 B.G. |
| 8. Kuria-Karjat | 35 B.G. |
| 9. Extension of the Argada Branch | 25 B.G. |

10. Kantabanji-Sambalpur .. 110 B.G.
11. Jogbani-Kosi Dam .. 35 B.G.
12. Rampur Lalkua .. 38 B.G.

Other projects that have not been included in the above list would be considered by the Central Board of Transport, province by province, in consultation with the representatives of provincial Governments as co-opted members. Any project considered to be both necessary and urgent would be included in the above list.

REVISION OF FARES

With effect from January 1, 1948, fares were fixed as follows:-

| | Pies per Mile. |
|----------------------------------|----------------|
| First class .. | 30.0 |
| Second class .. | 16.0 |
| Inter-class (Mail or Express) .. | 9.0 |
| Inter-class (Ordinary) .. | 7.5 |
| Third class (Mail or Express) .. | 5.0 |
| Third class (Ordinary) .. | 4.0 |

Rates were also enhanced in respect of Monthly Season Tickets, platform tickets, etc.

The repercussions of the heavy drop in traffic due to partition on the earnings during the year would have been serious but for the general enhancement in freight rates.

Railway Collieries: There was a decrease of 759,021 or 18.44 per cent as compared with the previous year in the total output of coal from the principal railway collieries during the year 1947-48, the output for the year being 3,356,519. Out of this, 2,805,089 tons were despatched to the railways. That formed 27.7 per cent of the total coal consumption of the railways during the year.

1949-50 BUDGET

The table below shows the principal figures of the budget estimates for 1949-50 as compared with the revised estimates for 1948-49.

| | Revised Estimate 1948-49 | Budget Estimate 1949-50 |
|--|--------------------------|-------------------------|
| (In Lakhs of Rs.) | | |
| TRAFFIC RECEIPTS | | |
| Gross traffic receipts .. | 204.50 | 210.00 |
| Working expenses .. | 155.80 | 159.03 |
| Depreciation Reserve .. | 11.29 | 11.47 |
| Payments to worked lines. | 1.56 | 1.62 |
| TOTAL WORKING EXPENSES .. | 168.71 | 172.12 |
| A.—Net Traffic Receipts .. | 35.79 | 37.88 |
| Miscellaneous Transactions Receipts .. | 3.45 | 3.16 |
| Expenditure .. | 1.17 | 8.72 |
| B.—Net Misc. Receipts .. | 2.28 | 5.56 |
| Net Railway Revenues (A & B) .. | 38.07 | 32.32 |
| Interest Charges .. | 22.24 | 22.84 |
| Net Surplus .. | 15.83 | 9.44 |

ROADS

THE sub-continent's road system may be briefly described as follows:

There exist four great trunk roads, stretching diagonally across the sub-continent, which form the framework with which most of the important subsidiary roads are linked. These trunk roads have been in existence for an immense period and are rich in historical association. The most famous is the ancient marching route—known as the Grand Trunk Road—which stretches right across the northern part of the sub-continent from the Khyber to Calcutta; the other three connect Calcutta with Madras, Madras with Bombay and Bombay with Delhi, and the four of them together account for about 5,000 out of the 98,000 miles of metalled road in the sub-continent.

None of these roads however can be considered safe "all weather" trunk roads according to modern standards. The Madras-Calcutta Road in particular is far from being bridged throughout its entire length. The other three roads also require a great deal of improvement; and on all of them there are places where floods are liable to cause serious interruption to traffic.

As regards the subsidiary roads, the best and most numerous are to be found in Southern India. As one would expect, the worst served regions are Rajputana, Sind and parts of the Punjab on the one hand, and Orissa and the Bengal area on the other, the former owing to its aridity and sparse population, and the latter because of the numerous unbridged and mostly unbridgable waterways which dissect it. In addition there are numerous other parts of the country, such as the lower Himalayas, which suffer from a dearth of communications owing to the difficult terrain. Besides surfaced roads, there is a very large mileage of "kucha" roads amounting to approximately 205,000 miles, some of which are good motor traffic during the dry weather.

DEVELOPMENT COMMITTEE

On the whole it is reasonable to say that the sub-continent's road system, even before the advent of motor transport, was altogether insufficient for its needs and it is the increasing realisation of this fact that led to the appointment of the special Road Development Committee in 1927 whose functions were to examine the question of the development of road communications in view of the increasing use of motor transport and suggest ways and means of financing it.

The recommendations put forward by the Committee were carefully considered by the Government of India, whose conclusions upon them were embodied in a resolution and provided that the increase from four to six annas per gallon in the import and excise duties on motor spirit, which had been effected in March 1929, should be maintained for a period of five years in the first instance, and that the additional duty should be allotted as a block grant for expenditure on road development, and credited to a separate Road Development Account, whose unexpended balances should not lapse at the end of the financial year.

Allocation to Provinces.—The original resolution dealing with the disposal of the Road Development Account has since been amended thrice, the resolution at present in force having been passed by the Dominion Legislature in November 1947. Its main features may be described as follows: The special tax on petrol introduced in 1929 shall continue to be levied for road development, the proceeds of which, after retaining a reserve of 15% for administration, research and special grants-in-aid, shall be allocated for expenditure in the different provinces, Union, etc., in the ratio of the petrol consumption in the various areas. These sums may be spent on the construction, re-construction or substantial improvement of roads and bridges including the

cost of preparation of road schemes—but not for ordinary road upkeep or maintenance—on interest and amortization charges on road loans sanctioned hitherto by the Government of India and also on administration of Provincial Boards of Communications and establishment connected with the control of motor transport.

With the levy of a surcharge on petrol, the share of the petrol duty available for the Road Fund was increased from 2 annas to 2½ annas per gallon with effect from October 1, 1931. Up to the end of March 1946, the Fund had received Rs. 25.3 crores, and after transferring Rs. 4.8 crores to the Reserve, the sum available for distribution to Provinces, Minor Administrations and States was Rs. 20.5 crores or Rs. 19.7 crores excluding Burma's share prior to separation. Of this, the actual distribution upto 31st March 1946 to the Provinces was Rs. 17.8 crores and to the Minor Administrations and States Rs. 2.4 crores.

Feeder Roads.—Up to the introduction of the Road Fund in 1929, all Provincial Roads were financed exclusively from the general revenues of the provinces and local roads from local revenues supplemented by provincial grants. The object of creating the Road Fund in 1929 was to supplement and not to replace the normal expenditure from provincial and local revenues, but unfortunately the ten years following the introduction of the Fund were marked by acute financial stringency, with the result that Provincial Governments and local bodies had to make drastic curtailments in the allotments made for roads from their revenue.

The effect of these curtailments was to starve the construction and development of feeder roads, as the Road Fund was originally being used exclusively for roads of inter-provincial and inter-district importance. The Government of India, however, subsequently laid down that at least 25 per cent. of the provincial shares in the Road Fund should be used on Feeder Roads and that not more than 25 per cent. can be used on roads which compete with the Railways.

Until the beginning of the War, the Road Fund had resulted in the construction of 382 new bridges or causeways in the provinces and centrally administered areas, besides the modernisation of 1,230 miles of roads, construction of 1,500 miles of fair-weather roads and improvement of 22,000 miles of existing metalled roads.

However, in spite of the inauguration of the Central Road Development Fund, the total expenditure on roads suffered a decrease. The expenditure in 1938-39, which amounted to Rs. 602.1 lakhs in the Governors' Provinces, was Rs. 41.7 lakhs less than in 1928-29.

The revenue from motor transport was steadily increasing in these years. In 1938-39, the total revenue of the Central Government and Provincial Governments from this source was Rs. 960 lakhs, representing an increase of Rs. 358 lakhs over the total road expenditure in the year.

WAR IMPROVEMENT

The war however invested roads with a new importance. Some works of road improvement were taken in hand to facilitate the operation of motor transport during the war years and are being continued. Road expenditure has continued to increase but a substantial part of such increase has to be set off against the rise in the cost of works because of the general increase in the cost of materials and labour. Owing to petrol rationing, the revenue from road transport did not register any appreciable increase till 1944 but since then it has rapidly resumed its upward trend.

In the year ending 31st March 1946, the total revenue from motor transport was over Rs. 26 crores (including duty on aviation spirit) and the total road expenditure was less than Rs. 15 crores, as per particulars below:—

ROAD TRANSPORT REVENUE, 1945-46 (In lakhs of rupees)

| | |
|---|-------|
| Central Government:— | |
| Duties on motor spirit* | 17.02 |
| Import duty on motor vehicles & parts | 1.89 |
| Excise duty on tyres | 1.24 |
| | 20.15 |
| Provincial Governments:— | |
| Provincial taxes and fees on motor vehicles | 2.58 |
| Petrol Sales Taxes | 3.76 |
| | 26.49 |

ROAD EXPENDITURE

| | |
|---|-------|
| On P.W.D. Road from Provincial Revenues:— | |
| Road Improvement | 3.11 |
| Road Maintenance | 6.79 |
| | 9.90 |
| On P.W.D. roads from the Central Road Fund | 1.42 |
| Total on P.W.D. Roads | 11.32 |
| Expenditure on Local Board Roads, estimated | 3.00 |
| Total | 14.32 |
| *Includes aviation spirit. | |

ROAD MILEAGE

On the administrative side roads are a provincial subject and may be divided into two main classes, Provincial Roads under the Public Works Department and Local Roads in charge of local bodies. The extent to which the administration of roads has been delegated to local bodies varies considerably from province to province but in the Dominions as a whole about 80 per cent. of the extra-municipal mileage is under the charge of District Boards or District Councils, including a certain mileage, mainly in the Central Provinces which is termed "Provincial" but maintained under their agency. Within Municipal areas, all roads, other than sections of main roads passing through the towns, are controlled by the respective Municipalities.

The grand total of the mileage of extra-municipal roads maintained by public authorities in the sub-continent including the States was 303,142 on March 31, 1944; of this the total mileage for Governors' Provinces amounted to 220,898, for Centrally administered areas 6,604 and for the States 75,640.

The total mileage of roads with modern surface, either bituminous or cement roads, was 17,109 and the total mileage of waterbound macadam roads was 81,041, making a total mileage of roads which were either modern surfaced or water-bound macadam of 98,240.

The total mileage of lower types of roads was 204,902. These roads are of three types: firstly, roads with artificially admixed granular material, gravel, moorum, etc., on natural soil; secondly, roads of natural soil which are motorable in fair weather; and thirdly, roads of natural soil which are unmotorable.

The total mileage of roads that are motorable was thus 221,690, out of which 126,374 miles were motorable throughout the year, and the remaining 95,316 miles motorable in fair weather.

Out of the 227,502 miles of roads in what was formerly called British India, no less than 178,233 miles of roads were maintained by local bodies, while the P.W.D. and M.E.S. maintained 49,269 miles.

The province with the greatest road mileage was Madras with 38,375, out of which, however, only 530 was modern surfaced, while the province with the greatest mileage of modern roads was the pre-partition Punjab with 5,061 miles, out of a total provincial mileage of 24,979.

There were, in addition, the roads maintained by Municipalities, the length of which was approximately 18,433 miles, made up of 10,840 miles of metalled roads and 7,593 miles of unmetalled roads.

BUILDING PROGRAMME

Considerable interest began to be taken before the end of the war in the need for an extensive programme of road development both for the purpose of assisting the transition from war to peace and for fostering the economic advancement of the sub-continent. In December 1943 the Chief Engineers of the various provinces and important States met in Conference at Nagpur and recommended that the sub-continent should be ready for a programme involving the improvement of the entire road system and designed to increase the road mileage to 400,000. This was estimated to cost Rs. 450 crores. If this scheme, known as the Nagpur Plan, was carried through, the sub-continent's total road mileage, on completion of the plan, would be as under: National Highways 18,000; Provincial Highways 72,000; Major District Roads 60,000; Other District Roads 100,000 and village roads 150,000.

FIVE-YEAR PROGRAMME

While the Government of India as well as the Provincial Governments and States endorsed these recommendations in general terms, there

was no general acceptance of a time-limit for the accomplishment of the plan. However five-year programmes for commencement from April 1947 and representing varying proportions of the Nagpur scheme were prepared by the Provinces for their respective areas in 1945-46. These Programmes, exclusive of National Highways (i.e. main arterial roads of national importance) were estimated to cost Rs. 146.80 crores over the five-year period, the following being the allotments (in crores of rupees) proposed by the individual provinces: U.P. 30.72; (old undivided) Bengal 23.34; Bombay 20.80; Madras 20.77; Bihar 13.60; (old undivided) Punjab 12.40; Sind 8.85; C.P. & Berar 7.00; Assam (before detachment of part of Sylhet) 5.32 and Orissa 4.00. The Programmes embraced the construction or Improvement of 80,000 miles of roads as under:

Provincial & District Roads.

| | |
|---------------------------------|--------|
| Mileage improvement | 33,393 |
| Mileage, new construction | 17,509 |

Village Roads.

| | |
|-----------------------------------|--------|
| New construction & Improvement .. | 30,093 |
|-----------------------------------|--------|

Some of the provinces, particularly Bombay and Madras, have since revised and reduced their 5-year programmes. In Madras, the target now for the 5-year period is an expenditure of Rs. 8½ crores and in Bombay Rs. 5½ crores.

The progress of the development programme has been very slow and has lagged behind schedule owing to various causes such as delay in acquisition of lands, inadequate supplies of road machinery, steel & cement, shortage of technical personnel, railway bottleneck in transport of road materials, etc. Although two years of the 5-year period elapsed by the end of March 1949, little visible progress is noticeable except in parts of the United Provinces and in some border areas.

NATIONAL HIGHWAYS

The Central Government, as part of their contribution towards post-war development in the provincial field and as part of a concerted plan for the co-ordinated development of land transport as a whole, accepted liability for the construction and maintenance of the National Highways outside the States with effect from 1st April 1947. Of the 18,000 miles of National Highways at present delineated, 15,000 are in India & Pakistan and the remaining 2,000 in States and States Unions.

The five-year plan for the development of National Highways was estimated to cost Rs. 36 crores. Although financed by the Centre, the actual execution of the work would be carried out through the Provincial P.W.D's. It was expected that as a result of this expenditure, about 5,421 miles of National Highways would be improved and 787 miles of new National Highways constructed in the Governors' Provinces.

The largest new construction of National Highways was to be undertaken in Bihar, the Punjab area and the Bengal area—260 miles, 110 miles and 100 miles respectively. In the States it was planned to construct, during the next 15 years, 264 miles of new National Highways and to improve 2,654 miles, but the allocation of the cost between the Central Government and the States had not been settled. At the time, Rs. 2 crores had been provisionally earmarked for expenditure by the Central Government on National Highways in the States for the following 5 years.

Vehicles.—Civilian motor vehicles on the country's roads in March 1947 (excluding the States) numbered 168,368 made up of 13,673 motor cycles, 81,318 cars, 8,804 taxis, 23,050 passenger buses, 40,107 goods lorries and 1,416 miscellaneous vehicles as shown in the statement attached below. There are also 6,292,000 bullock carts in use.

MOTOR VEHICLES IN INDIA & PAKISTAN, MARCH 1947

In March 1947, pre-partition India (excluding States) had 1,68,368 civilian vehicles on the roads, representing an increase of 23,674 vehicles on the 1946 figure, as per details given below. As between the Provinces, the largest increase, amounting to 9,454 vehicles, occurred in the Province of Bengal, where goods vehicles alone registered an increase of 4,653.

For the sake of comparison, totals for 1946 as also for 1939 (pre-war) are given alongside the 1947 totals in the following table:—

| Province | Motor Cycles | Private Cars | Public Service Vehicles | | | | Goods Vehicles | | Miscellaneous | | Total all Vehicles | | Total number of Motor Vehicles |
|---------------------|--------------|--------------|-------------------------|--------|---------------------|--------|---------------------|--------|---------------------|--------|--------------------|----------|--------------------------------|
| | | | Motor Cabs | | Other P. S. Vs. | | | | | | | | |
| | | | Diesel Engin- ed | Others | Diesel Engin- ed | Others | Diesel Engin- ed | Others | Diesel Engin- ed | Others | | | |
| Madras | 1,736 | 10,957 | — | 397 | 25 | 4,314 | 22 | 3,962 | — | 97 | 47 | 21,513 | 21,509 |
| Bombay | 2,157 | 16,436 | — | 1,609 | 199 | 2,913 | 63 | 8,689 | — | — | 262 | 31,204 | 31,466 |
| Bengal* | 1,542 | 17,255 | — | 4,570 | 1 | 4,635 | 5 | 12,454 | — | 69 | 6 | 40,525 | 40,531 |
| U.P. | 1,271 | 9,863 | — | 666 | 3 | 3,000 | — | 3,523 | 4 | 687 | 7 | 19,000 | 19,007 |
| Punjab | 2,628 | 6,260 | — | 274 | — | 3,167 | — | 1,983 | — | — | — | 14,312 | 14,312 |
| Bihar | 870 | 5,111 | — | 458 | — | 672 | — | 2,332 | — | 6 | — | 9,449 | 9,449 |
| C.P. & Berar .. | 780 | 2,901 | — | 94 | — | 911 | — | 1,519 | — | 32 | — | 6,237 | 6,237 |
| Assam | 492 | 3,276 | 1 | 141 | — | 1,294 | — | 2,922 | — | 355 | 1 | 8,480 | 8,481 |

† Provisional figures.

INLAND WATER-WAYS

IN pre-railway days inland navigation was highly developed in the sub-continent. But unfortunately it has not progressed in parallel with rail and road development as it has done in other countries like France or Germany or the U.S.A. There are several reasons for this but the most important single reason is the lack of a co-ordinating authority to maintain the water-ways and provide the appropriate navigation facilities. There is no question that the provision of navigable conditions on the water-ways is essential if we want to induce industrial and agricultural traffic to use the quickest and cheapest form of transport for heavy goods and bulk cargoes from the interior to the ports, both for internal distribution and export to world markets.

If we consider conditions in the old days on the main water-ways of India and Pakistan we find that the Indus was navigable from the sea to Attock, a distance of about 1,000 miles, the Chenab as far as Wazirabad, 800 miles, and the Sutlej as far as Ludhiana, 800 miles. The Ganges was navigable up to Kanpur as late as 50 years ago, and only a hundred years ago the Jumna was navigable as far as Agra. All these rivers are unnavigable today. Navigation on the Indus and other Punjab rivers is restricted to short distances up and down stream of the Sukkur Barrage and steamers seldom ply on the Ganges up-stream of Patna.

There are, of course, parts of the sub-continent where canal navigation is still active. In the Madras Presidency for instance, the Godavari Canal, including the Innanagudan Canal, the Kistna Canal, the Buckingham Canal, the Kurnool-Cudappah Canal, the West-Coast Canal and the Vedaranyam Canal are important high-ways for water-borne traffic. The Godavari and Kistna Deltas are indeed

the chief means of transport in that region and afford a cheap and ready mode of access to all markets. The Buckingham Canal has played an important part in the trade of the country traversed by it, and in particular during the last war when the traffic was heavy it afforded considerable relief to railways. On the West Coast the water-ways form the chief means of communication and transport in the interior of the country. In Orissa, too, there are some 250 miles of navigable canal in constant use.

Then there are the important water-ways of Bengal, East and West. The records of imports and exports into and from Calcutta show the extent to which the largest sea-port in India depends upon its water-way communications. Dealing first with imports, about 25 per cent. of the merchandise which flows into Calcutta from the rest of India is water-borne of which no less than 63 per cent. comes from Assam. As regards exports from Calcutta about 32 per cent. is carried by water and of this 72 per cent. goes to Assam. The total inland water-borne traffic of Calcutta amounts to approximately 45,00,000 tons of which 34 per cent. is carried by inland steamers and 66 per cent. by country boats. In 1945, 1,04,00,000 passengers were carried by steamer service in East and West Bengal.

Altogether it has been estimated that the amount of boat traffic over Government maintained channels is in the neighbourhood of 250 mln. ton-miles per annum. But this figure works out to little more than one per cent of the pre-war goods traffic by railway. It is therefore obvious that as matters stand to-day inland water transport forms an insignificant proportion of the nation's transport services. This becomes doubly clear when we consider the tremendous scope for expansion which still exists for the water-borne

traffic of the sub-continent. The total length of water ways in India and Pakistan which afford perennial flow amounts to about 25,000 miles, comprising 10,000 miles of rivers and 15,000 miles of canals. Of the former, as many as 6,000 miles are navigable to a minimum of about three feet draught, and of these again about 5,000 miles are in the north-east of India comprising the Provinces of old Bengal and Assam. The canals are mostly for irrigation but is estimated that about 4,000 miles would be suitable for power-driven craft, and the remaining 11,000 could be utilized for boat traffic.

THE FUTURE

The question of improving India's natural water-ways is receiving close attention of the local Governments, and the Central Water-ways Irrigation and Navigation Commission is endeavouring to co-ordinate these efforts on a country-wide as well as multi-purpose basis. It is deplorable that in some areas navigation has been completely neglected for the over-ruling benefits of irrigation. Possible extension of navigation can only obtain fruition by consideration of the multi-purpose use of our water wealth on a regional basis irrespective of political boundaries.

Conservation of water resources on a multi-purpose basis offers the following potential new navigable water-ways, or the resuscitation of old ones:—

i. Bengal (East and West)

a. A new canal to connect the coal-fields of Bengal and Bihar with the port of Calcutta.

b. Resuscitation of the Bhagirathi route to the Ganges.

- c. Resuscitation of the inner boat route connecting Calcutta to East Bengal to shorten the existing route by 50 per cent.
- d. Resuscitation of the river routes to North Bengal as visualized in the Tista Valley Project.
- e. Resuscitation of the old Brahmaputra and Dhalleshwari Rivers in the Dacca and Mymensingh Districts.
- ii. **Assam**
Resuscitation of the Dihing, Dihu, Dhansiri and Kalung Rivers in Upper Assam.
- iii. **Bihar**
 - a. Resuscitation of the Gandak and Kosi series of rivers.
 - b. Extension of navigation on the Sone River for about 150 miles as visualized in the Sone Valley Project.

- iv. **United Provinces and Central India**
 - a. Resuscitation of the Gogra River which would afford navigation facilities up to Fyzabad as in former days.
 - b. Flood control on the Betwa and Chambal rivers holds promise of ample discharge in the dry season, to permit navigation on the Jumna from Etawa to Allahabad, and on to Calcutta via the Ganges.
- v. **Central Provinces**
The Narbada and Tapi pass through the Central Provinces and a number of States before they join the Arabian Sea in the Bombay Presidency. Investigations are in progress to assess the value of these rivers for multi-purpose development including navigation.
- vi. **Madras**
Possible development of the Godavari, Pranitha, Wardha, and Wainanga rivers suggest other main lines of communication and taking into consideration the possible

development of the Tapi river it may be found practicable to obtain a transcontinental line by connecting the Wardha and Tapi rivers.

vii. Orissa

- a. The Orissa coastal canal between the Hooghly and Dhamra rivers, together with an extension of the Mahanadi delta system to link with the Madras Canal system would afford inland navigation from Assam to Madras.
- b. The Mahanadi Project visualizes the provision of navigational facility on the Mahanadi river to Sambalpur about 300 miles from the sea.

- viii. **East Punjab, West Punjab, Sind**
Resuscitation of the rivers Indus, Chenab and Sutlej would restore 2,600 miles of river communication to their former navigability, but the interests of established irrigation may stand in the way of reviving these communications to any extent.

PORTS BOMBAY

THE Port of Bombay is over 75 square miles in extent and is a comparatively modern creation. The decision of Government to constitute a Trust to administer the affairs of the Port originated in the apprehension of Government that the interests of trade were being seriously endangered by the monopoly of landing and shipping facilities being acquired by private companies holding large tracts of foreshore land, most notably the Elphinstone Land and Press Company, which was accordingly purchased by Government in the year 1869 and placed in the hands of a public trust.

During the first few years of its existence, however, the Board was faced with increasing deficits owing to competition from private wharf-owners holding the remainder of the foreshore land. The rights of these private wharf-owners were also, therefore, acquired by Government and vested in the Board in 1879, since when the Port of Bombay has been progressively developed and expanded.

The Board consists of a whole-time Chairman appointed by Government, and twenty-four members, of whom two are elected by the Bombay Chamber of Commerce, eight by the Indian Merchants' Chamber, two by the Bombay Municipality, one by the Mill-owners' Association, one by the Maharashtra Chamber of Commerce and the remaining ten, which include two representatives of labour, are nominated by Government.

The entire administration of harbour conservancy and lighting, pilotage, docks, bunders, railway and land estates is vested in this Board and is subject to the provisions of the Bombay Port Trust Act, 1879.

Harbour.—Bounded on the north and east by the mainland of India and on the west by a narrow peninsula which forms a natural breakwater, the harbour is naturally protected from the violence of the south-west monsoon and provides secure and ample shelter for shipping at all seasons of the year. It is about 12 miles long, 4 to 6 miles wide with a minimum of 32 feet at low water in the entrance fairway. Spring rise above datum is 14 feet 1 inch and the range between mean low and mean high water spring tides is 11 feet 6 inches so that the Port is well-endowed by Nature to accommodate deep-draft shipping.

The Port and its approaches are well-lighted, being served by the Prongs, Kennery and Sunk Rock Light Houses, an unattended Floating Light Vessel, the South Entrance and Prongs Reef Light Buoys, and other subsidiary lights, the more important of which are

the Dolphin Rock and Tucker Beacon Lights. The first two light-houses are directly connected by wireless with the Pilot Vessels and the Port Signal Station on the tower of Ballard Pier, while the Wireless Beacon installed on Kennery Island enables ships fitted with direction-finding gear to take bearings from its signals when approaching Bombay.

Passenger Facilities.—Trans-oceanic passenger traffic is mostly dealt with at the Ballard Pier

Station, Coastal and Harbour Passenger traffic is dealt with at the New Ferry Wharf.

The total number of overseas passengers embarking and disembarking at Bombay in 1947-48 exceeded 1,50,000 while the number of passengers carried by the coastal and ferry services was over 2,100,000.

| Name and date of completion | Width of entrance | Maximum available depth on sill at M.H.W.N. | Water area | Estimated quayside | Number of Berths |
|-----------------------------|-------------------|---|------------|--------------------|--|
| Prince's Dock (1886) | 66'-0" | 24'-0" | 36 acres | 6,910 | 9 |
| Victoria Dock (1888) | 80'-0" | 26'-0" | 25 " | 7,805 | 13 |
| Alexandra Dock (1914) | 100'-0" | 33'-0" | 49 " | 13,125* | 20 (plus 6 berths for ferry steamers.) |

* Does not include Ballard Pier.

Movement into and from Alexandra Dock is not restricted, ships being able to pass through an entrance lock 750'-0" by 100'-0" at all states of the tide.

The Victoria and Prince's Docks are connected by a communication passage. These Docks which were affected by the fires and explosions of April 1944 are in the course of reconstruction and are being provided with modern transit sheds.

The three Docks together have a water area of 104½ acres and about 6 miles of quayside; extensive open storage and shed and warehouse accommodation for the reception and storage of goods, exists.

Dry Docks. The main features of the two Dry Docks are as follows:—

| Name of Dry Dock and date of completion | Length | Width | Depth on sill at mean high water neaps | Remarks |
|---|----------|---------|--|--|
| Hughes Dry Dock (1914) | 1000'-0" | 100'-0" | 32'-0" | Divisible into two compartments so that 2 ships can be accommodated at a time. |
| Merewether Dry Dock (1891) | 525'-0" | 65'-6" | 24'-0" | |

Bunders and Timber Ponds.—Beyond the Docks are the "bunders" or open wharves and basins, where coasting and country craft traffic and overseas cargo from the Docks and stream are handled. These bunders have an aggregate quayside of nearly 5 miles and are equipped with cranes, sheds and other facilities for loading, unloading and storing cargo, but the labour for handling cargo at the bunders is not provided by the Port Trust and so the wharfage charges are much lower than in the Docks.

The bunder traffic is an important item in the trade of the Port, over 12½ lakhs tons or roughly one-fourth of the total tonnage of the Port being handled annually over the bunderwharves.

Adjoining the bunders are the Timber Ponds covering an area of over 60 acres, where every facility for storage and handling of timber is provided.

Bulk Oil Depots.—There are three groups of bulk oil installations, one each for liquid fuel and lubricating oil, kerosene oil, and petrol, all on land, aggregating 83 acres in extent, leased by the Port Trust.

Ample storage space is available within the Port area for grain (80 acres), cotton (127 acres, 1,000,000 bales), and manganese ore (30 acres, 300,000 tons). Large areas have also been reserved for the landing and storage of other commodities such as Coal, Bricks and Tiles, Building Stones and Iron.

PORT TRUST RAILWAY

The Port maintains its own railway system which handles nearly 50 per cent of the rail-borne goods traffic of Bombay. Its yearly traffic to and from the trunk Railways amounts to over 2,000,000 tons, and its local station-to-station traffic is approximately the same in volume. The principal commodities carried are cotton,

grain and seeds, oil cake, manganese ore, sugar, kerosene and other bulk oils, coal, charcoal and china clay.

Though only 7½ miles in actual length, it comprises nearly 120 miles of main lines and sidings all directly linked with the inter-railway exchange yard at Wadala, the various storage depots and the Docks and Wharves.

REVENUE AND EXPENDITURE FOR THE YEAR 1947-48

| | General Account | Pilotage Account | Special Receipts or Special Expenditure |
|---------------------|-----------------|------------------|---|
| Revenue | 5,15,95,492 | 6,31,748 | 34,48,230 |
| Expenditure | 4,25,92,789 | 9,81,801 | 34,48,230 |
| Surplus | 1,18,92,703 | | |
| Deficit | | 3,50,053 | |

STATISTICS SHOWING CARGO HANDLED DURING THE PERIOD

1938-39 to 1947-48

| Year | Imports | Exports | Total |
|-----------------|-----------|-----------|-----------|
| | Tons | Tons | Tons |
| 1938-39 | 3,209,000 | 1,887,000 | 5,096,000 |
| 1939-40 | 3,350,000 | 1,975,000 | 5,325,000 |

BOARD OF TRUSTEES

Nominated by Government: Chairman, V. S. Bhide, I.C.S., S. S. Vasist, O. Krishnam, Commodore H. R. Indgo-Jones, C.I.E., R.N., M. M. Chudasama, N. S. Sen, M.M.S.T., Brig. Madhau Singhji, M.L.I., David S. Brulker, Dinkar Desai, Prof. Bidesh Kulkarni, B. K. Patel, I.C.S.

Elected by the Bombay Chamber of Commerce: R. W. Bullock, A. Kirkwood-Brown.

Elected by the Indian Merchants' Chamber: M. A. Master, Ramdas Kishchand, Sankalchand G. Shah, Madhavji M. Bharti, P. M. Chinal, Madanmohan R. Ruia, Mangaldas B. Melita, Murarji J. Vaidya.

Elected by the Maharashtra Chamber of Commerce: M. L. Dahanukar.

Elected by the Municipal Corporation: Gordhanadas G. Morarji, V. B. Gandhi.

Elected by the Millowners' Association: Krishnaraj Madhavjee Damodar Thackersey.

ADMINISTRATION

Secretary, A. S. Bakre.

Deputy Secretary, E. H. Shmoes.

Chief Accountant, C. F. Lynn.

Deputy Chief Accountants, O. V. B. Hyde, R. B. C. Cour-Palais.

Chief Engineer, F. M. Surveyor.

Deputy Chief Engineer, P. E. Golvala.

Docks Manager, F. Seymour-Williams.

Deputy Docks Managers, G. K. Dukes, V. Vaz, Shank A. K. M. Jafar, V. A. Kashikar, M. H. Savani.

Railway Manager, H. A. Gaydon.

Deputy Manager, Operation, P. M. Boyce.

Deputy Manager, Commercial, M. E. A. Kizilbash.

Deputy Conservator, R. C. Vint.

Harbour Master, H. W. L. T. Davies.

Manager, Land and Bunders Department, H. G. Doshi.

Deputy Manager, E. M. Bhacka.

Controller of Stores, R. C. Master.

Deputy Controller of Stores, P. V. Thadani.

Chief Medical Officer, Dr. N. V. Nene.

Health Officer, Dr. A. J. Mhatre.

Chief Labour Officer, Batuk H. Melita.

Legal Adviser, S. D. Nariman.

CALCUTTA

Calcutta, the principal port in India is situated on the left bank of the River Hooghly which is formed by the uniting of three offshoots from the parent River Ganga. The port is about 80 miles from the mouth of the river and 120 miles from the Western Channel Light Vessel at Sandheads. Calcutta is both a receiving and distributing centre for Assam and the northern and central parts of the sub-continent. It is fed by products brought by a network of railways as well as by the water-borne traffic of the Ganga and Brahmaputra rivers.

The River Hooghly is subject to strong tides and sudden alterations in the depths on the bars and pilotage is compulsory. To compensate for these sudden changes the Commissioners maintain a permanent River Survey Service and in addition to the daily publication of charts, maintain Tidal Semaphores and Track Boards to indicate the latest depths available. The bars are sounded to the nearest 3 inches and the pilots allot draughts to the same limit. Pilots board the vessels at the Sandheads from the Pilot Barges which are fitted with V.T. and D.F. gear. The largest vessel to enter the port was 16,600 tons gross tonnage but the normal limit is 520 feet in length and 25-29 feet draught at spring tides depending on the time of year.

Navigation for small craft is not difficult as the channel is well marked but ignorance of the local rules may cause grave danger to seagoing vessels using the channel.

Anchorage is available at Saugor Roads, Haldia, Kalpi, Diamond Harbour, Ulularia and Garden Reach of which Haldia, Ulularia and Garden Reach are available only for ships on passage to and from the Port or in emergency.

In the port ships lie to moorings when in the stream or alongside jetties with cables forward and aft.

Accommodation in the docks is not suitable for passenger ships as sanitary arrangements are provided for lascars crews only. Special arrangements can be made if notice of arrival is given.

Quays and Docks.—The Kidderpore Docks and the King George's Dock are the two important docks in the Harbour. The former consist of Nos. 1 and 2 Docks and Turning Basin. There is a lock entrance 580 feet long by 80 feet wide from the river which gives access to the Dock system. Dock No. 1 is 2,700 feet in length by 600 feet wide, with a depth of 30 feet of water and has twelve berths serving single-storey cargo sheds. Dock No. 2 has a length of 4,600 feet by 400 feet and also provides a depth of 30 feet of water. It has five general berths serving double storey sheds and five coal berths. In addition there are new general berths totalling 1,850 feet in length with a depth of water of 30 feet have been completed in Dock No. 2; the berths serve single storey transit sheds. One new coal berth and a horse jetty in Kidderpore Dock No. 2, 488'-6" in length with a depth of water of 35'-0" has also been added.

King George's Dock comprises a lock entrance 700 feet long by 80 feet wide, five import berths, one export berth, a berth for the discharge of non-dangerous petroleum in bulk which is also equipped with 2 cranes of 2 ton capacity each and which can be used as a laying up berth. Three of the import berths are served by three storey sheds, two import berths by single-storey sheds, and the export berth by a two storey shed. Each berth is 600 feet long and can accommodate vessels drawing up to 30 feet of water. The petroleum berth is 600 feet long. One laying up berth 500 feet long with a depth of water of 17 feet is provided. Three lighter berths, total length 900 feet with a depth of water of 8 feet, are situated on the south bank and these berths are complete and in use. One heavy lift berth for Lighter 400 feet long with a depth of water of 7 feet is close by.

The river entrance to the Dry Docks has been permanently closed by the construction of a wall of steel sheet piling at the river end of the Dock. This permits removal of the caisson and increase the effective length of Dock No. 2 to 680 ft.

Five dry docks, owned by the Port Commissioners, are available for the use of shipping, three in Kidderpore Docks and two in King George's Dock. In the Kidderpore Dry Docks, one 4-ton crane is located between Nos. 1 and 2 Dry Docks. Breakdown cranes of 15 tons capacity can be brought close to No. 2 Dry Dock. A five ton crane is available at 13 Berth for lifting material ashore on to trucks for use at No. 2 Dry Dock, and in the King George's Dry Docks four 3-ton cranes are available two on each side of the dry docks.

Jetties.—The Garden Reach Jetties consist of a coaling jetty for ships up to 460 feet in length and four jetties for ships up to 600 feet, the transit sheds are double storey. Calcutta Jetties are situated on the river side below Howrah Bridge. There are nine jetties with a total length of 4,735 feet, but only seven of them are available for ocean-going steamers, one berth is used for loading lighters and country flats and one berth is used as a workshop by the Commissioners' Engineering Department. The depth of water available below M.L.W.S.T. varies according to the season of the year.

Petroleum Wharves at Budge are situated some 14 miles below the entrances to the docks. There are five pontoon jetties for ocean-going vessels and one for flats and barges at which non-dangerous petroleum and its products are discharged. Of the five pontoon jetties, one is reserved for the discharge of dangerous petroleum.

Warehouses.—The floor area of covered space under control of the Calcutta Port Commissioners is approximately: Transit Sheds 5,997,000 sq. ft.; Warehouses 2,840,000 sq. ft.; under construction Transit Sheds 77,000 sq. ft.

Coal.—There are at present six coaling berths at Kidderpore Dock No. 2 and one at Garden Reach Jetty. Two of the Dock berths are fitted with mechanical coal loading gear and one more is at present being mechanised. The rate of supply to ships is 1,500 to 2,000 tons per day at the Labour Berths and 4,000 tons per day at night at the Mechanical Berths. At Garden Reach Jetties, 4,000 tons per day and night.

Water Supply.—Drinking water is supplied in the stream and in Kidderpore Docks, King George's Dock and at Jetties in the river. Ten crafts are available for supply of water to ships. Direct supplies from quays and jetties where hydrants are available are controlled by the Port Commissioners or the Calcutta Corporation. These supplies are obtained partly from Corporation mains but largely from tube wells recently constructed in the Dock Area and operated by the Commissioners.

Unfiltered water is supplied to ships in Kidderpore Docks, G. R. Jetties and at "B" Berth, King George's Dock at the rate of 18 tons per hour. Ships at Kidderpore Docks, King George's Dock and G. R. Jetties wanting unfiltered water for boiler use, pump it from the dock or the river with their own pumps, the rate of pumping depending on the capacity of the vessels' pumps.

Overall Capacity of Port.—The average daily deadweight tonnage, for the month of February 1945, of all import cargo discharged in the Port of Calcutta was 11,700, average daily export tonnage for the same period was 9,900. These figures can be taken as representing the average capacity of the port in a peak month. Coal exports for this period were appreciably below pre-war figures for other types of cargo were correspondingly higher. The maximum tonnage for both imports and exports on any one day during February 1945 was 30,000.

The Port is administered by a Port Commission with jurisdiction under the Calcutta Port Act from Buj to Komnagar and under Indian Ports Act from Sagarheads to Kalna about 56 miles above Calcutta.

Commissioners for the Port of Calcutta.—N. M. Ayyar, Chairman; S. L. Dass, Deputy Chairman.

Elected by the Bengal Chamber of Commerce.—L. P. S. Bourne, H. C. Bauman, A. L. Cameron, M. G. Robson (Actg.), R. J. Clough, J. Elkins, C.B.E., J. Morshead (on leave). *Elected by the Calcutta Trades Association.*—C. Ormer, *Elected by the Bengal National Chamber of Commerce.*—Dr. S. B. Dutt, Bar-at-Law, Dr. N. Sanyal, M.A., Ph.D. (Lond.). *Elected by the Indian Chamber of Commerce.*—K. D. Jafan. *Elected by the Muslim Chamber of Commerce.*—Kassim A. Mohomed; *Elected by the Municipal Corporation of Calcutta.*—A. D. Khan, I.C.S.; *Nominated by the Government.* Capt. F. L. Hemming, R.N., V. Nihakanan, P. C. Mukerjee, S. C. Satyavadi.

Principal Officers.—Secretary.—P. C. Mitter; Traffic Manager.—F. D. C. Sumner; Chief Accountant.—A. J. Rose, A.C.R.A.; Chief Engineer.—R. M. H. Garvie, M.I.C.E.; Controller of Stores.—T. M. Barrell; Chief Mechanical Engineer.—N. M. Irvine, B.Sc., M. Mech. E.; Deputy Conservator.—Lt.-Cmdr. E. L. Pawsey, R.N. (Retd.); Port Pilotage Officer.—G. B. Hadley; Medical Officer.—Lt.-Col. P. J. Anderson, M.C., O.I.E., M.D., B.S., F.R.C.S., I.M.S. (Retd.); Consulting Engineers and London Agents.—Messrs. Rendel Palmer & Tritton.

COCHIN

The Port of Cochin, one of the five major ports in India, is a natural harbour lying on the direct route to Australia and the Far East from Europe.

It is open for deep-water traffic in the worst monsoons and provides a splendid anchorage at all times of the year. Any ship passing through the Suez Canal can enter the port even in the roughest weather. It has a strategic importance in South East Asia. It serves a vast hinterland of industrial planting areas comprising the States of Cochin and Travancore and the Southern districts of the Madras Province. Foreign and coastal steamer lines touch the Port regularly and Cochin is the passenger port for the United Kingdom, etc., in South India.

The Port consists of an extensive area of sheltered backwaters behind an opening, 400 yards wide. Partly in Indian Dominion and partly in Cochin State, its location is lat. 9° 58' and long. 76° 14' E.

A Broad gauge railway connects the Port through the Cochin State and S. I. Ryas, to all the main cities in India. Willingdon Island acreage situated in port area is a place of halt for Air India Service between Madras and Trivandrum.

The development of the harbour involved the cutting of a passage through the bar which blocked the entrance from the sea to an extensive backwater. The first cut through the bar of a wide and deep channel was made in 1928. The entrance channel is 450 ft. wide and about 3 miles long, buoyed on both sides according to regulations. The activities of the port are mainly centred in Willingdon Island which has been reclaimed in the backwaters by dredged soil from the inner channels. Since 1930 the harbour has been in regular use. A powerful tug has been provided for the convenience of shipping. A hotel on modern lines run by Spencer & Co. has been constructed by the Port to provide accommodation for passengers and other visitors to the Port.

Inside the harbour there are fourteen fore and aft berths, one swinging berth, one passenger berth and four wharf berths. 12 level lashing wharf cranes have been provided at the wharf berths, capable of lifting weights upto 3 and 10 tons. A floating crane for lifts upto 50 tons is also available. Sailing craft are moored with their own gear in a separate anchorage. One ware-house and eight sheds in Willingdon Island are available for storage of goods. There are three sheds at the main wharf for the handling of goods in transit. Vessels are brought into or taken out of harbour at practically any state of tide, day or night. There is a boat wharf with one 5-ton and three 2-ton hand cranes. There is a dry dock 240 ft. long and 14 ft. wide, suitable for vessels of less than 143 ft. draft but this is mainly intended for docking craft belonging to Harbour Authority and a fitting out wharf 300 ft. long with 11 ft. deep, close to Dry Dock, Bunker coal, Diesel and fuel oil are available. Fresh water from tank barge is supplied at the rate of Rs. 2 per ton during day, night or holiday, with a minimum of Rs. 40 per vessel per day delivered on board.

The principal imports are foodgrains, mineral oils, coal, piece goods, hardware, metals and provisions.

The principal exports are coir and coir products, tea, rubber, cashew kernels, ginger, pepper and spices.

STATISTICS SHOWING THE GROWTH OF THE PORT FROM 1943-44 TO 1947-48.

| Year | Imports | | Exports | | Total |
|---------|---------------|---------------|---------------|------|-------|
| | Tons | Tons | Tons | Tons | |
| 1943-44 | 89,339 | 82,177 | 1,71,516 | | |
| 1944-45 | 2,26,118 | 71,257 | 2,97,375 | | |
| 1945-46 | 3,80,564 | 1,11,991 | 4,92,555 | | |
| 1946-47 | 9,70,312 | 2,96,026 | 1,266,338 | | |
| 1947-48 | 8,50,995 | 3,16,315 | 1,167,310 | | |
| | (Dead weight) | (Dead weight) | (Dead weight) | | |

The affairs of the Port are under the administrative control of the Ministry of Transport of the Government of India and under the immediate control of the Administrative Officer and Chief Engineer appointed by that Government and advised by an Advisory Committee representing the Governments of India, Cochin and Travancore, the local Chambers of Commerce and Municipalities.

Off. Administrative Officer and Chief Engineer.—V. Srinivasan; *Executive Engineer.*—C. V. Venkiteswaran, B.E.; *Port Officer.*—H. G. Fletcher, J.P.; *Harbour Master.*—B. Brook; *Traffic Manager.*—Topen Bhose, B.A.; *Chief Accountant.*—A. N. Ayya-wami, M.A.; *Port Health Officer.*—Dr. A. N. Sinha, M.B., B.S., D.P.H.; *Mechanical Superintendent.*—R. Bately; *Secretary and Statistical Officer.*—J. Cyril Raj, M.A.

MADRAS

The Madras Harbour is an artificial one formed by two arms projecting from a low, sandy coast. There is a lighter fleet consisting of 55 crafts which include licensed and unlicensed crafts owned by firms and others. Two tugs are available for assisting vessels and two for towing the lighter fleet. Loading and discharging by means of lighters are effected on a frontage of about 5/8 of a mile partly ferro concrete wharves and partly at the west quay equipped with steam, electric and hydraulic cranes. There are about 8.2 acres of transit shedding alongside the quays for the accommodation of all types of cargo and also 10.76 acres of warehouses for lease to exporters or importers. There is a shipway for the repairs of small craft up to 965 tons. Ships get their water alongside the quays or from water boats. Large passenger vessels habitually use the quays which have direct railway connection with the neighbouring railways. Coal for bunkers and oil fuel are always available.

The affairs of the Port are administered by a Board of Trustees which function under the Madras Port Trust Act.

The Port is about 3/5 mile square (excluding boat basin, etc.) with an area of approximately 200 acres.

There is accommodation for 18 vessels inside the harbour, 9 at Moorings and 9 at Quays. The depth at moorings ranges from 28 ft. to 31 ft. 6" and at quays from 26 ft. to 30 ft. Pilotage is compulsory. There are no navigational difficulties and the Port is approached direct from the open sea.

The Income and Expenditure for the year 1947-48 were Rs. 93,01,000 and Rs. 75,70,298 respectively.

The chief imports are coal and coke, food grains, mineral oils, railway materials, metals, timber, building and engineering materials, cement, etc., Government stores, motor cars, provisions, cycles and parts and accessories of cars and trucks, beer and wines, paper and stationery, tanning substances, including wattle bark, glass and glass ware, hardware and chemical manures, seeds and nuts, hides and skins, vegetables and provisions, cotton, oil cake, bone meal, piece goods, food grains, turmeric, ores, and tobacco are the principal exports.

STATISTICS SHOWING THE GROWTH OF THE PORT FROM 1938-39 TO 1947-48

| Years | Imports | | Exports | | Total |
|---------|-----------|---------|-----------|------|-------|
| | Tons | Tons | Tons | Tons | |
| 1938-39 | 763,702 | 385,343 | 1,149,045 | | |
| 1939-40 | 895,651 | 391,956 | 1,287,606 | | |
| 1940-41 | 625,109 | 289,126 | 914,235 | | |
| 1941-42 | 573,296 | 297,372 | 870,668 | | |
| 1942-43 | 337,188 | 158,501 | 495,709 | | |
| 1943-44 | 696,007 | 374,079 | 1,070,086 | | |
| 1944-45 | 2,053,606 | 511,461 | 2,565,067 | | |
| 1945-46 | 1,833,496 | 648,232 | 2,481,828 | | |
| 1946-47 | 1,490,229 | 336,674 | 1,736,903 | | |
| 1947-48 | 1,382,795 | 278,399 | 1,661,194 | | |

Trustees of The Port: Appointed by Government.—G. P. Alexander, C.I.E., M.Inst.C.E., *Chairman*; W. G. W. Reid, General Manager, M. & S. Railway; K. Durai General Manager, S.I. Railway; R. K. Vaish, M.A., *Collector of Customs*; T. M. S. Mann, L.C.S., *Director of Industries*; Commerce; S. Guruswami, *Representative of labour*.

Elected by Commercial Bodies.—(Representing the Corporation of Madras): G. Rangiah Naidu, (Representing Madras Chamber of Commerce, Madras); C. Mainprize, J. R. Galloway, E. W. Hatchelor, C.I.E., H. R. Gossay, (Representing the Madras Trades' Association); S. Anantaramakrishnan, (Representing the Southern India Chamber of Commerce); M. S. V. Aradappa Chetty, D. C. Kothari, V. S. L. Nathan, (Representing the Andhra Chamber of Commerce); Y. V. Lotah, (Representing the Southern India Skin and Hide Merchants' Association); Y. R. Gaitonde, Mohamed Mustun Sheriff Sahib.

Principal Officers: Port Engineer.—G. P. Alexander, C.I.E., M.Inst.C.E., *Deputy Conservator of Port*; L. J. Whitlock, *Chief Accountant*; G. Venkataraya Rao, M.A., L.A.S., M.I.C.A., *Traffic Manager*; W. S. Vaidyanathan, B.A., *Executive Engineer*; S. Sagarbhushanam, B.A., M.E., A.I.E.E., *Mechanical and Electrical Engineer*; F. G. Cooper, *Medical Officer*; M. T. S. Subramaniam, M.I.C.B.S., D.I.M., D.I.H.

VIZAGAPATAM

Vizagapatam Harbour was created in order to supply an outlet for a large area of fertile country adjacent to the east coast of India, with considerable mineral resources and no alternative access to the outside world. The scheme was first formulated many years ago in the days of the East India Company, but was not actually taken up before 1925. In 1933, the harbour was first opened for sea-going vessels, and it now provides the following facilities:

An Entrance Channel, sheltered by hills, with a minimum depth sufficient to admit vessels drawing 28½ feet of water on any day of the year, gives access to a completely sheltered inside harbour, provided with three quays berths, each 500 feet long, and equipped with fully portal electric cranes, transit sheds, and railway lines, both behind and on the quay-side of the transit shed. Two of these berths are specially equipped for the rapid shipment of manganese ore in bulk; one of them is also equipped as an auxiliary coal bunkering berth. In addition, a special coal bunkering jetty berth is provided, at which coal is carried on board ships direct over adjustable gangways. Four mooring berths are also provided, at which vessels are served by a fleet of lighters operated by the port. A timber jetty berth for bunkering fuel oil has been provided. Behind this, oil storage tanks are installed.

Storage Sheds, for lease to import and export merchants, are provided with water frontage and rail service to the pier. From these sheds, export cargo can be carried directly alongside vessels by means of lighters.

The hauling equipment of the Harbour consists of four tugs of 1,000, 600, 450 and 400 H.P.

A graving dock with an entrance 60 feet 6 inches wide is provided; but in view of the fact that its length is at present limited to 366 feet, it is used principally for docking the craft of the Port, although it is also used by a certain number of small size vessels of other ownerships. The construction of another Dry Dock to take ships upto 600 ft. in length is being contemplated. The port has a floating crane and can deal with lifts upto 50 ton capacity.

There is a special railway connection, linking in with the Central Provinces. Additional railway lines for development of the hinterland are being surveyed.

INCOME AND EXPENDITURE OF THE PORT FOR THE YEAR 1947-48

| | Receipts. Rs. | Expenditure. Rs. |
|---------------|------------------|---------------------|
| Port Fund | 38,03,537 | 38,40,543 |
| Pilotage Fund | 87,116 | 64,043 |

STATISTICS SHOWING THE GROWTH OF THE PORT FROM 1944-45 TO 1947-48

| Year | Imports | Exports | Total |
|---------|----------|----------|----------|
| | Tons | Tons | Tons |
| 1944-45 | 1,19,675 | 2,85,480 | 4,05,155 |
| 1945-46 | 57,987 | 4,10,812 | 4,68,829 |
| 1946-47 | 99,909 | 5,38,675 | 6,38,584 |
| 1947-48 | 1,70,417 | 5,45,994 | 7,16,411 |

The Port is administered by the Government of India, Railway Department (Railway Board), through the Bengal Nagpur Railway.

Principal Officers. *Port Conservator*, P. C. Mukerjee, General Manager, B.N. Railway, Calcutta; *Port Administrative Officer & Port Engineer*, S. Nampudiah, Vizagapatam; *Deputy Port Conservator*, L. H. Ghosh, Vizagapatam; *Superintendent, Traffic*, J. K. Ghose, Vizagapatam; *Chief Accountant*, P. T. Mathew, Vizagapatam.

Other Ports ALLEPPEY

Alleppey, the premier port and commercial centre in Travancore, is situated about 50 miles north of Quilon and 35 miles south of Cochin. Alleppey is an open port. There is a mud bank off and near the pier which affords smooth water for shipping operations. A canal connects the port with the interior backwaters. Its warehouses are a convenient depot for the storage & disposal of all fresh produce, and it possesses a roadstead affording safe anchorage during the greater part of the year.

Port dues are 9 pies per registered ton.

The chief exports are copra, coconuts, coir fibre and matting, cardamoms, ginger and pepper.

Principal Port Officer, M. Raja Raja Varma, B.A.

BALASORE

Balasore, situated on the right bank of the Sundarling river and headquarters of the district of that name, was the only port of which Orissa could boast until the opening up of the country after the great famine of 1866. It was frequented at that time by vessels with cargoes of rice from Madras and with cowries, then largely used for currency, from the Laccadives and Maldives. The port is of historical interest as being one of the earliest European Settlements in India, factories having been established here in the 17th century by English, Dutch, French, Danish and Portuguese Merchants.

Balasore as a port is practically defunct. Foreign ships have ceased to visit since 1904 and coastal ships since 1910. An occasional country craft of negligible tonnage enters during the cold weather season for paddy, but beyond that there is no sea-borne trade. There is no import trade.

BHAVNAGAR

Bhavnagar city, formerly the capital of Bhavnagar State, and now the administrative headquarters of Gohilwad division of the Union of Saurashtra, lies near the head of the Gulf of Cambay in Lat. 21° 47' N., Long. 72° 08' E.

The port facilities comprise a deep water anchorage at Ghogo, a concrete jetty capable of berthing two ocean-going vessels and complete with modern crane and rail facilities five miles

north-west of the anchorage, and a fully equipped steel jetty for small coasting vessels 8 miles further up the Bhavnagar creek from concrete jetty.

There is ample warehouse accommodation and direct rail connection between the jetties and the metre gauge system of India.

BIMLIPATAM

Bimlipatam is 22 miles north-west of Waltair. It is connected by good roads with Vizianagram and Vizagapatam. The harbour is an open roadstead and ships lie about a mile off the shore and loading and unloading is effected by lighters. There are considerable exports of Bimlipatam jute, hemp, myrobalans, nicer seeds, gingelly seeds and groundnut kernels to foreign ports.

Coastwise imports and exports are of little importance except import of jute from Chittagong.

No steamers call at this Port from July 3, 1940 to end of war. Vessels anchor from 6 to 8 fathoms abreast the river Gouthiani during the south-west monsoon, and a little further to north in the north-east monsoon (Barings are different). Bottom is sandy and rocky.

Dues are to be paid according to schedule; overtime fees, ground rent, and boat license fees are also charged.

CALICUT

Calicut, the capital of the Malabar District, is some 42 miles south of Tellicherry and about 90 miles north of Cochin. It is 413 miles by rail from Madras. The port is practically closed during the south-west monsoon from the end of May until the latter half of August. The sea is very shallow and steamers anchor about three miles from the shore, connection being maintained by lighters and small boats. Nativecraft of 150 tons and below lie about 800 yards off the shore.

Beylore seven miles to the south of the mouth of the river of that name, is regarded as a wharf of Calicut Port. It has a number of wharves along the river bank and native craft of 150 tons burthen are able to anchor half a mile from the mouth.

The principal exports are coir, coir fibre, copra, coffee, tea, pepper, ginger, rubber, groundnut, raw cotton and fish-manure. The foreign import trade, consists chiefly of general merchandise.

CHANDBALI

Chandbali situated on the left bank of the Baitarani River, is a port of some importance on the Orissa Coast. It has a flourishing coasting trade with Calcutta but there is no direct foreign trade as in former days. The exports consist mainly of rice and the imports are cotton twist, piecegoods, kerosene oil, salt and gunny bags.

CUDDALORE

Cuddalore is situated about 15 miles south of Pondicherry. Steamers anchor about a mile off-shore, and the harbour wharves are situated on the western bank of the Uppanar Backwater and have been provided with a quay wall to facilitate the loading and unloading of cargo boats therefrom. The city wall is connected to the main line by railway.

The export trade consists principally of groundnut kernels, oils and coloured piecegoods in small quantities. The coastal trade consists mainly of grain, pulse and coal. The foreign import trade is chiefly in boiled betelnuts from the Malay Straits.

CUTCH MANDVI

The Harbour is situated in the Gulf of Kutch, is protected against westerly winds by the Albert Edward Breakwater, 1,850 feet long, and craft of from 9 to 10 feet draught can enter the harbour at High Water Neaps. There is also a pier and pitched slope where country craft can secure alongside and work cargo.

The Port is unfortunately exposed to the full blast of the South-west Monsoon gales, and is closed for maritime traffic from about the end of April until the month of September.

During the fairweather season, coastal steamers of the B.I.S.N. Coy. and the B.S.N. Coy. call regularly and anchor about 1½ miles south of the port, passengers and cargo being discharged into small craft for conveyance between steamers and shore.

Cutch Mandvi Lighthouse. A light is exhibited at an elevation of 115 feet from a white masonry tower 56 feet in height situated on the south-west bastion of Mandvi Port. A light is also exhibited at an elevation of 39 feet from the end of the breakwater.

The trade of the Port amounts to Rs. 135 Lakhs annually. Recent commercial undertakings include a Match Factory, Oil Mills and Metal Works.

CUTTACK

Cuttack, is situated 253 miles from Calcutta at the apex of a triangle formed by the Mahanadi and Katjuri rivers. It is on the main line of railway running between Madras and Calcutta and is connected by canal with Chandbali between which a small inland steamer trade exists and which links Cuttack with Calcutta. A short distance up the coast from Cuttack lies the port of False Point which has been closed since 1924, as the seaborne trade had entirely disappeared.

The decline of the small ports is said to be due to a variety of reasons and usually the chief reason quoted is that the ports have silted up but this is not actually the case. The ports have declined for two main reasons namely the coastal railway which has automatically cut out the sea trade since it cannot assist it and secondly that larger deep draft steamers have taken the place of the smaller coasting steamers and sailing ships of 30 years ago. The long and deeper draft steamers cannot enter such small ports as Balasore, Chandbali and False Point and hence the trade which at one time found its way by sea has now been caught by the railway and carried to the larger ports like Calcutta from where it is distributed elsewhere.

DHANUSHKODI

Dhanushkodi is the terminus of the South Indian Railway on the south east extremity of the Island of Rameswaram at the junction of Palk Strait with the Gulf of Mannar and connected with Talaimannar in Ceylon 21 miles distant by steamer service, the journey being made in about two hours. The port is equipped with a pier belonging to the S.I. Ry. Cargo is loaded direct from the railway trucks on the pier into steamer batches.

The Port is an open roadstead. The ferry steamers of the S.I.Ry. are moored at their own pier. No other steamers call here.

There are no channels or anchorages at the Port.

Port dues are collected on the net tonnage of vessels calling under the Indian Port Act XV of 1908. No other charges are collected at the Port.

Average annual receipts of the Port are Rs. 1,200 and charges Rs. 3,000.

The chief exports are fish (dry and salted), cotton piecegoods and beedies, and imports—aracanuts, coconuts, hides and skins and hardware.

IMPORTS & EXPORTS DURING 1947-48

| | Tons |
|-----------------|--------|
| Imports | 3,519 |
| Export | 20,254 |

The Port Conservator, Dhanushkodi, is the principal officer of administration of the Port.

DWARKA

Just below Port Okha is Dwarka, a famous place of pilgrimage. After the development of Port Okha, Dwarka has lost its importance as a port. Consequently the ocean-going steamers between Bombay and Karachi at present generally do not touch at Dwarka but at Port Okha. Steamers lie off at some distance from the shore and the traffic is chiefly local.

GOPALPUR

Gopalpur in the Ganjam District is situated ten miles from Berhampur on the B.N.Rly. It lies between Lat. 19° 13' N, Long. 84° 52' E; R of T. Sp. 6½ ft., Neap 4½ ft.

The chief imports are provisions, grain, tobacco, coriander seeds, soap nuts, empty bottles, potatoes, ginger, matches, coconut oil, and the exports are paddy, pigs, rice, gingelly seeds, dry leaves, horse grain, prawns, skins, and clava oil. There is passenger trade with Burma.

The Port is an open roadstead. Cargoes are landed and shipped on beach. Anchorage in 6 to 7 fathoms, sand and mud.

Port dues: Foreign vessels 3 annas per ton per voyage; coasting vessels, 1 anna per ton once in 30 days. Working cargo, about 2 annas per ton and lanching and shipping about Re. 0-14-0 per ton.

Port Conservator: A. D. Bhavanasi; Lloyd's Agents, The Coromandel Co. Ltd.

KAKINADA

Kakinada, is situated on the Cocanada Bay, just north of the Godavari River, about 80 miles south of Vizagapatnam and 270 miles north of Madras. In spite of several disabilities, it ranks fifth in importance among the ports of the Madras Presidency. Large steamers anchor about 6 to 7 miles from the shore and service is maintained with lighters which land cargo at the numerous small wharves and jetties constructed on the banks of the Cocanada Canal.

The trade of the port like other open roadstead ports was effected by the war. Foreign export trade of tobacco and palmira fibre has resumed, likewise coastal trade comprising of turmeric, pulses, castor and groundnut oil.

Import trade at present is confined to occasional consignments of Burma Teak.

KANDLA

Kandla Creek forms a natural harbour with good anchorage and sufficient depth of water for large ocean-going cargo steamers. The Port was opened for traffic in 1931 and has been recognised in Admiralty Chart No. 43 in the Gulf of Kutch.

The port area consists of 13,70,000 square feet of reclaimed land and has immense space for extension of reclamation.

The port has 6 miles of anchorage with depth of water at L.W.M.O.S.T. of over 36 feet and with ample swinging space. The reinforced concrete pier can berth 2 ships at a time. Steamers over 300 feet in length are moored along the outside of the pier. There is also a timber jetty which can accommodate vessels upto 800 tons. This jetty is also used for embarkation and disembarkation of passengers at any state of tide.

All over the Kutch coast there are well equipped lighthouses which are efficiently maintained. The Channel leading from the Gulf of Kutch into the Port is well defined by Buoys and Beacons erected in the foreshore. Pilots meet steamers at the outer Tuna Buoy. There are sufficient facilities for warehousing and more are being provided. The Port is connected by telephone and telegraph and rail with the hinterland. There is a dispensary, a dharamsala and a guest-house.

Port charges are very moderate and it is the policy of the State to encourage shipping. Port dues are Re. 0-1-0 per net registered ton. Pier dues vary from Rs. 5 to Rs. 24 per day according

to the tonnage of a ship. Lighthouse dues of Re. 0-1-0 per net registered ton are recovered once in six months.

The income from port dues and other port charges for the year 1946-47 was Rs. 57,000 and expenditure for general maintenance of the port was Rs. 49,000.

| Year | Imports | Exports | Total |
|---------|---------|---------|--------|
| | Tons | Tons | Tons |
| 1945-46 | 7,149 | 8,810 | 16,259 |
| 1946-47 | 35,812 | 13,631 | 79,446 |

MANGALORE

To the south of Goa lies the Madras district of South Kanara whose district headquarters is Mangalore, open to the coasting trade of Karwar, Honavar and Bhalkal. Mangalore is situated at the junction of the Gorpur & Netravati Rivers, about 170 miles south of Mormugao. It is a tidal port served chiefly by backwater communication with the hinterland. It is the north western terminus of the South Indian Railway.

It is an open roadstead, steamers anchor about 2 miles off the shore in 5 to 6 fathoms of water. Native craft of small draft enter the backwater at all states of the tides and anchor in the inner anchorage. Vessels of low tonnage berth at the wharves. Vessels above 60 tons anchor in backwater, and the cargo is conveyed by lighters from the anchorage to the wharves. The length of the landing and shipping wharves at present is 3,156 ft. and an extension of 880 ft. opposite the Railway Goods shed is under construction to facilitate rail-cum-sea traffic. There are three hand cranes at the Port. One of 5 tons within Customs enclosures and the other two 1½ tons at North and South reclamation respectively. For the use of 5 tons crane a fee of 12 annas per ton lift, is charged by this department.

Mofsa Launch 'Mangalore' is available for towing lighters and vessels from backwater to sea and vice versa and conveying passengers and ship's papers to and from the steamers at the outer anchorage. In addition there are also 3 private launches available at the Port for hire.

The chief exports to Europe are pepper, tea and cashew kernels (exported also to the United States) from neighbouring areas, coffee and sandalwood from Mysore, rubber to Ceylon and Gile, rice, salt fish, dried fruits and fish manures to Ceylon, Goa and the Persian Gulf. The foreign import trade is steadily increasing.

Mangalore is the favourite port on the coast for the Laccadive and Amindivi Islanders, who bring their coir and other coconut produce there for sale.

The income and expenditure for the Minor Ports Fund for 1946-47 were Rs. 27,800 and Rs. 31,000 respectively.

MASULIPATAM

Masulipatam is the principal port in the delta of the Krishna River. It is an open roadstead. A flashing light is exhibited. There is a conical buoy 4 miles eastward of the Lighthouse marking the position for boats to wait outside the bar in order to communicate with vessels approaching the Port. The roadstead is capacious and holding ground good. A convenient anchorage is in depths of 5½ fathoms, about 5½ miles east-south-eastward of the Lighthouse.

Port dues are at Rs. 0-4-0 per ton. Landing or shipping fees are charged at Re. 0-12-0 per ton of cargo.

Normal annual income is about Rs. 25,000 and expenditure is Rs. 20,000.

The chief export commodity is groundnuts to foreign countries and ordinarily averages about 130,000 tons a year. Imports are very small.

A port officer is in charge of the Port.

Port Officer.—L. G. Hardas.

NAVLAKHI

Navlakhi is one of the chief ports of Saurashtra and has a fine situation on the coast of Saurashtra. Ships anchor about three miles from the pier. Navlakhi is the terminus on the metre-gauge line of the Morvi section, Saurashtra Railway, and is thus directly connected with Delhi, Rajputana, Gujarat and Saurashtra. The port is open throughout the year and has been greatly developed in the last decade. It has ample godown space for storage purposes.

NAGAPATTINAM

Nagapattinam, the Chief Port in the Tanjore District is about 13 miles South of Kankal. The harbour is equipped with wharves and other facilities for the landing and shipment of goods and the considerable foreshore to the north is utilized for the storage of timber. Nagore is the eastern terminus of a branch of the South Indian Railway and a siding runs into the harbour premises at the Nagapattinam Beach Station. The port is further connected by river and canal with the tobacco growing areas to the south. The harbour is situated at the junction of the Kadivaiyar River with the sea. Nagore, 5 miles to the north, a great place of pilgrimage for Muhammadans, is a wharf of Nagapattinam. Steamers anchor in the roads about a mile off from the shore and cargo is transported between ship and shore by country crafts of which abundance is available locally. The depth on the bar varies from 1½ feet to 3½ feet L.W.O.S.T. according to season.

Port dues two to six annas per ton. Landing and shipping dues 7½ to 1 annas per ton.

The principal exports from Nagapattinam are groundnuts for Europe and coloured cotton piecegoods, tobacco and fresh vegetables for Penang, Singapore and Colombo, the port being the chief providing centre for the colonies who are constantly leaving by this route to work on rubber and tea estates in Ceylon and the Federated Malay States.

The principal imports are betelnuts and Lummehella logs.

Port Officer.—M. L. Advani.

OKHA

Port Okha, situated in a detached portion of the former Baroda State in Gujarat is dissimilar from other Kathiawar ports. It is an entirely modern conception, begun and completed with enterprise for the express purpose of dealing with ocean going traffic and commodities.

It lies in a strategic position at the extreme north-east point of the Kathiawar Peninsula, readily accessible to all steamers trading along that coast. The Harbour scheme has been well designed; there is an excellent terra-concrete jetty, served by railway lines and trams, alongside which large vessels can lie at all states of the tide, and there are also swinging moorings for other vessels in a protective position. The warehouse accommodation and railway connections are good. Okha is far removed from the large centres of population, being 231 miles from Wadiwan Junction through which railway centre its traffic must pass.

Rapid expansion scheme is being put into effect by extending the pier to accommodate three vessels and creating two more mooring berths.

The Port has an area of 2 sq. miles and the harbour 6 sq. miles.

One R.C.C. pier which can accommodate ships up to 559 ft. long with a draft of up to 28½ ft. at all states of tide. There is also a single mooring buoy. Two to three coasting steamers can also lie at their own anchors in the harbour in stream. The berths at the mooring buoy and anchorage in stream are restricted to a draft of 18 ft. at present but as soon as a dredger is available, these berths will be able to accommodate steamers up to 26 ft. draft.

Statistics showing the growth of the Port. —**TRAFFIC HANDLED IN TONS.**

| Year | Tons | Year | Tons | Year | Tons |
|---------|----------|---------|----------|---------|----------|
| 1926-27 | 16,196 | 1933-34 | 1,82,411 | 1940-41 | 1,69,366 |
| 1927-28 | 51,535 | 1934-35 | 1,95,220 | 1941-42 | 2,49,110 |
| 1928-29 | 80,527 | 1935-36 | 1,98,713 | 1942-43 | 2,74,702 |
| 1929-30 | 73,108 | 1936-37 | 1,78,831 | 1943-44 | 2,00,125 |
| 1930-31 | 73,909 | 1937-38 | 2,32,188 | 1944-45 | 2,50,602 |
| 1931-32 | 1,35,545 | 1938-39 | 1,75,182 | 1945-46 | 2,05,550 |
| 1932-33 | 1,71,118 | 1939-40 | 2,97,408 | 1946-47 | 2,51,583 |
| | | | | 1947-48 | 3,81,848 |

Steamers that cannot enter the harbour due to deep draft, are, weather permitting, allowed to discharge cargoes at the outer anchorage and barges can be supplied if asked for.

Ships are navigated during day light hours only. Small coasting steamers can enter and leave the harbour at any state of tide. The larger ships however have to wait for slack water.

Port dues Rs. 0-1-0 per ton. Pier dues Rs. 20 per day and Pilotage charge Rs. 100 each way.

The wharfage charge on cargo is recovered according to railway classification. It is very nominal and includes services of handling goods, warehousing and insurance against fire for six months.

Imports and Exports of Principal Goods.—The principal commodities of export are cement, salt, oil seeds and heavy chemicals. About 60 thousand tons of cement and salt each are exported. The imports comprise all varieties from coal, petroleum products, heavy and light machinery, railway materials and all types of merchandise, hardware, glassware to wines and spirits and foodstuffs.

Principal Officers.—Port Officer.—Capt. D. V. Singh. Harbour Engineer.—B. C. Mehta; Harbour Master.—Capt. D. V. Singh.

The expansion of the port and trade is carried out on systematic lines. Areas are set apart for residential purposes where plots of suitable sizes are given on generous terms. Industrial area linked up with railway sidings to the port and station with sea frontage, suitable for industries of various magnitude, from ship-building yard to oil mill, offers great facility for enterprise.

PORBANDAR

The capital town of Porbandar State is situated half way between the ports of Bombay and Karachi. Ocean going steamers anchor at about 1.2 mile from the shore. Port of Porbandar is an important regular Port of call for the B.I.S.N.Co. Ltd's steamers to embark and disembark passengers to and from Africa. It has been so for the last 25 years. The cargo is discharged into lighters at the open roadstead which are towed to the creek by Port tugs. The length of the quay wall, which runs throughout the length of the creek, is about 1,000 yards. The wharf area is more than one square mile. There is metre-gauge railway line running right along the quay wall, which connects port of Porbandar with various important business centres in the interior of India, such as Delhi, Ahmedabad, Bombay. The port being an open roadstead is closed for steamship traffic between 15th May and 15th September being the period of high seas and monsoon on this coast.

The principal imports at this port are wet and dry dates, timber, coal, sugar, machinery, petrol, kerosene, coconuts, jaggery, etc. The exports are salt, cement, glue, white clay powder and stone.

During the war the trade of Porbandar was chiefly coastwise.

Port Officer.—D. V. Bhatt; Chief Customs Officer.—R. S. Raja Iyer, u.com.

QUILON

Quilon, the "Coilum" of Marco Polo, has been a trading centre from very early times. It is connected with Alleppey by backwater, and is on the Shencottah-Quilon-Trivandrum branch of the South Indian Railway. Vessels anchor about 1 mile from the shore and a railway siding runs up to the landing place.

The chief exports are coconut oil, coir mats, timber, fish, ilmenite and cashew kernel. The export of cashew kernel in steamers bound for U.S.A. ports is carried on during the seasonal months—August to May—by means of floating docks. Raw cashew nuts from Portuguese East Africa is the chief item of import from foreign countries through this port. During seasonal months, food grains & sundry cargo are also imported. Since steamers can anchor in deep waters (7 to 8 fathoms) quite close to the shore the port has got facilities for improving the trade.

SURAT

Surat is situated 14 miles from the sea with which it is connected by a river navigable only by small country craft. Surat was one of the earliest and most important of the East India Company's factories, and its trade was very considerable in agricultural produce and cotton, the value of which was estimated in 1801 at over £1,000,000. A hundred years later this total had contracted to £200,000 and in the last fifteen years the decrease has been even more marked, most of the trade being now transferred to Bombay owing to the linking up of the two ports by the Bombay, Baroda and Central India Railway.

TELLICHERRY

Tellicherry is situated on the Madras-Mangalore line of the South Indian Railway and is about 94 miles south of Mangalore and 14 miles south of Cannanore a town of about the same size with much smaller foreign trade.

Steamers which anchor about two miles off the shore can work at Tellicherry even during the monsoon when all the other Ports on the coast are closed, owing to the natural backwater provided by the rocky approaches to the Port. Facilities for landing and shipping of cargo are provided. There is a pier with 4 one-ton cranes and one five-ton crane, wharf wall extending to nearly 600 feet on either side of the pier. Port dues leviable on steamers vary from 4 annas to 6 annas a ton according to the character of the voyage of the steamer.

The principal exports are coffee and pepper brought down from interior areas by road, such as copra, coconuts, sandalwood, tea, ginger, timber, rosewood and chief imports are grains and pulses, salt, kerosene oil, piecegoods, metals and glassware.

TUTICORIN

Tuticorin, an important port of southern India, is situated near the southern edge of the Coromandel Coast. It has the largest trade in South India next to Madras and Cochin. The port is open all through the year and ships have to anchor in open roadstead 5 to 6 miles off the shore. Harar Island upon which the lighthouse is situated affords considerable protection to lighters and other craft used for landing and shipping and the work is seldom interrupted by

bad weather. The port commands a very large import and export trade and is a direct link to Colombo, other coastal ports in India and foreign ports.

The chief articles of export are cotton, senna leaves, onions, chillies and livestock. The South Indian Railway runs along side the landing and shipping wharves from which goods can be transhipped to launches and lighters.

The port has an area of 15.7 acres.

Vessels anchor in open roadstead 5 or 6 miles from shore. There is a boat channel 400' wide from shore to deep water with depth of 11'-0" L.W.O.S.T. For handling the cargo from cargo boats, there are six piers of lengths 315', 478', 138', 288', 328' and 255'. Cargoes up to 5 tons can be handled by cranes.

The port is safe for ships all through the year. There are two lighthouses one at Hare Island and the other at Devil's point. The light at Hare Island is an Aga white light 1 second, eclipse 9 seconds, visibility 14 miles and candle power 1,000 British Candles. The light at Devil's point is a flash light giving 30 flashes per minute, visibility 11 miles and candle power 207 British candles.

Landing and shipping dues of Rs. 0.11-3 pence are charged generally. Foreign steamers—3 annas per ton; coasting steamers—2 annas per ton; sailing vessels—1 anna per ton.

The income and expenditure as per the Administration Report for 1947-48 were Rs. 3,16,575 and Rs. 4,37,077 respectively.

The Port stands second in rank among minor ports and third in the Province.

A total 1,54,599 tons of goods were imported in 1947-48; the chief imports being grains, coal, cotton, machinery, scrap iron, coconuts, firewood, palm-yeat, Bakel baskets. 77,802 tons of goods were exported in 1947-48, the principal exports being onions, chillies, cotton, yarn, fibre, senna, goods salt, sheep, dry fish, cotton piece and cotton waste.

The Port is administered by a Board of thirteen trustees.

Chairman, Port Trust, R. V. Raman, I.A.S.; Port Officer, Secretary and Traffic Manager, Port Trust, W. A. Bow Samter.

THE CURRENCY SYSTEM

THE history of Indian currency is fully summarised in the Reports of the Herschell, Fowler and Babington-Smith Committees, and the Chamberlain and Hilton Young Commissions. This historical retrospect is confined to a brief review of the facts and events of the past which chiefly influence the present and serve as a guide to the future.

Prior to 1818 India was suffering from political as well as currency chaos with a variety of coins of both silver and gold of different denominations in circulation. By the Act of 1818 the East India Company made the silver rupee of 180 grains 11/12ths the unlimited legal tender for South India. They substituted the silver rupee for the gold pagoda as the standard coin of the Madras Presidency where gold coins had been the standard currency for hundreds of years.

However the various Presidencies under the East India Company had rupees of different weights and fineness and the rupee of one Presidency was not legal tender in another. Great inconvenience, therefore, arose in making payments, and in actual payment they were weighed as bullion. A uniform system of coinage was, therefore, found necessary which was obtained by the Act of 1835. The 1835 Gold and Silver Coinage Act was enacted so as to make the rupee unlimited legal tender and deprive the gold coins of their legal tender character throughout British India. But in order to avoid the embarrassing fluctuations in the rate of exchange with gold standard countries consequent on the severe slump in the silver market from 1872 onwards, it was decided in 1893, in accordance with the recommendations of the Herschell Committee, to close the mints to the free coinage of silver. The stoppage of silver coinage was followed by an appreciation of the rupee, and by 1898 it had reached the level of 1s. 4d. The rupee remained unlimited legal tender, and was the standard of value for all internal transactions.

Sterling Exchange Standard.—The policy adopted in 1893, by the closing of the mints to the free coinage of silver, had for its declared object the establishment of a gold standard for India, and the Fowler Committee was invited in 1898 to consider how this object could best be secured. This Committee favoured the making of the British sovereign a legal tender and a current coin in India and recommended, at the same time, that "the Indian mints should be thrown open to the unrestricted coinage of gold on terms and conditions such as govern the three Australian branches of the Royal Mint. The result would be that, under identical conditions, the sovereigns would be coined and would circulate both at home and in India."

This recommendation was accepted by the Secretary of State for India and the Government of India and the effective establishment of a gold standard based on a gold currency thus became the recognised object of Government

and their advisers. But Government's first attempt to introduce gold into circulation was not a success, and the Indian currency system developed in the years that followed along lines different from those foreseen in 1898. Gold never became a substantial part of the circulation. Apart from small change, the internal currency consisted almost entirely of tokens, one printed on silver, the rupee, and the other on paper, the currency note. Their value was maintained at 1s. 4d. gold (there was during this period no difference between gold and sterling) by the offer of the Secretary of State to sell bills on India without limit of amount at 1s. 4d., and by the sale of drafts on the Secretary of State on occasions when, owing to temporary variations in the currents of trade, exchange tended to fall below the 1s. 4d. level. The latter process was not, however, the subject of a statutory obligation, nor was it in practice carried out as a matter of course. For instance the Secretary of State had to be consulted before offers of reverse remittances were announced, and the Government of India never went so far as to undertake to offer sterling drafts in all circumstances. The standard thus evolved was commonly known as a gold exchange standard, although in truth in so far as it amounted to a definite standard at all, it was a standard of sterling exchange.

The Chamberlain Commission was appointed in April 1913 to inquire, among other things, whether the then existing practice in currency matters was conducive to the interests of India. It reported: "The people of India neither desire nor need any considerable amount of gold for circulation as currency, and the currency most generally suitable for the internal needs of India consists of rupees and notes. A mint for the coinage of gold is not needed for purposes of currency or exchange, but if Indian sentiment genuinely demands it, and the Government of India are prepared to incur the expense, there is no objection in principle to its establishment either from the Indian or from the Imperial standpoint; provided that the coin minted is the sovereign or the half sovereign; and it is pre-eminently a question in which Indian sentiment should prevail. If a mint for the coinage of gold is not established, refined gold should be received at the Bombay Mint in exchange of currency. The Government of India should continue to aim at giving the people the form of currency which they demand, whether rupees, notes or gold, but the use of notes should be encouraged. The essential point is that this internal currency should be supported for exchange purposes by a thoroughly adequate reserve of gold and sterling."

Thus, in effect, the Chamberlain Commission abandoned the ideal of a gold standard based on a gold currency and accepted in its place an exchange standard with an excrecent currency

of sovereigns not essential to the working of the system. Owing to the outbreak of the First World War no action was taken on these recommendations.

Fluctuations. The war of 1914-18 put the currency system of India, in common with those of other countries, to a severe test. The price of silver rose to unprecedented heights. The world demand for silver was unusually keen, particularly for coinage. The coinage of British Empire alone absorbed nearly 108 million ounces during 1915-18 as against 30.5 million between 1910-13. The material of the silver token became worth more than its face value. The Government found it difficult to continue their unlimited offer of rupees at the long-established rate. There was a keen demand for Indian exports, and there were exceptional disbursements to be made on behalf of the British Government. Internal currency had to be in some way provided, and it could no longer be provided on the old terms. Simultaneously there was a reduction in the output of the world's silver mines coinciding with an increased demand for the metal. The price of silver in 1915 was 27s. 6d. per ounce; by May 1919 it was 58s.; and on December 17 of that year it reached 78s. Confronted with these difficulties, the authorities allowed the rupee, so long anchored at 1s. 4d., to break loose from its moorings and follow the course of silver prices. The rate of exchange accordingly rose rapidly until it reached 2s. 4d. sterling in December 1919. The effect of these measures was to jettison the currency policy pursued from 1893 to 1915, the main object of which was to stabilise the rupee at 1s. 4d.

The 2s. Ratio.—The Babington-Smith Committee was appointed in May 1919 when the rate was 1s. 8d., "to examine the effect of the War on the Indian Exchange and Currency system and practice, to make recommendations as to the policy that should be pursued with a view to meeting the requirements of trade, to maintaining a satisfactory monetary circulation, and to ensuring a stable gold standard."

These terms of reference precluded the Committee from considering alternative standards of currency and the Committee recommended the stabilisation of exchange at 2s. gold after taking into account the high range of silver prices and the importance of safeguarding the broken character of the rupee. It also recommended that during periods of exchange weakness, the Government of India should be authorised to announce, without previous reference to the Secretary of State, their readiness to sell weekly a stated amount of reverse councils. Furthermore, it advocated the movement of gold to and from India free from Government control, fixation of the statutory minimum for the metallic portion of the Paper Currency Reserve

at 40 per cent. of the gross circulation and the revaluation of the sterling investments and gold in the Paper Currency Reserve at 2s. to the rupee.

An important member of the Committee, Mr. Dadabhai Naoroji, appended a minority report in which he urged (1) the standard of the sovereign and gold mohur with rupees related at the ratio of 15 to 1, (2) the continuance of the then existing silver rupees of 165 grains of fine silver as full legal tender, (3) the stoppage of silver rupees of 165 grains being minted as long as New York quoted silver over 92 cents and the minting of 2 rupee silver coins of reduced fineness, and (4) the sale of reverse drafts on London only at 1s. 3-20/32d. and the meeting of drafts by the Secretary of State at a rate not below 1s. 4-3/32d. per rupee.

In making its recommendations, the majority was largely influenced by (1) the rise in the gold value of silver and (2) the decline in the gold value of sterling which was then about 30 per cent. below par. Actually the subsequent fall in the price of silver from 89½d. per ounce in February 1920 to 44d. in June 1920 outstripped the preceding rise. Moreover while this report was being written, the British Government was accepting the Cunliffe Committee's Report prescribing a deflationary policy for Britain.

Fall in Value.—The majority's recommendations were, however, accepted by the Secretary of State. The public mind, however, in February 1920, however, coincided with a keen demand for remittances to London, and steps were at once taken to maintain the new exchange rate of 2s. gold recommended by the Committee by the offer of reverse councils at a rate founded on that ratio, allowance being made for the depreciation of sterling in terms of gold, as shown by the dollar-sterling exchange. The rates for reverse councils offered by the Government thus varied from 2s. 3-20/32d. sterling to 2s. 10-27/32d. sterling. By the Indian Coinage Amendment Act of 1920, the sovereign was made legal tender at Rs. 10. The attempt to hold the rate of 2s. gold was not successful; and the Government of India thereupon tried, with effect from the weekly sale on June 24, 1920, to maintain it at 2s. sterling. This attempt also failed and was abandoned on September 28. The Government of India at this period were unable to contract currency in India at the pace at which world prices were falling. All they could do was to avoid further inflation and to effect some measure of contraction. This was insufficient to arrest the falling tide of exchange, which early in 1921 fell below the low level of 1s. 3d. sterling and 1s. gold. The 2s. ratio, passed in 1920, remained on the statute book and was ineffective for purposes of tender of gold to the currency office.

During this period the export trade was arrested and the import trade mounted when the precise converse was demanded and Government's action created an artificial movement of the transfer of capital from India to England; large war profits accumulated in India since 1914 were hurriedly liquidated and transferred to England. Then the difference between the reverse council rate and the market rate, which on some occasions was several pence, induced gigantic speculations. The Exchange Banks set aside all their available resources for bidding for Bills and at once sold their allotments at substantial profits.

Recovery.—In this way the weekly biddings for the million of reverse councils varied from 120 millions to 130 millions and the money market was completely disorganised. In turn, business was severely affected and immense losses were incurred by all importers. Government sold 555 millions of reverse councils before abandoning their effort to stabilise exchange at the new ratio, the loss on this account being Rs. 35 crores. According to an official statement, currency was contracted to the tune of Rs. 31½ crores in 1920-21 and the process was continued in the following two years by the transfer of sterling securities held in London to the Secretary of State's cash balance

and by the discharge of the Indian Treasury Bills held in the reserve. The tide consequently definitely turned by January 1923; and Government exchange recovered to 1s. 4d. sterling, and showed a general tendency to move upward. It reached the level of 1s. 6d. sterling in October 1924 at which time it was equivalent to about 1s. 4d. gold. From that time till March 1926, the upward tendency of exchange continued, but it was prevented from rising above 1s. 6d. by free purchases of sterling on the part of Government. Meanwhile sterling was restored to parity with gold about the middle of 1925 and the rupee was in the neighbourhood of 1s. 6d. gold when the Hilton Young Commission was appointed in 1926.

HILTON YOUNG COMMISSION

The system existing in 1926 was summed up by the Hilton Young Commission in the following words: "At the present time Indian currency consists of two kinds of token, paper notes and silver rupees, which are mutually convertible. The paper notes are in form a promise by the Government of India to pay the bearer on demand a specified number of rupees. The rupee is a silver coin 180 grains in weight and 11/12ths fine.

"The value of both forms of token currency in relation to sterling is at present being maintained between the gold points corresponding to a gold parity of 1s. No obligation has been assumed, but Government as currency authority have freely purchased sterling when the rate has stood at 1s. 6-3/16d., and in April 1926, authorised the Imperial Bank, to make an offer on their behalf to sell sterling at 1s. 5-7/8d. The stability of the gold value of the rupee is thus based upon nothing more substantial than a policy of the Government, and at present that policy can be found defined in no notification or undertaking by the Government.

"For the purpose of maintaining the value of the token currency, the Government of India hold two reserves, the Paper Currency Reserve and the Gold Standard Reserve. The former is composed of the proceeds of the note issue and is held as a backing against the notes in circulation; the latter has been accumulated from the profits of the coinage of silver rupees and is designed primarily to maintain the external value of these coins. The permanent constitution of the Paper Currency Reserve provides for a holding of gold and silver metallic reserves of not less than 50 per cent. of the total note circulation, and for the balance to be held in rupee and sterling securities. These permanent provisions have not yet become operative and in the meanwhile the Reserve is governed by transitory provisions under which the fiduciary portion is limited to a maximum of Rs. 100 crores and the balance of the reserve is held in gold and silver coin and bullion. The Gold Standard Reserve at present amounts to £40 million. It is invested in British Treasury Bills and other sterling securities."

The Commission's views on this system were: (1) The system is far from simple, and the basis of the stability of the rupee is not readily intelligible to the uninitiated public. The currency consists of two tokens in circulation, with the unnecessary co-existence of a third full-value coin which does not circulate at all. One form of token currency is highly expensive and is liable to vanish if the price of silver rises above a certain level. (2) There is a cumbersome duplication of reserves, with an antiquated and dangerous division of responsibility for the control of credit and currency policy (the former being with the Imperial Bank). (3) The system does not secure the automatic expansion and contraction of currency. Such movements are too wholly dependent on the will of the currency authority. (4) The system is inelastic. The utility of the provision for elasticity made on the recommendation of the Babington-Smith Committee is affected by the methods of financing Indian trade.

GOLD BULLION STANDARD

The Commission held the view that "the currency of the country must be linked with gold in a manner that is real and conspicuously visible." It, therefore, recommended a gold bullion standard whereby an obligation should be imposed by statute on the currency authority to buy and sell gold without limits at rates determined with reference to a fixed gold parity of the rupee but in quantities of not less than 400 fine ounces, no limitation being imposed as to the purpose for which the gold is required. It would establish the principle that gold is the standard of Indian currency at a fixed ratio. Simultaneously it recommended that the legal tender quality of the sovereign and the half-sovereign should be removed.

Other main recommendations of the Commission were:—

(i) The necessity of a unity of policy in the control of currency and credit for the achievement of monetary stability involves the establishment of a central banking system. Detailed recommendations are made about the constitution, functions and capacities of the Bank which should be a new organisation, referred to as the Reserve Bank of India.

(ii) An obligation should be imposed by statute on the Bank to buy and sell gold without limit at rates determined with reference to a fixed gold parity of the rupee but in quantities of not less than 400 fine ounces, no limitation being imposed as to the purpose for which the gold is required.

(iii) The conditions which are to govern the sale of gold by the Bank should be so framed as to free it in normal circumstances from the task of supplying gold for non-monetary purposes. The method by which this may be secured is suggested.

(iv) Government should offer "on tap" savings certificates redeemable in 3 or 5 years in legal tender money or gold at the option of the holder.

(v) The paper currency should cease to be convertible by law into silver coin. It should, however, be the duty of the Bank to maintain the free interchangeability of the different forms of legal tender currency, and of the Government to supply coin to the Bank on demand.

(vi) One-rupee notes should be re-introduced and should be full legal tender.

(vii) Notes other than the one-rupee note should be legally convertible into legal tender money, i.e., into notes of smaller denomination or silver rupees at the option of the currency authority.

(viii) No change should be made in the legal tender character of the silver rupee.

(ix) The Paper Currency and Gold Standard Reserves should be amalgamated, and the proportions and composition of the combined Reserve should be fixed by statute.

(x) The proportional reserve system should be adopted. Gold and gold securities should form not less than 40 per cent. of the Reserve, subject to a possible temporary reduction, with the consent of Government, on payment of a tax. The currency authority should strive to work to a reserve ratio of 50 to 60 per cent. The gold holding should be raised to 20 per cent. of the Reserve as soon as possible and to 25 per cent. within ten years. During this period no favourable opportunity of fortifying the gold holding in the Reserve should be allowed to escape. Of the gold holding at least one-half should be held in India.

(xi) The silver holding on the Reserve should be very substantially reduced during a transitional period of ten years.

(zix) The balance of the Reserve should be held in self-liquidating trade bills and Government of India securities. The "created" securities should be replaced by marketable securities within ten years.

(zi) A figure of Rs. 50 crores has been fixed as the liability in respect of the contractibility in the rupee circulation. Recommendations are made to secure that an amount equal to one-fifth of the face value of any increase or decrease in the number of silver rupees in issue shall be added to or subtracted from this liability, and the balance of profit or loss shall accrue to or be borne by the Government revenues.

(zix) The Reserve Bank should be entrusted with all the remittance operations of the Government. The Secretary of State should furnish in advance periodical information as to his requirements. The Bank should be left free, at its discretion, to employ such method or methods of remittance as it may find conducive to smooth working.

(zz) During the transition period the Government should publish a weekly return of remittances made. A trial should be made of the system of purchase by public tender in India.

(zix) The cash balances of the Government (including any balances the Government of India and of the Secretary of State outside India), as well as the banking reserves in India of all banks operating in India, should be centralised in the hands of the Reserve Bank. Section 23 of the Government of India Act should be amended accordingly.

(zix) The transfer of Reserve assets should take place not later than 1st January 1929, and the Bank's obligation to buy and sell gold should come into operation not later than 1st January 1931.

(zix) During the transition period the currency authority (*i.e.*, the Government until the transfer of Reserve assets and the Bank thereafter) should be under an obligation to buy gold and to sell gold or gold exchange at its option at the gold points of the exchange. This obligation should be embodied in statutory form, of which the outline is suggested.

(zix) Stabilisation of the rupee should be effected forthwith at a rate corresponding to an exchange rate of 1s. 6d.

(zz) The stamp duty on bills of exchange and cheques should be abolished. Bill forms, in the English language and the vernacular in parallel, should be on sale at post offices.

(zix) Measures should be taken to promote the development of banking in India.

(zix) Every effort should be made to remedy the deficiencies in the existing body of statistical data.

Minute of Dissent.—In a minute of dissent to the report, Sir Purshottam Das Thakurani said: "The position, as I view it, is that the Government and people of India stand committed to the principle recommended by the Fowler Committee and adopted by the Secretary of State and the Government of India. The Fowler Committee recommended and the Government adopted gold standard based on gold reserves and a gold currency as the currency system of India. I do not think that it is possible to improve upon the ideal of a gold standard based on gold reserves. India has today sterling and rupee securities equal to about four and a half times the value of her gold coin and bullion in reserve. It is neither feasible nor desirable that the sterling securities should be realised and converted into gold forthwith or in any manner other than the safest and most gradual to the markets of the world. The proportion of gold to securities in the currency reserves demonstrates the necessity of the free inflow of gold into India being permitted in the normal course."

On the question of the central banking institution, he held the view that the ends in view would be better served by developing the Imperial Bank of India into a full-fledged Central Bank.

As regards the exchange ratio, he said: "I look upon the question of the ratio in this Report as being no less important than the question of the standard to be adopted for the Indian currency system. I have very great apprehensions that if the recommendations of my colleagues to stabilise the rupee at 1s. 6d. is accepted, India will be faced during the next few years with a disturbance in her economic organisation. Why, therefore, gamble on uncertain factors if India's natural ratio of 1s. 4d., that stood for 20 years unshaken by the crisis of 1907-08 and shaken only after 1917 by a world convulsion and then too mainly because of the embargo on the import of gold, is still within India's reach? The facts and figures that I have stated, and the records from which I have quoted, conclusively show that the Executive had made up their minds to work up to a 1s. 6d. ratio long before this Commission was appointed to examine the question—indeed they have presented to us the issue in this regard as a *fait accompli* achieved by them, not having hesitated by manipulation to keep up the rate even while we were in session. I cannot conceive of any parallel to such a procedure in any country."

Act of 1927.—The Currency Bill of 1927 embodying the recommendations of the majority report was passed into an Act with an amendment that the obligation placed on Government was in regard to the purchase of gold and sale of gold or sterling and not gold exchange as originally proposed. The Act came into force on April 1, 1927. Its main features were:—

(1) The silver rupee, the silver half-rupee and the currency notes were all legal tender without limit, but open to issue at the will of Government. The parity of exchange was 8.47512 grains troy of fine gold per rupee.

(2) Gold coins were no longer legal tender, but could be received at any Government currency office and at any Government Treasury other than a Sub-Treasury as bullion at the rate of 8.47512 grains fine gold per rupee.

(3) Gold in the form of bars containing no less than 40 tolas (15 ounces) fine could be offered for sale in unlimited quantities to Government at the Bombay Mint, and Government was under a statutory obligation to buy gold at the rate of Rs. 21-3-10 per tola fine.

(4) Holders of legal tender currency were given the right of obtaining gold at the Bombay Mint or, at the option of Government, sterling for immediate delivery in London, provided they paid for an amount of gold or sterling of not less value than 1,055 tolas (400 ounces) of fine gold. As for sterling Rs. 21-3-10 was to buy as much sterling as was required "to purchase one tola of fine gold in London at the rate at which the Bank of England" was bought by law to give sterling in exchange for gold, after deducting therefrom an amount being the normal cost per tola of transferring gold bullion in bulk from Bombay to London, including interest on its value during transit. As the latter rate would vary, the Governor-General-in-Council had to notify from time to time the rate determined for this purpose.

Thus strictly speaking, the monetary standard created by the Act of 1927 was a sterling exchange standard with the proviso that it was like the gold exchange standard so long as sterling did not go off the gold parity. Moreover, it would have been a gold standard if Government had exercised the option of offering gold in exchange for rupees. While it retained most of the old features condemned by the Commission namely the conversion of silver rupee into paper currency, the duplication of reserves and the separation of currency from credit control, it represented

an improvement over the pre-1916 standard by ensuring a statutory gold parity for the rupee and a statutory obligation on Government with regard to the purchase of gold and sale of gold or sterling.

Ratio Controversy.—The main controversy in the following years centred on the exchange ratio. From the beginning, however, Government were finding it necessary to take special measures to maintain the ratio of 1s. 6d. owing to its weakness. On February 10, 1927 when the Imperial Bank desired to borrow Rs. 2 crores from Government, it was charged seven per cent. as against the bank rate of six per cent. This created the impression that Government had changed their regulations under the Indian Paper Currency Amendment Act of 1923 without making a public announcement and that this had been done as a part of the measures to sustain the rupee exchange at 1s. 6d. Government had to remit about £7 millions between February 15 and March 31 1930 during which sterling bills were difficult to obtain from the market and Government decided to raise the price of money in India by raising the interest on the emergency currency to be given to the Imperial Bank from 7 to 8 per cent. on February 14, 1930. The position deteriorated further by November 1930 owing to rumours about the change in the ratio, and sterling to the tune of £5,650,000 was sold between November 1930 and March 1931 on speculative account.

The weakness of the exchange was followed by contraction of currency during the same period. The net contraction of note currency during the five years ending 1931 was Rs. 102½ crores. The Secretary of State for India made the following statement in the House of Commons on February 11, 1931:—

"The Government regard the rupee question as having been settled in 1927, when the Indian Legislature passed the Currency Act by which the rupee was rated at 1s. 6d. gold. The Government will use all the means in their power to maintain this rate in accordance with their statutory obligations."

THE CRISIS OF 1931

By 1931 the situation had become critical owing to the economic depression resulting in the precipitate fall of agricultural prices, slump in trade and a serious deterioration in the budgetary position of the Government of India. The ways and means position was attempted to be buttressed by short-term loans in the form of treasury bills which mounted upto Rs. 83.4 crores by August 1931 and thereafter by taxation and retrenchment. The flight of capital from India could not be checked and Government had to sell £11 millions sterling to maintain the ratio at the lower exchange point between August and September 10, 1931.

On September 21, 1931, the pound sterling was divorced from gold; India had a Currency Ordinance, and the Secretary of State announced Government's currency policy in terms which were not in conformity with the Currency Ordinance. The confusion thus created necessitated the declaration of moratorium for three days in respect of banks and this unprecedented event was followed by the issue on September 24 of the Gold and Sterling Regulation Ordinance of 1931. The first Ordinance sought to suspend the operation of Section 5 of the Currency Act of 1927 relating to Government's obligation to sell gold or sterling at rates fixed therein in view of the emergency, while the Secretary of State made it clear before the Federal Structure Sub-Committee in London that "It has been decided to maintain the present currency standard on a sterling basis."

The Indian Gold and Sterling Sales Regulation Ordinance of 1931 had the object of maintaining the sterling paper standard by strict regulation of dealings in foreign exchange and the prevention thereby of the export of capital by nationals. The Imperial Bank of India was authorised to

allocate exchange for certain definite purposes such as normal trade needs, excluding the import of silver and gold, contracts done before September 21 and reasonable personal and domestic purposes. The linking of the rupee with sterling involving the loss of its freedom was strongly opposed by the public. Happily, however, the apprehensions did not materialise; but the change ensured the flow of trade between India and the British Empire while placing India at a disadvantage in respect of her trade with countries having a gold standard. An outstanding feature of our trade thereafter was the unusual exports of gold.

SECOND WORLD WAR

The table given below gives figures of money supply in India and Pakistan, which is defined as the total of currency in circulation plus the demand deposits of banks, including the deposits with the Reserve Bank, minus cash reserves of banks including their deposits with the Reserve Bank. This covers all forms of liquid assets in the country and includes not only cash balances with the public but also Government deposits with the Reserve Bank constituting the cash balances of Government. In the absence of

accurate estimates of the amount of small coin in circulation, the figures for total money supply exclude small coin. The figures for the cash balances with the public are derived by deducting from total money supply the deposits of Government with the Reserve Bank of India:—

During the war period the total money supply increased from Rs. 317 crores to Rs. 2,313 crores owing to the spectacular rise in the net accrual of sterling from the supplies balance of payments on private as well as on Government account, i.e., including the payments on account of the supply of goods and services to His Majesty's and Allied Governments in India against recoverable war expenditure. Though the war ended, the upward trend continued until the total money supply reached Rs. 2,643 crores at the end of 1945-46.

During the year 1946-47 the wartime upward trend in money supply was arrested, and the total money supply (excluding small coin) tended to decline. To be more precise, money supply receded to Rs. 2,567 crores in March 1947, as compared with an all-time peak of Rs. 2,652 crores in April 1946. During the first half of

the year 1947-48, the money supply showed a further sharp recession of Rs. 119 crores, touching a low of Rs. 2,448 crores by August 1947. From September 1947, however, this trend appears to have been reversed, money supply again showing a rise of Rs. 109 crores by the end of March 1948. On the whole, money supply showed a net fall of only Rs. 10 crores. The cash balances with the public, on the other hand, showed a steep rise of Rs. 108 crores from Rs. 2,105 crores at the end of March 1947, to Rs. 2,213 crores at the end of the year under review, mainly reflecting a sharp decline in Government deposits with the Reserve Bank of India from Rs. 462 crores to Rs. 344 crores. This fall is partly due to the heavy Governmental outlays on refugee relief, defence and food subsidies, as well as on Capital account. The continued rise in the cash balances of the public, also presumably occasioned by the gradual widening of the free sector of internal trade following decontrol, indicated the persistence of inflationary conditions, attributable mainly to the lag in agricultural as well as industrial production, and was reflected in a continued rise during the year in the general price level and living costs.

TOTAL MONEY SUPPLY

(Rupees in crores).

| | August 1939 | August 1945 | March 1946 | March 1947 | March 1948 |
|---|-------------|-------------|------------|------------|------------|

| April | 1,184.69 | 14.44 | 1,199.12 |

[NOTE:—Pakistan notes are shown within brackets. They were issued from April 1948 to June 1948 when the State Bank of Pakistan was established.]

TRENDS IN NOTE CIRCULATION

The impact of the busy season on note circulation in 1948-49 has been on a mild scale, as indicated in the following Table (Source: Reserve Bank Bulletin, May, 1949) which gives absorption (+) or return (-) of notes in circulation in the Indian Dominion during the busy season period, October 1948 to March 1949, as compared with the corresponding period (India and Pakistan) of 1947-48.

(In crores of rupees)

| | 1948-49 | 1947-48 |
|----------------|---------|---------|
| October | + 9 | + 19 |
| November | + 1 | + 7 |
| December | + 17 | + 25 |
| January | + 9 | + 37 |
| February | + 8 | + 25 |
| March | + 5 | + 18 |
| Total | + 47 | + 131 |

[NOTE I:—Figures for 1947-48 relate to India and Pakistan, while those for 1948-49 relate to the Dominion of India only.]

II:—India notes, returned from circulation in Pakistan and adjusted during the period under review, have been taken into account in arriving at the figures for 1948-49.]

During the financial year 1948-49, there has been a net contraction in notes in circulation, for the first time since the war, of Rs. 8 crores made up of

(i) slack season (April to September 1948) return of Rs. 55 crores and

(ii) busy season (October 1948 to March 1949) absorption of Rs. 47 crores.

The net contraction of Rs. 8 crores in notes in circulation during 1948-49 in respect of the Dominion of India compares with a net absorption of Rs. 62 crores in 1947-48 (for India and Pakistan).

Sources of Supply.—As regards the sources of additions to money supply during wartime, the total net accrual of sterling from the balance of payments on private as well as Government's account was the largest part of what might be termed as the inflationary potential. The budget deficit on revenue account and the defence expenditure on capital account were other constituents of this inflationary potential. The addition to the internal debt of the country acts largely as a deflationary influence; but has been reflected partly in the high and rising level of Government balances recently and the expansion of the public's cash balances given by the addition to the aggregate amount of note circulation, rupee coin and small coin and of deposits of banks, scheduled and non-scheduled, measures the extent of monetary inflation. The progressive series of each of these factors since 1939-40, are given below:—

| | (Rupees in crores) | | |
|--|--------------------|---------|---------|
| | 1939-40 | 1944-45 | 1945-46 |
| Total net accrual of sterling to end of period since the beginning of the war | 100 | 1,680 | 2,026 |
| Budget deficit including Defence Capital Expenditure, progressive | | 635 | 795 |
| Total of Both | 100 | 2,315 | 2,821 |
| Increase in note circulation, rupee coin and small coin circulation, and in total deposits of scheduled banks. | 82 | 1,706 | 2,048 |
| Increase in deposits with the Reserve Bank, progressive | 9 | 340 | 596 |
| Total of Both | 91 | 2,052 | 2,644 |
| Increase in the Rupee debt of the Central Government since March 31, 1939, progressive | 18 | 860 | 1,200 |

Absorption of Currency.—The wartime absorption of legal tender currency amounted to Rs. 1,198.64 crores of which notes accounted for Rs. 988.89 crores or 85 per cent., rupee coin for Rs. 142.16 crores or 11.9 per cent. and small coin for Rs. 67.59 crores or 5.6 per cent. The decline in the relative as well as the absolute expansion of note circulation which began in 1943-44 was further accelerated in 1946-47. But this declining tendency in currency absorption noticed from 1943-44 was arrested during 1947-48, the total absorption being higher at Rs. 53.97 crores, as compared with Rs. 31.11 crores in 1946-47. Notes in circulation registered an increase of Rs. 23.26 crores to Rs. 1,242.03 crores at the end of 1946-47 as against Rs. 133.89 crores in 1945-46, Rs. 202.39 crores in 1944-45 and Rs. 238.91 crores in 1943-44. The annual rate of expansion declined to 2 per cent. in 1946-47, from 12 per cent. in 1945-46, 23 per cent. in 1944-45 and 37 per cent. in 1943-44. The decline in the relative as well as the absolute expansion of note circulation, which began in 1943-44, was replaced by a rising tendency during 1947-48, notes in circulation registering an increase of Rs. 62.33 crores to Rs. 1,304.36 crores at the end of 1947-48. The annual rate of expansion moved up to 5 per cent. in 1947-48. The average circulation for the year showed only a small increase of Rs. 4.86 crores.

With the cessation of the legal tender character of the standard rupee coin with effect from November 1, 1943, the quaternary rupees, the nickel rupees, and Government of India one rupee notes constitute as from that date the total amount of rupee coin in circulation. The aggregate amount in circulation of the Government of India one rupee notes and quaternary rupees stood at Rs. 123.81 crores at the end of October 1943. The circulation of rupee coin rose to Rs. 137.33 crores at the end of 1943-44, to Rs. 147.28 crores at the end of 1944-45, to Rs. 165.73 crores at the end of 1945-46 and to Rs. 167.67 crores at the end of 1946-47. The demand for rupee coin showed a steep fall during 1946-47 the absorption amounting to Rs. 1.94 crores as compared with Rs. 18.35 crores in 1945-46 and Rs. 10.05 crores in 1944-45. During 1947-48, however, rupee circulation showed a decline of Rs. 12.34 crores to Rs. 155.35 crores at the end of March 1948. A net return of rupee coin of Rs. 12.34 crores was witnessed, indicating a probable reversal in the wartime trend.

The absorption of small coin was at its height during the war period and amounted to Rs. 67.59 crores between September 1939 and August 1945. While the year 1945-46 witnessed a steep fall in the demand for small coin, it was not as steep

as in the case of rupee coin and notes in the following year. The absorption in 1946-47 was smaller at Rs. 5.91 crores compared with Rs. 9.98 crores in 1945-46 and the record figure of Rs. 19.20 crores in 1944-45. During 1947-48, the absorption was lower at Rs. 3.98 crores, the monthly absorption ranging between Rs. 79 lakhs in August 1947, and Rs. 4 lakhs in March, 1948.

New Designs.—The Finance Minister, Dr. John Matthai, told the Indian Parliament, in May 1949, that the King's effigy on Indian currency notes would be replaced by the Ashoka Pillar, and the currency notes thus newly designed were expected to be put into circulation within the following few months. Changes in the designs of coins, including that of replacement of the King's effigy, were under the consideration of Government. The Finance Minister made it clear that no change was proposed in the existing denominations of notes and coins at present; nor was it proposed to demote the existing currency which would continue to be fully legal tender along with the newly designed notes and coins. He added that Government had no intention to replace the King's effigy with that of Mahatma Gandhi on coins and notes.

Seasonal Movements.—A study of the absorption and return of currency since 1920-21 indicates a fairly regular seasonality. The "busy" season when currency is absorbed begins usually in August, September or October and ends with December, January or February. The "slack" season of return of currency usually begins in January, February or March and extends upto July, August or September. In the pre-war years, there was a fair amount of regularity in the periodicity of the busy and the slack seasons. The war time monetary expansion distorted this even movement. The period of absorption that began in September, 1939 did not stop, as usual in the first quarter of 1940, but continued until the end of June, 1940, there being a return of currency from July to September. Again the next period of absorption beginning in October, 1940 extended over June, 1941 followed by a return of currency only during July, 1941. There was continued absorption during the entire period from August, 1941 to June, 1944, a period during which wartime monetary expansion reached its peak. Again there was a return of currency only during July, 1944. The period of absorption once more extended from August, 1944 to June, 1945, a return of currency taking place again in July, 1945. The next period of absorption which began in August, 1945 ended after December, 1945, there being a return of currency during January, 1946. There was an absorption of currency during February to June 1946, a period which is otherwise covered by the slack season. The return of currency began once again in July 1946 and ended after September, 1946, there being an absorption of currency from October, 1946 to March, 1947. During 1947-48, there was a return of currency during the period April to September 1947, and an absorption of currency during October to March, 1948. Thus, the tide of currency expansion during the war, resulting from steadily growing Governmental outlays, submerged the seasonal ebb and flow of currency. However, the month of July appeared to mark the bottom of the slack season, and despite the rising wartime trend in currency circulation, the seasonal fall in the demand for currency, reaching its maximum in July asserted itself in 1941, 1944 and 1945 when returns of currency were noticed in that month. With the end of the war, although the tempo of currency expansion slackened appreciably, seasonality did not immediately reappear, and currency absorption was noticed in the slack months of February to June, 1946. The return of currency from July to September, 1946, and the absorption in the busy months of October 1946 to March 1947, marked the beginnings of a process of return to normal conditions and the reappearance of currency trends in conformity with the normal seasonal pattern. These trends appeared to have asserted themselves more fully during 1947-48, when a return of

currency was witnessed in the months of April to September 1947, and an absorption during October 1947 to March 1948, which periods coincide with the slack and busy seasons of the year.

Before the wartime expansion of currency and credit got under way, opposite trends were witnessed in the movements of the volume of currency circulation and of demand deposits in the busy and the slack seasons. Note circulation tended to rise and demand deposits to contract in the busy season and *vice versa* in the slack season. During the war both deposits and currency circulation continued to expand, the incidence of the seasons being reflected in their varying rates of expansion. There was a greater percentage increase in demand deposits than in note circulation during the first half of the year corresponding generally to the slack season, while a comparatively larger expansion in note circulation than in deposits occurred in the second half of the year, which corresponds to the busy season.

During the year 1946-47, the pre-war tendency for notes in circulation and demand deposits to move in opposite direction during the different seasons re-appeared. Notes in circulation showed a reduction of 3 per cent. in the slack season of the year 1947-48. In the busy season, however, the rate of increase in note circulation, which had shown a deceleration from 15 per cent. in 1944-45 to 5 per cent. in 1946-47, showed an increase to 11 per cent. in 1947-48, owing mainly to the large issues of notes following the partition.

NOTE CIRCULATION

The denominational pattern of note circulation underwent a considerable change as a result of the promulgation of the High Denomination Bank Notes (Demonetisation) Ordinance, 1946, issued in January, 1946, under which notes of the denomination of Rs. 500 and above ceased to be legal tender. These notes were exchanged during the year for notes of lower denominations. The amounts of notes of these denominations outstanding on 31st December, 1947 were Rs. 3 lakhs in the case of Rs. 500 denomination, Rs. 1.12 lakhs of Rs. 1,000 denomination and Rs. 21 lakhs of Rs. 10,000 denomination, as against Rs. 26 lakhs, Rs. 113.37 lakhs and Rs. 18.46 lakhs respectively on 31st December, 1945. Rs. 100 notes recorded the highest increase of Rs. 51.40 lakhs, as against Rs. 12.30 lakhs only in the Rs. 100 denomination, while Rs. 5 notes registered a decline of Rs. 1.09 lakhs. The circulation of Rs. 100 denomination, which had fallen from Rs. 495.84 lakhs at the end of 1945 to Rs. 488.71 lakhs at the end of 1946 mainly on public apprehensions of the possible demonetisation of this denomination, rose to Rs. 540.11 lakhs at the end of 1947. The large issues of Rs. 100 notes are attributable, in part, to the exodus of funds almost entirely in bank notes of this denomination accompanying the mass migrations after the partition.

The circulation of Rs. 10 denomination also increased from Rs. 545.40 lakhs to Rs. 557.70 lakhs, its share in the gross circulation, however, falling from 43.3 per cent. to 42.0 per cent. at the end of 1947. The circulation of Rs. 5 notes, on the other hand, showed both an absolute and a relative decline, the circulation falling from Rs. 197.00 lakhs to Rs. 195.10 lakhs, while the Rs. 2 denomination showed a rise from Rs. 25.42 lakhs to Rs. 33.09 lakhs. As between the Government of India one rupee notes and notes of Rs. 2 denomination, the public showed a marked preference for the former. The steep fall in the absorption of all denominations of small coins noticed in 1946-47, continued in the year 1947-48, the decline being most noticeable in the case of four anna coins.

On the eve of separation of Burma from India, an Agreement, embodied in the India and Burma (Burma Monetary Arrangements) Order,

1937, was arrived at between the two countries, with the object of causing the least possible disturbance in the currency systems of India and Burma during the initial stages of separation. Under this Order, the currencies of both countries were to continue to be closely linked and managed by the Reserve Bank of India. Under the stress of the Japanese war, the Government of Burma and the office of the Reserve Bank of India in Rangoon temporarily moved to India. In June, 1942, the responsibility for Burma notes was transferred from the Reserve Bank of the Government of India along with the assets held by the Bank as cover against these notes, the intention being to hand over the liability along with the assets to the Government of Burma as soon as they re-established themselves in Burma. The outstanding liability for the pre-war issues of Burma notes, which had been transferred from the Reserve Bank of India to the Government of India in June, 1942 was transferred together with the assets held against them, to the Government of Burma in June, 1946.

In June, 1946, the Government of Burma decided to sever the currency link with India and to establish an independent currency to be managed by a Currency Board in London with effect from 1st April, 1947. Authority was taken by an Order-in-Council in August, 1946 to amend the India and Burma (Burma Monetary Arrangements) Order, 1937 with a view to terminating the joint monetary arrangements with India by six months' notice. The notice, which was served on the Governor-General with effect from 1st October, 1946, expired on 31st March, 1947 and with it the currency system of Burma was delinked from that of India. In order to enable the Reserve Bank of India to wind up its affairs in Burma, the Reserve Bank of India Act, 1934 was amended in March, 1947 to provide for the deletion of all references to Burma appearing in the Act. The Reserve Bank's office in Rangoon formally ceased to function in that country on 1st April, 1947.

In view of the ample time given to all bonafide holders of high denomination notes, which had been demonetised on January 12, 1946, to exchange their holdings, the Government of India announced on February 28, 1947 that no further claim for their exchange would be received after that date. The total notes exchanged upto March 31, 1947 amounted to Rs. 134,72,97,000 consisting of Rs. 21,70,000 worth of Rs. 5,000 denomination, Rs. 112,44,87,000 of Rs. 1,000 denomination and Rs. 22,96,40,000 of Rs. 10,000.

Arrangements with Pakistan: Following the decision to partition India into two Dominions from August 15, 1947, the Governor-General issued, on August 14, an Order called the Pakistan (Monetary System and Reserve Bank) Order, 1947 with a view to maintaining a united monetary system for the two Dominions of India and Pakistan, pending the establishment by the Pakistan Government of machinery to regulate currency and banking. The Order embodied, among other things, certain provisions relating to currency and coinage which were to be in force until September 30, 1948, but which by a subsequent amendment would be effective only up to June 30, 1948.

Following certain decisions arrived at as a result of discussions held in March 1948 between the Bank and the representatives of the Governments of the two Dominions, the Order of August 1947 was amended by the Pakistan Monetary System and Reserve Bank (Amendment) Order 1948, issued jointly by the Governors-General of India and of Pakistan on March 31, 1948. The amendment provided that the Bank would continue as the currency authority in Pakistan up to June 30, 1948 only and not September 30, 1948, as laid down in the original Order. India notes, however, were to continue to be legal tender in Pakistan up to September 30, 1948.

In terms of the foregoing Order, Bank notes of the current pattern inscribed with the words "Government of Pakistan" in English and

Urdu were put into circulation in Pakistan from April 1, 1948. Pakistan Government one rupee notes in the pattern of India Government notes (with the words "Government of Pakistan" inscribed), and Pakistan coins of distinctive designs but of the same denominations as India coins were also put into circulation as from that date. These notes and coins are not legal tender in India.

EXCHANGE CONTROL

The exigencies of the war necessitated the institution of strict exchange control which was exercised by the Exchange Control Department of the Reserve Bank of India. Payments and remittances were allowed freely to countries within the sterling area but the same system of control through the medium of banks authorised to deal in foreign exchange was maintained for transactions with countries outside the sterling area. Sales of the currencies of countries outside the sterling area continued to be restricted, while exports to these countries were only permitted provided the foreign currency proceeds were sold to the authorised dealers in foreign exchange thus ensuring the full conservation and mobilisation of the country's foreign exchange resources. Despite the end of the war and the resumption of financial and commercial relations with many countries previously under enemy occupation, the Exchange Control policy remained unaffected.

On March 25, 1947, Foreign Exchange Regulation Act was enacted to retain the powers granted under the Financial Provisions of the Defence of India Rules with certain modifications. It closely followed the Exchange Control Bill in the United Kingdom. The effect of the new measure is to continue the existing system of exchange control. It is an enabling measure giving wide powers to the Central Government and the Reserve Bank to control transactions in foreign exchange and securities and the import and export of bullion and currency notes. The Finance Member in his speech at the second reading of the Bill said that it was the intention of Government to allow payments for current transactions freely but to restrict transfers of capital unless directly connected with the furtherance of trade, and to aim at making the rupee multilaterally convertible as soon as practicable. In the meantime, in order to maintain India's balance of payments in equilibrium, it was necessary to continue import control and also to take advantage of the transitional period allowed by the Fund rules, under which India could continue exchange control for a period of three years.

Rupee Unlinked.—In terms of the Anglo-American Loan Agreement signed in July, 1946, the United Kingdom undertook to negotiate with the holders of the sterling balances for the settlement of these balances and to make currently-earned sterling multilaterally convertible for current transactions, within one year of the signature of the Agreement. Consequent on this obligation to negotiate settlement of the sterling balances, a delegation from the United Kingdom visited India in February for a preliminary discussion.

Another factor conditioning the background to foreign exchange relationships is the establishment of the International Monetary Fund and the International Bank for Reconstruction and Development. Consequent on India's membership of the Fund and the fixing of par values in accordance with the Articles of the Fund Agreement, sterling has ceased to be the sole determinant of the external value of the rupee. The convertibility of the rupee into other currencies was therefore provided, for by the enactment of the Reserve Bank of India (Second Amendment) Act, 1947, which was passed by the Central Legislature in April, 1947. The amendment repealed Sections 40 and 41 of the Reserve Bank of India Act which had obliged the Bank to buy and sell foreign exchange at such rates and on such terms and conditions as the Central Government may determine from time to time in conformity with their obligations as a member of the Fund.

AGREEMENT WITH U. K.

A delegation from the Government of India proceeded to London early in July 1947 to conclude the sterling balances negotiations inaugurated in February, when a delegation from the United Kingdom had visited India. Pending the completion of these negotiations, it was found necessary to impose restrictions on transfers of capital from India to the United Kingdom and other sterling area countries to prevent a flight of capital from India. The general permission given for transactions in sterling area currencies was accordingly cancelled and the opening of new accounts in such currencies by persons domiciled in India was made subject to the Reserve Bank's permission. Remittances to sterling area countries were also restricted.

The negotiations with the United Kingdom were concluded during August, and a Financial Agreement between the Government of India and the Government of the United Kingdom, covering the period up to December 31, 1949, was signed on August 14, 1947. Under the terms of the Agreement, which became effective from July 15, the Reserve Bank of India opened two accounts, namely No. 1 and No. 2 Accounts with the Bank of England. The total sterling asset of the Reserve Bank of India were fixed at £1,160 million as on July 14, 1947, which amount was credited to No. 2 Account. Out of the balance in this Account, an amount of 565 million comprising an initial release of £35 million for current purposes and £30 million as a working balance was credited to No. 1 Account. The Agreement provided that the balance in No. 1 Account would be freely available for payments in respect of current transactions in any currency area and would, therefore, be fully convertible for current purposes. Any sterling received after the date of the Agreement in respect of current transactions and any sums transferred from No. 2 Account were to be credited to this account. No. 2 Account was not to be used for current transactions and operations were to be confined to certain agreed transfers of a capital nature.

A delegation from the U.K. visited India in January 1948 for further negotiations with the Government of India regarding the sterling balances following which the Financial Agreement was extended up to June 30, 1948. Under the extended agreement, a sum of £18 million was transferred from No. 2 Account to No. 1 Account, for purposes of current expenditure up to June 30, 1948. As requested by the British delegation, with a view to co-operating with other members of the sterling area in conserving the foreign exchange resources of the area by restricting the country's expenditure in hard currency areas (which have been defined to include almost the whole of the American Continent, the Belgian monetary area, Japan, the Philippines, the Portuguese monetary area, Sweden, Switzerland, and Liechtenstein), the Government of India also agreed to purchase part of their requirements of U.S. dollars from the International Monetary Fund and so limit their expenditure in hard currency areas in the first six months of 1948 as to ensure that such expenditure would not exceed receipts from those territories together with the dollars which might be purchased from the Fund, by more than £10 million, the amounts to be paid to the Fund as charges not being included in this calculation.

On the partition of India, the Reserve Bank in its capacity as bankers to the Government of Pakistan also became the authority responsible for the administration of exchange control in Pakistan. However, as it was intended to set up an independent exchange control for Pakistan, it was agreed by the two Dominion Governments that, from January 1, 1948, each Dominion would separately retain her own foreign exchange earnings and meet her foreign exchange expenditure out of such earnings.

Foreign exchange for travel outside the sterling area for purposes of business, education and health continued to be sanctioned on the previous scales, but in view of the dollar stringency, which developed during the year, applications for travel

to the United States and other difficult currency countries were subjected to closer scrutiny.

The Foreign Exchange Regulation Act was amended in December 1947 making the import of gold or silver into any part in India without the permission of the Reserve Bank illegal. However, by a notification of January 21, 1948, general permission was given to bring or send gold or silver, provided it is in transit to a place outside India and Pakistan.

Sterling Balances Drop.—The sterling balances which reached the peak figure of Rs. 1,733 crores at the end of 1945-46, declined by Rs. 121 crores to Rs. 1,612 crores during 1946-47. This reduction was due mainly to the large imports of food. During 1947-48 the reduction was somewhat smaller due to the restrictive import policy which was introduced towards the close of 1947 and the balances fell by only Rs. 67 crores to Rs. 1,545 crores. In the first ten months of the financial year 1948-49, there was a further drop of Rs. 556 crores in these balances. The heavy outgo was mainly due to the payment to the U.K. Government, in accordance with the agreement reached with them in July 1948, of Rs. 281 crores for the purchase of annuities for financing the payment of sterling pensions and the acquisition of the defence installations and stores left behind in India by the U.K. at the end of the war. The second was the payment to the State Bank of Pakistan of Pakistan's share of these balances following the separation of its currency from that of India. This payment has been continuing as the sterling and other assets of the Issue Department are handed over in instalments as Indian notes are withdrawn from circulation in Pakistan and handed over to the Reserve Bank. Sterling to the extent of Rs. 177 crores had been handed over to the Pakistan State Bank by March 1949. The third factor responsible for the decline was (and is still) India's adverse balance of payments on current and capital account.

Under the Indo-British Agreement, signed in July 1948, it was agreed that India's free sterling account which had a balance, at the end of June 1948, of 180 million would be credited with an equivalent sum during the period July 1949 to July 1951. In pursuance of this policy and also with the immediate object of reducing the inflationary pressure in the country, import controls were relaxed during the course of the year, and they resulted in substantially increasing the available supply of goods in the country.

Unfortunately, however, it was not long before it became evident that India was frittering away its sterling balances at an alarming rate. It was stated in London early in May 1949 that India had already drawn not only the £80 million sterling-free balance brought forward from 1947-48 available up to June 1949, under the agreement, concluded last year, but had also heavily drawn on the 40 million sterling allotted for 1949-50. The factors leading up to this situation were officially explained in New Delhi as follows:—

Following upon the sterling balances agreement of July, 1948, India relaxed in a very large measure the somewhat stringent import controls that were till then in force in order primarily to meet the inflationary situation which had developed in the country and also to facilitate the utilisation of the sterling releases which in the previous year had proved difficult. The Government of India, however, kept a strict watch on the exchange position and when it became apparent as early as the beginning of this year that the sterling balances were being depleted at an undesirably rapid rate, considered the advisability of increasing the rigidity of the import controls.

Any sudden reversal of the import policy would have had in the inflationary context of the time not only an undesirable effect on the Indian economy, but would also have hit British export trade. Government decided, therefore, to take advantage of a meeting between the officials of India and the U.K., which was timed to be held in February this year, to review the working of the sterling balances agreement to suggest to the U.K. that releases in addition to those agreed

upon in July should be made in order to enable India to continue importing at a reasonable level those goods which were required for the needs of Indian economy.

The export of such goods from the U.K. might also help the British export drive. This suggestion was accordingly made and the British delegation to the conference agreed to let India have the British Government's considered reactions to this proposal.

The trend of this answer was not satisfactory and the whole approach of the memorandum to the problem was such that the Finance Minister of India found himself unable to accept the proposal. India's answer was that as the spending of India's own money was India's own concern, she saw no reason to discuss with any foreign Government how that money was to be spent; and as it had become apparent from the memorandum that the British Government were not willing to increase India's free sterling resources, there was no point in delaying any further the inevitable action necessary to restore equilibrium, viz. the suspension of the open general licence.

Accordingly, on May 3, 1949, the open general licence was suspended. The Government of India had been wanting to cancel the open general licence earlier, but had held back in order to accommodate the British Government.

Had the British Government informed India in February, when the question was put to them, that they would not agree to any further releases, the action which had been taken on May 3, would have been taken then, except that it might have been possible to avoid the jolt which the sudden cancellation of the open general licence gave to both Indian and British trade. The delay of ten weeks in the British Government's reply caused a reduction in India's sterling balances of no less than £42 million. India had to make advance drawings from her 1949-50 allotment of £40 million solely due to the delay in the reply of the U.K.

BREITON WOODS ORGANISATIONS

The year 1945-46 witnessed the establishment of the International Monetary Fund and the International Bank for Reconstruction and Development, as in terms of the Final Act, countries representing more than 65 per cent. of the total of the quotas had signed the Bretton Woods Agreement before December 31, 1945. In order to secure for India the advantages of original membership of the Fund and of the Bank, the Government of India promulgated an Ordinance on December 21, 1945, providing themselves with the necessary powers for signing the Agreement. This was done on December 27. The inaugural meeting of the Boards of Governors of the Fund and of the Bank was held at Savannah (Georgia) in March 1946. It dealt with the procedural steps necessary before these institutions could begin operations. India, by virtue of being one of the five largest quota holders appointed one Executive Director on the Fund and one on the Bank. In September 1947, the thirty-nine members of the Fund were notified to communicate to the Fund within thirty days, the par value of their currencies, expressed in gold or U.S. dollars, and based on the rates of exchange that prevailed sixty days before the Fund Agreement came into effect. According to the Articles of Agreement, the Fund could notify a member, or a member could notify the Fund that the par value communication, if it was unsatisfactory and could not be maintained without excessive dependence on the Fund. In such cases agreement on a suitable par value was to be reached between the Fund and the member within a reasonable period determined by the Fund. Before making a final decision as to the most satisfactory rate for the rupee, the Government of India invited proposals and comments from interested bodies and persons. After a thorough examination of the various proposals had been made, the Government decided that the existing par value should be maintained, which, based on the rupee-sterling rate of 1s. 6d. and the London/New York parity of 4.03 dollars per pound, works out to

Rs. 350,852 per \$100, or, with the U.S. Treasury's buying rate for gold of \$35 per ounce, the gold content of the rupee equals 0.264001 grammes. This par value was accepted by the Fund. On 18th December, 1946, the schedule of par values of the currencies of member countries was announced by the Fund.

India's Contribution.—India was called upon to pay to the Fund its subscription of \$100 million by 1st March, 1947. This had to be paid partly in the form of gold and partly in the form of rupees. Under the rules of the Fund, the gold subscription had either to be 25 per cent. of a country's quota or 10 per cent. of its net official holdings of gold and U.S. dollars whichever was less. As 10 per cent. of India's gold and dollar holdings was the lower figure, gold of this value was transferred to the Fund. Of the rupee subscriptions, a certain amount was credited to the Fund's account in the books of the Reserve Bank and the balance was paid in the form of non-negotiable non-interest-bearing promissory notes convertible on demand into rupees by crediting the par value to the account of the Fund. After the receipt of the subscriptions, the Fund announced that it was in a position to commence operations and sell the currencies of members in accordance with its rules and regulations from 1st March, 1947.

In October, 1946, the Central Legislature, while approving the payment of India's subscription to the Bank, also approved the continued membership of the Fund and the Bank. The balance due on account of 2 per cent. of India's subscription amounting to \$5,000,000 of which \$40,000 was paid on 27th December, 1945, was paid in U.S. dollars on 12th August, 1946. In payment of the 2 per cent. of its capital subscriptions, the Bank received until the time of the first annual report \$143,780,883.70 in gold and U.S. dollars out of a total of \$153,400,000. Another call was made for the payment of 5 per cent. of the subscriptions payable in the local currencies of the members by 25th February, 1947. India paid \$20,000,000 (Rs. 6,61,70,400) on account of this, partly in cash and partly in non-negotiable non-interest-bearing securities. Thus in 1947 India paid \$60,000,000 to the Bank (45 per cent. of its capital subscription), of which \$2,000,000 were paid in Indian currency.

Limited Help.—The present position is that certain countries of key importance in the world economy are rapidly running out of exchange resources, while the magnitude of the reconstruction task with which they are faced is far greater than was foreseen in 1945 and 1946. While the task is largely one of self help, a continuance of the flow of imports is necessary to enable the countries engaged in reconstruction to utilize fully their own productive resources. The Fund and the Bank can give only limited financial help. If the reconstruction is not completed, the constructive efforts already made for international co-operation to attain greater production and higher living standard will be jeopardized. The world is approaching a turning point at which the alternatives are clear. Either we seek through a concerted effort, the goals of expanded production and higher standards of living or we resign ourselves to economic conflict and impoverishment.

During the 13 months ended March, 1948, the Fund's operations consisted mainly in selling U.S. dollars against the members' currencies. The total of such sales amounting to \$8,000 million. Of these, sales to the U.K. amounted for \$300 million, France \$125 million, the Netherlands \$62.5 million and Belgium \$33 million. As India's requirements of U.S. dollars for the six months ending June, 1948, were estimated to exceed her own receipts and the amount of about \$10 million made available to her by the U.K. in terms of the Lend-Lease Agreement between them, India, for the first time in March 1948, applied to the Fund for U.S. dollars and following its asset purchase 48.25 million.

The second annual meeting of the Board of Governors of the Fund and the Bank was held in London in September 1947. At this meeting, the Governor for China was elected Chairman of

the Board of Governors, and the Governors for France, India, the U.K. and the U.S. Vice-Chairmen. Following the Indian Independence (International Arrangements) Order, 1947, it was decided that the quota of the prepartition India in the Fund and her subscription to the capital stock of the Bank should continue to be the 'quota' and 'subscription' of the Dominion of India.

In the year ended June 30, 1947, five additional members were admitted to membership in the Fund, making a total of 41 members and two further applications were received. In the year ended June, 1948, the Board approved membership applications from Finland, Austria and Australia. The total number of members on March 1948, of the Fund and the Bank, was 46 each. The admission of the new members resulted in an increase in the authorised subscription to the Fund as on February 29, 1948, to \$7,961.00 million, and the subscribed capital of the Bank as on March 31, 1948, to \$8,263.10 million. In accordance with the Fund agreement, the Fund was also taken action in prescribing a margin for gold transactions by members. This margin has been fixed at 1 of one per cent. above and below the exclusive of certain specified charges. These margins are directed at stabilizing the price of monetary gold for all members and preventing any insignificant divergencies from part of the external value of member currencies through transactions in gold. In June 1947, with a view to preventing the extension of external gold transactions at premium prices, which generally involve a loss of gold from monetary reserves and which might contribute to the undermining of exchange stability, the Fund requested all its members to co-operate in the elimination of such transactions. Regarding subsidies on gold production, the Fund announced, on December 11, 1947, its policy in relation to it, placing every member proposing to introduce new measures to subsidise the production of gold, under an obligation to consult the Fund on the specific measures contemplated. The Canadian Government consulted the Fund on their proposal for a subsidy on gold production and the Fund approved of the proposal. (Also see under *Billion*, the para on Gold Sales and the I.M.F.).

A Catalyst.—It must be stated that the International Bank cannot, and was never intended to, provide the external financing required for all the projects of reconstruction and development of the post-war years. Its function is to provide a catalyst by which production may be generally stimulated and private investment encouraged. The Bank has upto now placed particular emphasis on the problems of European recovery. To date the loan requests from European countries have been primarily for reconstruction programmes and much progress has already been made towards the reconstruction of the nations of Europe, though it has not been uniform.

The capital funds of the Bank required to be paid in by member governments amount to only 20 per cent. of the Bank's total subscribed capital: of the \$1,509,985,000 paid in capital only \$27,075,000 is represented by U.S. dollars, the remainder being in local currencies of various members other than the U.S. At present, the demand is primarily for U.S. dollars and the availability of the Bank's capital funds for lending is practically limited to approximately 725 million dollars. For loanable resources in excess of this amount, the Bank must look to the sale of its securities in the private investment market, for the time being predominantly the U.S. market. However, it will not be possible for the Bank to sell its securities in the market unless investors have confidence that their funds will be used only for economically sound and productive purposes. On July 15, 1947, the Bank made the first public offering of its bonds consisting of \$100 million ten year 2½ per cent. and \$150 million 25 year 3 per cent. at par. They were substantially oversubscribed. At present, however, the U.S. is the only market available in which the Bank's securities can be sold in large amounts. It may, however, be reasonably anticipated that in the

future, as conditions improve, non-American capital may be tapped by the Bank's borrowing operations.

Apart from the United States, which consented to the use of the whole of her paid-up capital for lending purposes, and Belgium which consented to the extension of a loan for 2 million dollars in Belgian francs out of her paid-up capital, none of the other members has given approval to the Bank for the use of its capital amount for lending purposes.

Up to March 31, 1948, eleven countries, namely, Chile, Czechoslovakia, Denmark, France, Iran, Italy, Luxembourg, Mexico, the Netherlands, Poland and Yugoslavia applied to the Bank for loans. The interest charged by the Bank on all the loans is 3½ per cent. In addition, the Bank will also charge a commission of one per cent. On all the loans annually to be set aside in a special reserve fund. Except in the case of Luxembourg, repayment of the principal will start after the expiry of five years. Thereafter, capital repayments will begin at a moderate rate and increase gradually so as to ensure complete repayment of the loans by the due date. The Bank sent a fact-finding mission to Poland to conduct technical studies prior to dealing with its application for a loan, and another mission to Brazil and the Philippines in accordance with the Bank's policy of keeping itself informed of economic developments in member countries.

By the end of 1948, 16 nations, had applied for loans from the Bank totalling \$509 million, including \$250 million to France and \$195 million to the Netherlands. Subsequently, the Bank granted 2 loans to Mexico totalling about \$35 million, and one of \$15 million to the Philippines, both for hydro-electric development.

WORLD BANK MISSION

In the middle of January 1949, a Mission of the International Bank for Reconstruction and Development, headed by Mr. A. S. G. Hoar, Assistant Loan Director of the Bank, toured the country at the invitation of the Government of India who had applied for a loan from the Bank. Government had submitted to the Bank a representation urging the grant of an adequate dollar loan for the purchase of machinery, including tractors and fertilisers, to carry out certain major land reclamation and hydro-electric projects. It was stated that the estimated area of waste land which could be usefully brought under the plough, is about 65 million acres, but Government, taking a realistic view of the problem, proposed to reclaim within the next five years only six million acres and thereby accelerate food production. The purpose of the Mission's visit was to form a first-hand appreciation of the economic and financial situation and, in particular, to discuss the Government's various plans for industrial and agricultural projects. The Bank is enjoined by its statute to lend prudently. Translated into practical terms, this means that the Bank has to make sure that any project which it finances are soundly conceived, well worked-out from a technical standpoint, supplemented by adequate internal finance and the availability of good managerial and other skills. It was, accordingly, the object of the Mission, as it travelled around India for six weeks in January-February 1949, to weigh against these standards the various projects which were under consideration. The results of the Mission's visit are not yet known, but it is confidently expected that an adequate dollar loan to India would be granted in due course.

On the Board of Governors of the Bank is Sir Chintaman Jeshumkhi (due to retire as Governor of the Reserve Bank of India in mid-June, 1949), with his alternate Mr. N. Sundaresan. Among the Board of Executive Directors is Mr. Sundaresan with Mr. D. S. Savkar as alternate. On the Bank's Advisory Council is Sir C. V. Raman representing scientific interests. The Bank continually endeavours for as wide a geographical distribution of staff as possible and 23 different countries are now represented.

COINAGE

THE act of 1818 marked the beginning of the Indian Coinage System when the silver rupee of 180 grains troy 11/12ths fine was made unlimited legal tender by the East India Company for South India, where gold coins had been in circulation. Seventeen years later, the Gold and Silver Coinage Act was enacted to extend the unlimited legal tender character of the rupee to the whole of India (which then included Pakistan) by substituting monometallism for bimetalism.

SILVER

Mintage of silver rupees was undertaken in this country in 1835. It continued till June 26, 1893 when the Indian Coinage Act of 1870 was amended with a view to closing the mints for the unrestricted coinage of silver for the public. For four years, no Government rupees were coined with the object of attaching higher value to it as coin than bullion; but recognition was again undertaken in 1897 and 1898 following the conclusion of arrangements with Bhopal and Kashmir for replacing the State currency by Government rupees. In 1899 there was again no coinage of rupees; but the need for it in the following year resulted in resuming its mintage which continued almost uninterruptedly till 1922 when it was suspended. The Currency Act of 1927 made the silver rupee and the silver half-rupee legal tender without limit, but open to issue at the will of Government.

In 1940 the then Government of India decided, as a measure of conserving silver resources as far as possible in view of the rapid absorption of silver price, to adopt the fineness of one-half silver and one-half alloy for all three coins. Incorporated in the new rupee was a new security edge device consisting of the insertion of a shallow re-entrant in the centre of the milled edge which was considered to be a virtually absolute safeguard against counterfeiting.

All Victoria and King Edward VII rupee and half rupee coins of the old fineness were withdrawn with effect from April 1, 1941 and May 31, 1942, respectively and King George V and King George VI standard silver rupees were called back with effect from May 1, 1943. These announcements marked the end of the policy which originated over 50 years ago of converting the rupee which had previously been a full value silver coin into a token. The return of coin was, however, meagre as, since the end of March 1943, the average price of silver was higher than the melting point of the standard silver rupee.

As standard silver coins have been demonetised, it is no longer illegal to hoard or melt them or to purchase or sell them at a value other than their face value; consequently, large quantities of coin have been hoarded or melted and sold for their bullion content. Under the Indian Coinage Amendment Act

1918, silver two anna pieces are no longer coined and issued, but coins previously issued continue to be legal tender.

New one-rupee notes were issued through the Reserve Bank of India in July 1941; the issue of these notes does not affect the earlier issue of the Government of India one-rupee notes of the 1935 King George V pattern which continue to be legal tender.

Between 1835 and 1946, the whole rupees coined and issued from the Indian mints totalled 755,29,90,130 comprising 16,30,78,572 of William IV, 352,13,80,138 of Victoria, 98,28,53,552 of Edward VII, 180,74,83,517 of George V, 98,02,178 of George VI standard and 106,71,92,173 of George VI quaternary standard.

The issue of quaternary rupee coin was discontinued from June 1946 when the reform for the introduction of the nickel rupee was launched.

In April 1947, the Government of India enacted the Indian Coinage (Amendment) Act, 1947. Under the authority thus taken, the Government issued on May 24, 1947, two notifications, authorising the minting of rupee coin of pure nickel and prescribing its (standard) weight, dimensions, design, etc. The new coins, which were first issued from the Reserve Bank on June 2, 1947, were similar in design to the pure nickel half and quarter rupees, bearing on the obverse the King's effigy with the words, "George VI King Emperor", and on the reverse a tiger, the word "India", the year of issue and the denomination in English, Urdu, and Devanagari Scripts.

The issue of quaternary (silver) rupee coin was discontinued from the end of May, 1946. The mintage of India nickel rupees during the year 1947-48 amounted to Rs. 11,51,39,000.

Rupees were not minted between 1922 and 1940. India rupee coin minted during 1947 amounted to Rs. 10.26 crores, against Rs. 3.49 crores in 1946 and Rs. 22.59 crores in 1945.

On March 11, 1940, Section 5 of the Indian Coinage Act of 1906 was modified by an Amending Act. The amendment reduced the silver content of the four-anna coin from 11/12 or 41.4 grains of fine silver to 50 per cent or 22.4 grains. This brought the silver four anna coin into line with the British subsidiary coinage. With a view to preventing counterfeiting, the Government of India directed on July 1, 1943, that the quarter-rupee coin minted during and after August 1943 should have the same security edge as quaternary rupees and half rupees.

In 1941-42, the design of the half-rupee coin of 1941 and after was altered so as to make it conform to that of the quaternary rupee coin. The minting of the quaternary half and quarter rupee silver coins was, however, suspended by a notification in May 1946 in order to enable the government to discharge the obligation to

return in kind, within five years of the end of the war, the 226 million ounces of silver borrowed from the U. S. Government between 1943 and 1945.

WITHDRAWAL OF SILVER COIN

All Victoria and King Edward VII rupee and half rupee coins were withdrawn with effect from April, 1941, and May 31, 1942, respectively, and King George V and King George VI standard silver rupees and half rupees were called back from May 1, 1943. The amount of rupee coin withdrawn from circulation is given below:—

| | (In lakhs of rupees) | | |
|----------------------|----------------------|---------|---------|
| | 1945-46 | 1946-47 | 1947-48 |
| William IV 1835 | .. | .. | .. |
| Queen Victoria | .. | .. | .. |

CIRCULATION OF RUPEES

With the cessation of the legal tender character of the standard rupee coin from November 1, 1943, the Government of India one rupee notes (issued from July 1940), quaternary silver rupees (issued from December, 1940 up to the end of May 1946), and nickel rupees (issued from June 1947) constitute the total amount of rupee coin in circulation. The aggregate amount of these, which had stood at Rs. 137.33 crores at the end of 1943-44, rose steadily to Rs. 167.67 crores at the end of 1946-47. During 1947-48, however, rupee circulation showed a decline of Rs. 12.34 crores to Rs. 155.33 crores at the end of March, 1948.

ABSORPTION OF RUPEES

Since the year 1942-43, which experienced the highest wartime absorption of rupee coin (44.93 crores) the demand for this form of currency has shown a decline. In 1946-47, there was a steep fall in the demand for rupee coin, the absorption amounting to Rs. 1.94 crores, as compared with Rs. 18.35 crores in 1945-46. During 1947-48, a net return of Rs. 12.34 crores was witnessed, indicating a probable reversal in the wartime trend as witnessed during the years following World War I. There was a return of rupee coin from May to October, 1947, and again during December, 1947, and March 1948, totalling Rs. 16.42 crores.

SMALL COIN ABSORPTION

The absorption of small coin was lower at Rs. 3.98 crores in 1947-48, compared with Rs. 5.91 crores in 1946-47, indicating the declining trend in the rate of absorption.

NICKEL

By a notification issued on May 23, 1946 the Central Government directed that the half and quarter rupee coins of the same size and weight as the quaternary coins shall be printed in pure nickel. Pure nickel coins of the denominations of four annas and eight annas were issued towards the end of May, 1946.

The Act of 1906 also provided for the coinage of a nickel coin. It was directed that the nickel one-anna piece should thenceforth be coined at the Mint and issued. The notification also prescribed the design of the coin, which has a waved edge with twelve scallops, the greatest diameter of the coin being 21 millimetres and its least diameter 19.8 millimetres. The advisability of issuing a half-anna nickel coin was considered by the Government of India in 1909 but after consultation with Local Governments it was decided not to take action in this direction until the people had become thoroughly familiar with the present one-anna coin. The two-anna nickel coin was introduced in 1917-18; and the four-anna and eight-anna nickel coins in 1919. The eight-anna nickel was withdrawn from circulation in 1924 but is still being received at issue offices only.

On account of war activities, the demand for small coin greatly increased and in January 1942 the Government of India issued a new half-anna coin which economises metal and is convenient to the public. Further with a view to economising the use of nickel, it was decided to mint new half-anna pieces and the one-anna coin and the later two-anna coin in a nickel-brass alloy instead of the cupro-nickel alloy. The notification of January 24, 1942, provided for the mintage of the new half-anna coin of a square shape and equal to three-fourths the weight of one-anna piece. According to this notification, the half-anna and one-anna pieces were minted in nickel-brass composed of 79 per cent. copper, 20 per cent. zinc and 1 per cent. nickel. A similar change in the metallic contents of two-anna piece was announced on March 21, 1942.

Towards the end of November 1945, the Government of India decided that further requirements of two-anna and one-anna pieces should be minted in the cupro-nickel alloy instead of nickel-brass alloy which had been adopted as a wartime expedient and later found unsatisfactory.

In May 1946 the Central Government authorised the minting and issue of half and quarter rupee coins in pure nickel owing to

"inadequate supplies of silver in the open market and the prevailing high prices in India." These new coins were exactly the same size and weight as the early silver coins with designs usually adopted for decimal coins of 50 cents and 25 cents respectively. The new coins have no security edge and have been designed with the margin lettering and head of the King on one side and the name of the country, the denomination in three languages, English, Devanagari and Urdu, with the figure of an Indian tiger on the reverse.

The efforts started in 1906 to avoid the wasteful use of a metal of high value like silver for coinage achieved their objective in 1947 when the Indian Coinage Act was amended further with a view to authorising the Government to issue all coins including the rupee in any metal. In the case of the half-rupee coin, the existing position was that the silver half-rupee was legal tender for any amount, but the nickel half-rupee only for a sum not exceeding one rupee, under the same Act and, all half-rupee coins are legal tender for a sum not exceeding ten rupees, while coins of smaller denominations would continue to be legal tender for one rupee as before.

Eight anna cupro-nickel coins were withdrawn with effect from October 1, 1921 and are now received at the Issue Offices only.

COPPER AND BRONZE

Copper coinage was introduced into the Bengal Presidency (now East and West Bengal) by Act XVII of 1835 and into the Madras and Bombay Presidencies by Act XXII of 1844. The weight of the copper coins struck under Act XXIII of 1870 remained the same as it was in 1835. It was as follows:—

| | Grains |
|--|--------|
| troy. | |
| Double piece or half-anna | 200 |
| Piece or quarter-anna | 100 |
| Half-piece or one-eighth of an anna | 50 |
| Pie being one-third of a piece or one-twelfth of an anna | 33½ |

The weight and dimensions of bronze coins were as follows:—

| | Standard weight in grains troy. | Diameter in millimetres. |
|--------------------|---------------------------------|--------------------------|
| Piece | 75 | 25.4 |
| Half-piece | 37½ | 21.15 |
| Pie | 25 | 17.45 |

Since 1924 double piee coin has been and is being withdrawn from circulation but it is still received at Treasuries and Issue Offices.

With a view to protecting further issues of piee against hoarding resulting from the black market value of the metallic contents rising above the face value, the Government of India issued in February 1943 a new design of piee, which economises the metal and is expected to be convenient to the public. The Finance Department notification dated February 23, 1943, provided for the mintage of the new piee with a smaller diameter and a circular hole in the centre, reduced in weight from 75 grains to 35 grains and with a metallic composition of 97 per cent. copper, 2½ per cent. zinc and one-half per cent. tin instead of the former fineness of 95½ per cent. copper, 3 per cent. tin, and 1½ per cent. zinc. The notification also provided for the discontinuance of the coinage of half-piee and pie pieces. The new piee was issued from the Bombay office of the Reserve Bank on February 1, 1943.

GOLD

Since 1870 there has been no coinage of double mohurs in India and the last coinage of single mohurs suspended as from 1891-92 was undertaken for a short period in 1918 only. The Currency Act of 1927 provided that "gold coins whether coined at His Majesty's Royal Mint or at any Mint established in pursuance of a proclamation of His Majesty's Royal Mint, shall not be legal tender in British India but such coins shall be received at any Government Currency Office, at the rate of 8,47,512 grains troy of fine gold per rupee."

DECIMALISATION

With a view to simplifying accounting and facilitating calculations the Government of India had under consideration the introduction of a decimal system of coinage in India. The occasion, calling for a huge recoinage programme necessitated by the unpopularity of the nickel brass coin introduced in 1942 as a wartime measure, was considered to be most opportune for the proposed reform. The proposals under this system were that the rupee would remain unaltered and the half-rupee and the quarter-rupee, while retaining their present shape, size and weight, would be issued as 50 cents and 25 cents coins. The existing lower denominations of small coin would, however, be discarded and, instead, cupro-nickel coins of 10 cents, 5 cents and 2 cents and bronze coins of 1 cent and, if necessary, ½ cent would be issued. A bill incorporating the above changes was introduced in the Central Legislative Assembly on the 18th February, 1946 and circularised to elicit public opinion. The matter was, however, allowed to rest due to the great changes which followed in August 1947.

BANKING

MODERN banking in India owes its origin to the British agency houses operating in Bombay and Calcutta in the eighteenth century. The banks in those days were connected with the introduction of their notes. The crisis that overtook the agency houses in the first half of nineteenth century had an adverse effect on this type of banking. Broadly, the history of Indian banking may be divided into three sections, one connected with the influence of the Presidency Banks, second following the establishment of the Imperial Bank of India in 1921, and third under the guidance of the Reserve Bank of India.

PRESIDENCY BANKS

The history of the Presidency Banks again falls into three well-defined stages. The Bank of Bengal was started in 1806, and it took 34 years more before the Bank of Bombay came into existence. The Bank of Madras however came only three years later in 1843. Prior to 1862, these Banks had the right of note issue and their main activity was to facilitate the borrowing operations of the East India Company and the financing of the trade of British merchants. Naturally, they were subject to Government control and their business was restricted by the terms of their charter.

In 1862, these banks were deprived of the right of note issue and were authorised to transact paper currency business as agents of Government. As compensation for the loss of

their right of issue, they were given use of the Government balances and the management of the treasury work in the cities and towns where they had their branches. Four years later, however, they were deprived of the paper currency business and by the Act of 1876 severe restrictions were imposed on their business. This system continued till 1920 when the Presidency Banks were merged into the Imperial Bank of India.

IMPERIAL BANK

Under the Imperial Bank of India Act of 1920, as amended by the Amendment Act of 1934, the control of the Bank is entrusted to a Central Board of Directors with Local Boards at Calcutta, Bombay and Madras and such other places as the Central Board may determine. A more detailed reference to the salient provisions in the Act will be found in the earlier editions of the Year Book; but it may be mentioned here that under the agreement with the Reserve Bank of India, the Imperial Bank continues to be the sole agent of the Reserve Bank at all places in the Indian Dominion where there was a branch of the Imperial Bank and no branch of the Banking Department of the Reserve Bank of India before 1934.

The Imperial Bank has at present 185 branches and over 200 sub-offices. Mr. A. R. Chisholm is the Managing Director, and Mr. N. G. Irvine is the Deputy Managing Director. The progress of the Bank is summed up below:—

(Rs. in lakhs)

| | Capital | Reserve | Govt. Deposits | Other Deposits | Cash | Investments | Dividend for year |
|-----------|---------|---------|----------------|----------------|-------|-------------|-------------------|
| 30th June | | | | | | | |

NATIONALISATION ISSUE

The question of nationalisation of the Imperial Bank has been hanging fire for some time, but opinion on its advisability is sharply divided. Speaking in the Dominion Parliament on February 10, 1949, Dr. John Matthai, Finance Minister, said that, "on a careful scrutiny of the matter, he had some doubts in his mind whether the management of commercial banks was a suitable sphere for nationalisation. 'I must say that I am not satisfied myself', remarked the Finance Minister, "with the organisation and working of the Imperial Bank under its present organisation. What I would like to do in the light of the criticisms which I have listened to is to see whether, without nationalising the Imperial Bank of India, it is not possible for us to secure the object which the members have in mind by undertaking a suitable revision of the Imperial Bank of India Act. What I want to do is to take in hand immediately the question of examining the provisions of the Act in the light of the actual experience or the working of it, and to see whether by revising the Act, we cannot put the Bank on a basis which would enable it to render the fullest possible service in the most suitable manner."

Reserve Bank of India

The idea of a central banking institution for the Indian sub-continent was mooted as early as in 1836 and was the subject of a minute by Mr. James Wilson, the then Finance Member, in 1850. Eight years later, Mr. Dickson, the then Secretary of the Bank of Bengal, submitted detailed proposals for the amalgamation of the three Presidency Banks. The question was again revived in 1914 by the Chamberlain Commission which went into the Indian currency and finance and was later thrashed out by the Hilton Young Commission. The latter came to the conclusion that central banking functions should not be combined with commercial banking and since it did not wish to rob the Imperial Bank of its commercial functions on the ground that such a step would arrest the progress of the country in one important sphere in which progress was most urgent and vital, it recommended a special central bank.

But the question remained undecided for nearly seven years owing to differences on its constitution. The matter was dropped after the introduction of two bills in the central Legislature and was reopened again in 1931 following the strong emphasis laid by the Central Banking Inquiry Committee in that year on the establishment of a Central Bank. The White Paper on Indian reforms carried the matter a step further when it laid it down as a condition that before responsibility in respect of finance was introduced at the centre a Reserve Bank free from political influence should be set up.

The Reserve Bank of India Act was passed by the Legislative Assembly and received the assent of the Governor-General on 6th March 1934 and the Bank began to function on 1st April 1935. From this date, the Reserve Bank took over the management of the Currency Department of the Government of India by the creation of a special department known as the Issue Department. The assets of the Gold Standard Reserve were transferred to the Bank and were combined with the assets of the Currency Department. On July 1st the Banking Department was opened and the scheduled banks deposited the required percentage of their demand and time liabilities. The Charities House was transferred from the Imperial Bank to the Reserve Bank as from this date.

Prior to its nationalisation as from January 1, 1949 a detailed reference to which is made elsewhere, the share capital of the Reserve

Bank was 5 crores of Rupees in shares of Rs. 100 each, fully paid up. The Reserve Fund of Rupees five crores was provided by Government of the Bank in the form of Government Rupee Securities.

The Bank maintained share registers at its offices at Bombay, Calcutta, Delhi and Madras.

Management.—The general superintendence and direction of the affairs and business of the Bank is entrusted to a Central Board of Directors which exercises all powers and does all acts and things which may be exercised and done by the Bank. The Board is composed of:—

(a) A Governor and two Deputy Governors, appointed by the Central Government after consideration of the recommendations made by the Board.

(b) Four Directors nominated by the Central Government.

(c) One Government official nominated by the Central Government.

The Governor and Deputy Governors are the executive heads, and hold office for such term not exceeding five years as the Central Government may fix when appointing them, and are eligible for re-appointment. A Local Board is constituted for each of the five areas.

FUNCTIONS

The Bank is authorised to carry on and transact the following commercial business, viz.:—The accepting of money on deposit without interest; the purchase, sale and rediscount of bills of exchange and promissory notes with certain restrictions; the making of loans and advances, repayable on demand but not exceeding 90 days, against the security of stocks, funds and securities (other than immovable property) against gold coin or bullion or documents of title to the same and such bills of exchange and promissory notes as are eligible for purchase or rediscount by the Bank; the purchase from and sale to scheduled Banks of sterling in amounts of not less than the equivalent of Rs. 1 lac; the making of advances to the Central Government and to Provincial Governments repayable in each case not later than three months from the date of making the advance; the purchase and sale of Government securities of the United Kingdom maturing within ten years from the date of purchase; the purchase and sale of securities of the Government of India or of a Provincial Government of any maturity or of a local authority in India and Pakistan or of certain States in the subcontinent which may be specified.

The Bank is authorised to act as Agent for the Secretary of State in Council, the Central Government or any Provincial Government or State in India for the purchase and sale of gold and silver, for the purchase, sale, transfer and custody of bills of exchange, securities or shares; for the collection of the proceeds, whether principal, interest or dividends, of any securities or shares; for the remittance of such proceeds by bill of exchange payable either in India or elsewhere, and for the management of public debt.

Bank Notes. The sole right to issue bank notes in British India is vested in the Reserve Bank and at convenience the Bank shall issue currency notes of the Government of India supplied to it by the Central Government and on and from the date of such transfer the Central Government shall not issue any currency notes. The issue of bank notes shall be conducted by the Bank in an Issue Department which shall be separated and kept wholly distinct from the Banking Department.

The Bank shall sell to or buy from any person who makes a demand in that behalf at its office in Bombay, Calcutta, Delhi, Madras or Rangoon, sterling for immediate delivery in London at a rate not lower than 1s. 6 49/64d. and not

higher than 1s. 6 3/16d. respectively; provided that no person shall be entitled to demand to buy or sell an amount of sterling less than ten thousand pounds. In April 1947 The Reserve Bank Act was amended consequent on India's membership of the International Monetary Fund and the fixing of the par value of the rupee. The amended Sections 40 and 41 of the Act now require the Reserve Bank to buy and sell foreign exchange at such rates and on such terms as the Central Government may determine from time to time.

The Bank shall make public from time to time the standard rate at which it is prepared to buy or re-discount bills of exchange or other commercial paper eligible for purchase under the Act.

The Bank will publish the accounts of both the Issue and Banking Departments weekly in the *Gazette of India*.

Every bank included in the Second Schedule shall maintain with the Bank a balance the amount of which shall not at the close of business on any day be less than five per cent. of the demand liabilities and two per cent. of the time liabilities of such bank in India as shown in the return referred to in sub-section (2).

Allocation of Surplus. After making provision for bad and doubtful debts, depreciation in assets, contributions to staff and superannuation funds, and such other contingencies as are usually provided for by bankers, and after payment out of the net annual profits of a cumulative dividend at such rate not exceeding five per cent. per annum on the share capital as the Central Government may fix at the time of the issue of shares, a portion of the surplus shall be allocated to the payment of an additional dividend to the shareholders calculated on the scale set forth in the Fourth Schedule and the balance of the surplus shall be paid to the Central Government.

Provided that if at any time the Reserve Fund is less than the share capital, not less than fifty lakhs of rupees of the surplus, or the whole of the surplus if less than that amount shall be allocated to the Reserve Fund.

(A) If the maximum rate of dividend fixed under section 47 is five per centum and so long as the share capital of the Bank is five crores of rupees.

(1) If the surplus does not exceed four crores of rupees. Nil.

(2) If the surplus exceeds four crores of rupees.

(a) up to such excess up to the first one and a half crores of rupees a fraction equal to one-sixteenth.

(b) out of each successive additional excess up to one and half crores of rupees—one-half of the surplus payable out of the next previous one and a half crores of excess.

Provided that the additional dividend shall be a multiple of one-eighth of one per cent. on the share capital, the amount of the surplus allocated thereto being rounded up or down to the nearest one-eighth of one per cent. on the share capital.

(B) If the maximum rate of dividend fixed under section 47 is below five per centum, the said fraction of one-sixteenth shall be increased in the ratio of the difference between six and the fixed rate to unity.

(C) When the original share capital of the Bank has been increased or reduced the said fraction of one-sixteenth shall be increased or diminished in proportion to the increase or reduction of the share capital.

Notwithstanding the provisions of section 47 of the Reserve Bank of India Act, 1934 (11 of 1934) and of the Fourth Schedule to that Act (given above), the aggregate of the rate at which payment of the cumulative dividend and the additional payable to shareholders of the Bank under the said provisions is made shall not, so

long as this Ordinance (the Reserve Bank of India Limitation of Dividend Ordinance of 1943) remains in force, exceed four per cent. per annum on the share capital of the Bank; and the balance of the surplus of the net annual profits of the Bank shall be paid to the Central Government.

Agricultural Credit Department.—The Bank shall create a special Agricultural Credit Department the functions of which shall be—

(a) to maintain an expert staff to study all questions of agricultural credit and be available for consultation by the Central Government [Provincial Governments], provincial co-operative banks, and other banking organisations.

(b) to co-ordinate the operations of the Bank in connection with agricultural credit and its relations with provincial co-operative banks, and any other banks or organisations engaged in the business of agricultural credit.

(1) The Bank shall, at the earliest practicable date and in any case within three years from the date on which this Chapter comes into force, make to the Central Government a report, with proposals, if it thinks fit, for legislation, on the following matters, namely:—

(a) the extension of the provisions of this Act relating to scheduled banks to persons and firms, not being scheduled banks, engaged in British India in the business of banking and

(b) the improvement of the machinery for dealing with agricultural finance and methods for effecting a closer connection between agricultural enterprise and the operations of the Bank.

(2) When the Bank is of opinion that the international monetary position has become sufficiently clear and stable to make it possible to determine what will be suitable as a permanent basis for the Indian monetary system and to frame permanent measures for a monetary standard it shall report its views to the Central Government.

The full text of the Act will be found in the earlier editions of the Year Book.

Nationalisation.—A proposal for the nationalisation of the Reserve Bank came up for consideration before the Central Assembly through a resolution on February 18, 1947. It may be recalled that the question as to whether the Reserve Bank of India should be a State or a shareholders' Bank aroused some controversy at the time when the first Reserve Bank Bill for constituting a shareholders' Bank on the lines recommended by the Hilton-Young Commission was proposed by Government in January 1927. At that time, the majority of the members opposed the Bill on the ground that a State Bank alone would inspire confidence among the people and that a shareholders' Bank would make domination by private financial interests possible. An influential minority, however, argued that a shareholders' institution alone would ensure freedom from interference in its working by political parties. The Government was prepared to accept the majority proposal but as no agreement was possible on the composition of the Directorate, the Bill was not proceeded with.

After the war, with the nationalisation of the Bank of England but more particularly with the formation of the Interim Government at the Centre, the demand for the nationalisation of the Reserve Bank of India was revived. In certain sections of the press and the non-official resolution mentioned above was the logical sequel. It was, however, withdrawn on the assurance of the Finance Member that Government would consider the proposition most carefully and sympathetically and if they were convinced that nationalisation of the Bank would be in the country's interests, they would not hesitate to take steps in that direction. This assurance was followed by an announcement by the Finance Member in the course of the budget speech on February 28, 1947 that Government had taken a decision to nationalise the Reserve Bank of India. He observed:

"I have since given further thought to the matter and am convinced that the advantages of nationalisation outweigh any possible disadvantages. I have, therefore, come to the conclusion that the Reserve Bank of India should be nationalised, the time and manner of effecting the change being a matter of separate consideration in due course."

Subsequently, on September 2, 1948, the then Acting Minister of Finance, Mr. K. C. Neogy, introduced in the Dominion Parliament a Bill to bring the share capital of the Reserve Bank of India under State ownership. The Bill was designed to ensure greater co-ordination of the monetary, fiscal and economic policies of the State by bringing about a closer legal relationship between the currency authority in the country, the Reserve Bank—and the Government. Mr. Neogy gave an assurance that the Bank would continue to be run, as far as possible, on business principles, and that the various interests represented on its governing body would not be disturbed.

Members of Parliament welcomed the measure as the beginning of a policy of "nationalisation through compensation". The amount of compensation proposed to be paid to shareholders was Rs. 118-16 for every Rs. 100 share.

COMPENSATION.

The nationalisation Bill was passed on 4th September 1948, and the Act became effective from 1st January, 1949. The shares of the Reserve Bank were transferred to the Central Government on that date, by a notification under the Reserve Bank (Transfer to Public Ownership) Act. Compensation was proposed to be paid to persons registered as shareholders immediately before January 1, 1949. The Bank's share registers were finally closed from December 1, 1948.

An official statement is issued on December 17, 1948, announced that the promissory notes to be issued as compensation for Reserve Bank shares would be of the 3 per cent First Development Loan 1947-53 and repayable at par on October 15, 1975, or by three months' prior notice, at an earlier date on or after October 15, 1970. The half-yearly interest payment dates of this loan were April 15 and October 15, but as compensation would become payable only on January 1, 1949, the interest payable on April 15, 1949, would be for the period from January 1 to April 14.

CENTRAL BOARD OF DIRECTORS

Governor.—Sir Benegal Rama Rao.

Deputy Governors.—C. R. Trevor, M. G. Vohkri.

The following have been appointed as Directors of the Central Board :—

Sir Purshotamdas Thakurdas (Bombay); Mr. B. M. Barla (Calcutta); Sir Shri Ram (New Delhi); Mr. C. R. Srinivasan (Madras); Sir Rustom P. Masani (Bombay); Sir Manilal B. Nanavati (Bombay); Mr. D. N. Sen (Calcutta); Mr. Shri Nivas (Benares); Mr. C. S. Katmasabhapati Mudliar (Bombay); Mr. R. M. Deshmukh (Amraoti); and Mr. K. G. Ambekar (Government Official).

The first four Directors have been appointed under clause (b) and the next six, under clause (c) of subsection one of section 8, of the Reserve Bank Act 1934, as amended by the Reserve Bank (Transfer to Public Ownership) Act, 1948.

REPORT FOR YEAR

The Report of the Central Board of Directors of the Reserve Bank of India for the year ended June 30, 1948, shows a net profit of Rs. 10,38,28,428 against Rs. 8,02,27,309 in the previous year. Of the net profit, a sum of Rs. 20 lakhs has been set aside for payment to shareholders of a dividend at four per cent, which is

the maximum rate fixed under the Reserve Bank of India (Limitation of Dividend) Ordinance of 1943. The balance of Rs. 10,18,28,428 is to be paid to the Government of India, out of which, in terms of the Pakistan (Monetary System and Reserve Bank) Order 1947, as amended in March 1948, the Government of Pakistan will receive a sum which bears the total of such surplus profits the same proportion as the total value of Pakistan notes in circulation in Pakistan on June 30, 1948, plus the total value of India notes returning from circulation in Pakistan in the year commencing on July 1, 1948, bears to the value of India notes and Pakistan notes in circulation in India and Pakistan on June 30, 1948.

Reviewing the general economic conditions in the country during the year, the report states that inflationary pressures gathered further momentum, particularly following decontrol in certain spheres and renewed additions to currency circulation resulting mainly from the depletion of Government balances accumulated during the war. Industrial production declined owing partly to a sense of frustration on the part of industrialists after the imposition of fresh taxation in the budget for 1947-48 and partly to growing labour unrest and the dislocation arising from widespread political disturbances.

According to preliminary figures compiled by the Bank, the total value of the foreign sea-borne trade (private and Government) of India and Pakistan for the seven months ended January, 1948, amounted to Rs. 435.2 crores against Rs. 391.1 crores for the corresponding period in the previous year. A feature of this was the sharp rise under exports both on private and Government account. There was an improvement in the balance of trade which showed a small surplus of Rs. 11.8 crores compared with a deficit of Rs. 8.9 crores during the corresponding period in the previous year.

Because of the partition of the country, and the general uncertainty in the political and economic fields, the Central Government could not reach the borrowing target of Rs. 1,00 crores envisaged in the India Act for 1947-48. Their loan operations during the year were confined to the flotation of one new loan, namely, the 21 per cent Loan 1952 in November 1947, with a second issue of the same loan in June 1948, and the repayment of the two loans, namely, the 32 per cent Loan 1947-50 and the 24 per cent Loan 1948-52. The new loan issues were fully subscribed. The total subscriptions, including amounts of maturing loans tendered for conversion, being approximately Rs. 75 crores.

As in the previous accounting year, the operations regarding the repatriation of sterling stocks were confined to the repayment of the repatriated stocks not surrendered earlier. The total amount thus repatriated during the year amounted to £2,108,696, the rupee counterparts created aggregating to Rs.44,09,510.

SCHEDULED BANKS.

During the year under review, five banks were included in the second schedule to the Reserve Bank of India Act, while three banks were excluded from it, thus bringing the total number of scheduled banks to 39. The total number of offices and branches of scheduled banks declined by 76 from 3,566 to 3,490. In the Dominion Bank one bank was declared as a Pakistan scheduled bank and was included in the schedule.

BANKING TRENDS.

In contrast to the trend noticed last year, the total demand and time liabilities of scheduled banks generally showed an upward trend and stood at Rs. 1,110-84 crores on June 25, 1948, against Rs. 1,013-70 crores on June 27, 1947. Advances recorded a further increase from Rs. 403.9 crores on December 5 to Rs. 468-41 crores by the end of the year attributable partly to the conditions arising from Government's policy of gradual decontrol.

NON-SCHEDULED BANKS.

The Reserve Bank granted loans to 12 banks including two provincial co-operative banks, the total sum advanced during the year being Rs. 228.80 lakhs. The total number of non-scheduled banks increased from 359 at the end of 1946 to 682 at the end of 1947. Their total demand and time liabilities, however, showed a decline from Rs. 75.14 crores to Rs. 45-19 crores, presumably due to the disturbed conditions in the country. The ratio of their cash to total demand and time liabilities also declined from 8.4 per cent to 7-14 per cent.

STERLING ASSETS.

The sterling assets of the Reserve Bank of India showed on balance a decline of 29-48 crores, the total holding in the Issue and Banking Departments was on June 30, 1948, standing at Rs. 1,536.67 crores. The reduction was mainly the result of the deficit in the country's balance of payments position following heavy food imports on Government account as well as permissible capital transfers.

TRADE BALANCE.

During the year, India's balance of payments position has, on the whole, been adverse to the country, though during certain months it did have a favourable balance. While it is essential not to slacken vigilance on the monetary and fiscal front, the report adds, the country's central problem is essentially one of good administration and effective execution.

INFLATION.

Observing that the rate of readjustment to normalcy will necessarily vary from country to country, the report states that in a comparatively backward country like India, it is ever likely that increased prices might, at the margin, actually lead to a lower volume of output. According to the report, another important factor contributing significantly to current inflation is the large volume of public expenditure which has been occasioned by the upheavals following the partition of the country.

CURRENCY EXPANSION.

Addressing the 14th Annual General Meeting of the Reserve Bank on August 9, 1948, Governor Sir Chintaman Deshmukh noted the nation to achieve the desired price and general economic situation by producing a larger volume of goods and services, which would be supplemented by monetary weapons, if necessary. He continued: "As a result of the emergence of a new inflationary pressure during the year, there has been a reversal of the trend observed last year for a net contraction of currency. While during the accounting year 1946-47 notes in circulation recorded a net decline of 13.3 crores, during the same period in 1947-48 there has been an expansion of Rs. 96.9 crores. The circulation of three coins (including one rupee note), however, declined by 12.63 crores during the seven months ended May 1948, as against Rs. 5.53 crores only during the whole accounting year 1946-47.

Sir Chintaman said that the expansion of currency in 1947-48 had been much larger than what might be explained as being due to seasonal requirements and the expansion period itself had been prolonged by about four to six weeks. In the absence of reliable and up-to-date information on the changes in the volume of production it was not possible to say to what extent the expansion of currency was due to that factor. Indirect evidence suggested that there had been expansion in industrial production in a few directions since November 1947, but it was probably not large enough to explain the expansion in note circulation. Its special pattern suggested one or both of two possible causes, namely, the policy of decontrol and the greater deficit expenditure by Government (Central as well as Provincial) on both revenue and capital accounts. Taking the latter first, it was observed

that in the financial year 1947-48, the combined balances of the Governments of India and Pakistan went down by Rs. 118 crores as against Rs. 95 crores in 1946-47.

STRESS AND STRAIN.

The banking system passed through a year of great stress and strain following the partition of the country. Some banks numbering about 300 had to close down their branches in Western Pakistan for want of staff and on account of apprehension regarding security of life and property, while a few others shifted their head offices to the East Punjab and Delhi. Government realised their difficulties and decided to help them. Confidence was long restored to some extent. Sir Chintaman, however, warned them that they should give careful attention to the writing off of bad debts and the training of staff. Such advances were almost invariably owing to destruction of property or other reasons should be treated as bad debt, lest they should nourish a false sense of security. Notwithstanding these shocks, the banking system had on the whole a record which was not altogether

depressing. The scheduled banks' deposits had increased during the year by about Rs. 100 crores and advances and bills discounted had risen, especially after the adoption by Government of decontrol, to the record level of Rs. 500-21 crores on April 16, 1948, as compared with Rs. 496-30 crores last year.

Normally such progress would be welcome as indicating the ability of banks to finance the growing needs of trade and industry. Banks had generally refrained from undue expansion of credit; but some appeared to have shown progress at the cost of relaxing the accepted standards of banking practice in making advances, possibly out of a desire to meet the enforced cost of management and to maintain dividend levels. He thought it was necessary more than ever before to guard against that temptation by expressing the utmost care in the selection of credit risks and, particularly, to discourage advances for speculative purposes. Besides, their advances should be of such a nature that it would not add to the inflationary pressure but would only stimulate production.

EQUITIES MARKET.

Explaining the inactivity, in view of the inflationary situation, of the suggestion that the Reserve Bank should have taken positive measures to lift the equities market, Sir Chintaman said that extraneous factors apart, the health of the stock exchanges could be preserved by the observance of the professional code by those operating there. In order to assist them in securing that, the management needed the avoidance of a modicum of legislation. Such legislation should attempt to curb only unhealthy speculation, which implied recognition of the fact that healthy speculation, if properly directed, contributed a great deal to the efficient performance of the essential functions of the securities market. Sir Chintaman was inclined to favour Government's framing minimum legislation covering only the vital aspects of reform, rather than attempting a complete reorganisation of the stock exchanges. The legislation should be conceived in practical rather than theoretical terms and, before finalising proposals, Government should hold consultations with the authorities of the various stock exchanges.

The Exchange Banks

The banks carrying on exchange business in India are merely branch agencies of banks having their head offices in London, on the Continent, in the Far East or the U. S. A. Originally their business was confined almost exclusively to the financing of the external trade of India; but in recent years, most of them, while continuing to play their main role, have also taken an active part in the financing of internal trade. Before the Great War, these banks used to do their business in India with money borrowed elsewhere; but the development of the money market in this country in the past three decades have enabled them to depend on internal deposits. No information is available as to how far each bank has secured deposits in India but the following statement published by the Reserve Bank of India throws light on the trend of their aggregate deposits and cash balances in India and Burma:—

| | Deposits Rs. in 000s. | Cash Balances Rs. in 000s. |
|------------------|--------------------------|----------------------------------|
| Dec. 31, 1870 .. | 52.34 | 61.15 |
| " " 1880 .. | 3,39.88 | 1,80.00 |

INVESTMENTS

Discussing the question of investment in greater detail we find that so far as India is concerned they consist to a great extent of the purchase of bills drawn against imports and exports to and from India.

The financing of the import trade originated and is carried through however for the most part by branches outside India, the Indian branches' share in the business consisting principally in collecting the amount of the bills at maturity and in furnishing their other branches with information as to the means and standing of the drawees of the bills, and it is as regards the export business that the Indian branches are more immediately concerned. The Exchange Banks have practically a monopoly of the export finance in India and in view of the dimensions of the trade which has to be dealt with the Banks would under ordinary circumstances require to utilise a very large proportion of their resources in carrying through the business. They are able, however, by a system of rediscount in London to limit the employment of their own resources to a comparatively small figure in relation to the business they actually put through.

The bills against exports are largely drawn at three months' sight and may either be "clean" or be accompanied by the documents relating to the goods in respect of which they are drawn. Most of them are drawn on well-known firms at home or against credits opened by Banks or financial houses in England and bearing as they do an Exchange Bank endorsement they are readily taken up by the discount houses and Banks in London. Any bills purchased in India or Pakistan are sent home by the first

possible mail so that presuming they are rediscounted as soon as they reach London the Exchange Banks are able to secure the return of their money in about 16 or 17 days instead of having to wait for three months which would be the case if they were unable to rediscount. It must not be assumed however that all bills are rediscounted as soon as they reach London as at times it suits the Banks to hold up the bills in anticipation of a fall in the London discount rate while on occasions also the Banks prefer to hold the bills on their own account as an investment until maturity.

The Banks place themselves in funds in India and Pakistan for the purpose of purchasing export bills in a variety of ways of which the following are the principal:—

- (1) Proceeds of import bills as they mature.
- (2) Sale of drafts and telegraphic transfers payable in London and elsewhere out of India or Pakistan.
- (3) Purchase of Council Bills and Telegraphic Transfers payable in India from the Secretary of State.
- (4) Imports of bar gold and silver, bullion.
- (5) Imports of sovereigns from London, Egypt or Australia.

The remaining business transacted by the Banks in India and Pakistan is of the usual nature and need not be given in detail.

GROWTH OF BANKING

The credit for giving an impetus to joint stock banking in India goes to a certain measure in the Indian Companies Act of 1860 which accepted the principle of limited liability, a factor indispensable to the raising of large amounts of capital. Till 1906 however, there were few banks in the country and their resources being meagre, the sphere of activity was also restricted. The *swadeshi* movement gave an impetus to indigenous banking activity in the country and between 1906 and 1913, the number of banks

with capital and reserves in excess of Rs. 5 lakhs doubled and their deposits increased from Rs. 8 crores to Rs. 18 crores. The year 1913 however, gave, a rude shock when several banks led by the People's Bank of India and the Indian Specie Bank went into liquidation; and though the First World War did give a fresh impetus, and the share of Indian joint stock banks in the aggregate deposits of banks in the country increased from 21 per cent. in 1914 to as much as 32 per cent. in 1920, it is a fact that between 1913 and 1924 as many as 161 banks failed.

Between 1924 and 1931 the joint stock banks in the country were adversely hit by the world depression; but the economic recovery that followed resulted in increasing the share of deposits of these banks from 31.6 per cent. in 1930 to 40.2 per cent. of the total banking deposits in 1936. The increase was mainly achieved at the cost of the Imperial Bank of India and the Exchange Banks. Since then there was a steady development till the outbreak of the Second World War excepting for a minor set-back in 1938 as the result of the closing down of the Travancore National and Quilon

Bank, Ltd.; and the pace of expansion accelerated during the war period as will be seen from the figures given below :—

SCHEDULED BANKS' CONSOLIDATED POSITION IN INDIA, PAKISTAN AND BURMA
(Rs. in lakhs)

| Average of Friday Figures. | No. of scheduled banks at the end of period. | Demand liabilities. | % of Demand liabilities to total deposits. | Time Deposits. | Savings Deposits. | Total Demand and Time Deposits. | Cash. | Balances with Reserve Bank. | Excess of Balances over statutory minimum. | Total Cash and Balances with Reserve Bank. | % of this to Demand liabilities. | Advances. | Bills Discounted. | Total Advances and Bills Discounted. | % of Advances to Demand Deposits. |

| 1945-46 | 91 | 654.53 | 71.6 | 259.52 | 121.56 | 911.05 | 34.80 | 89.91 | 51.99 | 124.71 | 13.64 | 285.07 | 16.05 | 301.12 | 32.94 |
| 1946-47 | 96 | 725.54 | 69.2 | 323.11 | 133.94 | 1,048.65 | 41.11 | 81.25 | 38.51 | 122.36 | 11.67 | 406.39 | 21.32 | 427.71 | 40.79 |

Statistics published by the Reserve Bank of India relating to Banks in India and Pakistan for the year 1947, show that, despite the disturbances that followed on the heels of partition in August 1947, commercial banking in the two Dominions presented, on the whole, an encouraging picture and even recorded further expansion. The Bank's report observes, "Both the Dominion Governments took measures to mitigate the severity of the dislocation and to revive confidence by passing emergency ordinances. A few banks shifted their registered offices from Pakistan to the Indian Dominion. Cash and balances with the Reserve Bank remained high throughout the year. Advances of scheduled banks were at a higher level than during the previous year. In the last quarter of 1947, they rose sharply. Investments did not vary appreciably from the previous year's level. As in the previous year, the flotation of new banks was restricted, and the opening of

new branches and change of location of existing branches, continued to be regulated by the Banking Companies (Restriction of Branches) Act, 1946."

With five new banks included during the year in the Second Schedule to the Reserve Bank of India Act and two excluded, the total number of scheduled banks came to 93 at the end of 1947, as against 96 at the end of 1946. At the end of 1947 there were in India and Pakistan, including the Indian States, as far as particulars available with the Reserve Bank of India 2,070 non-scheduled banks having paid-up capital and reserves of Rs. 5 lakhs and over, 202 between Rs. 1 lakh and Rs. 5 lakhs, 131 between 50,000 and Rs. 1 lakh, and 216 below Rs. 50,000.

The table below shows the Demand and Time Liabilities, Cash Balances, Advances, and Bills Discounted of Scheduled Banks as shown by their weekly returns:

(In Lakhs of Rupees)

| Year. | No. of Reporting Banks. | Demand Liabilities. | Time Liabilities. | Cash and Balance with R.B.I. | Advances. | Bills Discounted. |
|-----------------------|-------------------------|---------------------|-------------------|------------------------------|-----------|-------------------|
| (Average of Fridays.) | | | | | | |
| 1939 | 58 | 135.49 | 105.99 | 22.94 | 116.78 | 5.43 |
| 1940 | 60 | 155.68 | 106.16 | 37.91 | 131.78 | 4.05 |
| 1945 | 87 | 634.23 | 240.57 | 119.52 | 268.96 | 14.75 |
| 1946 | 93 | 722.05 | 310.41 | 126.03 | 372.76 | 20.44 |
| 1947 | 97 | 698.25 | 344.39 | 135.82 | 427.51 | 18.13 |

Contrary to the trend noticed during the past few years, the total demand and time liabilities of the scheduled banks did not maintain their continuous upward trend throughout 1946-47. From Rs. 1,039 crores, they reached an all-time high of Rs. 1,067 crores on November 2, 1946 but, receded thereafter. The proportion of demand to total liabilities increased from a little less than 57 per cent. on the eve of the War to 69.47 per cent. on June 28, 1946 and then slipped back to 65.82 per cent. in the following year. The increase in time liabilities in 1946-47 indicated a gradual progress towards pre-war pattern of bank deposits.

Though the deposits of banks increased since 1939, there was no corresponding rise in demand for bank finance in the war period and even though the subsequent increase was rather sharp, the banks were able to maintain high liquidity of their assets.

BRANCH BANKING

The tendency towards a rapid increase in the branches of Indian Joint stock banks noticed in the earlier years appeared to have lost its momentum in 1947. The number of offices of the exchange banks increased by two. The number of offices of scheduled banks increased by 61 from 3,480 to 3,541, while those of the non-scheduled banks declined from 2,041 in 1946 to 1,991 in 1947. Taking scheduled and non-scheduled banks together, there was only an increase of 11 in the number of offices during 1947. Owing to the disturbances following the political partition, many of the offices functioning in the eastern and western parts of the Country had to be temporarily closed.

The number of offices of the co-operative banks having paid-up capital and reserves of Rs. one lakh and over increased from 594 to 648.

During 1947, 13 new banks were floated. Control of capital issues under the provisions of the Emergency Provisions (Continuance, Ordinance, 1946, later enacted as the Capital Issues (Continuance of Control) Act, 1947, was continued during 1947. The total number of applications from existing banks was 84 and from proposed banks 21.

The proportion of cash balances to total deposits of the Imperial Bank of India shows a continuous, though slight decline during the past three years, while that of the other Indian scheduled banks increased from 19.3 per cent. in 1946 to 20.7 in 1947. As a result, the cash balances of all the Indian scheduled banks increased from 18.2 per cent. in 1946 to 19.0 per cent. in 1947. The cash balances of the non-scheduled banks declined from 26.2 per cent. to 22.0 per cent., and that of the exchange banks remained unchanged at 17.7 per cent.

The rates of investments to deposits of the Indian scheduled banks was slightly higher during 1947; for the Imperial Bank, it rose from 56.9 per cent. in 1946 to 57.3 in 1947, and for the other scheduled banks from 44.7 per cent. to 46.5.

While the ratio of loans and advances to deposits of scheduled banks declined to 40.6 per cent. during the year from 41.9 per cent. in 1946, that of non-scheduled banks increased to 65.3 per cent. from 56.1 per cent. in the previous year.

War-time Anxiety.—It would be seen from the above table and the previous one that the percentage of advances to total deposits fell sharply, owing to wartime restrictions on trade and Government being the main financier of the country's economic activity, from 44.3 per cent. on September 1, 1939 to 31.7 on June 28, 1946 but increased in the following year to 40.6. Similarly, the proportion of cash to total deposits rose from 13.5 per cent. just before the outbreak of the War to 14.8 per cent. and then contracted to 14.1 per cent. in the following year. It might be noted that the proportion of cash to deposits reached the peak of 20.7 per cent. on December 27, 1940 as a result of the fall in economic activity following the collapse of France.

Surveying the developments in 1946-47, Sir Chintaman Deshmukh, Governor of the Reserve Bank of India, told the annual meeting of the Bank on August 4, 1947 that the swift expansion in advances was not due entirely to the normal demands of trade and industry but due, to an unwholesome extent, to abnormal factors like bullish markets and speculative

imports. Such business was evidence of immature or imprudent bank management. With a view to restoring a proper balance between their capital and deposits and also because of the provisions of the projected banking legislation, banks continued to make applications for raising their capital.

"Banking practices," observed the Governor of the Reserve Bank, "still leave much to be desired. There is yet, for instance, a propensity

towards declaring dividends from profits arising out of security transactions. I have also noticed a pronounced tendency on the part of some banks to window-dress their balance sheets. Considerable anxiety was felt about the ability of Indian banks to tide over smoothly the period of transition from war to peace, particularly because of the scramble for establishment of new banks during the years following 1943. As the year 1946 advanced, the public felt reassured that the worst was over."

PRESENT POSITION

The following table shows the position of the better known existing banks as it appears in "Statistical Tables Relating to Banks in India and Pakistan for the year 1947":—

(In Lakhs of Rupees)

| | Capital. | Reserve. | Deposits. | Cash and Liquid Investments. | No. of Offices. |
|--------------------------------|----------|----------|-----------|------------------------------|-----------------|
| Allahabad Bank | 46 | 106 | 29.38 | 17.20 | 70 |
| Baroda Bank | 100 | 105 | 32.81 | 22.46 | 39 |
| Bank of India | 150 | 284 | 68.63 | 44.75 | 32 |
| Bharat Bank | 201 | 40 | 19.02 | 14.09 | 253 |
| Central Bank | 314 | 353 | 123.15 | 86.18 | 361 |
| Imperial Bank | 563 | 625 | 286.59 | 207.08 | 437 |
| Indian Bank | 53 | 63 | 18.15 | 11.61 | 70 |
| Punjab National Bank | 87 | 100 | 59.64 | 39.56 | 275 |
| Union Bank | 40 | 21 | 5.33 | 4.17 | 5 |
| United Commercial Bank | 200 | 40 | 31.55 | 28.18 | 82 |

The following figures appearing in the Statistical Tables Relating to Banks in India show the growth of the Capital, Reserve and Deposits of the Joint Stock Banks having a paid capital and reserves of Rs. 5 lakhs and over registered in India:—

In Lakhs of Rupees.

Banking Legislation

Ever since 1913 when the banking crisis in this country stressed the need for separate legislation to govern the working of banks, this problem has been confronting the authorities. The Indian Central Banking Inquiry Committee examined the question in greater detail and advocated legislation for a Special Bank Act covering the various aspects of banking. Owing to the outbreak of War and subsequent constitutional developments, this measure could not be passed through the legislature. However, some of its more urgent provisions were brought into effect either by the amendment of the Company law or by the issue of Ordinances.

The original bill provided for (1) a clear but simple definition of banking, (2) for minimum capital so as to permit them of reasonable profits, (3) restrictions on the mode of investment and (4) for acceleration of the liquidation proceedings in order to minimise the inconvenience of depositors. In 1912, the Government of India got the approval of the legislature to amend the Indian Companies Act whereby Section 277F was added so as to define the word "bank", "banker" or "banking". In 1913 following the Bombay High Court's ruling that the exemption granted to banks by Government under a notification on January 16, 1937 from showing in their balance sheets the provision for bad and doubtful debts, the Indian Companies Act was amended by providing specifically the same exemption under Part F in the Third Schedule.

By amending Section 277 F and adding Section 277 H, Government prevented the banks from employing managing agents or any person either on commission basis or on a contract exceeding five years. It also laid down that no bank registered after January 15, 1937 shall carry banking business unless its subscribed capital is not less than half the authorised capital and its shares consist of ordinary shares only. While the already registered banks were allowed to have preference shares, they were compelled to extinguish the deferred shares. It further regulated the voting rights on the basis of the contribution to the share capital. The whole object was to prevent the issue of mushroom banks which had been so prominent a feature of the War years.

The Banking Bill moved in the Central Legislature in 1941 sought to tighten the control more rigidly than the original legislation proposed in 1939 and provided for (1) a definite ban on trading by banks and disposal of trading assets of the defaulting borrower within a specified period, (2) ban on the grant of unsecured loans to directors, their firms and companies, (3) the licensing of banks registered outside British India, (4) submission of monthly returns to the Reserve Bank in respect of assets and liabilities and half yearly returns regarding particulars of advances and investments, (5) return of unclaimed deposits to be filed with the Reserve Bank, (6) a special form of balance sheet, (7) authority by which the Central Government could direct the Reserve Bank to inspect the books of any bank, and (8) the Reserve Bank being the official liquidator of banks.

Select Committee Report.—The revised Bill was referred to a Select Committee whose report was presented to the Legislative Assembly on February 17, 1947. The consideration of the report was, however, postponed to subsequent session. The main changes proposed by the Committee in the Bill were:—

(1) Limiting the Reserve Bank's emergency power to suspend the provisions of the Bill to 30 days, (2) Widening the definition of "banking", so as to include the acceptance of time deposits also, (3) Providing that no company other than a banking company shall accept deposits repayable on demand, (4) Making the existence of managerial contracts subject to confirmation by a general meeting of shareholders and making the Reserve Bank the arbiter in questions of disproportionate

remuneration, (5) Introducing a somewhat elaborate but more workable basis for capital requirements replacing the original basis of population for capital requirements by one dependent on the territorial range of a company's activities, (6) Limiting the voting rights of any one shareholder to one-tenth of the total voting rights so as to prevent the control of the affairs of a banking company from passing into the hands of a small group, (7) Prohibiting a banking company from declaring dividends before it has written off all its capitalised expenses, (8) Debarring a banking company incorporated in India from taking on its board a person who is already a director of another banking company, (9) Placing on all banking companies incorporated in India an obligation to build up and maintain a reserve fund equal to the paid-up capital, (10) Making it necessary for all banks to obtain the permission of the Reserve Bank before forming a subsidiary company for purposes other than those expressly permitted under clause 19, (11) Requiring all banking companies to take out licences, (12) Prohibiting a banking company from holding shares in any company in the management of which any manager or managing director of the banking company is in any way concerned or interested, (13) Bringing down the minimum percentage of cash and approved securities to be held from 25 per cent. to 20 per cent., (14) Giving the Reserve Bank free discretion to inspect a banking company at any time so that the public may not draw any pessimistic inference from the fact that a bank has been inspected, (15) Adding further to the powers and functions of the Reserve Bank so as to bring it into closer contact with banking companies and providing for an annual report by the Reserve Bank on the trend and progress of banking in the country, (16) Removing, in case of private banking companies, some of the exceptions granted under the Indian Companies Act, (17) Amending the Reserve Bank of India Act so as to enable the Bank under certain circumstances to come to the aid of a banking company by means of a loan against such securities as it may consider sufficient.

Unhealthy Developments.—The Committee also suggested that the constitutional difficulties standing in the way of extending the provisions of the Bill to partnerships and individuals carrying on banking business should be examined with a view to introducing legislation to bring them within the purview of the Bill.

Pending the enactment of the Banking Companies Bill, 1946, and with a view to controlling the unexplained expansion of branches and checking certain undesirable developments such as excessive expenditure on branches in relation to their resources, employment of untrained staff, etc., a Bill for the licensing of branches of banking companies was introduced in the Assembly on November 4, 1946. After being approved, it became effective from November 22.

Section 31 of the Reserve Bank of India Act was amended on November 16, 1946 putting on a permanent footing the ban on the issue of promissory notes payable to bearer. The ban had been imposed by the Government of India on May 18, 1946 by an Ordinance with a view to putting a stop to the unhealthy practice noticed in the case of certain banks of issuing bearer promissory notes with a stated period of maturity, which, in effect, constituted substitutes for currency notes.

BANKING ACT OF 1949

The Bill to consolidate and amend the law relating to banking companies (otherwise known as the Banking Companies Bill), as reported by the Select Committee, was passed by the Indian Dominion Parliament on February 17, 1949 and brought into effect from March 16. The legislation, called the Banking Companies Act 1949, marks the culmination of the long and chequered career of the proposal for a Banking Companies Bill, first mooted in 1939. It

attempts to consolidate with certain modifications the relevant provisions concerning banking companies, contained in the Indian Companies Act, 1913, and various *ad hoc* measures like the Banking Companies (Restriction of Branches) Act, 1946, the Banking Companies (Inspection) Ordinance, 1946, and the Banking Companies (Control) Ordinance, 1948, that were adopted from time to time pending comprehensive legislation.

As a result of the representation made by a deputation of the Indian Banks' Association, the Select Committee did away with certain stringent features of the original Bill. The Act is, on the whole, a salutary measure to check malpractices which may occur in the management of banks.

The following is a summary of the Act as published in the Reserve Bank of India Bulletin, April 1949:—

The Act regulates all banking companies and covers all the Provinces of India and to Acceding States to the extent to which the Dominion Legislature has power to legislate for States in respect of banking. Banking has been defined as "the accepting, for the purpose of lending or investment, of deposits of money from the public, repayable on demand or otherwise, and withdrawable by cheque, draft, order or otherwise." Co-operative banks, however, have been excluded from the scope of the Act.

All banks working in the Provinces of India and in Acceding States to which the Act extends, are to be licensed. The licence is to be issued by the Reserve Bank, which may require to be satisfied that the applicant bank is in a sound position, and further in respect of a foreign bank, that the law of the country in which it is incorporated does not discriminate in any way against banking companies registered in India.

The Act lays down the minimum requirements relating to the paid-up capital and reserves of a bank incorporated in India; these requirements vary according to the geographical coverage of its operations.

Scheduled banks continue to be required to keep minimum reserves with the Reserve Bank and to submit weekly returns under the Reserve Bank of India Act, 1934. All banks other than the scheduled banks are now required to maintain in cash with them or with the Reserve Bank, or partly in cash with them and partly with the Reserve Bank, 2 per cent. and 5 per cent. of their time and demand liabilities respectively, and to submit monthly returns giving details of cash held and time and demand liabilities as on each Friday of the month.

All banking companies are required, two years after the commencement of the Act, to maintain 20 per cent. of their demand and time liabilities in India in cash, gold or unencumbered approved securities, valued at a price not exceeding the current market price. They have also to maintain in the Provinces and Acceding States assets representing 75 per cent. of their demand and time liabilities at the end of each quarter.

The Act prohibits inter-locking directorates among banking companies and the employment of managing agents. It also prohibits the granting of unsecured loans or advances to any of the directors, or to firms in which the directors are interested. Monthly returns are to be submitted to the Reserve Bank relating to unsecured loans to companies in which the directors are interested.

The Reserve Bank has now the power, on a permanent statutory basis, to control not only the scheduled but also the non-scheduled banks, and, therefore, the entire joint-stock banking system. It may give directions to banking companies in regard to their lending policies; the purposes for which advances may or may not be made, the margins to be maintained, and the rate of interest to be charged on advances. It may caution or prohibit banking companies

generally or any banking company in particular, against entering into any particular transaction or class of transactions. It may call for periodical as well as *ad hoc* returns, and, in the public interest, it may also publish such information in any consolidated form it deems fit. It may inspect any bank either on its own initiative or on being directed to do so by the Government. The Reserve Bank's prior permission is required for the opening of new branches and the transfer of existing ones.

The Reserve Bank has also been given certain powers in respect of voluntary winding up and amalgamations of banking companies, and it may, on applying for it, be appointed as official liquidator.

The Reserve Bank is required to make an annual report to the Central Government on the trend and progress of banking in the country, with suggestions, if any, for the strengthening of the banking business in the country.

INDIGENOUS BANKERS

Long before the establishment of joint-stock banking companies in India, Pakistan indigenous bankers or *shroffs* flourished. Even at present they form an important credit agency in the banking system and are the only source of credit in many parts of the sub-continent. The difference between *shroffs* and money-lenders is that while the latter work generally with their own capital, the former use borrowed capital also either in the form of deposits from the public or by drawing and rediscounting *hundi*s. A certain number of indigenous *shroffs* work on modern lines and transact all kinds of business which the ordinary joint stock banks transact, including the issue of pass books and cheque books. They do not, however, publish balance sheets and their management is entirely in the hands of a single proprietor or a firm of proprietors.

No reliable estimates of the capital employed by indigenous bankers are available; but it is recognised that amongst the agencies financing agriculture, internal trade and small industries, they occupy a prominent position. Their operations are not attended with formalities and delay, and the majority of them combine banking with some form of trade and the capital employed in banking is not distinguished from that employed in trade.

In Bombay indigenous bankers on the approved lists of joint-stock banks get advances from these banks upto their respective limits. Banks also make advances against *shroffs' hundi*s, the period for which is usually 60 days. In all Provinces, the indigenous bankers get remittance facilities from the Imperial Bank on the same terms as the general public do.

In pursuance of the recommendations of the Central Banking Inquiry Committee for linking indigenous bankers with the country's central banking institution, the Reserve Bank of India, on its formation, opened negotiations; but no agreement materialised since the indigenous bankers felt that the conditions laid down were rather irksome. The question was brought up for discussion again in 1946 when the Central Assembly considered the Banking Bill. The Select Committee has now suggested that indigenous bankers should be brought in line with joint-stock banks and the difficulties in the way of extending the legislation to them should be examined.

THE INTEREST STRUCTURE

Recent monetary theory looks on money rates as the basic influence at work in respect of a country's economy. Banks work within the conditions set by interest rates which, in turn, are regulated, under the modern monetary technique, by the central banking institution of a country. The yield on a non-terminable Government security is generally looked upon as a barometer of long-term interest rates, while the rate of the Imperial Bank on demand loans represents earnings on short term investments. The Imperial Bank's *hundi* rate is the

rate at which the Bank discounts first class trade bills. The call money rate is the rate for surplus money seeking investment and repayable at the option of the borrower or the lender subject to a minimum period of 24 hours. Bazaar Bill rates are the highest rates in the Indian money market and they are the rates charged by *shroffs*.

In the monetary history of the sub-continent the normal relationship between the short-term money rates and the long-term money rates is that the former stands higher than the latter. For three decades in the last century, the excess ranged between one and two per cent.; but since then, the difference has narrowed down and the latest tendency is that the short-term loan rates are actually lower than the long-term interest rates. This is mainly due to the exceptional demand of Government for loans.

Formerly each Presidency Bank fixed its own Bank rate which was not uniform. After the amalgamation of the Presidency Banks the Imperial Bank fixed the rate for the whole of the sub-continent until July 1, 1935 when the right to fix the official Bank rate was exercised by the Reserve Bank. The rate fixed represents the rate charged by the banks on demand loans

against Government securities and is the standard rate at which the Reserve Bank is prepared to buy or rediscount bills of exchange or other commercial paper eligible for purchase under the Reserve Bank of India Act. This rate enables the Reserve Bank to have direct contact with short-term rates and the money market and to encourage or discourage scheduled banks to obtain more cash.

The Bank rate of the Reserve Bank of India and the *hundi* rate of the Imperial Bank of India remained unchanged at three per cent. throughout 1947-48. As during the previous year, money conditions were generally stringent during the greater part of 1947-48. However, the inter-bank call money rate quoted by the larger scheduled banks remained nominally around $\frac{1}{2}$ per cent. during the major part of the year. The 12 months rate which was quoted at $\frac{1}{2}$ to $\frac{3}{4}$ per cent. at the end of last year was quoted at that level up to June 28 but thereafter recovered to $\frac{1}{2}$ to $\frac{3}{4}$ per cent. continuing unaltered throughout the remaining period under review.

Money Rates.—The following is the trend of the short-term money rates in the country since 1935-36:—

| Year. | Bank Rate. | Imperial Bank <i>Hundi</i> Rate. | | Call Money. | | Bazar Bill. | | Average Treasury Bill Rate. | Annual Deposits. | |
|---------|------------|----------------------------------|------|-----------------|---------|-----------------|-----------------|-----------------------------|------------------|-----------------|
| | | High. | Low. | Highest. | Lowest. | H. | L. | | H. | L. |
| 1935-36 | 3 | 3 $\frac{1}{2}$ | 3 | 3 $\frac{1}{2}$ | 1 | 6 $\frac{1}{2}$ | 3 | 1.21 | .. | .. |
| 1936-37 | 3 | 3 | 3 | 1 $\frac{1}{2}$ | 1 | 5 $\frac{1}{2}$ | 3 $\frac{1}{2}$ | 0.78 | .. | .. |
| 1937-38 | 3 | 3 | 3 | 1 $\frac{1}{2}$ | 1 | 5 $\frac{1}{2}$ | 5 $\frac{1}{2}$ | 0.97 | .. | .. |
| 1938-39 | 3 | 3 | 3 | 2 $\frac{1}{2}$ | 1 | 5 $\frac{1}{2}$ | 3 | 1.63 | 2 | 1 $\frac{1}{2}$ |
| 1939-40 | 3 | 3 $\frac{1}{2}$ | 3 | 2 $\frac{1}{2}$ | 1 | 6 $\frac{1}{2}$ | 5 $\frac{1}{2}$ | 1.86 | 2 | 1 $\frac{1}{2}$ |
| 1940-41 | 3 | 3 $\frac{1}{2}$ | 3 | 1 $\frac{1}{2}$ | 1 | 6 $\frac{1}{2}$ | 5 $\frac{1}{2}$ | 0.89 | 2 | 1 $\frac{1}{2}$ |
| 1941-42 | 3 | 3 | 3 | 1 | 1 | 6 $\frac{1}{2}$ | 4 $\frac{1}{2}$ | 0.82 | 2 | 1 $\frac{1}{2}$ |
| 1942-43 | 3 | 3 | 3 | 1 | 1 | 6 $\frac{1}{2}$ | 5 | 0.87 | 2 | 1 $\frac{1}{2}$ |
| 1943-44 | 3 | 3 | 3 | 1 | 1 | 6 | 4 $\frac{1}{2}$ | 0.90 | 1 $\frac{1}{2}$ | 1 |
| 1944-45 | 3 | 3 | 3 | 1 | 1 | 5 $\frac{1}{2}$ | 4 $\frac{1}{2}$ | 0.49 | 1 $\frac{1}{2}$ | 1 |
| 1945-46 | 3 | 3 | 3 | 1 | 1 | 5 $\frac{1}{2}$ | 5 $\frac{1}{2}$ | 0.38 | 1 $\frac{1}{2}$ | 1 $\frac{1}{2}$ |
| 1946-47 | 3 | 3 | 3 | 1 | 1 | 7 $\frac{1}{2}$ | 5 $\frac{1}{2}$ | 0.43 | 1 $\frac{1}{2}$ | 1 $\frac{1}{2}$ |

Relative Rates.—The relationship between the long-term interest rates as represented by the yield on non-terminable Government loan and the short-term interest rates is established in the following table:—

| Year. | Yield on $\frac{3}{4}$ p.c. Rupee Security. | Average Bank rate. | Excess or Deficit of 2 over 1. |
|-------|---|--------------------|--------------------------------|
| 1870 | 4.3 | 5.16 | + 0.86 |
| 1880 | 4.3 | 5.01 | + 0.71 |
| 1890 | 4.0 | 5.92 | + 2.07 |
| 1900 | 3.04 | 5.51 | + 1.87 |
| 1910 | 3.72 | 5.47 | + 1.74 |
| 1920 | 5.9 | 6.20 | + 0.07 |
| 1930 | 5.1 | 5.88 | + 0.78 |
| 1931 | 5.5 | 7.04 | + 1.54 |
| 1932 | 5.7 | 5.92 | + 0.70 |
| 1933 | 4.3 | 3.56 | — 0.74 |
| 1934 | 3.9 | 3.59 | — 0.40 |
| 1935 | 3.45 | 3.45 | — |
| 1936 | 3.52 | 3.00 | — 0.52 |
| 1937 | 3.63 | 3.09 | — 0.63 |
| 1938 | 3.55 | 3.00 | — 0.55 |

* From this year, the yield is on 3 per cent. Rupee Paper.

| Year. | Yield on $\frac{3}{4}$ p.c. Rupee Security. | Average Bank rate. | Excess or Deficit of 2 over 1. |
|----------|---|--------------------|--------------------------------|
| 1940-41* | 3.79 | 3.0 | — 0.79 |
| 1941-42 | 3.69 | 3.0 | — 0.69 |
| 1942-43 | 3.77 | 3.0 | — 0.77 |
| 1943-44 | 3.57 | 3.0 | — 0.57 |
| 1944-45 | 3.33 | 3.0 | — 0.33 |
| 1945-46 | 3.14 | 3.0 | — 0.14 |
| 1946-47 | 2.90 | 3.0 | + 0.10 |

Clearing Houses.—The Principal Clearing Houses in India and Pakistan are those of Calcutta, Bombay, Madras and Karachi, and of these the first two are by far the most important. In 1946-47 Clearing Houses were opened at Alleppey, Rajkot and Gaya and are being managed by the Imperial Bank of India. This brings the total number of Clearing Houses under the management of the Imperial Bank to 19. In Bombay, a Metropolitan Clearing Association was formed and registered in October 1946 to arrange for clearing for non-scheduled banks as the Bombay Bankers' Clearing House decided to restrict its membership and sub-membership only to scheduled banks.

CLEARING HOUSE STATISTICS

(In lakhs of rupees)

| Year. | Calcutta. | Bombay. | Madras. | Karachi. | Rangoon. | Cawnpore. | Lahore. | Delhi. | Total. | Other Centres. |

STOCK EXCHANGE

THE earliest reference to stock broking in the sub-continent dates back to the end of the 18th century when transactions in Government securities and the shares of the East India Company used to take place in Calcutta under a *room tree*. Similar references are also available about business in shares in Bombay before 1840. The boom following the American Civil war gave a great impetus to this business.

The Native Share and Stock Brokers' Association of Bombay was formally constituted by an indenture dated December 3, 1887. It has now about 500 members on its roll who carry no business in the Brokers' Hall bought in 1887 from the funds of the Association. Trading is governed by the rules framed by the Governing Board. The present value of a broker's card is about Rs. 35,000.

This is the only share market where forward business used to be conducted in an organised way. This business is governed by separate rules approved by the Government of Bombay under powers vested in them by the Bombay Securities Contract Control Act. This legislation was enacted in 1925 in pursuance of the recommendations made by the Stock Exchange Inquiry Committee in 1923, with Sir Wilfrid Atlay as President. The majority report made a number of recommendations for the strengthening of discipline, extension of business hours, curtailment of holidays, annual election of the Board, annual declaration by members as to the class of business they propose to undertake, abolition of sub-brokers, use of a common transfer form, abolition of blank transfers on the reduction of the stamp duty, etc. The minority report of one member the late Mr. B. J. Desai laid stress on the reduction of holidays and minor improvements and was accepted by the Association.

Thirteen years later, the Government of Bombay appointed a Committee, with Mr. W. B. Morison as Chairman, "to examine and report on the organisation and methods of working of the Native Share and Stock Brokers' Association, to consider whether any modifications are desirable in the interests of the investing public and to make recommendations."

The wild orgy of speculation that started in the share markets all over the country in 1913 called for Governmental action. On September 11, 1913, the Government of India issued Rule 91-C under the Defence of India Rules, prohibiting with effect from the 24th of that month all stock exchanges in India from permitting or affording facilities for *bada* transactions or for the making of any contracts other than for ready delivery contracts. Speaking about the working of this Rule at the annual meeting of the Native Share and Stock Brokers' Association in 1945, Mr. K. R. P. Shroff, however, complained that instead of achieving the objective, the Rule had only created "grey" markets all over the country. In December 1945, this rule expired following the termination of the War.

Bombay Bill.—In September 1947, the Government of Bombay brought forward a comprehensive Bill to control and regulate forward trading in the Province by consolidating the existing laws including the Bombay Securities Contract Control Act. The Bill seeks to vest wide powers in Government in the matter of framing the rules of a recognised trade body and superseding its Governing Board. It also provides for Government recognition of an association for purposes of forward trading. The rules and bye-laws of a recognised association have to be approved by the Government and no alterations or additions thereto shall be made

without their prior approval. The Government have also the power to add to, vary or rescind any rules or bye-laws of the recognized association. It makes contracts, hitherto known as void, a penal offence, defines a ready delivery contract and bans trading in forward contracts at any place other than the trading hall of a recognised association.

Besides the premier share market in Bombay, occasional attempts were made in the city to have an additional share market. In 1917 the Bombay Stock Exchange Ltd. was registered, but it ceased to function after a brief period. A new stock market was opened in 1938 under the name of the Indian Stock Exchange, Ltd.

Calcutta Association.—The Calcutta Stock Exchange Association was founded at No. 2, New China Bazar Road (now known as 2, Royal Exchange Place), Calcutta, with 150 founder members in 1908. Fifteen years later, it was registered as a limited liability concern. The Association is controlled and managed by a Committee and has a membership of 232 brokers.

The only registered institution in South India of brokers dealing in shares and securities is the Madras Stock Exchange Association, Ltd., registered in 1937.

Of late, several stock markets have been started at other industrial centres. These include Delhi and Cawnpore. Plans for setting up a share market in Karachi are now under way.

The Ahmedabad Stock Exchange is also a registered body and recognised by the Government of Bombay under the Bombay Securities Contract Control Act.

Among the States, Hyderabad has recently started a stock market of its own.

CAPITAL MARKET

Until the beginning of the Second World War the capital market had made a slow but steady progress; but its pace quickly accelerated during the War period when the monetary inflation and the rising trend of industrial profits served as a first class stimulant to its growth which was spectacular. The post-war period has, however, served mainly towards consolidating the early gains. A broad idea of the expansion of the market can be had from the fact that between 1938-39 and 1946-47, the interest-bearing obligations of the Government of India increased by Rs. 1,176 crores, while consent for the issue of capital was granted to the tune of Rs. 640 crores from May 17, 1943 to March 31, 1947. During 1947-48, however, the former declined by Rs. 7 crores, while for the latter consent was given to the tune of Rs. 165 crores.

CONTROL OF CAPITAL ISSUES.

To canalise the resources of the capital market in Government loans, the Government of India introduced on May 17, 1943 control over capital issues. The control passed through several amendments, namely, (1) discouragement of long-range schemes till April 1944, (2) relaxation in regard to long range schemes from April 1944 onwards, (3) exemption of companies, other than banking and insurance companies, for capital not exceeding Rs. one lakh with effect from August 1945, and (4) the raising of this exemption limit to Rs. 5 lakhs in December 1945.

In order "to secure a balanced investment of the country's resources in industry, agriculture and the social services," the Government of India introduced in March 1947 a Bill proposing to keep in existence for five years, control over capital issues, hitherto secured by Rule 94-A of the Defence of India Rules and later by the Ordinance. The final Act was enacted on April 19 with the following features: (1) The duration of the control was to be reduced from five years to three years. (2) If an application for the issue of capital was refused, the Central Government was required, upon the request of the applicant, to communicate to him in writing the reasons for such refusal. (3) An Advisory Committee consisting of not more than five members was to be set up for reference to and advise on matters arising out of the administration of the Act.

An analysis of the available statistics for the 28 months ended September 30, 1945, which marked the end of the Japanese War, shows that 4,666 companies applied for an aggregate issue of Rs. 385 crores and consent was given to 3,784 companies involving a total capital of Rs. 2604 crores. On the other hand, between March 1943 and 1946, the Government of India were able to raise by way of loans Rs. 980 crores. In other words, the war period witnessed the facilitation of Government borrowing at the cost of industrial development.

The post-war period, however, witness a reversal of the trend. Whereas in the 284 months of the war period, the total capital sanctioned was Rs. 2604 crores, in the 18 months of the post-war period it was as much as Rs. 380 crores despite the fact that the nature of control as reflected in the proportion of consents to applications had been very early the same in both periods. Consents for immediate schemes, which had been given preference in the war period, showed a decline in the post-war period in respect of both the number of companies and the amount sanctioned. Similarly, while the proportion of industrial issues to total issues had been larger during the war period, the industrial schemes predominated in the post-war period. An analysis of these statistics can be had on page 162 of the Currency Report for 1946-47. It is, however, significant that whereas capital issues allowed in 18 months ended March 31, 1947 amounted to Rs. 380 crores, Government borrowings during the financial

year ended March 31, 1947 totalled only Rs. 126 crores in the country. During the year ended 31st March 1948, only 541 applications were received for an issue of capital amounting to Rs. 103.1 crores. Out of these consent was given to 426 companies for an issue of Rs. 162.99 crores. The figures upto 14th August 1947 relate to undivided India while those after that date relate only to the Dominion of India. Further, the decline during 1947-48 was probably due to the uncertain political situation in the country and the continued weakness of the stock-market. From May 17, 1943 to March 31, 1948 the number of applications was 6,815, the number of companies sanctioned was 5,335 and the amount allowed 803.51 crores. For the next six months ending September 30, the number of companies sanctioned was 189 and the amount of money allowed 55.95 crores.

During nine months ending September 1948, new issues by existing concerns on favourable terms were mostly successful. For example, the Bank of India raised new capital for Rs. 1 crore by offering to its shareholders new shares Rs. 50 paid up—at a premium of Rs. 50. The Associated Cement made calls on the partly paid shares for nearly Rs. 2 crores. The South India Steam successfully issued 4½% 15-year debentures for Rs. 5 crores.

Government Borrowing.—The debt position of the Central Government reveals that the figures nearly doubled during 2nd War and post-war periods. The total rupee debt stood at Rs. 2,124.90 crores at the end of 1947-48. During 1945-46 & 1946-47, the Government was able to borrow Rs. 365.53 crores and Rs. 205.07 crores respectively. The figure, however, came down to Rs. 40 crores only during 1947-48, against the target of Rs. 150 crores envisaged in the budget. In June 1948, the Government of India made a fresh issue of 2½% 1962 loan for Rs. 35 crores and offered the entire amount for conversion purposes to the holders of 2½% 1948-52 loan which was due for retirement. A unique feature of this loan was that no cash subscription was invited from the public but the loan was floated exclusively for conversion purposes. The issue was successful and the entire amount was taken up.

During the same month a new short-dated loan 24% 1955 was issued at par & the total amount of Rs. 20 crores was fully subscribed. On 15th July, the outstanding amount of 2½% 1948-52 loan was repaid in cash. For three weeks in August, the accepted Treasury Bill tenders reached the high level of Rs. 6 crores a week. In the closing month of 1948, however, tighter money conditions resulted in the cessation of Treasury bill offerings. On 1st September 1948, the Government of Central Provinces &

Berar floated 3½% 1964 loan @ Rs. 99 for a total amount of Rs. 2 crores and the entire amount was taken up. Following the recommendations of economists and industrialists, Government announced the issue of Treasury Deposit Receipts for 6, 9 & 12 months @ 1, 1½ & 1¾% p.a. According to the Finance Minister's Budget statement, Treasury Deposit Receipts amounted to Rs. 4 crores in December 1948.

Investment Trusts.—The tremendous growth of the resources of the capital market has made the old investors, both institutional and individual, very powerful and has created a new set of investors. Besides the banks and insurance companies, several industrial investment trusts have come into existence.

INDUSTRIAL FINANCE CORPORATION.

To provide medium and long-term credits for industrial concerns in India, particularly in circumstances where normal banking accommodation is inappropriate or recourse to capital issue methods is impracticable, the Government of India established in July 1948, The Industrial Finance Corporation under an Act of the legislature with a paid-up capital of Rs. 5 crores. Besides the Government and Reserve Bank, its shares have been allotted to and subscribed by only recognised institutions like Banks, Insurance Companies and Co-operative bodies. The Corporation is empowered to guarantee loans raised by industrial concerns provided they are repayable within 25 years and are floated in the public market, to underwrite the issues of stocks, shares or debentures by industrial concerns and to grant loans or subscribe debentures of industrial concerns repayable within 25 years. The ceiling for advance, etc. for any concern has been placed at Rs. 50 lakhs.

In September, the Corporation started working with Sir Shri Ram as Chairman and Mr. Ram Nath as Managing Director. According to the Finance Minister's statement in Parliament the Corporation has, since its inception, sanctioned 12 loans totalling Rs. 2.25 crores. Of these, six loans were for the purpose of assisting newly established concerns and six for assisting existing industries.

Similar Corporations are proposed to be started by the Provincial Governments with the object of providing medium & long-term finance of cottage and medium scale industries.

INDIAN SECURITIES

The following table indicates the broad trend of the prices of Indian securities during the war period and thereafter on the basis of the index numbers prepared in the office of the Economic Adviser to the undivided Government of India with 1927-28 as the base for the index:—

| | Government Securities | Variable Yield Industrial Securities | | | | | | | | | | General Index |
|-----------------|-----------------------|--------------------------------------|--------------------|------------------|------------------|----------------------------|-----------------|------------------|------------------|------------------|--------------------|---------------|
| | | Fixed yield Industrial Securities | Cotton (22 shares) | Jute (20 shares) | Coal (13 shares) | Iron and Steel (13 shares) | Tan (19 shares) | Sugar (3 shares) | Cement (1 Share) | Paper (2 Shares) | Banking (8 Shares) | |
| August 1939 | 117.6 | 137.7 | 59.4 | 117.7 | 131.7 | 369.5 | 57.8 | 74.7 | 149.6 | 174.0 | 119.2 | 98.5 |
| 1939-40 | 111.2 | 131.5 | 85.1 | 64.3 | 161.5 | 529.3 | 69.0 | 97.2 | 162.8 | 346.7 | 116.6 | 120.5 |
| 1940-41 | 114.6 | 147.5 | 185.5 | 51.6 | 140.4 | 507.1 | 61.6 | 159.4 | 159.4 | 290.4 | 123.8 | 117.4 |
| 1941-42 | 115.9 | 155.9 | 111.0 | 57.2 | 132.5 | 509.3 | 77.7 | 107.2 | 193.9 | 323.9 | 133.3 | 120.0 |
| 1942-43 | 115.0 | 144.9 | 146.6 | 53.9 | 161.3 | 441.5 | 86.9 | 141.7 | 235.0 | 359.9 | 144.9 | 138.6 |
| 1943-44 | 117.2 | 164.3 | 198.8 | 65.6 | 227.2 | 555.9 | 118.0 | 211.4 | 278.4 | 488.0 | 190.9 | 182.2 |
| 1944-45 | 118.0 | 176.2 | 185.2 | 79.3 | 298.1 | 557.5 | 120.3 | 220.0 | 294.0 | 510.1 | 194.1 | 197.3 |
| 1945-46 | 118.6 | 187.0 | 199.0 | 100.9 | 356.4 | 651.1 | 131.8 | 215.3 | 287.6 | 509.2 | 217.6 | 220.8 |
| 1946-47 | 129.4 | 197.8 | 267.1 | 133.3 | 408.2 | 787.2 | 170.5 | 236.6 | 303.4 | 888.1 | 286.7 | 268.6 |
| 1947-48 | 117.2 | 169.9 | 191.3 | 90.7 | 260.7 | 525.9 | 145.5 | 164.8 | 216.6 | 609.3 | 222.6 | 191.9 |
| 1948 April-Dec. | .. | .. | 179.5 | 71.7 | 205.5 | 430.7 | 126.1 | 143.8 | 205.4 | 521.5 | .. | .. |

Initial Boom:—Stimulated by the widespread belief that the War would bring about soaring prices and monetary inflation, the stock markets developed a veritable boom right from September 1939 and Tata before was lifted up from Rs. 1,300 on July 25, 1939 to Rs. 2,332.8 on January 1, 1940. The series of German successes and the levy of the E.F.T. pricked the bubble thereafter and in May 1940, the market authorities in Bombay had to suspend work for a day and later suspend forward trading itself sine die. In the middle of June cash

dealings were resumed but the shares on the forward list, in which the outstanding business amounted to Rs. 11 crores of which again Tata Steels alone accounted for two-thirds, were given the protection of the minimum prices. Between October and December 1940, the authorities managed to reduce the volume of outstanding forward account by half under a scheme permitting restricted forward business.

The year 1941 provided two sets of quotations for shares on the forward list, one for cash dealings and another for forward transactions which were justified on account of the outstanding business. Throughout the year, the sentiment remained bright and Tata Deferreds were marked up from Rs. 1,660 to Rs. 2,353-8 in the forward market and to Rs. 2,290 in cash on December 3, 1941. The news of Japan's entry into the War, however, gave a severe jolt to the industrial share market which collapsed rather abruptly. The market was unable to transact any business for several days and the minimum prices had to be fixed for 28 scrips. Tata Deferreds fell from Rs. 2,353-8 on December 3 to Rs. 1,600, the official floor price, on December 16, then to Rs. 1,525, the new floor, on February 16, and further to Rs. 1,265 on March 27, 1942, and then finally to Rs. 1,210 on April 7, 1942 following the withdrawal of the floor rates.

Rise and Fall.—The Central Government's announcement regarding war risks insurance scheme on April 8 brought a message of cheer to the market unmoved by wild rumours about Japanese air raids and helped Tata Deferreds to creep forward to Rs. 1,650 on June 9. The recovery, however, proved temporary and the general inclination to prime commitments owing to war uncertainty forced Deferreds to slip back to Rs. 1,382-8 on July 2. Thereafter the trend was generally upward, but the Congress resolution of "Quit India" on August 7, 1942 resulted in closing down the market. Trading was resumed on November 19 with Tata Deferreds at Rs. 1,670 and pushed that share to Rs. 1,790 on December 1; but the air raids on parts of the sub-continent depressed the rate to Rs. 1,480 on December 25, 1942. The steady improvement in the war that followed lifted Deferreds again to Rs. 2,095 on March 9; but the Finance Member's warning against speculation in cotton and restrictions on dividends had a bearish effect on the market.

In the following financial year, the favourable position of industries due to very high war demands, the elimination of fears about the country being attacked and the growing pressure of idle funds against limited investment opportunities contributed to a boom in Industrials which recorded the largest gains in any single year since the outbreak of the war despite the levy of the E.P.T., the institution of cloth control, and restrictions on forward trading in bullion and on *badla* transactions in shares. Tata Deferreds touched the bottom at Rs. 1,837-8 during the year but advanced to Rs. 2,252-8 on March 20, 1944.

Upward Trend.—The upward trend was generally maintained thereafter; but the improvement was less marked owing mainly to the bearish vow of favourable war news. Tata Deferreds dropped from Rs. 2,252-8 on March 20, 1944 to Rs. 1,967-8 by the middle of April 1944; but banks and insurance shares slumped heavily following the explosion in Bombay docks. With the restoration of confidence following Government agreeing to reimburse the losses from explosion, Deferreds moved up to Rs. 2,290 on July 3. The following three months noted a recession on prospects of the early end of the war and the plantation shares were the worst to suffer. Deferreds declined from Rs. 2,290 on July 3 to Rs. 2,018-12 by September 8, 1944; but were subsequently pushed to Rs. 2,422-8 on January 9, on modification of peace psychology. The subsequent relapse was due to the budget jitters with Deferreds declining to Rs. 2,028-12 on March 28, 1945.

Beginning with a hesitant anticipation of early Allied victory in Europe, the market maintained stability till June 1946 despite the

surrender of Germany in May and then staged an impressive upswing which was strengthened by a strong competitive position for the Tatas as revealed in the report of the Parliamentary Select Committee on British Expenditure in India and the announcement of the 24 per cent. 1950 loan. Tata Deferreds, which had stood at Rs. 2,012 just before the V-E-Day rose to Rs. 2,275 towards the middle of July and even the surrender of Japan in the second week of August did not create any nervousness. From the beginning of September again an optimistic sentiment was noticed with Calcutta assuming the leadership and was strengthened by the bullish statements of leading industrialists and by the issue of the 24 per cent 1950 loan marking another milestone in Government's cheap money policy. The Indian Government's budget surpassed the most optimistic expectations and the months of April to August constituted the upward phase during which the share prices reached their highest levels for the year and in many cases for all time. Tata Deferreds soared from Rs. 2,970 at the end of March to Rs. 3,640 in August 1946.

STRAIN AND STRESS

As the boom was being reached, an impression seems to have prevailed that it was to a certain extent artificial. The outbreak of communal disturbances, the declaration of a series of strikes including the postal strike and the long-drawn out strike at Hirapur, the severe jolt given by the Budget, the partition of the country and the subsequent wild orgy of communal disturbances in the Punjab all contributed to a downward trend throughout the next 12 months. Tata Deferreds collapsed from Rs. 3,640 in August 1946 to Rs. 1,550 in September 1947. Throughout this period, the market worked under abnormal strain and stress and, on many occasions, trading had to be suspended. The downward trend was, however, arrested when in November 1947, the Finance Minister presented an Interim Budget with no proposals for fresh taxation. Later on the agreement about Industrial Truce and the expectation of early decontrol cheered up the market and Tata Deferreds were pushed up to Rs. 2,007-8 on December 23.

The beginning of 1948, however, witnessed an easy tendency. The publication of the recommendations of the Congress Economic Programme Committee towards the end of February which recommended, *inter alia*, limitation of company dividends, had bearish effects. The budget which did not contain substantial relief in direct taxation, the Government's uncertain industrial policy, and the introduction of Estate Duty Bill on March 22 further aggravated the situation and Tata Deferreds were marked down to Rs. 1,517-8 on March 31 (the lowest during 1947-48).

Between April and September, the market continued to move within a narrow range with investors totally absent. There were various factors which had actions and reactions over the market. Tata Deferreds lowered around Rs. 1,000. In July, the publication of Dr. Thomas' report for regulation of Stock-Exchanges in India kept the market depressed but in September, the successful "police action" in Hyderabad and the publication of the Expert's Committee's recommendations on profit-sharing had cheerful effects—though short-lived.

The Committee presented a divided house with labour representatives dissenting. The Committee recommended that:

(i) The scheme proposed in the report should be tried out in the first instance for a period of five years and that it should apply only to (a) cotton textiles, (b) jute textiles, (c) steel (main producers), (d) cement, (e) manufacture of tyres and (f) manufacture of cigarettes.

(ii) Depreciation should be the first charge on gross profits and the rates of depreciation allowed for income-tax should be revised in conformity with what is required under present conditions.

(iii) Reserves should be the first charge on net profits which should be arrived after deduction of depreciation, Managing Agency commission and taxation. As a first charge 10% of net profits should be compulsorily set aside for reserves.

(iv) Six per cent on paid-up capital plus all reserves held for the purpose of business would be a fair return on capital under present circumstances. If in any year profits are not enough to provide this rate of return, the deficiency should be made up in the succeeding years, cumulatively.

(v) Having due regard to the conditions prevailing in the industries selected for an experiment in profit-sharing, labour's share should be 50 per cent of the surplus profits of the undertaking.

The downward trend in the market was accentuated by the publication of the Government of India's Anti-inflationary programmes which though generally favourable, contained a clause to limit dividends. Accordingly, on October 29, The Public Companies (Limitation of Dividends) Ordinance was promulgated which debarred companies from paying dividends in excess of the average of the cash distribution made during the two years ending March 1948 or 6% of the paid-up capital whichever was higher. This had a bearish effect and so Tata Deferreds were hammered down to Rs. 1,495. Later on, on calculation it was found that for many of the concerns the ordinance would not affect the distribution of dividends to any extent, and so confidence began to revive.

Slowly the market came to be dominated by a group of bulls who made fortunes in seeds and other commodities and as a result Tata Deferreds were lifted to Rs. 1,680 towards the close of the year.

The beginning of the year 1949 however witnessed hesitancy and caution in the market. Although the Government has time and again declared their inability to nationalise industries at present and that private enterprise has large enough scope for at least ten years to come, the market showed no signs of any revival of confidence among investors. Also the budget could not do much in the matter and so far except for a few speculative activities here and there, the market remains devoid of the usual colour. Tata Deferreds, for instance, have fluctuated narrowly between Rs. 1,600 and Rs. 1,700.

The table below gives approximate prices of leading industrial shares on certain days during the period August 15, 1947 to March 15, 1949.

| | 21st Aug. 1947 | 28th Feb. 1948 | 23rd Dec. 1948 | 15th March 1949 | Highest in 1948 | Lowest in 1948 |
|----------------|-------------------|-------------------|-------------------|--------------------|--------------------|-------------------|
| | Rs. a. | Rs. a. | Rs. a. | Rs. a. | Rs. a. | Rs. a. |
| Tata Deferred | 1,965 0 | 1,750 0 | 1,681 4 | 1,666 4 | 2,017 8 | 1,460 0 |
| Bombay Dyeing | 1,030 0 | 1,075 0 | 1,008 12 | 952 8 | 1,230 0 | 977 8 |
| Howrah Jute | 87 13 | 87 12 | 82 8 | 25 8 | 95 10 | 27 12 |
| Bengal Coal | 500 0 | 595 0 | 432 0 | 435 0 | 612 0 | 432 0 |

§ After the issue of bonus shares.

CHAMBERS OF COMMERCE

ASSOCIATED Chambers of Commerce of India, Royal Exchange, 2, Netaji Subhas Road, Calcutta, (Head Office located in Calcutta)—Registered in 1920 under Act VII, 1913 (Indian Companies' Act, 1913) later on name altered from "Associated Chamber of Commerce of India and Ceylon" to "Associated Chambers of Commerce of India" as per special resolution of the Association in 1932 and under section II, sub-section (5) of Act VII, 1913 (Indian Companies' Act, 1913).

Objects:—To promote and protect the trade, commerce, industries and manufactures of the country; to take up, consider and discuss questions connected with or affecting such trade, commerce, industries and manufactures; to promote or oppose legislation or other measures affecting same; to collect and circulate statistics and other information relating to same; to act as arbitrator in the settlement of disputes arising out of commercial transaction; to support and establish or aid in the establishment and support of associations, institutions, funds, trusts and conveniences calculated to benefit employees of the association or the dependants or connections of such persons, and grant pensions and allowances and to make payments towards insurance and subscribe or guarantee money for charitable or benevolent objects, or for any public general useful objects etc., etc.

In all there are three classes of members, viz. Original, Additional and Associate, there are 11 Chambers of Commerce from different parts of the country as members of the association. Annual subscription of each member whether Original, Additional or Associate is Rs. 120 per vote.

President:—A. J. Elkins, C.B.E., of Messrs. Gillanders, Arbuthnot & Co., Calcutta.
Secretary:—D. C. Fairbairn, M.A., C.I.E.

Bengal Chamber of Commerce. The Bengal Chamber of Commerce was founded in 1834. Its headquarters are in Calcutta. The Bengal Chamber is registered with a declaration of membership of 330. Its objects are the usual purposes connected with the protection of trade "in particular in Calcutta." There are two classes of members. Permanent (Chamber and Associate) and Honorary.

Merchants, bankers, shipowners, representatives of commercial, railway and insurance companies, brokers, persons and firms engaged in commerce, agriculture, mining or manufacture, and joint-stock companies or other corporations, formed for any purpose or object connected with commerce, agriculture, mining or manufacture, and persons engaged in or connected with art, science or literature, may be elected as permanent members of the Chamber.

The following are the office-bearers of the Chamber for the year 1949-50:—

President:—A. J. Elkins, C.B.E., Messrs. Gillanders, Arbuthnot & Co., Ltd., Calcutta.

Vice-President:—A. L. Cameron, Messrs. Andrew Yule & Co., Ltd.

Committee Members:—A. R. Elliott-Lockhart, C.I.E. (Gladstone, Lyall & Co., Ltd.); A. S. Officer (Bird & Co., Ltd.); A. P. Garabut (Shaw Wallace & Co.); P. G. Knott (MacKinnon Mackenzie & Co.); A. C. Watkins (Chartered Bank of India, Australia and China); W. A. Bell (Imperial Chemical Industries (India) Ltd.); E. A. Paterson (Jardine Henderson Ltd.).

Secretary:—D. C. Fairbairn, M.A., C.I.E.; **Deputy Secretary:** J. B. Sutherland, M.B.E.; **Assistant Secretaries:** W. D. Bryden, T. R. Crook and J. J. Ratnay.

The following are the public bodies (among others) to which the Chamber has the right of returning representatives, and the representatives returned, for the current year.

The West Bengal Legislative Assembly.—J. R. Walker, F.T.I.

The Calcutta Port Commission.—R. J. Clough; C. A. Innes; H. C. Bannerman; M. G. Robson; L. P. S. Bourne; A. J. Elkins, C.B.E.

The Board of Trustees for the Improvement of Calcutta.—T. Godley.

The Bengal Boiler Commission.—J. M. Grant; G. P. Chesney and W. H. W. Urquhart, A.M.I. Mech. E.

The Bengal Smoke Nuisances Commission.—R. J. Oliver; A. Nicoll.

The Chamber elects representatives to various other bodies of less importance, and to numerous subsidiary associations. The following are the recognised associations of the Bengal Chamber of Commerce:—

Calcutta Grain, Oilseed and Rice Association; Indian Jute Mills Association; Indian Tea Association; Calcutta Tea Traders' Association; Calcutta Insurance Association; Calcutta Import Trade Association; The Wine, Spirit and Beer Association of India; Indian Mining Association; Calcutta Baled Jute Association; Indian Paper Makers' Association; Indian Engineering Association; Calcutta Jute Fabric Shippers' Association; Calcutta Hydraulic Press Association; Jute Fabric Brokers' Association; Calcutta Baled Jute Shippers' Association; Calcutta Jute Dealers' Association; Calcutta Hides and Skins Shippers' Association; Calcutta Flour Mills' Association; Calcutta River Transport Association; The Masters Stevedores Association and the Paint Federation; Calcutta Freight Brokers' Association and European Mottisil Jute Balers' Association.

The Chamber does not assist in the preparation of official statistical returns. It publishes weekly the *Calcutta Prices Current*, and also publishes a large number of statistical circulars of various descriptions in addition to a monthly abstract of proceedings and many other circulars on matters under discussion.

The Chamber maintains a Tribunal of Arbitration for the determination, settlement and adjustment of disputes and differences relating to trade, business, manufactures, and to customs of trade, between parties, all or any of whom reside or carry on business personally or by agent or otherwise in Calcutta or elsewhere in India or Burma, by whomsoever of such parties the said disputes and differences are submitted. The Secretary of the Chamber acts as the Registrar of the Tribunal, which consists of such members or assistants to members as may from time to time, annually or otherwise be selected by the Registrar and willing to serve on the Tribunal. The Registrar from time to time makes a list of such members and assistants.

The Licensed Measures Department of the Chamber was instituted in 1883 and is the only officially recognised concern of this nature in Calcutta. Its functions are mainly the weighing and/or measurement of cargo for freight purposes and for confirmation of invoice weights, and to act as arbitrator in cases of disputes over weights. Certificates issued for these purposes are accepted universally.

The Department is controlled by a special Committee and is supervised by a Superintendent (John Henfrey). Head Office Manager (F. W. Kendall), and four Assistant Superintendents (B. Perry, S. J. Warwick, E. A. Butchart and J. B. Gee Smyth). A Staff of 129 Inspectors and Officers carry out the work of measurement and weighing at the Calcutta Docks and Jetties and on vessels loading at river moorings.

Address:—Royal Exchange, Post Box No. 280, Calcutta 1.

Bengal National Chamber of Commerce.—The Bengal National Chamber of Commerce, the premier institution of the Indian Commercial Community in Bengal, was founded in 1887.

The objects of the Chamber are to aid and stimulate the development of commercial, agricultural and industrial enterprises in Bengal and Assam and to protect the commercial interest of all persons trading therein; to promote unanimity and uniformity of practice amongst the members of the commercial community; to represent their views and requirements to the Government, railway and port authorities; to arrange for organised action on all matters involving the interests of members including conditions of employment of industrial labour; to arbitrate when occasion occurs between parties willing to submit their differences to the Association, and generally to do all such things as may be conducive to the interests of the commercial classes of Bengal and Assam.

The constitution of the Chamber extends the facilities of Associate and Honorary Membership to the entire trading community in Bengal. The number of Ordinary members on the roll is about 600. Almost all the leading Indian commercial and industrial firms and persons in every branch of the inland and foreign trade in Bengal are members of the Chamber. A considerable portion of the joint-stock capital invested in Bengal in banking, insurance, steamer services, cotton mills, etc., is also represented. The constitution of the Chamber provides for a close association as between the Chamber and various sectional organisations of trades and industries in Bengal.

List of Associations Affiliated to the Chamber.—All-India Jute Mill Robin Manufacturers' Association; All-Bengal Electrical Contractors' Association; All-India Soap Makers' Association; All-India Tea Growers' Federation; Association of Engineers; Bengal Brickfield Owners' Association; Bengal Motion Pictures Association; Bengal Hosiery Manufacturers' Association; Bengal Glass Manufacturers' Association; Bengal Banks' Association; Bengal Cotton Association, Ltd.; Bengal Industries Association; Bengal Stationers' Association; Bengal Bus Syndicate; Bengal Trades' Association; Bengal Tanners' Association; Bengal Oil Mills' Association; Brickfield Association, Korum; Bengali Jute Dealers' & Brokers Association; Brahmanbaria Merchants' Association; Calcutta Boot and Cloth Shops Association; Calcutta Electric Traders' Association; Calcutta Flour Dealers' Association; Calcutta Iron Merchants' Association; Calcutta Jute Exchange, Ltd.; Calcutta Paper Traders' Association; Calcutta Rice Dealers' Association; Calcutta Timber Merchants' Association; Calcutta Salt Association, Ltd.; Calcutta Rice Mills' Association; Calcutta Stevedores' Association; Calcutta Wine Association; Eastern District National Chamber of Commerce; East India Jute & Hessian Exchange Ltd.; Eastern India Federation of Builders; Faridpur Local Merchants' Association; Gramophone & Radio Dealers' Association; Grain & Pulse Dealers' Association; Indian Insurance Institute; India Society of Engineers; Indian Lamp Factories' Association; Indian Cement Distributors' Association; Indian Colliery Owners' Association; Indian Plywood Manufacturers' Association; Tea Chest and Plywood Traders' Association; Indigenous Belting Industries Association; Indian Battery Manufacturers' Association; Metropolitan Banking Association; Khulna Chamber of Commerce; Menari Paddy & Rice Merchants' Association; North Bengal Timber Merchants' Association; Pabna Mahajan Samity; Tripura Tea Association; Retail Textile Dealers' Association; Sirajganj Bengal Cloth & Yarn Dealers' Association; West Bengal Iron & Sheet Merchants' Association; Vansapatil Dealers' Association; West Bengal Saw Mills Association.

The Chamber enjoys the privilege of electing representatives to the West Bengal Legislative Assembly, the Calcutta Port Trust, the Calcutta Improvement Trust, Bengal Industries Board, Economic Enquiry Board, Bengal, Indian Central Jute Committee, Indian Central Cotton

Committee, Indian Tea Market Expansion Board, Indian Coal Grading Board, Calcutta Corporation, Provincial Sugar Board, West Bengal Electricity Power Control Board, West Bengal Boiler Commission, Calcutta Telephone Advisory Committee, P. & T. Regional Advisory Committee at Calcutta, Provincial Transport Authority and other important bodies.

The headquarters of the Chamber are at Calcutta and its affairs are administered by a committee of 32 members in addition to the President, two Vice-Presidents and the Honorary Treasurer, with the help of the Secretary and a number of Departmental Committees.

The Berhampur Chamber of Commerce (Orissa)—The Berhampur Chamber of Commerce was established soon after the formation of the new province of Orissa. It is registered under the Indian Companies' Act and is recognised by the Government of Orissa. It maintains a library and an information service, arranges commercial arbitration and makes commercial opinion available to Government. It has nearly 100 members on its rolls and is represented on all important Committees set up by Government for various purposes.

President: P. Narayana Rao, B.A., B.L.; **Vice-President:** The Agent of Messrs. Haji Jamal Nur Mohammad; **Hon. Jt. Secretaries:** J. Rama Murthi and T. R. Mohana Rao, B.A. **Address:**—Berhampur, Ganjam Dist., B. N. Rly.

Bombay Chamber of Commerce. Mackinnon Mackenzie Bldg., Ballard Estate, Bombay. The object and duties of the Bombay Chamber, as set forth in the Memorandum and Articles of Association, are to encourage and promote a friendly feeling and unanimity among commercial men on all subjects involving their common good, to promote and protect the general mercantile interests of this Presidency, to collect and circulate information on all matters of general commercial interest, to obtain the removal, as far as such a Society can, of all acknowledged grievances affecting merchants as a body, or mercantile interests in general, to receive and decide references on matters of usage and custom in dispute, recording such decisions for future guidance, and by this and such other means, as the Committee for the time being may think fit, assisting to form a code of practice for simplifying and facilitating business; to communicate with the public authorities, with similar Associations in other places and with individuals on all subjects of general mercantile interest; and to arbitrate between parties willing to refer to, and abide by, the decision of the Chamber.

The Bombay Chamber was established in 1836, under the auspices of Sir Robert Grant, who was then Governor of the Presidency, and the programme described above was embodied in their first set of rules. According to the latest returns the number of Chamber members is 302.

All persons engaged or interested in mercantile pursuits desirous of joining the Chamber and disposed to aid in carrying its objects into effect are eligible for election to membership by ballot. The Chamber member's subscription is Rs. 500. Gentlemen distinguished for public services, or "eminent in commerce and manufactures," may be elected honorary members and as such are exempt from paying subscriptions. Any stranger engaged or interested in mercantile pursuits and visiting the Presidency may be introduced as a visitor by any Member of the Chamber inserting his name in a book to be kept for the purpose, but a residence of two months shall subject him to the rule for the admission of members.

Officers of the Year. The affairs and funds of the Chamber are managed by a committee of twelve ordinary members, consisting of the President and Vice-President and ten members. The committee as a rule meet at least once a week and the minutes of its proceedings are open to inspection by all members of the Chamber subject to such regulations as the committee may make in regard to the matter. A general meeting of the Chamber must be held once a year and ten or more members may requisition, through the officers of the Chamber, a special meeting at any time, for a specific purpose.

The Chamber elects representatives as follows to various public bodies:—

Bombay Legislative Assembly, two representatives.

Bombay Municipal Corporation, one member, elected for three years.

Board of Trustees of the Port of Bombay, five members, elected for two years.

The following are the officers of the Chamber for the year 1948-49 and its representatives on the various public bodies:—

The General Committee, President: A. D. Finney, **Vice-President:** L. A. Halsall, **Committee:** G. M. Bathgate, W. B. Bryden, C. R. C. Gardner, W. M. Martin, C. F. Morris, R. W. Bullock, C. J. Damala, H. C. Macoll, V. F. Noel-Paton, G. N. Tod, **Secretary:** L. Boulle.

Representatives on

Bombay Legislative Assembly: C. P. Brandle, C. B. Sharpe.

Bombay Port Trust: R. W. Bullock, C. J. Damala, A. D. Finney, C. W. Warrington, V. F. Noel-Paton.

Bombay Municipal Corporation: W. M. Martin
Sydenham College of Commerce Advisory Board: R. W. Bullock.

Bombay Smoke Nuisance Commission: H. F. Milne.

Persian Gulf Lights Committee: C. F. Morris.

Indian Central Cotton Committee: L. F. H. Goodwin.

Empire Cotton Growing Corporation: S. B. Samoilys.

Back Bay Reclamation Scheme—Standing Advisory Committee: L. A. Halsall.

Ex-Services Association, India: A. D. Finney.

Ex-Services Association, Bombay Branch: C. R. Azar.

Bombay Seamen's Society: L. A. Halsall.

Indian Sailors' Home: A. W. C. Brown and Capt. V. Dickelle.

I. M. M. T. S. Dufferin: A. D. Finney.

Traffic Advisory Committee: L. Mudie.

Federation of Chambers of Commerce of the British Empire: Sir Geoffrey Winterbotham, Kt.

Railway Advisory Committees—

G. I. P.: C. W. Warrington.

B. E. & C. I.: C. W. Warrington.

Railway Rates Advisory Committee: L. A. Halsall, C. J. Damala, A. P. Darlow and A. L. Hutson.

Government of Bombay Board of Communications: L. Mudie.

Bombay University: A. L. Hutson.

Bombay Provincial Transport Authority: W. W. Russell.

Bombay City and Suburbs Post-War Development Committee: A. W. Percy.

Bombay Joint Town Planning Committee: E. Williamson.

Provincial Industries Committee (Bombay) and Miscellaneous Industries Sub-Committee: L. A. Halsall.

Regional Railway Advisory Committee: C. E. Bingham.

Special Work. One of the most important functions performed by the Chamber is that of arbitration in commercial disputes. Rules for this have been in existence for many years and have worked most satisfactorily. The decisions are in all cases given by competent arbitrators appointed by the General Committee of the Chamber and the system avoids the great expense of resort to the Law Courts.

A special department of the Bombay Chamber is its Statistical Department, which prepares a large amount of statistical returns connected with the trade of the port and of great importance to the conduct of commerce. They compile all the statistical information in connection with the trade of the port, in both export and import divisions, which it is desirable to record. No other Chamber in India does similar work to the same extent.

The Bombay Chamber publishes a Daily Arrivals Return which shows the receipts into Bombay of cotton, wheat and seeds, and a Daily Trade Return, which deals with trade by sea and shows in great detail imports of various kinds of merchandise and of treasure, while the same return contains particulars of the movements of merchant vessels.

The Chamber publishes twice a week detailed reports known as Import and Export manifests, which give particulars of the cargo carried by each steamer and country craft to and from Bombay.

Four statements are issued once a month. One shows the quantity of exports of cotton seeds and wheat from the principal ports of the whole of British India. The second gives in detail imports from Europe, more particularly in regard to grey cloths, bleached cloths, Turkey red and scarf cloths, printed and dyed goods, fancy cloth of various descriptions, woollens, yarns, metals, kerosene oil, coal, aniline dyes, sugar, matches, wines and other sundry goods. The third shows classified, the number of packages of piece-goods and yarns imported by individual merchants. The fourth gives the number of bales of cotton exported by each firm to each country during the month with a running total of the number of bales exported during the year.

Another "Monthly Return" issued by the Chamber shows clearance of a large number of important designations of merchandise. A return of "Current Quotations" is issued every Monday and shows the rates of exchange for Bank and Mercantile Bills on England and a large quantity of general banking and trade information.

The Chamber has also a Measurement Department with a staff of 18, whose business is that of actual measurement of exports in the docks before loading in steamers. Certificates are issued by these officers with the authority of the Chamber to shippers and ship agents as to the measurement of cotton and other goods in bales or packages. From the measurements given in these certificates the freight payable by the Shippers of goods is calculated. The measurers are in attendance on the quays whenever there are goods to be measured and during the busy season are on duty early and late.

Calcutta Chamber of Commerce—Object.—To foster and develop mutual help and co-operation amongst those who are directly or indirectly interested in Trade, Commerce, Industry, Agriculture, etc. and safeguard the interests of commercial communities of India.

Membership.—Any firm, company, corporation, or individual doing business, lawyer, physician, banker or man of public importance is eligible for membership on payment of subscription as determined by the committee and on recommendation in writing by any two of its members subject to the approval of the committee.

Administration.—The affairs of the Chamber shall be administered by an Executive Committee the members of which are:—

President.—Hemanta Kumar Bose; **Vice-President.**—Bhabatosh Ghatak; **Hon. Secretary.**—Debi Sen; **Hon. Treasurer.**—J. N. Sen.

Members of the Executive Committee.—B. Roy of the Bhugachak Estate, Gushudun Chatterjee, Jibanitosh Ghatak, Shivananda Sarkar of the Zanbar Estate, Amritlal Mitra, Sall Basack, Sudhir Roy Chowdhury, Jagannath Koley, K. L. Chatterjee, G. Sen Gupta, J. M. Dey, Surendra Mohan Roy Chowdhury, M. Z. Haque, B. C. Roy Chowdhury of Churaman Est.

The Committee shall co-opt members if recommended by any of its members and by the Committee.

Address.—P-5, Canning Street, Calcutta 1. Phone: Cal. 4231.

Cocanada Chamber of Commerce.—The Cocanada Chamber of Commerce was established on 29th October 1868.

The following are the members of the Chamber, which has its headquarters at Cocanada, the chief port on the Coromandel Coast north of Madras:—

Members.—The Coromandel Co., Ltd.; Ripley & Co.; Gordon, Woodroffe & Co. (Madras) Ltd.; Wilson & Co.; Best & Co., Ltd.; Burmah Shell Oil Storage and Distributing Co. of India Ltd.; The Agent, Imperial Bank of India; The Deccan Sugar and Akhbari Co., Ltd.; Samalkot & Parry & Co., Ltd.; Vizagapatam; Oriental Salt Co. (1907) Ltd., Cocanada.

Members of the Committee.—S. A. Cheesman (Chairman), R. J. Haylock, A. W. Banks, W. Le Faucheur (Honorary Secretary).

The rules of the Chamber provide that by the term 'member' be understood a mercantile firm or establishment, or the permanent agency of a mercantile firm or establishment, or a society of merchants carrying on business in Cocanada or other place in the Districts of Kistna, Godavari, Vizagapatam, and Ganjam, and duly elected according to the Rules of the Chamber, and that all such be eligible but only members resident in Cocanada can hold office. Members are elected by ballot. The Committee, when called upon by disputing members or non-members of the Chamber, give their decision upon all questions of mercantile usage and arbitrate upon any commercial matter referred to them for final judgment. In either case a minimum fee of Rs. 16 must accompany the reference with Rs. 5 from a non-member and Re. 1 from a member as payment for the Chamber's Sealed Certificate.

The Committee consisting of 3 members, including the Chairman, is elected by ballot at the general meeting in January in each year for a term of 12 months. The entrance fee for each member, whose place of business is in Cocanada, is Rs. 100 and for each member whose place of business is elsewhere is Rs. 50. Subscription for members whose place of business is in Cocanada, Rs. 120 per annum, payable quarterly, for others Rs. 60 per annum, payable in advance. The Committee usually meets once a month on the penultimate Thursday and the general body meets on the last Thursday.

A Fortnightly Circular of current rates of produce, freights, and exchange is drawn up by the Committee.

Federation of Indian Chambers of Commerce and Industry.—The Federation has 112 Chambers of Commerce and Commercial Associations affiliated to it as Ordinary Members and 6 Associate Members, and is recognised by the Central Government as the premier organisation representing commercial and industrial interests in the country. The headquarters of the Federation are situated in New Delhi. There are two classes of Members, Ordinary and Associate.

Among the objects for which the Federation is established are the following:—

- To promote Indian businesses in matters of inland and foreign trade, transport, industry and manufactures, finance and all other economic subjects.
- To encourage friendly feeling and unanimity among the business community and association on all subjects connected with the common good of Indian business.
- To enter into any arrangement with any Government or authority supreme, municipal, local or otherwise, that may seem conducive to the Federation's objects or any of them, and to obtain from any such Government or authority all rights, concessions, and privileges which the Federation may think desirable to obtain and to carry out, exercise and comply with any such arrangements, rights, privileges and concessions.
- To sell or dispose of the undertaking of the Federation or any part thereof for such consideration as the Federation may think and in particular for shares, debentures or securities of any other company having objects altogether or in part similar to those of the Federation.
- To take or otherwise acquire and hold shares in any other company having objects altogether or in part similar to those of the Federation.
- To undertake and execute any trusts the undertaking of which may seem to the Federation desirable either gratuitously or otherwise.
- To draw, make, accept, discount, execute and issue bills of exchange, promissory notes, bills of lading, warrants, debentures and other negotiable or transferable instruments or securities.

OFFICE-BEARERS FOR 1948-49.

President.—Lalji Mehrotra, Bombay.
Vice-President.—K. D. Jalan, Calcutta.
Hon. Treasurer.—Tulsidas Kilchandi, Bombay.
Offg. Secretary.—G. L. Bansal.
Office.—28, Ferozshah Road, New Delhi.

Indian Chamber of Commerce, Calcutta.—The Indian Chamber of Commerce was established in November 1925 to promote and protect the trade, commerce and industries of India and in particular the trade, commerce and industries in or with which Indians are engaged or concerned; to aid and stimulate the development of trade, commerce and industries in India with capital principally provided by or under the management of Indians; to watch over and protect the general commercial interests of India or any part thereof, and the interests of persons, in particular the Indians, engaged in trade, commerce or industries in India; to adjust controversies between members of this Chamber; to arbitrate in the settlement of disputes arising out of commercial transactions between parties willing or agreeing to

abide by the judgment and decision of the Tribunal of the Chamber; to promote and advance commercial and technical education and such study of different branches of Art and Science as may tend to develop trade, commerce and industries in India; to provide, regulate and maintain a suitable building or room or suitable buildings or rooms for a Commercial Exchange in Calcutta; and to do all such other things as may be conducive to the development of trade, commerce and industries, or incidental to attainment of the above objects or any of them.

There are two classes of members, local and motusil. The local members pay an annual subscription of Rs. 500 and the Motusil members Rs. 250. Merchants, Bankers, Ship-owners, representatives of commercial, transport or insurance companies, brokers and persons engaged in commerce, agriculture, mining or manufacture, and persons engaged in or connected with art, science or literature who are Indians shall be eligible for election as members of the Chamber.

Members of the Committee for 1948: President.—K. P. Goetka; **Senior Vice-President.**—K. M. Naik; **Vice-President.**—Shantiprasad Jain; **Members.**—Darab Cussetji Driver; K. D. Jalan; B. M. Birla; M. L. Shah; R. L. Nopany; K. L. Jatia; L. N. Birla; Dr. H. Ghosh; Lala Karam Chand Thapar; Sir Bijoy Prasad Singh Roy; Sir Abdul Halim Ghaznavi; S. Padamul P. Chinnai; P. D. Hunsingkar; B. T. Thakur; Rangnath Banerji; G. D. Binani; Mulchand C. Parekh and Nandlal Kanoria.

Secretary.—Dr. R. D. Tiwari M.A., LL.B., Ph.D., D. Litt.

Deputy Secretary.—I. S. Bisht, B.Sc., LL.B.

The following Associations are affiliated with the Chamber:—

Indian Sugar Mills' Association; Indian Chemical Manufacturers' Association; Indian Paper Mills' Association; Engineering Association of India; Indian Insurance Companies' Association; Indian Paint Manufacturers' Association; Indian Colliery Owners' Association; Indian Hemp Association; Calcutta Tea Merchants' Association; Indian Steel Makers' Association; Indian Chemical Merchants' Association; Jute Balers' Association; Gunny Trades' Association; Indian Rope Manufacturers' Association; Cycle Manufacturers' Association; East India Jute & Hessian Exchange; Calcutta Kirana Association; Calcutta Tube Importers' Association; Automobile Manufacturers' Association; Investors Association; Employers' Association; Calcutta Rice Merchants' Association; Sindhi Merchants' Association; Bengal Sugar Merchants' Association; Indian Non-Ferrous Metal Manufacturers' Association; All-India Plywood Manufacturers' Association; Bengal Cosmetic Manufacturers' Association.

The Indian Chamber of Commerce also appointed in 1927 a Tribunal of Arbitration to arbitrate in all disputes relating to various trades. With a view to covering the varying nature of disputes arising in different trades, separate panels of Arbitration are appointed on the Tribunal of Arbitration for each of the following trades:—(1) Jute; (2) Gunny; (3) Sugar; (4) Piece-goods and Yarn; (5) Iron and Steel; (6) Coal and Minerals; (7) General.

Indian Merchants' Chamber.—The Indian Merchants' Chamber was established in the year 1907. Its objects are:—

- To encourage friendly feeling and unanimity among the business community on all subjects connected with the common good of Indian merchants.
- To secure organised action on all subjects relating to the interests of the Indian business community directly and indirectly.
- To promote the objects of the Indian business community in matters of inland and foreign trade, shipping and transport, industry and manufacture, banking and insurance.
- To collect and disseminate statistical and other information securing the promotion of the objects of the Chamber, and to make efforts for the spread of commercial and economic knowledge.
- To take all steps which may be necessary for promoting, supporting or opposing legislation or other action affecting the aforesaid interests by the Government or any Department thereof or by any local body or bodies, and in general to take the initiative to secure the welfare of the business community in all respects.
- To make representations to Local, Central or Imperial authorities, Executive or Legislative, on any matter affecting trade, commerce, manufacture or shipping, banking or insurance.
- To undertake by arbitration the settlement of commercial disputes between merchants and businessmen and also to provide for arbitration in respect of disputes arising in the course of trade, industry or transport, and to secure the services of expert technical and other men to that end if necessary or desirable.
- To advance and promote commercial and technical education and to found and support establishments and institutions for such purposes.
- To undertake special enquiries and action for securing redress for legitimate grievances of any branch of trade or industry as also all such other action as may be conducive to the extension of trade, commerce or manufacture or incidental to the attainment of the above objects.
- To secure the interests and well-being of the Indian business communities abroad.
- To secure, wherever possible, organised and/or concerted action on all subjects involving the interests of members including regulating conditions of employment of industrial labour in various industries represented by the members of the Organisation.
- To nominate delegates and advisers, etc., to represent the employers of India at the Annual International Labour Conference of the League of Nations.
- To take up, consider and formulate ideas on the subjects which are on the Agenda of each International Labour Conference.
- To take all steps which may be necessary for promoting, supporting or opposing recommendations or conventions of the International Labour Conference.
- And generally to do all that may be necessary in the interests of the realisation of the above objects of the Chamber directly or indirectly.

Under the Montagu-Chelmsford Reforms the Chamber had the right of electing one representative on the Central Legislative Assembly and under the Government of India Act, 1935 it has the right of electing one representative on the Bombay Legislative Assembly. The Chamber also has the right to elect five representatives on the Bombay Port Trust, and one representative on the Bombay Municipal Corporation.

International Chamber of Commerce, Indian National Committee. The Indian National Committee of the International Chamber of Commerce was established for the following purposes in the year 1928:—

- To participate in the promotion of the objects for which the International Chamber of Commerce, hereinafter called the "International Chamber," is established, namely:
 - To facilitate the commercial intercourse of countries.
 - To secure harmony of action on all international questions affecting finance, industry and commerce.
 - To encourage progress and to promote peace and cordial relations among countries and their citizens by the co-operation of businessmen and organisations devoted to the development of commerce and industry.

The Indian National Committee has on its roll 36 commercial bodies as Organisation Members and 48 commercial firms as Associate Members.

OFFICE-BEARERS FOR 1948-49.

President.—Lalji Mehrotra, Bombay.

Vice-President.—K. D. Jalan, Calcutta.

Honorary Treasurer.—D. N. Sen, Calcutta.

Offg. Secretary.—G. L. Bansal.

Office.—28, Ferozshah Road, New Delhi.

Madras Chamber of Commerce.—The Madras Chamber of Commerce was founded in 1836. Any person or firm, interested in the general trade, commerce, or manufactures of the Madras Presidency is eligible for Chamber membership. Distinguished persons, members of kindred associations, and officials interested in trade, commerce or industry in the Madras province may be elected Honorary Members of the Chamber. Honorary Members do not have to pay any subscription and are not entitled to exercise the privileges of Ordinary Members except to speak at any ordinary meeting of the Chamber. Other Chambers of Commerce may be Affiliated Members. Election for membership is by ballot. Every member other than an Honorary Member pays an entrance fee of Rs. 100, provided that banks, corporate bodies and mercantile firms may be represented on the Chamber by one or more members and are liable for an entrance fee of Rs. 100 once in every 10 years. The subscription shall not exceed Rs. 800 per annum, payable quarterly in advance, for each representative. Each Affiliated Member shall pay an annual subscription of Rs. 50 payable at the beginning of the calendar year.

The Chamber undertakes arbitrations and surveys, and the granting of certificates of origin.

There are 76 Firms, who are Members of the Chamber; and there are 5 Affiliated Members and 9 Honorary Members of the Chamber in 1948. The officers and the committee of the Chamber are as follows:—

Chairman: B. W. Batchelor. *Vice-Chairman:* H. J. Womfor. *Committee:* K. H. Chambers; E. Donner; D. G. Leonard, M.L.A.; D. D. H. Thomas; H. G. P. Woodroffe. *Secretary and Adviser:* G. T. B. Harvey, C.I.E.

The following are the Chamber's representatives on various public bodies:—

Corporation of Madras: R. W. Theobald. *Madras Port Trust:* J. E. Galloway; H. K. Goosery; C. Mainprize and B. W. Batchelor, C.I.E. *Madras and Southern Mahratta Railway Advisory Committee:* J. H. Hendrie. *South Indian Railway Advisory Committee:* W. L. Knapp. *Board of Communications:* J. M. Kennedy. *Senate of the University of Madras:* H. J. Womfor. *Senate of the Annamalai University:* F. H. Oakley. *State Technical Scholarship Board:* F. H. Oakley. *Board of State Aid to Industries:* R. W. Theobald. *South Indian Nursing Association:* F. H. Oakley. *Madras City Estate Licensing Board:* C. D. Allerton. *Trade Marks Advisory Committee:* B. W. Batchelor. *Madras City Improvement Trust:* R. W. Theobald.

Office:—"Dare House," First Line Beach, Madras.

Maharashtra Chamber of Commerce.—The Maharashtra Chamber of Commerce was started in September 1927 with the object of establishing friendly relations among merchants and factory-owners of Maharashtra, safeguarding their interests against measures likely to affect them adversely, collecting financial, industrial and trade statistics, and disseminating information thereabout amongst members of the Chamber.

Membership of the Chamber is confined to merchants and factory-owners belonging to the City of Bombay, Bombay Suburban District,

Poona, Sholapur, Satara, Ratnagiri, Kolaba, Nasik, Ahmednagar, Thana and East and West Khandesh and Belgaum and the Indian States in and about these, namely, Kolhapur (with its Jagirs), Sangli, Miraj (Senior and Junior), Kurundwad (Senior and Junior), Jamkhadi, Sawantwadi, Mudhol, Ramdurg, Jath, Akalkot, Phaltan, Aundh, Bhur, Surgana, Jawhar and Janjira.

President:—G. V. Piranik.

Vice-Presidents:—K. H. Kabbur; S. P. Ogale and W. W. Wagh.

Secretary:—D. V. Kelkar, M.A.

Address:—Industrial Assurance Building, Church Gate, Bombay.

The Mahratta Chamber of Commerce and Industries.—The Mahratta Chamber of Commerce and Industries is an institutional organisation representing the economic, commercial and industrial interests of Maharashtra.

Members, Funds and Properties.—The Chamber was established in 1934. Its membership today exceeds 500. Shreeamant Sir Malojirao Naik Nimbalkar, the Rajasahib of Phaltan and 38 other leading industrialists, businessmen, firms and Joint Stock Companies are among its patrons. Today, the properties and funds, which are held by the Mahratta Chamber of Commerce and Industries End Trust exceed Rs. 1,10,000. The Chamber conducts a Marathi Commercial Monthly named the "Sanpada" for the benefit of its members.

Object and Activities.—Its principal object is to work for the commercial and industrial development of Maharashtra as an integral part of India, through local initiative and effort, and to infuse confidence in the sons of the soil in the management of economic and financial institutions on modern lines. Among the more noteworthy achievements of the Chamber can be mentioned the promotion of the Bank of Maharashtra, a premier Maharashtra Joint Stock Bank conducted and managed by Maharashtra, the encouragement of local enterprise in the field of general insurance, business, successful advocacy for grant of post-war protection to cocoa-powder and cocoa-chocolate and hurricane lantern industries.

Every year this Chamber awards G. S. Parkhe Industrial Merit Prizes and organises G. P. Ogale Memorial Lecture on economic subjects and also awards to a student of the Brihan Maharashtra College of Commerce the B. S. Kamat Memorial Prize.

Government Recognition and Representations on Various Bodies.—The Chamber has received the recognition of the Central as well as the Bombay Provincial Governments. It is represented on the Board of Trustees of the Lord Rensy Maharashtra Industrial Museum, Poona; the Advisory Committee of the Sub-Regional Employment Exchange, Poona Area; the Local Advisory Committee of the M. & S. M. Railway, for the Bombay Province; the Telephone Advisory Committee, Poona; Bombay Board of Communication, Bombay Province; and on the Regional Post and Telegraph Advisory Committee, Bombay Circle. The Greater Poona Municipal Constitution Committee has recommended that this Chamber should be represented on the proposed Greater Poona Corporation. It is one of the two Chambers named for electing two representatives on behalf of trade, industry and commerce on the Court of the Poona University.

OFFICE BEARERS

President.—S. V. Khloskar, Khloskar Bros., Ltd., Kiroloskarvadi; *Working President.*—D. V. Potdar, B.E. (Elec.), B.E. (Mech.), A.M.I.E. (India); *Rotating Honorary Secretaries.*—A. B. Bhat, M.Com.; G. D. Apte, B.A., G.D.A., B.A.; *Assistant Secretary.*—D. B. Kulkarni, M.A.; *Advisory Board:*—J. S. Karandikar, B.A., LL.B., Trustee Kesari and Mahratta, Poona; B. S. Hire, B.A., LL.B., President, Maharashtra Provincial Congress Committee; Prof. D. R. Gadgil, M.A., D.Litt., Director, Gokhale Institute

of Politics and Economics; Sardar V. L. Thulhe, Landlord; D. G. Karve, M.A., Principal, Brihan Maharashtra College of Commerce. *Address:*—Mahratta Chamber's Building, 587/9, Shukrawar Petli, Tilak Road, Poona 2.

Bharat Chamber of Commerce.—(Established 1900). The main object of this Chamber is to foster the growth of commerce and industry in the country, to safeguard the interests of the commercial communities, to protect and promote the trade, commerce, manufactures, agriculture and industries of West Bengal, to watch over and protect the general commercial interests of persons engaged in trade, commerce, manufactures, agriculture or industries in India and in particular of Calcutta, and to deal with all questions connected with trade, commerce, agriculture, manufacture and industries. It arbitrates in disputes arising out of commercial transactions and also issues certificates of origin to exporters of indigenous goods. The Chamber is generally consulted by Government on questions of public interest and commercial matters. It undertakes special enquiries and action for securing redress of legitimate grievances of any branch of trade or industry. The Chamber has over 700 members representing different trades and industries. It handles more than 80 per cent of distributive trade in cotton textiles and a good number of members are interested in export and import trade.

President:—Lala Lakshminipat Singhanin.

Vice-Presidents:—I. P. Gonenka and P. L. Sarangi.

Acting Secretary:—B. N. Sengupta.

The following Associations are affiliated with the Chamber: Marwari Association, Kalnping; District Marwari Merchants' Association, Darjeeling; The Wheat and Seeds Association, Calcutta; Sonada Merchants' Association, Sonada; The Indian Jute & Cotton Association Ltd., Calcutta; Assam Marwari Chamber of Commerce; Calcutta Salt Association; Cloth Merchants' Association, Siliguri; Upper Assam Marwari Chamber of Commerce, Jorhat; Bogra Cloth and Yarn Merchants' Association; Bengal Textile Unit Holders' Association.

Address: Imperial Bank Building, Burrabazar Branch, Calcutta.

Telephone No. B.B. 2265.

Grams:—"Marchamber."

Merchants' Chamber of United Provinces, Kanpur.—The Merchants' Chamber of United Provinces was established in November, 1932, with the object of safeguarding the interests of trade and industry in the United Provinces, providing regular and efficient statistical and intelligence service to the business firms of the province and generally helping the promotion of trade and business in the United Provinces through proper organisation of commercial opinion. The Chamber represents almost entirely Indian capital and has affiliated to its membership, Cotton Mills, Sugar Mills, Jute Mills, Silk weaving and Hosiery works, Oil Mills, Banks and Firms engaged in extensive dealings in Piece-goods, country produced Hide and Leather. Ten Commercial Organisations and Trade Associations of the Province are also affiliated to the Chamber. The Chamber maintains a ceaseless channel of correspondence with the Central and Provincial Governments and the various Railways on all points of commercial grievances, whether of general or of specific interest. It issues every month an English and Hindi Bulletin to its members who are scattered over the entire province. The report of the activities of the Chamber is a regular feature of the daily press of the province. The Chamber is represented on the U.P. Legislative Assembly, Court of the Lucknow University, U.P. Advisory Committees, Provincial Economic Advisory Board, U.P. Prices Advisory Board, Governing Body of the Agricultural College, Kanpur, Provincial Board of Agriculture and Animal Husbandry, Kanpur

Municipal Board, United Provinces Food Advisory Council and about 15 other spheres of public service. The constitution of the Chamber which is registered under the Indian Companies Act, 1913, with a license under Section 26, provides for an Executive consisting of a President, a Vice-President and 19 Members of the Council. A wholetime Secretary is attached to the Council.

Grams :—"Chamber," New Delhi.

Southern India Chamber of Commerce—Indian Chamber Buildings, Madras. The Southern India Chamber of Commerce established in 1909 has its Registered Office in Madras. The objects of the Chamber are those usual for such bodies, concerning the promotion of trade,

especially in the Madras Presidency, and the interests of members. Special objects are stated to be :—

"To maintain a Library of books and publications of commercial interest, so as to diffuse commercial information and knowledge amongst its members."

"To establish Museums of commercial products or organise exhibitions, either on behalf of the Chamber or in co-operation with others."

There are three classes of members, Affiliated, Resident and non-Resident. The usual conditions as to eligibility for election prevail.

The Chamber is a member of the Federation of Indian Chambers of Commerce, the Indian Chamber of Commerce in Great Britain, and the Indian National Committee of the International Chamber of Commerce, Paris.

The Chamber holds survey and arbitration, issues certificates of origin and certificates of invoices; certificates of sampling, analysis and weights.

The right of electing three representatives to the Madras Port Trust was accorded to the Chamber by the Madras Port Trust Amendment Act, 1941. Members of the Chamber hold seats in the Madras Legislative Assembly, and the Chamber has also been accorded the right of electing a representative to that body. Go jointly with the Nattukottai Nagarathars Association the Chamber has the right of electing a representative to the Federal Assembly. Under the Madras City Municipal Amending Act, 1936, the Chamber has the right of electing one Councillor to the Madras Corporation. Under the State Aid to Industries Act, 1923, the Chamber has the right to elect one member to the Board of Industries.

The Chamber also sends its representatives to the Madras Legislative Assembly, the Madras Port Trust, the South Indian Railway Local Advisory Committee, the M. & S. M. Railway Local Advisory Committee, Senate of the Madras University, Senate of the Annamalai University, Board of Industries, Board of Communications, the City Improvement Trust, the Indian Tea Market Expansion Board, the Textile Trade Marks Advisory Committee, the Madras Port Committee and the Board of Referees, Excess Profits Tax.

The Chamber has about 750 members on the rolls and has its own building. Forty-eight Associations in the City of Madras and Chambers of Commerce in the mofussil have been affiliated to this Chamber.

President :—Rao Bahadur T. S. Kachapikess Mudaliar, B.A.

Vice-Presidents :—V. Pandurangiah and A. M. M. Murugappa Chettiar.

Secretary :—Sri S. Ananthapathmanabham, M.A., B.L.

United Provinces Chamber of Commerce—Kanpur. The United Provinces Chamber of Commerce established in 1914, represents all the important commercial and industrial interests of the Province. The Chamber is recognised both by the Provincial and Central Governments and jointly returns a representative to the United Provinces Legislative Assembly. It is represented on the Kanpur Municipal Board, the Local Advisory Committee of the East Indian Railway, Great Indian Peninsula Railway, Rohilkhand Kumaon Railway, Bengal and North-Western Railway and on the Informal

Committee of the East Indian Railway. The Chamber's representatives also sit on the Provincial Boards of Industries, Economic Enquiry and Agriculture, High School and Intermediate Education and Governing bodies of Government, Textile and Dyeing and Printing Schools, Agricultural College, Sir H. B. Technological Institute, Kanpur, Board of Traffic and Communications, Senate of the Lucknow University, and Employment Board, U.P. and various other public bodies in the Province. The Chamber is affiliated to the Federation of Indian Chambers of Commerce and Industry as also to the National Committee of the International Chamber of Commerce.

Membership :—Any firm, individual, company, corporation or association engaged or interested in trade, commerce or industry is eligible for membership of the Chamber.

The number of members on register is 260.

The following are the office-bearers of the Chamber for the current year.

President :—J. K. Srivastava, M.L.A.

Vice-Presidents :—H. S. Bagla and Hirday Narain.

Secretary :—Satya Narain Bagla, M.A., LL.B. *Jt. Secretary* :—Gajanan Sutarwala.

Assistant Secretary :—P. K. Menon, B.A.

Technical Advisor :—S. R. Rattan, B.Com. (Hons.).

Upper India Chamber of Commerce—The Upper India Chamber of Commerce, established in 1888, is concerned with trade, commerce and manufactures in the United Provinces and has its registered office at Kanpur. Members are elected by the Committee, subject to confirmation by the next general meeting of the Chamber. Men distinguished for public service, or eminent in commerce or manufactures, may be elected honorary members of the Chamber by the members in a General Meeting and such shall be exempted from paying any subscription to the Chamber. There is no entrance fee for membership, but subscriptions are payable as follows :—A firm, company or association having its place of business in Kanpur, Rs. 500 a year; an individual member resident or carrying on business in Kanpur, Rs. 500; firms or individuals having their places of business or residence outside Kanpur pay Rs. 150 a year but the maintenance of a branch office in Kanpur necessitates payment of full rates.

The affairs and funds of the Chamber are managed by a Committee of ten members, which has power to constitute Local Committees of from four to seven members each at trade centres where membership is sufficiently numerous to justify the step. Such Local Committees have power to communicate only with the Central Committee.

The Chamber appoints Arbitration Tribunals for the settlement and adjustment of disputes, when invited to do so, members of the Tribunals being selected from a regular printed list of arbitrators.

The Chamber has a membership of 139, including 2 honorary, 12 affiliated members.

President :—Sir Arthur Inskip, Kt., C.B.E., O.B.E., E.D.

Secretary :—S. V. Subramaniam.

Head Clerk :—R. K. Mehra.

PROVING OF WILLS

IN India if a person has been appointed Executor of the Will of a deceased person, it is always advisable to prove the Will as early as possible. If the Will is in an Indian language it has to be officially translated into English. A petition is then prepared praying for the grant of probate of the Will. All the property left by the deceased has to be disclosed in a schedule to be annexed to the petition. Values must be shown as at the date of the Petition and Probate Fees will be calculated on such value. The Values of immovable properties are usually assessed at 10½ years' purchase on the net Municipal assessment, in the absence of a report from a competent architect.

Scale of Probate Duty.—Up to Rs. 1,000 Nil.

For the next Rs. 9,000 (i.e. upto Rs. 10,000), 2 per cent.; for the next Rs. 40,000 (i.e. upto Rs. 50,000) 3 per cent.; for the next Rs. 50,000 (i.e. upto Rs. 1,00,000) 4 per cent.; for the next Rs. 1,00,000 (i.e. upto Rs. 2,00,000) 4½ per cent.; for the next Rs. 50,000 (i.e. upto Rs. 2,50,000) 5 per cent.; for the next Rs. 50,000 (i.e. upto Rs. 3,00,000) 5½ per cent.; for the next Rs. 1,00,000 (i.e. upto Rs. 4,00,000) 6 per cent.; for the next Rs. 1,00,000 (i.e. upto Rs. 5,00,000) 6½ per cent.; for amounts exceeding Rs. 5,00,000 (or the portion over Rs. 5,00,000) 7 per cent. In addition to this Probate Duty there is, at present, a surcharge of 25%.

Exemptions from Probate Duty.—In determining the amount of the value of the estate for the purposes of probate duty the following items are allowed to be deducted:

1. Debts left by the deceased including mortgage encumbrances.
2. The amount of funeral expenses.
3. Property held by the deceased in trust and not beneficially or with general power to confer a beneficial interest.

In addition, there is general exemption for service personnel killed in action or dying on service in certain circumstances.

Procedure.—The particulars of the property of the deceased and the particulars of all items allowed by law to be deducted have to be shown in separate schedules. It is the practice of the High Court to send a copy of these schedules to the Revenue Authorities and if the properties, particularly immovable properties, have not been properly valued, the High Court issues a notice to the petitioner requiring him to amend the schedule of property accordingly. In certain cases the Court requires citations to be published and served on such persons as the Court thinks are interested in the question of the grant of probate. If no objection is lodged by any person so interested within the time mentioned in the citation to the effect that nothing should be done in the matter of the petition for probate without notice to the person objecting or to use

technical language the caveator, and if the Will is shown to have been properly executed, probate is ordered to be granted. If an objection or caveat is filed, the petition for probate is converted into a suit in which the petitioner is plaintiff and the caveator is the defendant.

As probate, however, cannot be granted merely because the parties consent, the Will has to be proved. It is against public policy to enter into an agreement or compromise as to the genuineness or execution of the Will if the effect of such an agreement or compromise is to exclude evidence in proof of the Will.

Probate, Codicil, etc.—Probate has effect over all the property and estate moveable or immovable of the deceased throughout the province in which the same is granted and is conclusive as to the representative title of the person to whom the probate is granted against all debtors of the deceased and all persons holding property which belongs to the deceased and will afford full indemnity to all debtors paying their debts and all persons delivering up such property to the person to whom such probate is granted. Probate can only be granted to an executor appointed by the Will and the appointment may be express or by necessary implication. Probate cannot be granted to any person who is a minor or is of unsound mind. Where several executors are appointed probate may be granted to them simultaneously or at different times. If a codicil is discovered after the grant of probate a separate probate of that codicil may be granted to the executor. If it in no way repeals the appointment of executors made by the Will. If different executors are appointed by the codicil, probate of the Will will be revoked and a new probate granted of the Will and codicil together. When probate has been granted to several executors and one of them dies, the entire representation of the testator accrues to the surviving executor or executors. Probate of a Will when granted establishes the Will from the death of the testator and renders valid all intermediate acts of the executor as such. When a person appointed an executor has not renounced the executorship, letters of administration will not be granted to any other person until a citation has been issued calling upon the executor to accept or renounce the executorship, but when one or more of several executors have proved the Will, the Court may, on the death of the survivor of those who have proved, grant letters of administration without citing those who have not proved. The renunciation may be made orally in the presence of the Judge or by a writing signed by the person renouncing and when made will preclude him from ever thereafter applying for probate of the Will appointing him executor. If an executor renounces or fails to accept an executorship within the time limited for the acceptance or refusal thereof, the Will may be proved and letters of administration with a copy of the Will

annexed may be granted to the person who would be entitled to administration in case of intestacy.

Probate is necessary in case of Wills of Europeans, East Indians, Armenians, Jews, Parsis and Indian Christians and also in case of Wills of Hindus, Buddhists, Sikhs or Jains made within the territories of the undivided Provincial Government of Bengal or made within the towns of Madras and Bombay or if the Wills relate to immovable property situate in such territories.

Probate is not necessary in case of Wills of Hindus, Buddhists, Sikhs or Jains not falling in classes specified above or of Wills of Mahomedans and Khepals.

Articles of Association of most of the joint stock companies contain an article to the effect that the Executor or Administrator of a deceased member who has obtained Probate or Letters of Administration as the case may be or the holder of the Succession Certificate should be the only persons recognised by the Company as having any title to his share. In such cases, the Company validly insists on the production of such legal representation before transfer of the shares of a deceased member whether he is a European, Hindu, Mahomedan, Parsi or otherwise.

Residuary Legatee.—When no executor has been appointed by a deceased in his Will or when the deceased has appointed an executor who is legally incapable or refuses to act or who has died before the testator or before he has proved the Will or when an executor dies after having proved the Will but before he has administered all the estate of the deceased, a universal or a residuary legatee may be admitted to prove the Will and Letters of Administration with the Will annexed may be granted to him of the whole estate or so much of it as may be unadministered.

After any grant of Probate or Letters of Administration with Will annexed, no other than the person to whom the same may have been granted has the power to sue or prosecute any suit or otherwise act as representative of the deceased until such Probate or Letters of Administration has or have been recalled or revoked.

SMALL ESTATES

Administrator General's Certificate.—In cases where the value of the estate is Rs. 2,000 or less, an Administrator General's Certificate can be obtained. The procedure for obtaining this Certificate is simple and less expensive. A fee of 3% on the value of the estate is payable. The value of the estate has, however, to be taken as at the date of the death of the deceased. These Certificates are equivalent to Letters of Administration.

TRADE AND ECONOMY

INDIA is an agricultural country with farming regarded by the people as a tradition rather than as business. It has, however, large deposits of raw materials vitally needed for the development of industries. It is the biggest producer of raw cotton and tobacco except the U.S.A. It is one of the largest producers of jute and sugar today. It is also the largest grower of oilseeds and has vast mineral resources, most of which have remained untapped. It possesses the world's largest reserves of the richest class of iron ore and manganese ore. There is no lack of tungsten, chromium and cobalt which are necessary for manufacturing alloy steel. India also leads in mica and bauxite. Great discoveries of sulphur have been made recently. As regards the position of oil, India is relatively near to the world's largest oil deposits around the Persian Gulf and fresh resources of oil have recently been struck in a number of places. These advantages have enabled it to make a steady progress towards industrialisation during the past quarter of a century.

If we look back on the course of agriculture over a long period of years, we note a striking development towards stability. In the days that are past, the output of the soil was subjected to periodic shocks from famines arising from the failure of the rains, when the export trade in these staples dwindled to small proportions. But the spread of irrigation has produced a great change, and though no doubt in future heavy losses may be incurred from the weakness of the monsoons, they are never likely to be as catastrophic as in such years as 1896-97 and 1899-1900. Projects for mobilising the resources of Damodar Valley, Hirakud, Mahanadi and Narasimha Valley are under way, and when complete will off-set the effects of the failure of a monsoon.

AGRICULTURE

Thirty years ago in the sub-continent (India and Pakistan) the second largest producer of raw cotton in the world—long staple varieties of cotton were almost unknown. The position at the outbreak of the last war was that the Indian textile industry was meeting a considerable portion of its long staple requirements from within the sub-continent. The improvement in the quality of the crop was accompanied by an increase in the average yield per acre of the order of 30 per cent. during the same period.

The record of jute has not, however, been one of uninterrupted progress. The steep fall in the prices of raw jute during the world depression, accompanied by a cut in acreage, was estimated to have reduced the income of the average jute grower by about two-thirds. The plight of the cultivator no doubt improved later but the difficulties of the jute manufacturing industry resulted in a fall in the consumption of raw jute and this necessitated a large measure of State control in regard to the area under the crop.

Sugarcane—The progress of sugarcane cultivation was limited solely by the capacity of the internal consumption of sugar to increase. The estimated production of cane in 1924-25 was less than 30 million tons, but by 1936-37 it had exceeded 67 million tons. This turned out to be far in excess of the effective demand and the manufacturing industry was in a state of over-production. As a result, the production of cane came down to the low level of 36 million tons in 1938-39, but it improved to 48 million tons in the next year.

The price of sugar in India is above world parity, and this has affected the export trade of Indian sugar. The relatively higher price is mainly due to the low yield of sugarcane in the country. Attempts have recently been made to grow better varieties of sugarcane. The old varieties have been practically ousted in some of the Provinces by better types; yet, for want of nutrition, there has not been any marked increase in the average yield per acre. Better attention has to be paid to provision of fertilisers and preventives against pests. The Madras Government have started model farms, especially

in Coimbatore, for demonstrating improved methods of sugarcane cultivation. Last year cane prices in that province were increased to Rs. 60 per ton from Rs. 54 per ton. The Deccan Sugar Technologists' Association is doing good work in the matter of improving cane production in Deccan areas. But the Bombay Government's decision last year to levy a cess, not exceeding As. 6 per maund of cane crushed, was criticised as a deterrent to better production. Preliminary steps to establish an Institute of Sugar Technology and Sugarcane Research were taken up by the Indian Central Sugarcane Committee at Bhadrak Farm, near Lucknow. The Committee in 1948 suggested to Government to appoint a fact-finding Committee to go into the question of sugarcane and sugar production in India.

The area under sugarcane during the season in 1947-48 was estimated at 37,84,000 acres, with an outturn of 52,69,000 tons of gur, as against 35,28,000 acres and 49,13,000 tons respectively in 1946-47. The increase in 1947-48 was evidently due to the higher price of Rs. 2 per maund fixed for cane in 1947-48, against Rs. 1-4 per maund in the previous year.

Groundnut—The one agricultural commodity whose fortunes were not appreciably affected by the world depression was groundnut. A quadrupling of the area and a proportionate increase in output in the course of two decades is a record which is not shared by any other crop. This phenomenal increase in acreage is explained by the highly remunerative nature of the crop. The greater part of the increased production was exported; as a result groundnut had steadily displaced the other oilseeds from the export trade of the sub-continent and moreover by 1939 the sub-continent had become first among the groundnut exporting regions of the world.

As the principal groundnut exporting country of the world, India has about 45% of the total world acreage under cultivation of this oilseed. The partition has had no effect on its cultivation, as the whole of the groundnut producing area of the undivided India falls within the territories of the Indian Union.

In India, the yield per acre of groundnuts averages about 800 lbs. On the basis of the present indications, the crop in 1948-49 is expected to be about 2,494,000 tons. Apart from export, groundnut is used as an edible seed as well as in vanaspathi. It has been estimated that nearly 10% of the total production is required for seed purposes and about 50% is used for edible purposes.

The vanaspathi and soap industries in this country, which largely depend on this oilseed, consume 21% and 7%, respectively, of the total production.

While world prices of groundnut have risen by about 180%, since 1939, our exports of this commodity have declined from 834,000 tons to 196,000 tons.

The per capita consumption of oils and fats in India is much lower than that required by nutritional standards. It has been estimated that the per capita consumption is 8 lbs. per annum, as against a minimum requirement of 45 lbs. Effective steps are, therefore, essential to increase the production of groundnuts—notwithstanding a declining tendency in exports—by securing higher yield per acre with the help of fertilisers and improved seeds.

Rice—This story of continued progress has to be varied somewhat in relation to the production of foodgrains. The output of rice has obstinately refused to improve in spite of the best efforts of the Agricultural Departments. About 4½ million acres of rice land were brought under improved varieties but this has no perceptible effect on the total production; actually, the output declined by something like 10 per cent. as between 1920-21 and 1940-41. The tendency to substitute other crops for rice was greatly accentuated by the availability of an abundant supply of cheaper varieties of imported rice. According to the Directorate of Economics and Statistics, Ministry of Agriculture, the rice crop in India in 1947-48 was as follows: Area, 59,655,000 acres and yield 18,760,000 tons, as compared to 60,987,000 acres and a yield of 19,856,000 tons in 1946-47. This represented a decrease of two per cent in acreage and of six per cent in yield in contrast to the 1946-47 crop. The world's rice supply was expected to continue short in 1949 and for a few years thereafter. World rice trade in 1948 was expected to approximate four million short tons, about one million tons more than in 1947, but still only one-half as much as in pre-war years.

Wheat—The results of research have been applied with much greater success in the case of wheat. About a third of the total area under wheat has been brought under improved crop and in the course of 20 years the total output of wheat has increased from 6,000,000 tons in 1920-21 to 8,000,000 tons in 1940-41. The cost of production, however, remained very high in comparison with the other wheat-producing countries of the world and the Indian wheat grower was hit so hard by the fall in the world prices of wheat during the depression that in his interest a protective duty had to be imposed on imports of wheat. The final forecast for the 1947-48 wheat crop put the area at 20,207,000 acres, compared with 24,350,000 acres during 1946-47, a decline of approximately 17 per cent. But production aggregated 3,316,000 tons, against 4,745,000 tons in 1946-47. The increase was mainly in U.P. and decrease in C.P., Bihar, E. Punjab, and C.I. States area due to scarcity of seed at the time of sowing and more area for kharif crops.

The experience of the other cereals, particularly millets, was more or less similar to that of rice. The millet crops are concentrated in areas of very poor rainfall and it is in such areas that any improvement in cultivation is of peculiar difficulty.

AREA UNDER CROPS

The following statements summarise the data relating to area under crops in the sub-continent and the per acre yields of certain important crops:—

(Figures in '000 acres)

| Crops. | Average Triennium ending 1933-34. | Average Triennium ending 1939-40. | Average Triennium ending 1942-43. | 1945-46. |
|-------------------------------------|-----------------------------------|-----------------------------------|-----------------------------------|----------|
| Total acreage under all crops | 3,19,067 | 3,16,860 | 3,24,223 | .. |
| Major Cereals | 1,68,563 | 1,70,865 | 1,71,360 | 1,85,868 |
| Cereals and Pulses | 2,37,811 | 2,34,627 | 2,40,296 | .. |
| Oil Seeds— | | | | |
| Edible | 17,344 | 18,683 | 18,093 | 19,166 |
| Non-edible | 6,432 | 7,391 | 6,879 | 4,613 |
| Total | 23,776 | 26,054 | 24,972 | 23,779 |
| Cotton | 20,447 | 21,285 | 20,281 | 14,480 |
| Sugarcane | 3,200 | 3,546 | 3,004 | 3,847 |

The statement below shows the triennium average of yield for selected crops in reporting areas in the sub-continent in lbs. per acre.

| | Triennium ending 1933-34. | Triennium ending 1939-40. | Triennium ending 1942-43. | Triennium ending 1946-46. |
|------------------------|---------------------------------|---------------------------------|---------------------------------|---------------------------------|
| 1. Rice | 852 | 766 | 731 | 779 |
| 2. Wheat | 607 | 671 | 674 | 624 |
| 3. Cotton | 78 | 89 | 102 | 105 |
| 4. Groundnut | 939 | 857 | 870 | 799 |
| 5. Linseed | 272 | 241 | 280 | 216 |
| 6. Sugar (raw) | 2,985 | 2,832 | 2,915 | 3,061 |
| 7. Jute | 1,263 | 1,094 | 992 | 1,159 |

It should be noted that the total acreage under crops in the country has increased very slowly. The per acre yields of important crops for which statistics are available reveal no trend towards a general increase in per acre yields. Agricultural production in India fluctuates greatly from year to year. These fluctuations are due, in the main, to the nature of the agricultural season. During some years of the war, the incentive to increased production by way of high prices was considerable but there is nothing in the statistical data to indicate any general increase in productive capacity.

INDUSTRIES

Thus while the sub-continent's economy is essentially agricultural, it ranks as one of the eight greatest industrial countries of the world. Although the basic raw materials of industry were present in great abundance, it was not generally realized until the early twenties of this century that with the development of the necessary manufacturing processes it would be possible to effect a gradual displacement of various categories of imports by home-made articles. The pace of industrial development since that period has been greatly accelerated by the policy of active assistance pursued by the State both by way of granting tariff protection in deserving cases and of giving preference to the products of Indian industry in purchasing Government requirements. The prospects of continued Government help and the anticipation of handsome profits encouraged a rapid flow of private capital into industry. New capital invested in joint stock enterprise alone in the inter-war period was something like Rs. 150 crores.

Iron and Steel.—The outstanding instance of an industry which was greatly fostered by State encouragement is the iron and steel industry. The real growth of the industry took place in the last two decades, and it is remarkable that the industry recorded the most rapid progress during the world depression. Between the year 1932-33, when the regular collection of production figures started, and the year 1940-41, the steel ingot production of the country increased from less than 6 lakhs tons to more than 1.3 million tons. During the same period the output of finished steel jumped up from 359,000 tons to 925,000 tons. This development was accompanied by an expansion of the activities of various ancillary industries like foundries and the structural steel and wagon-building industries, the last-named of which had received an early promise of preference from the Railways.

TATA STEEL OUTPUT 1948-49

| | Pig Iron | Steel Ingots | Finished Steel |
|--------------------------------|-------------|-----------------|-------------------|
| Quarter Ended Dec. 31, 1948 | 246,300 | 238,900 | 171,200 |
| January to April 1949 | 305,700 | 322,300 | 227,900 |

The Iron and Steel (Major) Panel, constituted in January 1946, estimated India's existing productive capacity of finished steel of all classes to be about 1,200,000 tons, and they anticipated that additional capacity of about 340,000 tons could be made available during the course of the next five years as under:—Tatas 150,000; Sesh 200,000; Mysore Iron Works 30,000; Rife Factory, Ishapore 60,000.

Even if all these extensions are completed within five years, there would still be a deficiency of nearly one million tons of steel per annum. The Panel accordingly recommended the installation immediately of a new unit with an initial capacity of 500,000 tons, and an ultimate capacity of one million tons, and the setting up later of a second such unit if circumstances appeared to justify it. The first unit, the Panel suggested, should be in C.P. and the second in Bihar. It considered it desirable to have regionalisation of only steel processing and consuming industries, not of plants as such. The Panel felt that if necessary private capital was not forthcoming to finance the new plants, Government must undertake to erect them.

Pending examination by the Tariff Board of the question of the fair retention prices of steel produced by the Tata Iron and Steel Co., and the Steel Corporation of Bengal, the Government of India, in January 1948, allowed an increase of Rs. 23-8 per ton, and, in order to meet this additional payment and to equalise the high prices of imported steel with those of indigenous steel, so that all essential consumers might get steel at the same price, the selling price of steel was increased to Rs. 75 per ton. Subsequently, the Tariff Board submitted its report, and the Government of India, after examining it, decided to increase, with effect from May 1, 1949, the fair retention prices, which would give both companies an average increase of Rs. 18 per ton. A resolution embodying the recommendations of the Tariff Board and the Government's decision thereon, was published in the Gazette of India of May 20, 1949.

Since the decision to equalise the prices of imported steel with those of indigenous steel was taken in January 1948, not only did the price of imported steel go up but the flow of imports was also on the increase. To meet this extra liability and the increase in retention prices, payable to both companies, the Government of India decided to increase, with effect from June 1, 1949, the existing selling prices by Rs. 50 per ton on the average. The increase for bars and rods was fixed at Rs. 33, for structurals, Rs. 35, for plates and black sheets Rs. 67, for galvanised corrugated sheets Rs. 80 and so on.

It was also decided to increase the existing differential of Rs. 10 per ton between the price of tested and untested steel to Rs. 30 per ton. The notification announcing the new prices was published in the Gazette of India of May 28, 1949.

Textile.—The cotton textile industry recorded such good progress in the inter-war period that the share of imports in the cloth requirements of the country decreased from about four-fifths to much less than a fifth. In the same period the number of mills increased from 227 to 355, the number of spindles from 6.2 millions to 8.4 millions and the number of looms from 109,000 to 168,000. The output of yarn more than doubled in weight and the output of piece-goods nearly trebled in length.

Many technical improvements were effected by the industry during the period, chief among these being the installation of modern machinery for spinning and weaving and the development of new bleaching, dyeing, printing and finishing processes.

The jute manufacturing industry had, however, to face numerous troubles in the last twenty-five years but in the period taken as a whole the industry did show a fair degree of improvement.

Sugar.—The history of the sugar industry may be said to begin with the grant of protection to the industry. The output of sugar which was only about 300 000 tons in 1932-33 has now risen to over a million tons. The industry had to contend for a time against a number of difficulties arising from organisational weaknesses but to offset this there has been the steady improvement in the quality of cane which, in conjunction with the recent technological advances, has made possible a higher percentage recovery of sugar from cane. The protective duty on sugar has been extended from year to year. The last extension was agreed to by the Constituent Assembly in March 1948. Sugar production in 1947-48 amounted to 10,77,000 tons, as compared to the peak production of 12,49,000 tons in 1939-40, and the lowest in 1946-47 when it was 9,21,000 tons. The size of the domestic demand for sugar has been reduced by 2½ lakhs of tons due to the partition of the sub-continent and, consequently, the industry is faced with a surplus of two lakhs of tons for the season 1948-49. The statutory control over the price of sugar was withdrawn in December 1947, when the industry raised the price from Rs. 20-14 to Rs. 35-7 per maund, although early in December 1948, the price was reduced to Rs. 28-8 per maund, which was still a high figure. Although the world position of sugar has changed recently, no serious competition is anticipated from the chief exporting countries in the near future. Difficulties of finding sufficient dollars to buy sugar from Cuba and the unsettled conditions in Java are the main reasons.

The incidence of the protective duty increased from 130 per cent. in 1932-33 to 180 per cent. in 1939, indicating that the gap between the C.I.F. price of foreign sugar and the fair selling price of indigenous sugar had actually become wider; the continuous increase in the cost of production of sugar made the gap wider still. The Indian Sugar Syndicate came in for much public criticism for raising the price of sugar following its decontrol.

According to a statement issued by the Director, Indian Institute of Sugar Technology, Kanpur, the total production of sugar during the season 1948-49 is estimated to be 10-30 lakh tons, as against the actual production of 10-75 lakh tons in the season 1947-48. This shows that a decline in production to the tune of 45,000 tons of sugar is anticipated. An all-round fall, in production, except in Bihar, is expected where an increase to the extent of 19,000 tons is estimated. The recovery of sugar per cent. cane is expected to be slightly higher in the current season in the United Provinces and Madras. In the remaining parts of the Indian Union, the recovery is expected to fall slightly. But, on the whole, the recovery per cent. cane is estimated to be 9-92 for the Indian Union as a whole, as against the actual figure of 9-85 in the season 1947-48.

The table below gives the estimated production and recovery per cent. of cane, the quantity of cane crushed, and the number of factories operating in the year 1948-49. The figure in brackets refer to the season 1947-48:

| Provinces | No. of factories worked | Cane crushed | Sugar Produced | Recovery per cent. cane |
|-----------------------|-------------------------|----------------------------|--------------------------|-------------------------|
| | | (Tons) | (Tons) | |
| U.P. | 65 (63) | 57,18,800 (61,23,000) | 5,63,700 (5,99,900) | 9.86 (9.80) |
| Bihar | 29 (29) | 18,11,400 (16,05,300) | 1,87,300 (1,65,500) | 10.34 (10.49) |
| East Punjab | 1 | 1,21,900 | 12,500 | 10.01 |
| Madras | (1) | (1,25,300) | (12,300) | (9.86) |
| | 10 | 5,50,700 | 50,500 | 9.17 |
| Bombay | (11) | (6,85,800) | (59,300) | (8.65) |
| | (10) | (7,44,900) | (80,100) | 10.79 |
| West Bengal and Assam | (1) | (4,300) | (4,000) | 9.33 |
| | (2) | (8,100) | (5,200) | (10.84) |
| Orissa | 1 | 39,700 | 4,000 | 10.08 |
| | (1) | (35,000) | (3,500) | (9.70) |
| Indian States | 17 (17) | 13,45,800 (14,76,100) | 1,27,400 (1,36,500) | 9.47 (9.24) |
| Total | 134 (134) | 102,76,500 (109,10,700) | 10,29,800 (10,74,800) | 9.92 (9.85) |

Paper—The paper industry would have languished in the decade following the 1914 war but for the protection granted to it in 1925. The duty imposed on imported wood pulp some years later was instrumental in the development of the production of indigenous bamboo pulp which is now the main raw material for paper in the country. The production of fine writing and printing paper increased rapidly in the last decade. The same was the case with kraft or packing paper, but in the absence of proper raw materials for making mechanical pulp all efforts made by the Forest Research Institute to produce newsprint in this country have not been crowned with success so far and the whole of our annual requirements totalling about 50,000 tons of newsprint has to be imported from abroad.

Cement—Among the industries that were struggling for existence in the early years but which stabilised themselves without direct outside assistance, first mention should be made of the cement industry. It staged a surprising recovery in the thirties on the basis of a mutual agreement and the greater part of the credit for the enormous increase in the consumption of this relatively new building material goes to the industry itself. To make 100 tons of cement, about 160 tons of limestone and clay, 4 tons of gypsum and 38 tons of coal are needed. With the exception of coal these materials are available in plenty. To some extent hydro-electric power can be substituted for coal as is done in cement works in South India.

The production of cement in India in 1945-46 amounted to 2,075,340 tons, as compared with 781,000 tons in 1934-35. The increase is stated to be maintained. Government have set six million tons as the target to be achieved in 1952, by which time internal demand is expected to exceed five million tons. (Ref. Report of the Advisory Planning Board, June 1947).

Chemical Industry—The Development of the Indian chemical industry was handicapped from the beginning by the absence of indigenous supplies of sulphur and in view of the fact that the industry had a measure of protection only for the short period of less than two years; the increase in the output of sulphuric acid by more than 60 per cent. in less than eight years should be considered a creditable achievement for the industry.

The other acids also showed a similar improvement but in the case of salts the progress was not an uninterrupted one. The production of ammonium sulphate, to take one instance, which increased from 8,000 tons in 1932-33 to 18,000 tons in 1936-37 fell to 15,000 tons in 1938-39. The import difficulties created by the last war led to an expansion of the indigenous production

of ammonium sulphate as evidenced by the output of 28,000 tons in 1940-41 but the industry will have to increase its capacity much more if the greatly enlarged internal demand is to be satisfied.

An obvious lacuna in the country's production of chemicals is in respect of alkalis, particularly soda-ash, the available supply of which remained the sole limiting factor in the expansion of the glass and soap industries in the country in recent years.

Smaller Industries—Steel, Sugar, Paper and Cement are four major instances of industries which have established themselves in the last twenty years but there are several smaller industries which have witnessed a striking advance in the past ten years. Among the comparatively new industries are paints, soap, matches and chemicals. At the outbreak of the last war although many important constituents, as for example the finer varieties of pigments for the paints industry and soda-ash for the soap industry had still to be imported from abroad, the position was that two-thirds of the country's requirements of paints and almost the whole of the supply of soap came from local production whereas at the end of the first World War only a very small portion was so met in either case. This is largely true of the match industry as well.

The growth of organised industry in the sub-continent was necessarily accompanied by a number of developments not all of which have been beneficial to the country's economy. In the first place the increased output of factory products led to a gradual decline in handicrafts with the solitary exception of handloom weaving. With the decline of handicrafts a large number of artisans were thrown out of work and while a considerable proportion of these were no doubt absorbed by the expanding organised industries, the rest had to fall back on agriculture for their livelihood thus increasing the already heavy pressure on land.

SHIFTS IN TRADE

The most important outcome of the policy of industrialisation was a significant change in the composition of India's import trade. Imports of finished goods amounted for 84 per cent. of the total value of the imports of India including Burma in 1920-21. By 1936-37 the corresponding percentage had declined to 75. In value the fall was from Rs. 274 crores to Rs. 92 crores. An even more striking development on the import side was the steady increase in the share of industrial raw materials from 5 per cent. to 16 per cent. During a period in which the total value of imports declined by

nearly two-thirds, the value of imports of raw materials increased by more than 10 per cent. These tendencies have been greatly accentuated by the last war and the position in 1941-42 was that manufactured articles formed but 55 per cent. of the total imports while the share of industrial raw materials had risen to the high figure of 29 per cent.

The sub-continent's increased demand for foreign raw materials was not, however, accompanied by a decline in her raw material exports; on the other hand between 1920-21 and 1936-37 the proportion of industrial raw materials in total exports increased from 45 per cent. to 53 per cent. During the same period the share of manufactured goods in the total exports declined from 36 per cent. to 26 per cent. owing chiefly to a steep fall in the value of exports of cotton and jute manufactures.

Thus it would appear that before the last war the progress of industrialisation was reflected mainly in the development of the then existing industries catering mostly to the internal demand for finished goods rather than in the establishment of new industries merely for the purpose of processing the raw materials that were being exported as such. During the last war, however, the outlook underwent a vital change. This is well illustrated by the fact that the proportion of raw materials in exports has fallen to 28 per cent. and the exports of manufactures has risen to 47 per cent.

These changes in the composition of trade were accompanied by even more remarkable changes in its direction. In 1920-21, 61 per cent. of the imports were derived from the United Kingdom, but in 1936-37 only 38 per cent. came from that country. Only a small portion of the trade lost by the United Kingdom was captured by the other Empire countries whose share increased from 5 per cent. to only 11 per cent. during the same period, while foreign countries, particularly Japan, Germany and the U.S.A. improved their position from 34 per cent. to 51 per cent. After the last war, the share of the United Kingdom declined still further to 21 per cent. in 1941-42 but the other Empire countries not only filled the gap thus created but also improved their position further at the expense of the foreign countries, the share of the two later groups in India's imports in 1941-42 being 40 per cent. and 39 per cent. respectively.

The main changes noticeable in the direction of export trade were an increase of the share of the United Kingdom from 22 per cent. to 32 per cent. between 1920-21 and 1936-37, a decrease in the share of the rest of the Empire from 21 per cent. to 14 per cent. and a relative stability in regard to the foreign countries.

The war was accompanied by a slight decline in the share of the United Kingdom, a pronounced decline in the case of foreign countries and a rise from 21 to 30 in the percentage share of the Empire countries.

BILATERALISM

An interesting consequence of these shifts in the direction of trade was the introduction of an element of 'bilateralism' in India's trade with the Empire as a whole. In 1920-21 the Empire took only 43 per cent. of India's exports but supplied 66 per cent. of her imports but by 1936-37 the proportions had very nearly balanced themselves at 46 and 49 per cent. respectively. This movement was further accelerated by the last war and in 1941-42 the Empire's share of India's exports as well as imports was 61 per cent.

Of equal importance with the remarkable changes that took place in the composition and direction of trade were the developments concerning India's balance of trade. Only on rare occasions did India's total imports exceed her exports as for instance during the year 1920-21 and 1921-22; during the succeeding years, the merchandise balance of trade remained in her favour and the size of the balance was large enough to permit a considerable importation of gold and silver even after meeting the country's external obligations. This continued up to 1930-31 but the trade depression which had become very severe by this time resulted in a steeper fall in the prices of India's exports than in the prices of her imports and as a consequence the merchandise balance of trade dwindled to almost nothing. This would have led to difficulties in regard to India's external payments; but following the steep rise in the rupee price of gold resulting from the monetary events of the period, India had become a net exporter of this precious metal. The balance of transactions in treasure which had thus turned to India's favour largely made up for the decline in the merchandise balance of trade.

ECONOMIC SITUATION

After about six years of total war, the year 1945-46 witnessed the return of peace following the unconditional surrender of Japan early in August 1945 within about four months of the surrender of Germany. India's industrial equipment was overworked to almost breaking point, and her plans for reconstruction were delayed owing mainly to her inability to import the necessary capital goods. The diversion of large fractions of the country's productive capacity to purposes of war production had resulted in enormous shortages of consumer goods, the situation being further aggravated by reduced imports. The decrease in the expenditure recoverable from His Majesty's Government from Rs. 411 crores in 1944-45 to Rs. 347 crores in the revised estimates for 1945-46 reflected partly the success of the Hydrabad Mission's effort to secure a reduction of the demands for war purposes on India's productive capacity.

With the termination of the war with Japan, Government were also faced with the immediate problems of transition which included demobilization, re-settlement of ex-servicemen and war workers and re-conversion of industry to peace time production. The food situation further deteriorated and Government tried to meet the crisis through efforts to obtain supplies from abroad. Following the earlier stabilisation measures, as well as the improvement in the overall supply position and modification of controls during the year, prices were maintained at the previous year's level according to the Economic Adviser's index which averaged 245.0 in 1945-46 as against 244.2 in 1944-45.

Trends in International Trade.—The cessation of hostilities in 1945 put an end to the commercial seclusion of a large part of Europe and the Far East and to the arbitrary diversion of the productive resources of these two regions to fulfil the economic needs of Germany and Japan. The sterling areas' inadequate holding

of non-sterling exchange constituted the dominant consideration for its continuing the existing restrictions on trade with the outside countries. The termination of lend-lease in September 1945 marked an important phase in the transition from war to peace-time trading conditions. The Anglo-U.S. financial agreement providing for a loan of \$4.4 billion to Britain marked the first practical step in the direction of liberating the existing restrictions on foreign trade. The establishment early in 1946 of the International Monetary Fund and the International Bank represented a definite step in economic collaboration of the nations towards re-establishing the commercial and financial relations on a stable multilateral basis.

PRESENT POSITION

(Value Rs. lakhs)

| | October 1947 | October 1948 | Seven months ended Oct. 1947 | Seven months ended Oct. 1948 |
|---------------------|--------------|--------------|------------------------------|------------------------------|
| Imports .. | 29.56 | 35.13 | 239.19 | 267.64 |
| Exports .. | 33.94 | 32.25 | 221.62 | 242.03 |
| Re-exports .. | 93 | 26 | 4.14 | 5.02 |
| Balance of Trade .. | 1.531 | 2.62 | 13.43 | 20.59 |

The following is a statement showing the total value of imports from, and exports to, hard and soft currency areas for seven months from 1st April 1948 to 31st October 1948:

(Figures in Million Rupees)

| Currency Areas | Imports | Exports |
|-----------------------------------|---------|---------|
| Dollar and Hard Currency Areas .. | 730 | 680 |
| Soft Currency Areas .. | 1,940 | 1,710 |
| Total .. | 2,670 | 2,390 |

The following table shows the total cost of consumer goods and capital goods from soft and hard currency areas as imported during seven months from 1st April 1948 to 31st October 1948:

(Figures in Million Rupees)

| Currency Areas | Capital Goods | Consumer Goods |
|-----------------------------------|---------------|----------------|
| Dollar and Hard Currency Areas .. | 120 | 320 |
| Soft Currency areas .. | 310 | 870 |
| Total .. | 430 | 1,190 |

The percentage of capital goods imported as compared to total imports is 16.1.

A significant feature of India's imports during 1948 has been the prominent position occupied by imports of capital goods. Machinery and equipment formed the largest single item in our import list, accounting for Rs. 71.44 crores, with food imports coming second at Rs. 63.40 crores. The U.K. has been not only our biggest customer but also our biggest supplier.

The Board of Trade figures published in London on May 21, 1949, showed that the value of exports to England during the first quarter of this year rose to £26,128,419 compared to £23,878,732 during the corresponding quarter of last year.

Imports during the same period almost doubled in value—£35,965,587 compared with £18,842,394. During March, though exports dropped slightly compared with the previous year, imports into India leapt to more than twice the value for March 1948—from £5,284,020 to £11,652,373.

Detailed figures for the first four months of this year with the corresponding period of last year were:

Exports: Tea £15,815,259 (£11,015,825); leather £942,455 (£562,975); tobacco £704,835 (£269,120); hides and skins £595,877 (£221,696); woolen and worsted yarns and manufactures £474,556 (£541,750); raw jute £214,524 (£2,868,362); raw cotton and waste £548,040 (£1,469,650).

Imports: Iron and steel manufactures £1,008,775 (£1,204,216); non-ferrous metals and manufactures £1,401,877 (£907,751); cutlery and hardware £1,464,656 (£80,535); electrical goods £3,780,246 (£1,779,377); machinery £14,311,597 (£10,812,838); cotton yarns and manufactures £5,879,054 (£1,551,206); chemicals, drugs and dyes £1,615,618 (£1,851,341); vehicles £6,059,451 (£3,174,271).

Statistics for the first half of 1948-49 show that the export value of a dozen commodities constitutes more than 83 per cent. of India's total exports. Jute manufactures top the list forming 33.85 per cent., followed by cotton piece-goods with 19.87 per cent. Tea exports form about 11.28 per cent., while raw jute and raw cotton form 6.43 per cent. and 4.17 per cent. respectively. Next in importance come vegetable oils with 3.53 per cent., followed by hides and skins forming 2.91 per cent., and mica with 2.81 per cent. During the last decade, the peak year in India's export trade was 1947-48 with a record figure of Rs. 403 crores.

IMPORT POLICY

The Government of India's import policy is largely determined by the trend of the balance of payments. The aim of this policy is so to regulate trade that, while it is kept at the highest possible level consistent with the needs and requirements of the country, India should not have an overall deficit in her balance of payments on current account during any particular period of time of more than the amount by which it has been agreed with the United Kingdom Government India's sterling balances should be drawn upon. Under the agreement signed in July 1948, it was agreed that India's free sterling account, which had a balance at the end of June 1948 of £80 million, would be credited with an equivalent sum during the period July 1949 to June 1951. In pursuance of this policy, and also with the immediate object of reducing the inflationary pressure in the country, import controls were relaxed during the course of the year, and they resulted in substantially increasing the available supply of goods in the country. At the end of the financial year ended March 1949, while India's overall balance of payments position was on the whole satisfactory, her balance of payments with the dollar and hard currency countries was causing great concern to Government.

In the pre-war years, India had usually a surplus with the U.S.A. and, during the war years, owing to the drastic curtailment of imports to conserve dollars for the war effort, India continued to have increasing surpluses. After the war, the trend of trade rapidly reversed itself and, in common with the rest of the world, India started having substantial deficits on hard currency account. The reason for this was that India had increasingly to turn to the hard currency countries for her requirements, as the countries whose economies had been disrupted by the war could not meet them. This was particularly true of food which is today the largest single consumer of foreign exchange. Burma could not supply all the rice India needed because of the ravages of the war and its aftermath, coupled with the subsequent political unrest.

India's dollar deficit in the past used to be financed by the Central reserves of the sterling area. But beginning from January, 1948, the U.K. refused to carry its responsibility any further and insisted on limiting the convertibility of our sterling very rigidly. The limits imposed—£10 million or 40 million dollars—for the half-year January to June 1948, and £15 million or 60 million dollars for the year July 1948 to June 1949, bore no relation to India's mounting needs.

Concurrently with the imposition of these limits on convertibility, there came the separation of the exchange resources of Pakistan from India which also took place in January 1948. This also handicapped the country severely, as many commodities which before partition earned hard currency, such as raw jute, long staple cotton and hides and skins, were exported largely (especially the first two) from territories now in Pakistan.

In spite of the maximum possible limitation of imports from the hard currency areas and the maximum possible encouragement of exports thereto, India had a deficit in her balance of payments with the hard currency countries in the six months April to September 1948 of 45 million dollars. The Finance Minister in March 1949 estimated the deficit for the next three months, for which preliminary figures were available, at 48 million dollars. Of these deficits, the purchase of foodgrains alone was responsible for 35 million dollars. These deficits, which exceeded by far the convertibility allowed to India by the United Kingdom, have been met by loans from the International Monetary Fund from which since March 1948, we borrowed no less than 92 million dollars.

Addressing the first meeting of the Import Advisory Council on February 29, 1949, Mr. K. C. Neogy, Commerce Minister, gave a factual review of the Government of India's policy in regard to import trade control. He said: Import Trade Control was first instituted about eight years ago for the conservation of dollar and hard currency resources as well as of limited shipping tonnage during the period of the war. On the close of the war, it was thought that the controls should be gradually removed. In fact, the economic conditions then prevailing demanded as large an import as possible of plant and machinery for the replacement and maintenance of the industrial units and also of other industrial goods required for increased production.

In order to meet the pent up demand, the then Government liberalised its import policy during 1946. The system of Open General Licences was extended to a large number of commodities imported from sterling as well as other countries. During the 12 months ended March 1947, the total value of licences was as much as nearly its 1,000 crores. A large variety of goods of luxury and semi-luxury types were imported during 1946 and early 1947 even from the dollar area. There was a heavy call on our foreign exchange reserves which comprised mainly the war-time accumulations of our sterling balances. Early in 1947, it was realised that such generous imports could no longer be allowed and that the country would soon be called upon to limit the imports to what it could pay for from current earnings of export proceeds, plus the transfers from the sterling balances as fixed by mutual agreement with the U.K. Government.

From July 1947, import trade control thus entered a new phase, being linked closely with foreign exchange control and the balance of payments problem. Since then, the main objective of import trade control has been the conservation of foreign exchange resources.

For the first half year ended December 1947, our foreign exchange was multilaterally convertible, and licences were issued during that period without closely discriminating between the sources of supply. From January 1948, however,

the discriminatory form of control had to be reintroduced, the control being more rigorous against dollar and hard currency imports. Throughout the period of twelve months, ending June 1948, many of the non-essential goods were either given no licences or their imports were severely curtailed. Exceptions were plants and other capital goods.

While these restrictive policies helped in maintaining the balance of payments with dollar and hard currency countries, the position that developed by June 1948 was that we ended with a large surplus balance in our current account with soft currency areas. Meantime the prices of various articles were also mounting. It was against this background that the policy of restricted imports came to be revised. The main objects of the liberalisation of control after July 1948, were to make further use of our foreign exchange balance in soft currencies, and to increase supplies of consumer goods in the country so as to counteract inflation that had been menacing the economic stability of the state.

The measures taken to liberalise imports were to issue Open General Licences for the more essential consumer goods and industrial raw materials, and to permit imports, in limited quantities, of certain luxury and semi-luxury goods which had till then been banned. The liberalisation could be made only in respect of imports from soft currencies as well as from Sweden, Switzerland and Japan.

Following the issue of Open General Licences, there flowed into this country a large and ever-increasing variety of goods from sterling and soft currency areas. Heavy withdrawals ensued from India's sterling balances held in London; these withdrawals, for the 10 months ended April 1949, exceeded by £42 million the permissible limit under the Indo-British Sterling Agreement. It became increasingly clear that Government, before long would have to impose restrictions on the unbridled imports of essential and non-essential goods. It became apparent in the beginning of 1949 that the sterling balances were being depleted at an undesirably rapid rate, and the need for re-application of import controls became more pronounced. On May 4, the Government of India suspended O.G.L. XI in order to eliminate the growing deficit in balance of payments arising from the huge imports and falling exports.

In the first week of May 1949, it was announced in London that the British Chancellor of the Exchequer had handed a memorandum to Pandit Nehru expressing the British Government's "deep concern felt at the very heavy rate at which India was drawing on her free sterling balances." It was stated that India had already drawn not only the £80 million sterling free balance brought forward from 1947-48 available up to June 1949, under the agreement concluded last year, but had considerably drawn on the £40 million allotted for 1949-50. New Delhi immediately came out with a confirmation of the memorandum but emphatically repudiated the "insinuation in the London report that India's suspension of the Open General Licence was due to a suggestion made by Britain," and pointed out that the Government of India would have taken similar action much earlier, and without disruption to the export-import trade, had not the British Government delayed their reply to certain Indian representations made as far back as February this year. It was disclosed further that the delay in the British reply had involved India in a "loss" of £42 million, in the sense that during the ten weeks while the British Treasury remained silent, India had drawn in advance on her sterling balance allocations for 1949-50, which she might have avoided, partly at least, if she had received the British reply earlier.

A delegation from India, headed by Finance Minister Dr. John Mathai, had discussions with the British Treasury on the sterling balances in London in July 1949.

Following the suspension of the O.G.L. XI, the Commerce Ministry announced, on May 19, a revised list of commodities which could be imported without licence from soft currency areas, provided the commodities were manufactured or produced in those areas. The new list, called General Licence XV, replaced Open General Licence XI.

Principal commodities included in General Licence XV are: asbestos manufactures; ball and roller bearings; jute mill stores (excluding bobbins and pickers); cotton textile machinery and spares (with the exception of spinning machinery looms), condensed and powdered milk; spices; cement; all sorts of mineral oil excluding white oil; raw film; certain pharmaceuticals; raw materials for the manufacture of paints; cotton and woollen yarn and fabrics; artificial silk yarn; pulses other than gram; component parts of wireless sets; motor vehicle parts; printing machinery; agricultural implements and certain scientific instruments.

EXPORT DRIVE

The diversion of acreage from cash crops to food crops necessitated by the country's over-all food shortage continued to influence not only the volume of production of the cash crops, which constituted the bulk of India's export, but also Government's export policy, which was governed by the desire to conserve essential raw materials to be exchanged against food imports from other countries. The relaxation of export controls was consequently gradual and was applied only to such articles as were in excess of domestic needs, although there was also the awareness of the need to secure as great an expansion of exports as possible to provide for the increased import requirements of the country. While control over exports in respect of a large number of commodities of a non-essential nature was removed in July, it was retained or modified in respect of items, such as footwear, sheepskins, raw hides, oilseeds, long staple cotton, etc., and the export of groundnuts was altogether prohibited during the year. The export of cloth and jute to some countries was permitted in order to secure imports of needed foodstuffs. Adequate peace-time powers to regulate the exports from and imports into the country for a period of three years with effect from 25th March, 1947 were also taken in hand by Government through the Imports and Exports (Control) Act, 1947, this legislation being intended to help the Government to take such measures as are necessary to ensure a smooth and orderly transition in the trade of the country.

During the Budget session of the Indian Dominion Parliament in February 1949, Mr. K. C. Neogy, Commerce Minister, in the course of a statement, gave a brief review of the measures taken and of the steps proposed to be taken in order to stimulate exports:

Measures taken to stimulate exports with a view to improving India's trade balance fall into the following two general categories:—
(1) Measures to stimulate exports in general to all foreign countries, and (2) Measures to stimulate exports to hard currency areas.

As regards (1), measures already taken include decontrol of the export of over 200 commodities since the termination of the war, strengthening of commercial representation abroad, participation in various national and international fairs and exhibitions with a view to publicising Indian commodities, affording priority assistance for movement of goods intended for export, despatch of trade delegations in various countries and negotiations for concluding trade agreements with various countries. Measures proposed to be taken further include the opening of show-rooms in the offices of trade representatives abroad for exhibiting Indian commodities, the examination of proposals for setting up an organisation similar to the British Export Trade Research Organisation, the standardisation of goods intended for export so as to ensure a certain optimum standard.

As regards (2), certain goods, the exports of which to easy currency areas are controlled, are allowed to be freely exported to hard currency areas; while quotas of certain other commodities like jute goods, oils and oilseeds and cloth are fixed liberally for such areas.

Trade commissioners have been appointed in the following countries:—U. K. and Eire; Australia and New Zealand; Canada and Newfoundland; East Africa; Egypt; Ceylon; Pakistan; Eastern Pakistan; Brazil; Iran; France; Germany; Japan; Burma and Afghanistan. It has been decided to appoint Commercial Representatives in the following countries at an early date: Italy; Iraq; Aden; Czechoslovakia; West Canada; Fiji; Switzerland. Trade interests in the following countries are watched by diplomatic and consular officers: U.S.A.; China; Argentina; Sinkiang; West Indies; Siam; Mauritius.

Firms or individuals interested either in selling or purchasing Indian produce or manufactures in the following territories may correspond with the trade representatives shown below:—

Sir N. R. Pillai, Commissioner-General for Economic and Commercial Affairs in Europe, Embassy of India, Paris; S. S. Bajpai, Commercial Counsellor to the Indian Embassy, 31, Rue de La Baume, Paris; M. J. Desai, Commercial Adviser to the High Commissioner for India, A. S. Lall, Indian Trade Commissioner, India House, Aldwych, London; R. R. Saksena, Consul-General for India, 630, Fifth Avenue, New York; S. K. Krepalani, Consul-General for India, San Francisco; Aftab Rai, Consul-General for India, Avenida Roque Saez, Pena, 628, Buenos Aires, Argentina; A. G. Meneses, Commercial Secretary to the Indian Embassy, Chancery, Avenida Presidente Vargas 509, Rio de Janeiro, Brazil; M. H. Ahuja, Indian Government Trade Commissioner, Royal Bank Building, Toronto, Canada; G. Parameswaran Pillai, Indian Government Trade Commissioner, Prudential Building, Martin Place, Sydney, Australia; Sardar Sahib Saugat Singh, Indian Government Trade Commissioner, Killindini Road, Mombasa, East Africa; Indian Government Trade Commissioner, No. 6, Rue Adib Bey Issac, Alexandria, Egypt; M. S. Sait, Commercial Secretary to the Indian Embassy, Avenue Ferdowsi, Teheran, Persia; Dr. T. G. Menou, Indian Government Trade Commissioner, Chaffoor Building, Fort, Colombo; D. G. Mulherker, Commercial Counsellor to the Indian Liaison Mission, Tokyo, Japan; D. N. Naravane, Commercial Secretary to the Indian Embassy, Randeria Building, Phayre Street, Rangoon; M. P. Mathur, Commercial Attache to the Indian Military Mission, c/o. Hq. Control Commission, Berlin, Germany; L. R. S. Singh, Indian Trade Commissioner, Mohatta Building, Macleod Road, Karachi.

COMMERCIAL PACTS

During 1948-49 (until the end of the financial year), India signed commercial agreements with 10 countries of Europe and Asia in pursuance of her policy to have direct trade with foreign countries, instead of through the United Kingdom as in the past.

Conservation of hard currency was one of the important objectives in the policy behind those treaties.

The countries with which India had already entered into commercial agreements include Switzerland, Poland, Czechoslovakia, Hungary, Finland, Yugoslavia, Pakistan, Japan and Egypt.

These countries are all soft currency areas.

The pacts also secured to India soft currency sources for the supply of essential commodities and capital goods.

One of the results expected from these agreements was the stimulation of exports and consequent reduction of adverse trade balances.

Negotiations for concluding a commodities agreement between India and Australia were in progress at the time of writing (May, 1949).

The main goods which India would export were jute products, cotton textiles, oilseeds and manganese while Australia was expected to supply India capital goods, timber, lead, zinc, milk products and canned meat.

Siam was another South-East Asian country with whom India proposed to enter into a bilateral trade agreement. While India would get rice, tin, railway sleepers and teakwood from Siam, she was expected to supply Siam in turn with jute goods, cotton textiles, pig iron, linseed oil, diesel and steam rollers, and motor lorries.

Among the other countries with whom India was having trade pacts were Russia, Belgium, Italy, Iraq, Iran, Ceylon and Tibet.

The Belgian and Italian negotiations were exploratory and their trade missions visited India recently. The Iranian Government agreed to amend the Iranian Import Control Act so as to enable foreigners including Indians to take part in the import trade. It was therefore, expected that India's export to Iran, which would include cotton piecegoods and jute manufactures, and Iran's export to India, such as agricultural products, dry fruits, copper, lead and manganese could be improved.

As far as Iraq was concerned, the Government of India had allocated 2,200 tons of jute and five million yards of cotton textiles for the first half of this year. Iraq recently allocated 30,000 tons of barley to India.

Negotiations with Ceylon were not successful in regard to the supply of copper in which India was deficit, and it was not known when the talks would be resumed.

In a review of the work of his organisation, the Chief Controller of Exports, Government of India, pointed out, early in May, 1949, that with India's growing unfavourable balance of trade, emphasis must be laid on stimulating rather than controlling exports, and that unless that policy was immediately and fully given effect to, our markets abroad "might turn to other sources of supply."

While a certain amount of directioning of trade to hard currency areas would no doubt be still necessary, it would have to be within the

framework of the maximisation of exports as the basic policy. Greater liaison between Indian Trade Commissioners abroad and exporters at home, imposition of some form of qualitative control, and better transport facilities were suggested as other directions in which Government could assist the trade to maintain exports.

The Chief Controller's review disclosed that India's exports in 1948 rose in value to Rs. 420 crores from Rs. 378 crores in 1947 and Rs. 249 crores in 1946. Although much of this increase was attributable to increasingly high prices, it was noted that the 1948 figures related to exports of the Indian Union alone.

Approximately 30 per cent. of India's total exports went to hard currency countries in 1948, jute and jute manufactures figuring predominantly to the extent of 70 per cent. of the exports. The United States alone took 66 per cent. of India's exports. Some quantities of raw jute, particularly of varieties grown more widely in India than in Pakistan, were exported. As for cotton piecegoods exports, the steady downward trend, the Chief Controller said, were causing deep concern. Growing competition from other sources made it difficult for India last year to sell her exports quota. As against the target of 750 million yards for export in 1948, 309.3 million yards were exported. British East Africa, the largest buyer of Indian cloth, took only 29 million yards against its quota of 40 million yards, while Australia, with a similar quota, took only 20 million yards. The Chief Controller concluded: "It became apparent that with the return of a buyer's market and with effective demand tending to be lower than supply, the time had come for decontrol of cloth exports. Accordingly, early in 1949, steps to liberalise the licensing policy were announced." As against this, Indian cloth exporters complained that Government's liberalisation did not go far enough, and that Government should abolish the 10 per cent. duty on cloth exports, besides giving full freedom to the mills in the matter of production of various types of piecegoods, especially finer types required overseas.

Early in May 1949, the Government of India announced the appointment of a Fiscal Commission under the Chairmanship of Sir V. T. Krishnamachari, in order to recommend measures to regulate and control foreign trade. The Commission's terms of reference include the examination, in consultation with the interests concerned, of the working of the Government's policy with regard to the protection of industries since 1922, recommendations as to the future policy to be adopted in regard to protection and assistance to industries, and other matters having a direct bearing on the implementation of this policy and the administrative machinery required. It was also expected to consider the question of Commonwealth Preference and the effect on India of international obligations of the kind envisaged in the Charter of the International Trade Organisation. The Commission will have nothing to do with the question of revision of the tax structure. It was expected to present its interim report by October 1949 and its final report by the end of the year. Mr. D. I. Mazumdar is the Member-Secretary of the Fiscal Commission.

BALANCE OF TRADE

India's visible balance of trade in merchandise and treasure during the twelve months, April to March, 1943-44, 1944-45 and 1945-46 is shown in the following table. The figures are arrived at by combining the balances of transactions in private merchandise and treasure on private account. In these balances the sign *plus* (+) indicates net export and *minus* (—) net import.

| Twelve months, April to March. | | | |
|---|---------------|---------------|---------------|
| | 1943-44. | 1944-45. | 1945-46. |
| | Rs. in lakhs. | Rs. in Lakhs. | Rs. in Lakhs. |
| Exports of Indian merchandise (private) | 199.88 | 211.05 | 240.39 |
| Re-exports of foreign | + 10.96 | + 16.69 | + 23.47 |
| Imports of foreign | 117.67 | 203.57 | 240.49 |
| Balance of Trade in merchandise | + 93.17 | + 24.17 | + 23.37 |
| Gold (private) | 13 | 8 | 28 |
| Silver | 13 | 14 | 20 |
| Currency notes (private) | 3. 6 | 4.49 | + 6.26 |
| Balance of transactions in treasure (private) .. | 3.66 | 4.55 | 6.34 |
| Total visible balance of trade | 98.83 | + 28.72 | + 29.71 |
| Gold earmarked on account of purchases abroad .. | 10.19 | 18.97 | 9.76 |
| Purchases of Sterling by the Reserve Bank of India .. | 144.83 | 141.69 | 139.47 |
| Sales of Sterling by the Reserve Bank of India .. | 1.42 | 19.30 | 63.40 |
| Transfers of Government Securities | 6 | 4 | 1 |
| Interest drafts on India in respect of Government of India Securities | 7 | 7 | 7 |
| Balance of remittances of funds | 140.54 | 122.50 | 76.15 |

The total value of India's foreign sea-borne trade, which has been going up since the outbreak of the last war owing mainly to the rise in commodity prices, reached the new high level of Rs. 504 crores compared with Rs. 431 crores in 1944-45 and Rs. 327 crores in 1943-44. The total value of India's foreign sea-borne trade reached the peak figure of Rs. 93.17 lakhs in 1943-44, which was reduced to Rs. 24.17 lakhs in the following year and further down to Rs. 23.37 lakhs in the year under review. Imports increased from Rs. 203.57 lakhs in 1944-45 to Rs. 240.49 lakhs and showed an increase of 19.4 per cent. over the 1943-44 figure of Rs. 117.67 lakhs. On the other hand, re-exports continued their steady improvement from Rs. 10.96 lakhs in 1943-44 to Rs. 16.69 lakhs in 1944-45 and Rs. 23.47 lakhs in 1945-46. Exports were up from Rs. 211.05 lakhs in 1944-45 to Rs. 240.39 lakhs in the year under review as compared with Rs. 199.88 lakhs in 1943-44.

DIRECTION OF TRADE

The following table shows the more important changes in the direction of India's trade and the balance of trade with important countries and groups in lakhs of rupees for the two years 1944-45 and 1945-46 and compares them with the pre-war year 1938-39 :—

| | 1938-39. | | | 1944-45. | | | 1945-46. | | |
|---------------------------------|----------|---------------------------------|---------------------------------|----------|---------------------------------|---------------------------------|----------|---------------------------------|---------------------------------|
| | Imports. | Exports (excluding re-exports.) | Balance (excluding re-exports.) | Imports. | Exports (excluding re-exports.) | Balance (excluding re-exports.) | Imports. | Exports (excluding re-exports.) | Balance (excluding re-exports.) |
| I. BRITISH EMPIRE : | | | | | | | | | |
| United Kingdom | 46.49 | 55.51 | + 9.02 | 40.29 | 61.78 | + 21.49 | 61.07 | 67.91 | + 6.84 |
| Percentage | 30.5 | 34.1 | .. | 19.7 | 29.2 | .. | 25.3 | 28.2 | .. 30 |
| Burma | 24.35 | 10.03 | 14.32 | 13 | 13 | — | 42 | 12 | — |
| Ceylon | 1.18 | 5.09 | + 3.91 | 3.64 | 19.18 | + 14.54 | 3.73 | 16.74 | + 13.01 |
| Australia | 2.41 | 2.97 | + .56 | 10.27 | 14.08 | + 4.41 | 7.55 | 10.56 | + 3.21 |
| Canada | .91 | 2.14 | + 1.23 | 4.28 | 6.00 | + 2.62 | 5.59 | 6.69 | + 1.10 |
| South Africa | .35 | 1.49 | + 1.14 | 2.96 | 11.88 | + 8.92 | 2.67 | 7.21 | + 4.54 |

| Total British Empire | 88.56 | 85.37 | 3.19 | 78.64 | 137.99 | + 59.35 | 101.83 | 133.60 | + 31.77 |
| Percentage to Total Trade | 58.1 | 52.4 | .. | 38.6 | 65.3 | .. | 42.3 | 55.5 | .. |
| II. FOREIGN COUNTRIES | | | | | | | | | |
| United States | 9.78 | 13.88 | + 4.10 | 52.44 | 44.69 | 7.75 | 67.40 | 61.62 | 5.78 |
| Percentage | 6.4 | 8.5 | .. | 25.7 | 21.1 | .. | 28.0 | 25.6 | .. |
| Japan | 15.41 | 14.50 | .91 | 17.58 | 3.36 | 14.02 | 15.10 | 2.82 | 12.28 |
| Egypt | 2.19 | .78 | 1.41 | 49.33 | 2.73 | 46.60 | 46.28 | 1.52 | 44.76 |
| Iran | 3.49 | .. | .. | .. | .. | .. | .. | .. | .. |
| Other Foreign Countries | 36.39 | 47.78 | + 11.33 | 5.80 | 22.28 | 16.48 | 9.88 | 40.83 | + 30.95 |
| Total Foreign Countries | 63.77 | 77.42 | + 13.65 | 124.05 | 73.06 | 51.89 | 138.66 | 106.79 | 31.87 |
| TOTAL TRADE | 152.33 | 162.79 | + 10.46 | 203.59 | 211.05 | + 7.45 | 240.49 | 240.39 | 10 |

ADVERSE BALANCE

During 1945-46 India's usual favourable trade balance, without taking into account re-exports, was converted into an unfavourable one. Further reductions were recorded in India's surplus trade balances with the Empire countries and the reductions in import surpluses with foreign countries were not sufficient to compensate the loss in export surplus with the Empire countries. As a result, the favourable trade balance of Rs. 81.25 lakhs in 1943-44 was reduced to Rs. 7.45 lakhs in the following year and was converted into a nominal deficit of Rs. 10 lakhs in the year under review. As regards the Empire countries the imports from the United Kingdom increased from Rs. 40.29 lakhs in 1944-45 to Rs. 61.07 lakhs while exports rose by Rs. 6.13 lakhs to Rs. 67.91 lakhs with the result that our export surplus with that country received a sharp set-back from Rs. 21.49 lakhs to Rs. 6.84 lakhs only. Likewise India's trade balance with Ceylon and Australia decreased from Rs. 14.54 lakhs and Rs. 4.41 lakhs respectively to Rs. 13.01 lakhs and Rs. 3.21 lakhs respectively. Owing to substantially higher imports from Canada compared to exports, the favourable trade balance with that country shrank from Rs. 2.62 lakhs to Rs. 1.10 lakhs; similarly the sharp decline in exports to South Africa from Rs. 11.88 lakhs to Rs. 7.21 lakhs reduced the export surplus with that country from Rs. 8.92 lakhs to Rs. 4.54 lakhs. During the year, imports from and exports to the Empire countries respectively accounted for 42.3 per cent. and 55.5 per cent. of the total as against 38.6 per cent. and 65.3 per cent. in the previous year.

While India's favourable balance of trade with Empire countries was reduced from Rs. 59.35 lakhs to Rs. 21.77 lakhs, India's import surplus with non-Empire countries did not drop to the same extent. The total imports from foreign countries rose by 11.1 per cent. to Rs. 138.06 lakhs as against an increase of 46.1 per cent. in exports of Indian merchandise from Rs. 73.06 lakhs to Rs. 106.79 lakhs. Imports from the United States rose by 28.5 per cent. from Rs. 52.44 lakhs to Rs. 67.40 lakhs; the sharp rise in exports from Rs. 44.69 lakhs to Rs. 61.62 lakhs reduced the adverse trade balance from Rs. 7.75 lakhs to Rs. 5.78 lakhs. The import surplus from Iran and Egypt also shrank owing to reduced imports from both the countries.

Statistics on India's foreign trade relating to the half-yearly period April to September 1948, show that India's adverse balance in seaborne trade amounted to Rs. 17.94 crores. During the same half-yearly period in 1947, the adverse balance of undivided India was Rs. 18.72 crores. India's total exports during the half-year ended September 1948, amounted to Rs. 209.75 crores and re-exports Rs. 4.77 crores, while imports were valued at Rs. 232.46 crores. The deficit in balance of payments has continued month by month. Latest available figures show that the adverse balance in February 1949 was Rs. 16.36 crores, against Rs. 17.91 crores in January.

Certain striking features are noticeable in regard to the direction of India's trade during the war period. Of the Empire countries while the total value of India's trade with the United Kingdom increased from Rs. 102 crores in 1938-39 to Rs. 129 crores, that with Australia and South Africa which had shown a marked expansion between 1938-39 and 1944-45 declined slightly in the year under review. Trade with Canada also received a set-back along with Ceylon. Amongst the non-Empire countries, marked increases have taken place in respect of the U.S.A., Egypt and Iran. The total value of trade with the U.S.A. rose from Rs. 23 crores in the pre-war year to Rs. 129 crores in the year under review. With Iran the rise is roughly twelve-fold while that with Egypt is three-fold.

Figures released by the Directorate of Commercial Intelligence and Statistics for the year 1948-49 showed that the adverse balance of trade was as much as Rs. 95 crores, as against an adverse balance of Rs. 4.5 crores in 1947-48. It should

be noted, however, that the figures for 1947-48 related to undivided India. They also excluded India's seaborne trade with Pakistan up to February 1948, and trade on Government account. Yet, the seriousness of the position in 1948-49 cannot be overlooked. The adverse balance was due to the sharp increase in imports which were not counter-balanced by a proportionate increase in exports. Imports rose from Rs. 338.62 crores in 1947-48, to Rs. 518 crores in 1948-49, while exports rose to only Rs. 415.5 crores.

COMPOSITION OF TRADE

The following table gives the composition of India's imports and exports (including re-exports) according to the main commodities during the years 1944-45 and 1945-46 and compares them with the pre-war year 1938-39. Although the exclusion of trade on Government account detracts from the value of these figures, they serve as a comparative guide to the distribution of trade over the constituent categories during the period under review. The figures are in crores of rupees.

| | 1938-39. | | 1944-45. | | 1945-46. | |
|-----------------------|----------|-----------|----------|-----------|----------|-----------|
| | Rs. | Per cent. | Rs. | Per cent. | Rs. | Per cent. |
| IMPORTS. | | | | | | |
| Food | 24.00 | 15.7 | 18.85 | 9.3 | 22.25 | 9.3 |
| Raw Materials .. . | 38.18 | 21.7 | 117.25 | 58.5 | 116.57 | 48.5 |
| Manufactured Goods .. | 92.79 | 60.8 | 65.08 | 31.9 | 97.53 | 40.6 |
| EXPORTS. | | | | | | |
| Food | 39.43 | 23.3 | 77.75 | 23.5 | 58.44 | 22.5 |
| Raw Materials .. . | 76.28 | 45.1 | 58.19 | 21.5 | 84.85 | 20.6 |
| Manufactured Goods .. | 50.72 | 30.0 | 115.77 | 53.5 | 114.68 | 46.0 |

The trade returns for 1945-46 fully reflected the change, brought about by the first sight of peace after six years of global war, in the face of India's economy. Imports of manufactured goods, which had been relegated to the background by the reduction of their percentage to total trade from 60.8 in the pre-war year 1938-39 to 31.9 in 1944-45 under the stress of the war, tended to return to the pre-war pattern in the following year when their proportion to total trade rose to 40.6 per cent. On the other hand, the growing demand for raw materials during the war period, which had lifted their share in the trade from 21.7 per cent. in 1938-39 to 58.5 per cent. in 1944-45 abated in the year under review. The share of food imports remained unchanged.

The slow return of the export trade to the pre-war pattern was also simultaneously noted. While exports of foods were more or less stationary in terms of their share in the trade the proportion of raw materials, which had steadily declined from 45.1 per cent. in 1938-39 to 21.5 per cent. in 1944-45, staged a recovery to

26.5 per cent. in the year under review, while those of manufactured goods retreated to 46 per cent. in 1945-46 after advancing from 30.0 per cent. in 1938-39 to 33.5 per cent. in 1944-45.

IMPORTS OF MERCHANDISE

India's import trade in private merchandise reached a new high level at Rs. 240.49 lakhs in 1945-46 showing an increase of Rs. 36.90 lakhs over the preceding year. The upward trend was mainly attributable to the relaxation of the import trade control following the end of the war. Imports of oils accounted for one-third of the total value of the import trade as against 40 per cent. in the preceding year, while raw cotton and cotton waste and machinery ran closely for the second place. Arrivals of tobacco, cutlery, dyes, electrical goods, metals, paper, vehicles and textile fabrics registered an impressive advance over the preceding year, while the receipts under seeds, wood, chemicals, rubber manufactures, jute manufactures and salt were either stationary or lower than the preceding year.

The following table shows the comparative importance of the principal articles imported into British India in thousands of rupees :

| | 1943-44. | 1944-45. | 1945-46. | Percentage of total imports. |
|---|----------|----------|----------|------------------------------|
| Oils | 36,48.04 | 80,70.49 | 79,37.69 | 33.01 |
| Cotton, raw and waste .. . | 17,52.78 | 24,00.63 | 22,86.65 | 9.51 |
| Machinery | 11,30.16 | 16,29.76 | 22,60.44 | 9.42 |
| Dyes and colours .. . | 8,29.55 | 7,92.39 | 11,41.22 | 4.74 |
| Grain, pulses and flour .. | 3,02.72 | 8,09.18 | 9,18.93 | 3.82 |
| Iron and Steel | 2,02.33 | 3,55.87 | 6,65.44 | 2.77 |
| Cutlery, hardware, etc. .. | 2,77.06 | 3,68.87 | 6,40.96 | 2.67 |
| Chemicals | 4,37.05 | 6,87.90 | 6,04.79 | 2.51 |
| Vehicles | 1,26.98 | 4,35.64 | 6,04.50 | 2.51 |
| Metals other than iron and steel .. | 2,09.38 | 2,91.84 | 5,98.83 | 2.50 |
| Paper, Pasteboard and Stationery .. | 1,96.29 | 2,90.93 | 5,77.58 | 2.41 |
| Coal and other non-metallic mining and quarry products .. . | 3,29.64 | 5,40.32 | 5,70.04 | 2.37 |
| Electrical goods and apparatus .. | 1,53.11 | 2,51.07 | 4,49.02 | 1.87 |
| Tobacco | 1,59.71 | 2,90.25 | 3,90.61 | 1.62 |
| Drugs and medicines .. . | 2,08.66 | 2,87.34 | 3,64.48 | 1.52 |
| Wool, raw | 4,02.25 | 2,09.57 | 3,09.04 | 1.29 |
| Woolen yarns and manufactures .. | 44.73 | 1,05.16 | 3,00.28 | 1.20 |
| Other yarns and textile fabrics .. | 36.22 | 71.84 | 2,34.71 | 0.98 |
| Cotton yarns and manufactures .. | 1,33.43 | 1,54.41 | 1,84.56 | 0.77 |
| Silk yarns and manufactures .. . | 26 | 9 | 5.38 | .. |
| Jute yarns and manufactures .. . | 5.35 | 2.10 | 1.74 | .. |
| Fruits and vegetables .. . | 87.02 | 1,55.03 | 2,31.37 | 0.97 |

Principal articles imported—(Contd.)

| | 1943-44. | 1944-45. | 1945-46. | Percentage of total imports. |
|--|-----------|-----------|-----------|------------------------------|
| Wood and timber | 11.76 | 2.31 | 4.55 | 0.02 |
| Spices | 89.60 | 1,53.84 | 1,82.62 | 0.76 |

| | 117,76.71 | 203,58.65 | 240,48.53 | 100.00 |

The following tables give the principal items of India's foreign trade during March 1948, March 1949, and the years 1947-48 and 1948-49, respectively:—

EXPORTS OF PRINCIPAL COMMODITIES

(Value in Rs. lakhs)

| | March | | 12 months ended March | |
|---|-------|-------|-----------------------|--------|
| | 1948 | 1949 | 1948 | 1949 |
| Jute yarn and manufactures | 15.90 | 10.96 | 127.82 | 146.31 |
| Raw jute | 3.24 | 1.60 | 25.83 | 23.89 |
| Tea | 4.56 | 5.24 | 54.90 | 63.69 |
| Cotton yarn and manufactures | 2.29 | 2.52 | 20.52 | 39.85 |
| Raw cotton | 3.40 | 1.56 | 39.68 | 19.15 |
| Gums, resins and lac | 1.17 | 45 | 9.84 | 9.46 |
| Oils | 1.70 | 67 | 12.30 | 11.34 |
| Spices | 59 | 1.02 | 6.38 | 5.46 |
| Seeds | 1.35 | 74 | 9.71 | 7.06 |
| Hides and skins tanned, dressed and leather | 89 | 2.07 | 14.48 | 12.68 |
| Non-metallic mining and quarry products | 65 | 34 | 5.83 | 6.12 |
| Hides and skins, raw | 47 | 48 | 7.47 | 5.59 |
| Total | 42.43 | 31.94 | 395.31 | 415.53 |

IMPORTS OF PRINCIPAL COMMODITIES

(Value in Rs. lakhs)

| | March | | 12 months ended March | |
|--|-------|-------|-----------------------|--------|
| | 1948 | 1949 | 1948 | 1949 |
| Cotton raw and waste | 2.08 | 7.29 | 31.20 | 64.23 |
| Machinery of all kinds | 6.78 | 9.43 | 59.14 | 80.87 |
| Grain, pulse and flour | 4.63 | 3.11 | 22.99 | 66.51 |
| Vehicles | 1.93 | 2.97 | 26.64 | 32.68 |

MAIN EXPORTS IN 1947 AND 1948

(Volume in 100 tons, value in Rs. crores)

| | 1947 | | 1948 | |
|-------------------------|--------|--------------|--------|--------------|
| | Volume | Value Rs. | Volume | Value Rs. |
| Jute goods | 835.0 | 112.8 | 957.0 | 151.5 |
| Jute raw | 269.5 | 24.9 | 235.0 | 25.2 |
| Cotton piecegoods* | 247.2 | 21.4 | 300.3 | 33.4 |
| Cotton raw | 207.4 | 33.9 | 94.0 | 16.8 |
| Cotton waste | 103.0 | 4.9 | 54.0 | 5.4 |
| Hides and skins, raw | 26.0 | 7.8 | 17.0 | 5.9 |
| Hides and skins, tanned | 22.4 | 16.4 | 13.7 | 11.5 |
| Seeds | 89.1 | 5.5 | 152.8 | 10.3 |
| Lac | 26.5 | 9.1 | 27.5 | 9.6 |
| Mica | 9.5 | 4.6 | 17.8 | 6.1 |
| Manganese ore | 539.4 | 2.5 | 330.1 | 2.2 |
| Groundnut oil | 28.4 | 3.6 | 42.1 | 7.3 |
| Linseed oil | 10.4 | 2.1 | 11.4 | 1.9 |
| Castor-oil | 18.1 | 2.0 | 18.2 | 3.2 |
| Tea | 172.0 | 51.4 | 159.6 | 55.8 |

* In millions of yards

The following figures give the relative importance of commodities, in terms of value, compared with figures for 1938 (in brackets) :—

| | |
|---------------------------------|---------------------------------|
| Jute manufactures | 36.1 per cent. (16.1 per cent.) |
| Tea | 13.4 per cent. (14.6 per cent.) |
| Cotton yarn and manufactures | 8.5 per cent. (4.7 per cent.) |
| Raw jute | 6 per cent. (7.5 per cent.) |
| Cotton raw and waste | 5.3 per cent. (1.8 per cent.) |
| Hides and skins, raw and tanned | 4.1 per cent. (5.1 per cent.) |
| Oils | 3.3 per cent. (0.6 per cent.) |
| Seeds | 2.5 per cent. (9.8 per cent.) |
| Lac | 2.3 per cent. (0.7 per cent.) |
| Others | 18.5 per cent. (39.1 per cent.) |

Oils (Rs. 79.38 lakhs).—Imports of oils, vegetable, mineral and animal, which had mounted up from Rs. 36.48 lakhs in 1943-44 to Rs. 80.77 lakhs in 1944-45, dropped in value to Rs. 79.38 lakhs in the year under review. The bulk of the imports were in respect of mineral oils which registered a further advance in quantity from 983 million gallons in 1943-44 to 1,093 million gallons in 1944-45, but declined in value from Rs. 79.04 lakhs to Rs. 77.80 lakhs as compared with 574 million gallons valued at Rs. 35.22 lakhs in 1943-44. Out of this again, mineral oils, other than kerosene, accounted for 969 million gallons valued at Rs. 69.75 lakhs in the year under review compared with 857 million gallons valued at Rs. 73.15 lakhs in 1944-45 and 493 million gallons valued at Rs. 29.61 lakhs in 1943-44.

Imports of motor spirit advanced from 211 million gallons valued at Rs. 19.11 lakhs in 1943-44 to 329 million gallons valued at Rs. 55.18 lakhs in the following year but declined to 489 million gallons valued at Rs. 41.90 lakhs in the year under review.

Imports from Iran declined from 300 million gallons valued at Rs. 27.95 lakhs in 1944-45 to 261 million gallons valued at Rs. 22.83 lakhs in the year under review and those from the U.S.A. from 191 million gallons valued at Rs. 23.56 lakhs to 185 million gallons valued at Rs. 22.85 lakhs. Petroleum, other than motor spirit, which had advanced from 18 million gallons worth Rs. 1.61 lakhs in 1943-44 to 61 million gallons valued at Rs. 5.84 lakhs in the following year, declined sharply to 34 million gallons valued at Rs. 3.18 lakhs in the year under review.

Arrivals of kerosene reached a new high level of 124 million gallons valued at Rs. 8.04 lakhs in the year under review as compared with 96 million gallons worth Rs. 6.49 lakhs in the preceding year and 80 million gallons valued at Rs. 5.62 lakhs in 1943-44. The bulk of receipts were from Iran which accounted for 105 million gallons valued at Rs. 6.83 lakhs as against 84 million gallons valued at Rs. 5.71 lakhs in 1944-45 and 65 million gallons valued at Rs. 5.62 lakhs in 1943-44. Fuel oils accounted for an intake of 411 million gallons valued at Rs. 11.59 lakhs in the year under review compared with 272 million gallons valued at Rs. 7.21 lakhs in 1944-45 and 239 million gallons valued at Rs. 4.81 lakhs in 1943-44.

Imports of lubricating oils, which had shown a small improvement from 22 million gallons valued at Rs. 3.72 lakhs in 1943-44 to 24 million gallons valued at Rs. 4.70 lakhs in the following year, registered a phenomenal rise to 33 million gallons valued at Rs. 5.60 lakhs in the year under review. As in respect of kerosene, the bulk of the receipts of fuel and lubricating oils were from Iran.

Imports of animal oils were comparatively insignificant though the trend was upward. The receipts of non-essential vegetable oils were almost wholly of coconut oil and showed an advance from 24 million gallons valued at Rs. 57 lakhs in 1944-45 to 2.8 million gallons valued at Rs. 80 lakhs in the year under review, the figures for 1943-44 being 2.9 million gallons valued at Rs. 89 lakhs. Ceylon which had cut down its shipments from 3.9 million gallons valued at Rs. 89 lakhs to 2.5 million gallons valued at Rs. 57 lakhs raised its exports to 2.8 million gallons valued at Rs. 80 lakhs in the year under review. The total imports of non-essential vegetable oils, including coconut and linseed stood at 2.8 million gallons valued at Rs. 80.8 lakhs in the year under review compared with 4 million gallons valued at Rs. 91 lakhs in 1943-44 and 2.5 million gallons valued at Rs. 57.5 lakhs in 1944-45.

Cotton, raw (Rs. 22.87 lakhs).—Imports of raw cotton from abroad showed a small set-back in the year under review. The total receipts, which had mounted up from 76,102 tons valued at Rs. 17.53 lakhs in 1943-44 to 89,717 tons valued at Rs. 24.01 lakhs in the

following year, declined to 86,009 tons valued at Rs. 22.87 lakhs in 1945-46. Bombay accounted for an intake of 82,519 tons valued at Rs. 21.88 lakhs in the year under review as against 89,570 tons valued at Rs. 23.97 lakhs in 1944-45 and 75,764 tons valued at Rs. 17.48 lakhs in 1943-44.

Egypt headed the list with a shipment of 36,783 tons valued at Rs. 12.23 lakhs in the year under review compared with 49,059 tons valued at Rs. 15.96 lakhs in 1944-45 and 43,421 tons valued at Rs. 10.21 lakhs in 1943-44. The decline in imports of raw cotton from Egypt was partly offset by higher receipts from Kenya Colony which shipped 10,860 tons valued at Rs. 2.42 lakhs in 1943-44, 30,490 tons valued at Rs. 6.79 lakhs in 1944-45 and 57,581 tons valued at Rs. 8.39 lakhs in 1945-46. The Tanganyika Territory also improved its exports of raw cotton to India from 5,334 tons valued at Rs. 1.21

lakhs in 1944-45 to 6,596 tons valued at Rs. 1.47 lakhs in the following year but still showed a fall over 1943-44 during which the shipments from this source totalled 8,798 tons valued at Rs. 1.96 lakhs. Anglo-Egyptian, Sudan, which had sent as much as 12,243 tons valued at Rs. 2.74 lakhs in 1943-44, gave way further in the year under review for which imports from it totalled only 206 tons valued at Rs. 19 lakhs as compared with 3,948 tons valued at Rs. 88 lakhs in 1944-45. The U.S.A. which had shipped no cotton to India in the preceding two years, accounted for 245 tons valued at Rs. 7 lakhs in the year under review.

Machinery (Rs. 22.69 lakhs).—Imports of machinery reached a new high level of Rs. 22.69 lakhs in the year under review showing an increase of Rs. 0.40 lakhs over 1944-45 and Rs. 11.39 lakhs over 1943-44. The following figures are in lakhs:—

| | 1943-44. | 1944-45. | 1945-46. |
|---|----------|----------|----------|
| Textile machinery | 3.19 | 3.38 | 4.34 |
| Electric machinery | 2.24 | 3.01 | 3.22 |
| Metal working machinery | 54 | 1.53 | 1.81 |
| Prime movers | 62 | 76 | 1.44 |
| Belting for machinery | 83 | 1.19 | 1.17 |
| Mining machinery | 25 | 77 | 1.09 |
| Oil crushing machinery | 4 | 1 | 6 |
| Paper mill machinery | 25 | 25 | 24 |
| Typewriters and parts | 6 | 13 | 79 |
| Printing lithographic machinery | 4 | 4 | 14 |
| Sewing and knitting machinery and parts | 19 | 27 | 63 |

| Leather Tanning machinery | 1 | 1 | 1 |

The list continued to be headed by TEXTILE MACHINERY which accounted for nearly one-fifth of the share under this group. Imports of cotton machinery in 1945-46 amounted to Rs. 2.91 lakhs of which the spinning machinery accounted for Rs. 2.11 lakhs and weaving machinery Rs. 44 lakhs as compared with Rs. 2.27 lakhs in 1944-45 and Rs. 2.40 lakhs in 1943-44. The arrivals of JUTE MACHINERY improved from Rs. 24 lakhs in 1943-44 to Rs. 55 lakhs in the following year and stood at Rs. 59 lakhs in the year under review. The bulk of the imports were from the United Kingdom.

ELECTRICAL MACHINERY noted a rise of Rs. 21 lakhs over 1944-45 and of Rs. 98 lakhs over 1943-44 at Rs. 3,22 lakhs in 1945-46. While the share of the United Kingdom declined from Rs. 2.66 lakhs in 1944-45 to Rs. 2.55 lakhs in the following year, that of the U.S.A. registered a sharp rise from Rs. 31 lakhs to Rs. 54 lakhs. The receipts of control and switch gear reached a new higher level of Rs. 96 lakhs as compared with Rs. 55 lakhs in 1943-44 and Rs. 78 lakhs in 1944-45 and those of motors showed an increase of Rs. 28 lakhs and Rs. 3 lakhs respectively at Rs. 70 lakhs. Imports of transformers, which had advanced from Rs. 28 lakhs to Rs. 54 lakhs, declined sharply to Rs. 38 lakhs and those of turbo-generating sets steadily declined from

Rs. 19 lakhs to Rs. 10 lakhs in 1944-45 and to Rs. 6 lakhs in the following year.

A sustained improvement was noted under METAL WORKING MACHINERY, the imports of which advanced from Rs. 54 lakhs in 1943-44 to Rs. 1.53 lakhs in the following year and Rs. 1.81 lakhs in the year under review. Most of the receipts were from the U.S.A. and the United Kingdom and consisted of machine tools whose imports were valued at Rs. 1.72 lakhs in the year under review showing an increase of Rs. 26 lakhs over the preceding year and of Rs. 1.44 lakhs over 1943-44.

There was a phenomenal rise in the receipts of TYPEWRITERS which numbered 30,785 valued at Rs. 74 lakhs compared with 4,773 worth Rs. 10 lakhs in 1944-45 and only 2,340 worth Rs. 4 lakhs in 1943-44. The U.S.A. accounted for 28,687 typewriters valued at Rs. 71 lakhs in the year under review. Imports of parts of typewriters steadily mounted from Rs. 2 lakhs to Rs. 3 lakhs in 1944-45 and to Rs. 5 lakhs in the year under review.

Imports of BELTING FOR MACHINERY were valued at Rs. 1.17 lakhs for 1945-46, Rs. 1.10 lakhs for 1944-45 and Rs. 85 lakhs for 1943-44 and comprised as under (the figures are in lakhs):—

| | 1943-44. | 1944-45. | 1945-46. |
|-------------------------|----------|----------|----------|
| Cotton Belting | 5 | 13 | 9 |
| Hair | 12 | 24 | 25 |
| Leather | 59 | 57 | 51 |
| Other materials | 10 | 16 | 32 |

Dyeing and Tanning Substances (Rs. 10.38 lakhs).—Imports of dyeing and tanning substances accounted for Rs. 7.72 lakhs, Rs. 7.09 lakhs and Rs. 10.38 lakhs for 1943-44, 1944-45 and 1945-46 respectively. Imports of DYES obtained from coal tar showed a sharp increase from 8.8 million lbs. in 1944-45 to 14.3 million lbs. in the following year, the value rising from Rs. 6.41 lakhs to Rs. 9.77 lakhs and compared favourably with 1943-44 for which the receipts totalled 9.4 million lbs. valued at Rs. 7.07 lakhs. The bulk of the imports were for Bombay. The total imports of alizarine dyes, which had

declined from 5½ lakhs lbs. valued at Rs. 18 lakhs in 1943-44 to 1½ lakhs lbs. valued at Rs. 5 lakhs in the following year, recovered to 2½ lakhs lbs. valued at Rs. 10 lakhs in the year under review. Congo red also noted a rise from 1½ lakhs lbs. valued at Rs. 8 lakhs in 1944-45 to 2½ lakhs lbs. valued at Rs. 11 lakhs in the following year but compared unfavourably with 1943-44 for which imports were 4½ lakhs lbs. valued at Rs. 30 lakhs.

The following are the details in respect of certain other categories (the rupees are in lakhs):

| | 1943-44. | | 1944-45. | | 1945-46. | |
|------------------------|----------|-----|----------|-----|----------|------|
| | lbs. | Rs. | lbs. | Rs. | lbs. | Rs. |
| Naphthols | 6½ | 72 | 5-4/5 | 78 | 9 | 1.06 |
| Indigo | 4½ | 19 | 4-2/3 | 20 | 9½ | 52 |
| Sulphur, black | 24 | 64 | 31 | 78 | 39 | 72 |

During the year under review imports of barks for tanning totalled 5½ lakhs cwts. valued at Rs. 48 lakhs as against approximately the same quantity valued at Rs. 47 lakhs in 1944-45 and 6.3 lakhs cwts. valued at Rs. 51 lakhs in 1943-44.

Paint and Painters' Materials (Rs. 1.04 lakhs).—Imports under this group, which had advanced from Rs. 57 lakhs in 1943-44 to Rs. 83 lakhs in the following year, advanced further by Rs. 21 lakhs in the year under review. Paints and colours mounted up from Rs. 46 lakhs to Rs. 65 lakh and Rs. 82 lakhs respectively with

the United Kingdom maintaining its position as the leading supplier. Quantitatively, however, imports were reduced from 121,181 cwts. in 1944-45 to 115,369 cwts. in the following year as compared with only 85,914 cwts. in 1943-44. The United Kingdom increased her shipments from 41,574 cwts. in 1943-44 to 70,404 cwts. in the following year and to 85,847 cwts. in the year under review at the cost of the U.S.A. the arrivals from which declined steadily from 40,982 cwts. to 31,198 cwts. and then to 18,159 cwts. respectively. Details regarding some of the more important items are given below:—

| | 1943-44 | | 1944-45 | | 1945-46 | |
|------------------------|---------|-----|---------|-----|---------|-----|
| | Cwts. | Rs. | Cwts. | Rs. | Cwts. | Rs. |
| Paris Blue | 6,589 | 7 | 13,201 | 17 | 14,058 | 17 |
| Graphite | 2,756 | 1½ | 2,158 | 1 | 11,654 | 3 |
| Lithophone dry | 29,175 | 7 | 28,905 | 6½ | 19,491 | 4½ |

The details regarding other more important categories are given below (the figures for rupees are in lakhs):—

| | 1943-44 | | 1944-45 | | 1945-46 | |
|--------------------------------------|---------|------|---------|------|---------|-------|
| | Tons | Rs. | Tons | Rs. | Tons | Rs. |
| Pipes and fittings cast | 613 | 6 | 661 | 5 | 847 | 8 |
| Rails, chains and fishplates | 1,145 | 3 | 50 | 4 | 57,509 | 1.40 |
| Screws | 955 | 14 | 1,273 | 19 | 1,870 | 31 |
| Sheets and plates : | | | | | | |
| Galvanised | 10 | 0.06 | 8 | 0.04 | 70 | 0.2 |
| Tinned | 291 | 1.44 | 1,499 | 8.29 | 585 | 5.83 |
| Others | 697 | 2.25 | 7,034 | 20½ | 6,027 | 21.23 |
| Sleepers and keys | 44 | 0.27 | .. | .. | 789 | 2.60 |
| Tubes, pipes and fittings | 2,133 | 25 | 3,223 | 26 | 5,409 | 44 |
| Wire nails | 2,966 | 13 | 6,865 | 27 | 2,313 | 9 |
| Wire ropes | 1,354 | 15 | 4,571 | 53 | 5,724 | 66 |
| Wire | 1,693 | 10 | 5,847 | 26 | 6,966 | 36 |

Imports of painters' materials other than paints and colours steadily rose from Rs. 11 lakhs to Rs. 18 lakhs and further to Rs. 22 lakhs owing mainly to a substantial rise in the arrivals of turpentine substitute which rose in value from Rs. 1 lakh in 1943-44 to Rs. 6 lakhs in 1944-45 and to Rs. 9 lakhs in 1945-46 the quantity showing an increase from 11,182 cwts. to 70,036 cwts. and 154,924 cwts. respectively.

Grain, Pulses and Flour (Rs. 9.19 lakhs).—Imports under this group continued to be mainly on Government account, but the first sign of return towards pre-war pattern was in evidence in the year under review. From the small beginning of 8,772 tons valued at Rs. 31 lakhs in 1943-44, imports advanced to 301,774 tons valued at Rs. 8.09 lakhs in the following year and further to 378,901 tons valued at Rs. 9.19 lakhs in the year under review. Imports of wheat, which had amounted to only 8 tons valued at Rs. 1,689 in 1943-44, registered a sharp up-swing to 283,427 tons valued at Rs. 7.05 lakhs in the following year and reached a further high level of 351,518 tons valued at Rs. 8.44 lakhs in the year under review. Wheat flour rose from 8,651 tons valued at Rs. 30 lakhs in 1943-44 to 11,398 tons valued at Rs. 32 lakhs in 1944-45 and declined in quantity to 10,090 tons in the year under review for which the value however, showed a small rise of Rs. 80,000 at Rs. 33 lakhs.

Iron and Steel (Rs. 6.65 lakhs).—Imports of iron and steel and manufactures thereof, which had gone up from Rs. 2.02 lakhs in 1943-44 to Rs. 3.56 lakhs in the following year, registered a sharp advance to Rs. 6.65 lakhs in the year under review. Imports of iron, including ore, were valued at Rs. 1½ lakhs in 1945-46 as against a little less than its half a lakh in the preceding year. The bulk represented bars and channels whose receipts mounted from 53 tons valued at Rs. 36,581 in 1943-44 to 80 tons valued at Rs. 46,990 in 1944-45 and to 183 tons valued at Rs. 129,471 in 1945-46. The balance consisted of angle, tea, bolt and rod whose receipts declined from 79 tons to 8 tons and 5 tons respectively.

Imports of steel advanced from 20,985 tons valued at Rs. 43 lakhs in 1943-44 to 37,648 tons valued at Rs. 75 lakhs in the following year and to 73,310 tons valued at Rs. 1.61 lakhs in the year under review. These included 21 tons of angle and tea, 6 tons of spigots, 2,412 tons of bars, 24 tons of cast and 70,847 tons of ingots, blooms, billets and slabs in the year under review as against 5 tons, zero ton, 487 tons, 11 tons and 37,145 tons respectively in 1944-45. Anchors and cables registered a six-fold rise from 208 tons in 1944-45 to 1,329 tons, the value rising eight times from Rs. 1½ lakhs to Rs. 14 lakhs. Imports of beams, channels, pillars, girders and bridgework, which had shown a small improvement from 31 tons to 36 tons, rose to 475 tons in the year under review, while the value advanced from Rs. 3,259 to Rs. 10,656 and reached Rs. 1,93,704. A substantial rise was noted under bolts and nuts from 208 tons to 353 tons and to 628 tons valued at Rs. 2½ lakhs, Rs. 4½ lakhs and Rs. 7 lakhs respectively.

Fencing material, including fencing wire, doubled from 65 tons valued at Rs. 31,156 in 1943-44 to 129 tons valued at Rs. 62,513 in the following year and reached 282 tons valued at Rs. 24 lakhs in the year under review. A steady improvement in the arrivals of hoops and strips was noticeable. With imports moving up from 5,842 tons valued at Rs. 28 lakhs in 1944-45 to 6,388 tons valued at Rs. 18 lakhs in 1945-46 as compared with 5,822 tons valued at Rs. 25 lakhs in 1943-44. The arrivals of nails, rivets and washers suffered a slight set-back from 3,595 tons valued at Rs. 25 lakhs to 3,457 tons valued at Rs. 27 lakhs in 1945-46 but compared favourably with 1943-44 for which they amounted to 3,324 tons valued at Rs. 21 lakhs. Old steel for re-manufacture, whose imports had improved from 2,452 tons valued at Rs. 2 lakhs in 1943-44 to 3,882 tons valued at Rs. 4 lakhs in the following year, retreated to 2,977 tons valued at Rs. 4 lakhs in the year under review.

Cutlery (Rs. 45 lakhs)—Imports of cutlery showed a progressive rise during the past three years. From Rs. 5 lakhs in 1943-44, they rose to Rs. 25 lakhs in the following year and reached Rs. 45 lakhs in the year under review. The U.S.A. led with a share of Rs. 24 lakhs and the United Kingdom supplied cutlery worth Rs. 21 lakhs in the year under review. Nearly 62 per cent. of the receipts were blades which were valued at Rs. 28 lakhs in 1945-46 compared with Rs. 19 lakhs in 1944-45 and Rs. 3 lakhs in 1943-44. Imports of complete razors, which were valued

at less than Rs. 200 in 1943-44 and Rs. 4,000 in the following year amounted to as much as Rs. 61 lakhs in the year under review.

Hardware (Rs. 2.22 lakhs)—Imports of hardware steadily improved from Rs. 94 lakhs in 1943-44 to Rs. 1.29 lakhs in 1944-45 and reached a new higher level at Rs. 2.22 lakhs in the year under review. A little over three fifths of the arrivals were from United Kingdom. The following are the more important details (the figures are in lakhs):—

| | 1943-44 | 1944-45 | 1945-46 |
|-------------------------|---------|---------|---------|
| Agricultural Implements | 0.83 | 2.33 | 2.33 |
| Buckets | 0.14 | | 0.08 |
| Builders' hardware | 1.57 | 6.17 | 10.88 |
| Domestic hardware | 1.09 | 0.47 | 1.99 |
| Enamelled ironware | 0.46 | 0.38 | 0.86 |
| Gas mantles | 0.23 | 0.30 | 0.45 |
| Gurb hoses (Powrals) | 0.33 | 2.04 | 4.08 |
| Metal lamps | 3.03 | 4.02 | 3.84 |
| Parts of lamps | 0.52 | 1.21 | 1.08 |
| Hand pumps | 0.53 | 0.28 | 0.87 |
| Stoves and Stove parts | 0.01 | 0.02 | 0.60 |

Instruments, Apparatus and Appliances (Rs. 7.33 lakhs)—Imports in this group mounted up from Rs. 2.93 lakhs in 1943-44 to Rs. 4.40 lakhs in 1944-45 and further to Rs. 7.33 lakhs in the year under review. The arrivals of electric fans and parts thereof were adversely hit during the past three years and their value declined from Rs. 74 lakhs in 1943-44 to a little less than Rs. 2 lakhs in 1944-45 and dropped still further to Rs. 86,474 in the year under review. Electric wires and cables registered a sustained improvement from Rs. 25 lakhs to Rs. 61 lakhs and Rs. 77 lakhs. Insulations, other than rubber, advanced from Rs. 32 lakhs to Rs. 54 lakhs in 1944-45 and Rs. 91 lakhs in the following year while telegraph and telephone wires and cables accounted for an intake of Rs. 2,365 in 1943-44, Rs. 4 lakhs in 1944-45 and Rs. 24 lakhs in 1945-46.

The receipts of bare copper wire, which had received a sharp set-back from Rs. 8 lakhs in 1943-44 to Rs. 24 lakhs in the following year, noted a remarkable rise to Rs. 94 lakhs in the year under review. The total imports of electric wires and cables were consequently valued at Rs. 1,80 lakhs as against Rs. 65 lakhs in 1943-44 and Rs. 1,21 lakhs in 1944-45. Nearly 90 per cent. of the receipts were from the United Kingdom.

Imports of telegraph and telephone instruments and apparatus, which had doubled from Rs. 12 lakhs in 1943-44 to Rs. 24 lakhs in 1944-45, reached Rs. 41 lakhs in the year under review. A phenomenal rise from Rs. 11 lakhs in 1943-44 to Rs. 22 lakhs and Rs. 73 lakhs respectively was noted under electric lamps and parts thereof while vacuum electric bulbs accounted for an increase of 150 per cent. from Rs. 5 lakhs to Rs. 13 lakhs as compared with Rs. 23 lakhs in 1943-44. The overseas supply of electric bulbs for torches increased from Rs. 14 lakhs to Rs. 3 lakhs and Rs. 7 lakhs and that of other sorts of electric lamps increased ten times, from Rs. 1 lakh to Rs. 10 lakhs imports of batteries.

Chemicals (Rs. 6.95 lakhs)—Imports of chemicals, which had sharply advanced from Rs. 4.97 lakhs in 1943-44 to Rs. 6.88 lakhs in the following year, received a minor set-back at Rs. 6.05 lakhs in the year under review. Caustic soda accounted for an intake of 758,170 cwt. valued at Rs. 1,17 lakhs in 1945-46 as compared with 844,676 cwt. valued at Rs. 1,31 lakhs in

the preceding year and 707,088 cwt. valued at Rs. 1,11 lakhs in 1943-44. The bulk of them were from the United Kingdom. Imports of sodium carbonate, which had risen from 10.2 lakhs cwt. valued at Rs. 76 lakhs in 1943-44 to 15.8 lakhs cwt. valued at Rs. 1,23 lakhs in the following year, received a small set-back at 15.7 lakhs cwt. valued at Rs. 1,10 lakhs in the year under review. A severe decline was noted under acids, the imports of which fell in quantity from 61,587 cwt. in 1944-45 to 23,477 cwt. in 1945-46 and in value from Rs. 53 lakhs to Rs. 22 lakhs but compared favourably with 32,808 cwt. valued at Rs. 29 lakhs in 1943-44.

Vehicles (Rs. 6.05 lakhs)—The upward trend of imported vehicles, which had gained momentum from Rs. 1,27 lakhs in 1943-44 to Rs. 4,36 lakhs in 1944-46, accelerated further to Rs. 6,05 lakhs in the year under review. Imports of perambulators which numbered 12 valued at Rs. 833 in 1943-44 and one valued at Rs. 40, in 1944-45, reached 2,250 valued at Rs. 1,2 lakhs in the year under review. The arrivals of cycles doubled from 37,391 in 1944-45 to 76,141 in 1945-46 and in value from Rs. 25 lakhs to Rs. 55 lakhs and compared favourably with 28,355 valued at Rs. 19 lakhs in 1943-44. The total of cycles and spare parts amounted to Rs. 40 lakhs, Rs. 55 lakhs and Rs. 1,08 lakhs for the three respective years. 263 motor cars valued at Rs. 10 lakhs were imported in the year under review as against 13 valued at Rs. 4 lakh in 1944-45 and 41 valued at Rs. 1 lakh in 1943-44. A ten-fold rise was witnessed in motor cycles including scooters, the receipts of which increased in number from 3 in 1943-44 to 61 in 1944-45 and 600 in 1945-46 and in value from Rs. 2,302 to Rs. 46,685 and Rs. 41 lakhs respectively.

Imports of motor, lorries, etc., numbered 13 for 1943-44, 1 for 1944-45 and 150 for 1945-46 while those of chassis were 56, 7,736 and 359 respectively.

Metal, other than Iron and Steel (Rs. 5.99 lakhs)—Imports of metals, other than iron and steel, doubled from Rs. 2.92 lakhs in 1944-45 to Rs. 5.99 lakhs in the year under review as against Rs. 2,09 lakhs in 1943-44. A phenomenal increase was noted under imports of lead whose total value jumped up from Rs. 3 lakhs in 1944-45 to Rs. 99 lakhs in the following year while the quantity advanced from 11,217 cwt. to 443,243 cwt. Out of this, pig lead

accounted for 148,057 cwt. valued at Rs. 31 lakhs in 1945-46 as compared with 8,000 cwt. valued at Rs. 14 lakhs in the preceding year. Imports of quick silver, which had advanced fourfold from 54,569 lbs. valued at Rs. 54 lakhs in 1943-44 to 237,213 lbs. valued at Rs. 21 lakhs in the following year, slipped back to 177,181 lbs. valued at Rs. 11½ lakhs in the year under review. The total receipts of tin were 2,807 cwt. valued at Rs. 0 lakhs in the year under review as against 1,297 cwt. valued at Rs. 17,394 in 1944-45 and 198 tons valued at Rs. 43,867 in 1943-44. Out of these the receipts of unwrought tin totalled 2,803 tons valued at Rs. 6 lakhs in 1945-46 as compared with zero for the preceding year. The total of imported zinc or spelter for the year under review was 197,271 cwt. valued at Rs. 55 lakhs compared with 23,873 cwt. valued at Rs. 11 lakhs in the preceding year and 33,412 cwt. valued at Rs. 9 lakhs in 1943-44.

Paper (Rs. 4.19 lakhs)—The upward trend of imported paper accelerated in the year under review for which the total amounted to 104 lakhs cwt. valued at Rs. 4.19 lakhs as compared with 6.2 lakhs cwt. valued at Rs. 2.40 lakhs in 1944-45 and 34 lakhs cwt. valued at Rs. 1.63 lakhs in 1943-44. Of these packing and wrapping paper amounted to 14 lakhs cwt. valued at Rs. 85 lakhs as against 58,590 cwt. valued at Rs. 46 lakhs in 1944-45 and 75,651 cwt. valued at Rs. 49 lakhs in 1943-44. Nearly two-thirds was from the U.S.A. Printing paper accounted for an intake of 714,332 cwt. valued at Rs. 1.66 lakhs in 1945-46 as against 227,250 cwt. valued at Rs. 59 lakhs in 1943-44 and 473,995 cwt. valued at Rs. 1,07 lakhs in 1944-45. Half the receipts were from Canada and a little less from the U.S.A.

Imports of news print alone accounted for 514,132 cwt. in the year under review as against 448,372 cwt. for the preceding year and 207,360 cwt. in 1943-44, their value for the respective years being Rs. 1,04 lakhs, Rs. 93 lakhs and Rs. 46 lakhs. Imports of writing paper and envelopes rose by nearly four times in quantity and three times in value from 26,529 cwt. valued at Rs. 23 lakhs in 1944-45 to 100,579 cwt. valued at Rs. 66 lakhs in the following year and compared favourably with 18,493 cwt. valued at Rs. 15 lakhs in 1943-44.

Fruits and Vegetables (Rs. 2.31 lakhs)—Imports of fruits and vegetables, which had advanced from Rs. 87 lakhs in 1943-44 to Rs. 1,55 lakhs in the following year, reached Rs. 2,31 lakhs in the year under review. Imports of cucumbers, which had improved from 22.1 million valued at Rs. 194 lakhs in 1943-44 to 27.1 million valued at Rs. 211 lakhs in the following year, had, however, a set-back at 19.9 million valued at Rs. 183 lakhs in the year under review. Dates accounted for an intake of 33,738 tons valued at Rs. 153 lakhs in the year under review showing a rise of 2,802 tons valued at Rs. 24 lakhs over the preceding year and of 20,012 tons valued at Rs. 93 lakhs over 1943-44. A phenomenal increase was noted under imports of cashew-nuts which mounted up from zero in 1943-44 to 1,348 tons valued at Rs. 34 lakhs in the following year and 16,156 tons valued at Rs. 55 lakhs in the year under review.

Liquors including Denatured and Perfumed Spirits (Rs. 2.32 lakhs)—Imports in this category showed a rise of seven per cent. in quantity and of 40 per cent. in value during 1945-46 for which the total was 1.1 million gallons valued at Rs. 2,32 lakhs compared with 1.0 million gallons valued at Rs. 1,47 lakhs in 1944-45 and 0.9 million gallons valued at Rs. 1,47 lakhs in 1943-44. Out of these a little less than half was received by Bombay. The bulk of the imports was in respect of spirit which accounted for an intake of 7.6 lakhs gallons valued at Rs. 1,97 lakhs in 1945-46 as against 5 lakhs gallons valued at Rs. 1,24 lakhs in 1944-45 and 5.3 lakhs gallons valued at Rs. 1,22 lakhs in 1943-44. Ale, beer and porter accounted for an intake of only 1.4 lakhs gallons valued at Rs. 6 lakhs in the year under review compared with 4.2 lakhs gallons valued at Rs. 14½ lakhs in 1944-45 and 3 lakhs gallons valued at Rs. 12 lakhs in 1943-44. On the other hand, imports of wines, which had

remained virtually stationary around 82,000 gallons in quantity but had fallen in value from Rs. 13½ lakhs to Rs. 9½ lakhs, doubled in quantity to 1.8 lakhs gallons and trebled in value to Rs. 29 lakhs in the year under review.

Out of the total imports of liquor in 1945-46, whisky accounted for 2.4 lakhs gallons valued at Rs. 54 lakhs followed by drugs, medicines, and chemicals containing spirit with 1.3 lakhs gallons valued at Rs. 51 lakhs. Brandy stood third with 2.1 lakhs gallons valued at Rs. 46 lakhs.

Provision and Oilman's Stores (Rs. 1.37 lakhs)—After a 100 per cent. increase, imports under this head advanced further from Rs. 1.21 lakhs in 1944-45 to Rs. 1.37 lakhs in the following year as against Rs. 55 lakhs in 1943-44. A little more than half the receipts were from Australia. Imports of condensed and preserved milk, which had increased by five times both in quantity and value from 19,961 cwt. valued at Rs. 10 lakhs in 1943-44 to 96,832 cwt. valued at Rs. 50 lakhs in the following year, declined sharply to 79,687 cwt. valued at Rs. 38 lakhs in the year under review. On the other hand, a sharp rise was noted in respect of milk foods for infants from 3,947 cwt. valued at Rs. 9 lakhs in 1943-44 to 11,797 cwt. valued at Rs. 25 lakhs in 1944-45 and 17,569 cwt. valued at Rs. 35 lakhs in 1945-46.

Spices (Rs. 1.83 lakhs)—The upward trend of imported spices was well maintained in the year under review for which the receipts totalled Rs. 1.83 lakhs compared with Rs. 1.54 lakhs in the preceding year and Rs. 90 lakhs in 1943-44. Cloves accounted for 133,234 cwt. valued at Rs. 87 lakhs as against 94,380 cwt. valued at Rs. 69 lakhs in 1944-45 and 28,635 cwt. valued at Rs. 21 lakhs in 1943-44, while betel-nuts accounted for 162,263 cwt. valued at Rs. 71 lakhs, 143,551 cwt. valued at Rs. 74 lakhs and 126,906 cwt. valued at Rs. 64 lakhs respectively.

Tobacco (Rs. 3.91 lakhs)—Imports of tobacco maintained their upward curve during the past three years from 9.8 million lbs. valued at Rs. 1.60 lakhs in 1943-44 to 13.4 million lbs. valued at Rs. 2.90 lakhs in the following year and to 15.1 million lbs. valued at Rs. 3.91 lakhs in the year under review. The bulk of the arrivals consisted of unmanufactured tobacco which totalled 9.7 million lbs. valued at Rs. 1.58 lakhs in 1943-44, 13 million lbs. valued at Rs. 2.33 lakhs in 1944-45 and 14.9 million lbs. in 1945-46. Tobacco for pipes and cigarettes formed the second largest group.

Wool, Raw (Rs. 3.09 lakhs)—Imports of raw wool, which had declined from 25.5 million lbs. valued at Rs. 4.02 lakhs in 1943-44 to 10.9 million lbs. valued at Rs. 2.10 lakhs in the following year, improved by nearly 90 per cent. in quantity and 50 per cent. in value to 19 million lbs. valued at Rs. 3.09 lakhs in the year under review. Australia continued to be the main shipper with 11 million lbs. valued at Rs. 2.25 lakhs in the year under review.

Cotton Yarns and Manufactures (Rs. 1.85 lakhs)—Imports in this group were valued at Rs. 1.85 lakhs in 1945-46 showing an increase of Rs. 30 lakhs over 1944-45 and of Rs. 51 lakhs over 1943-44. The receipts of twist and yarn shrank from 6½ lakhs lbs. valued at Rs. 12 lakhs in 1943-44 to 2 lakhs lbs. valued at Rs. 4 lakhs in 1944-45 and further to 1½ lakhs lbs. valued at Rs. 3½ lakhs in the year under review. In the same period, imports of handkerchiefs and shawls were up from Rs. 0.09 lakhs to Rs. 1½ lakhs and to Rs. 4½ lakhs respectively and those of hosiery from Rs. 0.19 lakhs to Rs. 1½ lakhs and Rs. 20½ lakhs respectively. Imports of piece-goods, which had improved from 3.7 million yards valued at Rs. 24½ lakhs in 1943-44 to 5.2 million yards valued at Rs. 32½ lakhs in 1944-45, were reduced to 3.2 million yards valued at Rs. 43 lakhs in the year under review. Thread accounted for an intake of 1.3 million lbs. valued at Rs. 91 lakhs in 1945-46 as against 1.6 million lbs. valued at Rs. 1.03 lakhs in 1944-45 and 1.3 million lbs. valued at Rs. 87 lakhs in 1943-44.

Woolen Yarn and Manufactures (Rs. 3.99 lakhs)—Imports registered a phenomenal increase from Rs. 45 lakhs in 1943-44 to Rs. 1.05 lakhs in 1944-45 and to Rs. 3.00 lakhs in 1945-46. A little less than half the imports were in respect of yarn and knitting wool which advanced from 1½ lakhs lbs. valued at Rs. 6½ lakhs in 1943-44 to 7½ lakhs lbs. valued at Rs. 32 lakhs in 1944-45 and to 27½ lakhs lbs. valued at Rs. 1.24 lakhs in the year under review. An equally important item was woollen and worsted piece-goods. Imports in this category advanced from 1.1 lakhs lbs. valued at Rs. 8 lakhs to 4.4 lakhs lbs. valued at Rs. 44 lakhs and further to 11.6 lakhs lbs. valued at Rs. 1.24 lakhs respectively. The major portion of the shipments was from the United Kingdom.

Drugs and Medicines (Rs. 3.64 lakhs)—Imports of drugs and medicines mounted up from Rs. 2.87 lakhs in 1944-45 to Rs. 3.64 lakhs in 1945-46 showing an increase of Rs. 1.56 lakhs over 1943-44. Of these proprietary medicines accounted for Rs. 34 lakhs in the year under review as against Rs. 23 lakhs for 1944-45 and Rs. 20 lakhs for 1943-44. Quinine salts which were valued at Rs. 0.81 lakhs in 1943-44, mounted up to Rs. 1½ lakhs in the following year and reached Rs. 3½ lakhs in the year under review, the respective quantity being 2,007 lbs., 3,301 lbs. and 17,942 lbs. Imports of codliver-oil, which were practically nil in 1943-44 but amounted to nearly Rs. 35,515 in the following year

reached Rs. 5 lakhs in the year under review. Arrivals of camphor rose from Rs. 2.1 lakhs in 1943-44 to Rs. 7½ lakhs in 1945-46 after declining to Rs. 1.9 lakhs in 1944-45.

Seeds (Rs. 1.46 lakhs)—Imports of seeds remained steady with narrow fluctuations, the value for 1943-44 and the following two years being Rs. 1.23 lakhs, Rs. 1.46 lakhs and Rs. 1.46 lakhs respectively. Copra or coconut kernel alone accounted for Rs. 1.19 lakhs, Rs. 1.43 lakhs and Rs. 1.42 lakhs respectively in value while in quantity it amounted to 35,176 tons; 46,782 tons and 35,305 tons respectively.

Salt (Rs. 1.80 lakhs)—Imports of salt which stood at 166,625 tons valued at Rs. 1.54 lakhs in 1943-44 increased to 286,683 tons valued at Rs. 2.41 lakhs in the following year but declined to 216,630 tons valued at Rs. 1.80 lakhs in the year under review. The larger arrivals from Egypt, which sent 84,151 tons valued at Rs. 75 lakhs in 1943-44 and 173,664 tons valued at Rs. 1.55 lakhs and 188,993 tons valued at Rs. 1.57 lakhs respectively in the following two years, were unable to make up the loss arising from sharp cuts in imports from Aden and other countries.

Other articles—The following table shows the trend of imports in respect of some of the other articles of importance (the figures are in lakhs):—

| | 1943-44 | 1944-45 | 1945-46 |
|---|---------|---------|---------|
| Bobbins | 66.15 | 81.11 | 94.69 |
| Boots and Shoes | 0.46 | 0.16 | 0.91 |
| Bristle and fibre for Brushes | 0.88 | 0.48 | 0.53 |
| Brushes and Brooms | 3.33 | 15.68 | 21.75 |
| Buttons | 0.06 | 2.82 | 12.79 |
| Coir | 2.21 | 2.25 | 1.35 |
| Cork manufactures | 6.67 | 16.00 | 18.51 |
| Sanitary ware | 3.74 | 7.80 | 8.13 |
| Potatoes | 1.18 | .. | 2.79 |
| Gelatine | 1.39 | 0.48 | 1.38 |
| Hair and their manufactures | 2.15 | 3.89 | 2.13 |
| Ivory | 7.26 | 42.70 | 33.15 |
| Mica | 0.95 | 0.74 | 0.23 |
| Oil cloth and floor cloth | 0.24 | 0.28 | 2.74 |
| Perfumery | 1.48 | 0.53 | 2.52 |
| Diamonds | 1.21 | 2.20 | 1.88 |
| Polishes | 7.79 | 25.32 | 40.65 |
| Pearls | 16.35 | 14.75 | 17.73 |
| Soap | 1.68 | 2.19 | 3.96 |
| Starch, Dextrine and Farina | 1.70 | 1.93 | 2.33 |
| Pencils | 0.58 | 2.32 | 11.40 |
| Stone and Marble | 0.95 | 0.28 | 0.74 |
| Tallow and Stearine | 38.10 | 19.02 | 29.83 |
| Tea chests | 82.44 | 190.41 | 191.45 |
| Flax | 20.79 | 16.16 | 18.62 |
| Haberdashery and millinery | 3.11 | 3.25 | 13.13 |
| Hemp | 20.43 | 43.41 | 36.67 |
| Toys and sports requisites | 1.66 | 3.57 | 11.00 |
| Umbrellas and umbrella fittings | 0.05 | 0.18 | 10.01 |

EXPORTS

Compared with the imports, the improvement in exports was rather halting. Out of Rs. 2,40 crores worth of shipments from India in 1945-46, one-fourth were in respect of jute manufactures.

Tea stood second with exports valued at Rs. 38 crores. Cotton goods accounted for Rs. 38 crores. Thus, these three items accounted for 54 per cent. of the export trade. Raw jute, raw cotton and seeds shared almost equally, Rs. 46

crores of exports, leaving a variety of other goods to share in the rest of the 27 per cent. of the trade. Throughout the year under review the trade was governed by export trade regulations. The following figures are in thousands of rupees:—

| | 1943-44 | 1944-45 | 1945-46 | Percentage on total exports of merchandise in 1945-46 |
|------------------------------------|------------------|------------------|------------------|---|
| Jute, raw and waste | 8,32.91 | 7,50.01 | 15,83.69 | 6.59 |
| Jute manufactures | 49,47.19 | 60,42.52 | 59,53.00 | 24.76 |
| Cotton, raw and waste | 7,48.79 | 7,70.17 | 15,96.88 | 6.60 |
| Cotton manufactures | 42,62.42 | 37,60.17 | 32,80.17 | 13.65 |
| Tea | 37,85.82 | 38,12.04 | 35,52.33 | 14.78 |
| Seeds | 11,14.92 | 10,53.35 | 14,50.71 | 6.03 |
| Hides and skins, raw and dressed | 8,51.24 | 8,19.76 | 11,48.01 | 4.78 |
| Metals and ores | 2,49.75 | 2,52.39 | 1,59.73 | 0.66 |
| Non-metallic ores | 2,91.07 | 3,03.92 | 2,50.34 | 1.04 |
| Grain, Pulses and Flour | 2,30.92 | 1,23.24 | 2,73.88 | 1.14 |
| Tobacco | 76.45 | 1,40.01 | 2,33.47 | 0.97 |
| Wool, raw and manufactured | 2,34.97 | 3,90.68 | 6,04.63 | 2.52 |
| Fruits and vegetables | 2,27.55 | 4,59.14 | 7,03.90 | 2.93 |
| Oil-cakes | 14.92 | 41 | 71 | .. |
| Coal | 21.08 | 22.78 | 24.43 | 0.10 |
| Gums, Resins and Lac | 2,92.63 | 4,74.70 | 4,96.58 | 2.07 |
| Oils | 83.13 | 1,05.57 | 1,70.15 | 0.71 |
| Coir manufacture | 97.16 | 1,93.41 | 2,96.24 | 1.23 |

| Other Articles | 3,49.65 | 4,38.93 | 7,42.94 | 3.09 |
| TOTAL | 199,87.68 | 211,05.11 | 240,38.83 | 100.00 |

Jute, Raw (Rs. 15.84 lakhs)—Exports of raw jute, which suffered a slight set-back in the preceding year from 177,557 tons valued at Rs. 8.33 lakhs in 1943-44 to 160,174 tons valued at Rs. 7.50 lakhs in the following year owing to disturbed conditions, doubled both in quantity and value to 338,318 tons valued at Rs. 15.84 lakhs in the year under review. The United Kingdom was the best customer with an off-take of Rs. 4.02 lakhs as against Rs. 4.45 lakhs in 1944-45 though the quantity dropped from 98,290 tons to 87,935 tons. The U.S.A. which was the second best customer advanced to 58,874 tons valued at Rs. 2.97 lakhs as against 31,638 tons valued at Rs. 1.55 lakhs in 1944-45.

Jute Yarn and Manufactures (Rs. 59.53 lakhs)—Shipments of jute goods which had gone up from 49.47 lakhs in 1943-44 to Rs. 60.43 lakhs in the following year, maintained their position fairly well at Rs. 59.53 lakhs in the year 1947-48. Out of these twist and yarn was valued

at Rs. 12 lakhs, Rs. 41 lakhs and Rs. 58 lakhs respectively. Exports of gunny bags declined from 343,456 tons valued at Rs. 24.50 lakhs in 1944-45 to 274,121 tons valued at Rs. 19.59 lakhs in the following year and compared unfavourably even with 1943-44 for which the shipments totalled 309,502 tons valued at Rs. 19.78 lakhs. The Union of South Africa reduced her imports to one-third of the previous year while the rest of the decline was spread evenly over a number of countries. Shipments of gunny cloth, however, mounted up from 349,541 tons valued at Rs. 34.45 lakhs in 1944-45 to 375,106 tons valued at Rs. 37.53 lakhs in the year under review, while exports under this category in 1943-44 were 314,615 tons valued at Rs. 28.97 lakhs. A little over 60 per cent. of the quantity was absorbed by the U.S.A. The total exports of jute manufactures including twist and yarn were 634,365 tons in 1943-44, 708,193 tons in 1944-45 and 680,488 tons in 1945-46.

Cotton, Raw and Waste (Rs. 15.67 lakhs)—Exports of cotton, raw and waste, which had

crept forward from Rs. 7.49 lakhs to Rs. 7.70 lakhs, increased by Rs. 8.17 lakhs in the year under review. Out of this cotton waste accounted for 26,510 tons valued at Rs. 1.12 lakhs, 16,303 tons valued at Rs. 77 lakhs and 44,330 tons valued at Rs. 1.95 lakhs respectively.

Thanks to the broadening of the overseas demand and the easing of the shipping situation, exports of raw cotton, which had improved from 281,574 bales valued at Rs. 6.36 lakhs in 1943-44 to 318,741 bales valued at Rs. 6.93 lakhs in the following year, increased further to 761,293 bales valued at Rs. 13.92 lakhs in the year under review. The U.S.A. increased their off-take by four times from 11,735 tons valued at Rs. 96 lakhs in 1943-44 to 47,004 tons valued at Rs. 3.91 lakhs in the following year, while the United Kingdom which used to be an important customer reduced her purchases from 41,728 tons valued at Rs. 5.65 lakhs to 39,006 tons valued at Rs. 4.74 lakhs.

Cotton Yarns and Manufactures (Rs. 32,80 lakhs)—Exports in this category continued to shrink steadily from Rs. 42.62 lakhs in 1943-44 to Rs. 37.60 lakhs in 1944-45 and further to Rs. 32.80 lakhs in the year under review. Out of these, piecegoods accounted for 462.3 million yards worth Rs. 36.57 lakhs in 1943-44, and 425 million yards valued at Rs. 33.79 lakhs and 440.5 million yards valued at Rs. 29.52 lakhs in the following two years respectively. The bulk of the shipments were from Bombay. Exports of grey piecegoods which had shrunk from 218.9 million yards valued at Rs. 15.28 lakhs in 1943-44 to 215.7 million yards valued at Rs. 13.18 lakhs in 1944-45, improved in

quantity to 228.1 million yards but declined in value to Rs. 12.12 lakhs in the year under review. Nearly one-fifth of the consignments were for Sudan. Exports of white cotton goods declined both in volume as well as value from 80.5 million yards valued at Rs. 6.18 lakhs to 63.2 million yards valued at Rs. 5.03 lakhs and further to 52.8 million yards valued at Rs. 3.69 lakhs. Coloured, printed and dyed goods declined from 163 million yards valued at Rs. 15.11 lakhs in 1943-44 to 144.1 million yards valued at Rs. 15.59 lakhs in 1944-45 but recovered to 159.6 million yards valued at Rs. 13.71 lakhs in the year under review.

The following table gives the details regarding the destinations:—

| | 1943-44 | | 1944-45 | | 1945-46 | |
|--|-------------------|--------------|-------------------|--------------|-------------------|--------------|
| | Yards in millions | Rs. in Lakhs | Yards in millions | Rs. in Lakhs | Yards in millions | Rs. in Lakhs |
| Kenya Colony, Zanzibar and Pemba | 40.6 | 3.38 | 28.6 | 2.20 | 37.8 | 2.49 |
| Australia | 38.1 | 3.51 | 37.7 | 2.98 | 30.5 | 2.33 |
| Anglo-Egyptian Sudan .. | 43.6 | 2.70 | 50.1 | 2.84 | 55.9 | 3.01 |
| Aden | 34.5 | 2.69 | 52.8 | 3.20 | 37.1 | 2.08 |
| Iraq | 12.8 | 1.15 | 25.2 | 1.59 | 34.1 | 2.16 |
| Nigeria | 33.4 | 2.23 | 23.4 | 1.64 | 29.4 | 1.63 |
| Tanganyika Territory .. | 20.5 | 1.63 | 21.7 | 1.66 | 26.4 | 1.80 |
| Arabia | 10.6 | .92 | 18.8 | 1.25 | 20.0 | 1.30 |
| Ceylon | 37.7 | 4.84 | 43.8 | 7.83 | 57.6 | 3.82 |
| South Africa | 29.2 | 2.34 | 32.9 | 2.45 | 22.8 | 1.73 |
| Other countries | 161.3 | 11.18 | 88.7 | 6.25 | 108.9 | 7.17 |
| TOTAL EXPORTS .. | 462.3 | 36.57 | 423.0 | 33.79 | 440.5 | 29.52 |

Tea (Rs. 35.52 lakhs)—Exports of tea were reduced in quantity as well as value from 415.5 million lbs. valued at Rs. 38.12 lakhs in 1944-45 to 362.8 million lbs. valued at Rs. 35.52 lakhs in the following year as against 413.1 million lbs. valued at Rs. 37.86 lakhs in 1943-44. The biggest customer was, of course, the United Kingdom which absorbed two-thirds of the shipments. Exports to that country totalled 237.9 million lbs. valued at Rs. 22.76 lakhs in the year under review compared with 278.3 million lbs. valued at Rs. 25.58 lakhs in 1943-44 and 262.3 million lbs. valued at Rs. 23.55 lakhs in 1944-45. The U.S.A., the second important customer, absorbed 52.4 million lbs. valued at Rs. 5.45 lakhs in the year under review compared with 60 million lbs. valued at Rs. 5.93 lakhs in 1943-44 and 51.4 million lbs. valued at Rs. 5.44 lakhs in 1944-45. Exports to Canada which had improved from 22.3 million lbs. valued at Rs. 2.81 lakhs in 1943-44 to 41.3 million lbs. valued at Rs. 3.80 lakhs in the following year, received a sharp set-back at 19.8 million lbs. valued at Rs. 1.97 lakhs in the year under review. On the other hand, Australia maintained its position virtually by importing 15.8 million lbs. in 1944-45 as well as in the following year the value however increasing from Rs. 1.38 lakhs to Rs. 1.51 lakhs but the exports to that country in 1943-44 amounted to 20 million lbs. valued at Rs. 1.66 lakhs.

Seeds (Rs. 14.51 lakhs)—Exports of seeds which were subjected to severe restrictions in the preceding two years were higher in 1945-46 owing to relaxation of control and amounted to 414,515 tons valued at Rs. 14.51 lakhs as against 342,763 tons valued at Rs. 10.53 lakhs in 1944-45 and 325,956 tons valued at Rs. 11.15 lakhs in 1943-44. Shipments of groundnuts, however, displayed a downward trend from 240,875 tons valued at Rs. 8.22 lakhs in 1943-44 to 214,953 tons valued at Rs. 6.31 lakhs in 1944-45 and further to 196,690 tons valued at Rs. 6.08 lakhs in 1945-46 though the United Kingdom's share in it increased to 151,634 tons valued at Rs. 4.71 lakhs in the year under review after declining from 181,728 tons valued at Rs. 6.36 lakhs in 1943-44 to 168,327 tons valued at Rs. 3.12 lakhs in 1944-45. The Union of South Africa reduced its takings to 12,383 tons valued

at Rs. 34 lakhs after raising them from 27,680 tons valued at Rs. 67 lakhs to 32,022 tons valued at Rs. 95 lakhs respectively. Practically the whole of the exports were from Madras in the year under review.

Exports of linseed maintained their upward movement and totalled 169,354 tons valued at Rs. 5.84 lakhs in the year under review as against 92,333 tons valued at Rs. 2.74 lakhs in 1944-45 and 36,652 tons valued at Rs. 1.10 lakhs in 1943-44. Like groundnuts here also the United Kingdom was the main customer and her receipts showed an astronomical rise from 2,595 tons valued at Rs. 8 lakhs in 1943-44 to 35,669 tons valued at Rs. 1,07 lakhs in 1944-45 and to 115,459 tons valued at Rs. 3.95 lakhs in the year under review. Australia took 28,293 tons valued at Rs. 1,00 lakhs in the year under review as against 46,373 tons valued at Rs. 1.37 lakhs in 1944-45 and 27,555 tons valued at Rs. 83 lakhs in 1943-44.

Shipments of rapeseed which had declined from 18,347 tons valued at Rs. 57 lakhs in 1943-44 to 10,881 tons valued at Rs. 60 lakhs in the following year rose to 21,893 tons valued at Rs. 85 lakhs in the year under review. Nearly 80 per cent. of the quantity was shipped to the United Kingdom which absorbed 17,846 tons valued at Rs. 70 lakhs in the year under review while Australia purchased 3,497 tons valued at Rs. 14 lakhs in the same year. Practically the whole of the shipments were from Sind.

Sesamum accounted for 3,010 tons valued at Rs. 18 lakhs in 1945-46 as against 6,154 tons valued at Rs. 21 lakhs in 1943-44 and 1,315 tons valued at Rs. 7 lakhs in 1944-45. Exports of castor-seeds steadily fell from 14,239 tons in 1943-44 to 6,364 tons in the following year and further to 5,831 tons in 1945-46 with the value dropping from Rs. 53 lakhs to Rs. 20 lakhs and Rs. 17 lakhs respectively.

Fruits and Vegetables (Rs. 7.04 lakhs)—Exports in this group, which had doubled from Rs. 2.28 lakhs to Rs. 4.59 lakhs in the preceding two years, reached a yet higher figure at Rs. 7.04 lakhs in 1945-46. The bulk consisted of cashew kernels, which after declining from 5,171 tons valued at Rs. 1.88 lakhs to 2,989 tons valued

at Rs. 3.23 lakhs, advanced to 9,522 tons valued at Rs. 5.72 lakhs in the year under review, thanks to the growing demand from the U.S.A. and Canada entering the field for the first time.

Hides and Skins (Rs. 11.48 lakhs)—Exports of hides and skins raw as well as tanned rose from Rs. 8,20 lakhs in 1944-45 to Rs. 11.48 lakhs in the following year and compared favourably with Rs. 8.41 lakhs in 1943-44. Of these, raw and undressed hides and skins accounted for 12,952 tons valued at Rs. 5.01 lakhs in 1945-46 as compared with 14,567 tons valued at Rs. 3.99 lakhs in 1944-45 and 22,424 tons valued at Rs. 4.13 lakhs in 1943-44. There was no export of raw buffalo hides in the past two years while in 1943-44 it was to the tune of 171,030 weighing 687 tons and valued at Rs. 9 lakhs. 138,725 cow hides weighing 605 tons and valued at Rs. 14 lakhs were shipped in 1945-46 as compared with 85,328 weighing 395 tons and valued at Rs. 6 lakhs in 1944-45 and 457,191 weighing 1,315 tons valued at Rs. 21 lakhs in 1943-44. Calf skins numbered 477,079 valued at Rs. 12 lakhs for 1943-44, 330,278 valued at Rs. 10 lakhs in 1944-45 and 34,766 valued at Rs. 91,000 in 1945-46, their weight being 900 tons, 681 tons and 69 tons respectively. Sind and the Bengal area were the only sources of shipments of hides.

A downward trend was noticed in respect of exports of raw skins. From 16,185 tons, equivalent to 28.1 million in number and valued at Rs. 3.67 lakhs in 1943-44, exports fell to 11,423 tons, i.e., 22.1 million in number, valued at Rs. 3.78 lakhs in the following year and dropped further to 10,478 tons, i.e., 22.5 millions; but the value reached a new high level at Rs. 4.82 lakhs in the year under review. Goat skins dropped from 15,843 tons (26.3 millions) valued at Rs. 2.93 lakhs to 9,582 tons (16.7 millions) valued at Rs. 2.41 lakhs and then to 7,278 tons (14.7 millions) valued at Rs. 2.30 lakhs respectively. The bulk of the shipments went to the U.S.A. On the other hand a marked improvement was noted in respect of raw sheep skins, exports of which rose from 655 tons (1.7 millions) valued at Rs. 62 lakhs to 1,569 tons (3.5 millions) valued at Rs. 1.10 lakhs and further to 2,517 tons (5.7 millions) valued at Rs. 2.22 lakhs in the year under review. Other skins advanced from 187 tons (1.1 millions) in 1943-44 to 272 tons (1.9 millions) in the following year and to 683 tons (2.1 millions) in the year under review, their corresponding value being Rs. 11 lakhs, Rs. 26 lakhs and Rs. 30 lakhs respectively.

Exports of hides and skins, tanned or dressed fluctuated from 10,677 tons valued at Rs. 4.08 lakhs in 1943-44 to 8,069 tons valued at Rs. 4.00 lakhs in 1944-45 and to 10,561 tons valued at Rs. 6.34 lakhs in 1945-46. Exports of buffalo hides, which had reached 380 tons valued at Rs. 14 lakhs in 1933-44 as the result of Iraq importing 342 tons, were reduced to only 1 ton in the following year but improved to 5 tons in the year under review, thanks again to Iraq importing the whole of them valued at Rs. 0.22 lakhs in the year under review. Exports of cow hides improved in 1945-46 to 4,992 tons valued at Rs. 2.00 lakhs after declining from 5,553 tons valued at Rs. 1.51 lakhs to 3,648 tons valued at Rs. 1.21 lakhs. The shipment were mostly destined for the United Kingdom. The export trade in calf skins continued downward from 1,035 tons valued at Rs. 38 lakhs in 1943-44 to 631 tons valued at Rs. 28 lakhs and further to 391 tons valued at Rs. 20 lakhs in the year under review.

The overcast demand for tanned skins remained upward rising from 3,701 tons valued at Rs. 2.06 lakhs in 1943-44 to 3,788 tons valued at Rs. 2.51 lakhs in the following year and reaching 5,159 tons valued at Rs. 4.04 lakhs in the year under review. Shipments of goat-skins improved from 1,909 tons valued at Rs. 1.03 lakhs to 2,069 tons valued at Rs. 1.22 lakhs and further to 3,497 tons valued at Rs. 2.37 lakhs, while those of sheep skins recorded in quantity from 1,723 tons to 1,689 tons and further to 1,624 tons but rose in value from Rs. 99 lakhs to Rs. 1,07 lakhs and further to Rs. 1,19 lakhs.

A precipitate fall in exports was noted in respect of unwrought leather which slumped from 6,096 cwt. valued at Rs. 22 lakhs in 1943-44 to 3,563 cwt. valued at Rs. 13 lakhs in the following year and to 347 cwt. only valued at Rs. 6 lakhs in the year under review.

Wool, Raw and Manufactured (Rs. 6.05 lakhs).—Exports under this category advanced from Rs. 2.35 lakhs in 1943-44 to Rs. 3.91 lakhs in 1944-45 and further to Rs. 6.05 lakhs in 1945-46. Shipments of raw wool improved from 22 million lbs. valued at Rs. 1.72 lakhs to 26 million lbs. valued at Rs. 2.25 lakhs and to 39 million lbs. valued at Rs. 3.67 lakhs respectively. Sind constituted the main source of exports with the U.S.A. as the most important destination. The manufactures comprised carpets and rugs whose exports rapidly rose from 2.9 million lbs. valued at Rs. 54 lakhs to 5.3 million lbs. valued at Rs. 1.64 lakhs and 10 million lbs. valued at Rs. 2.32 lakhs respectively, other exports comprised piece goods, shawls, etc.

Metals and Ores (Rs. 1.60 lakhs).—Exports remained downward from Rs. 3.50 lakhs in 1943-44 to Rs. 2.52 lakhs in the following year and reached a still lower level at Rs. 1.60 lakhs in the year under review. Of these, the metallic ores and scrap iron or steel for remanufacture accounted for Rs. 2.24 lakhs, Rs. 1.11 lakhs and Rs. 1.18 lakhs respectively. Shipments of brass, bronze and similar alloys, which had jumped up by five times in quantity and seven times in value from 1,750 tons valued at Rs. 61 lakhs to 6,987 tons valued at Rs. 43 lakhs, declined to 3,771 tons valued at Rs. 17 lakhs in the year under review. Chromite steadily fell from 27,060 tons valued at Rs. 14 lakhs to 19,187 tons valued at Rs. 10 lakhs and further to 14,036 tons valued at Rs. 73 lakhs in the year under review. Copper accounted for a few hundred tons while ferro-manganese, which was shipped to the extent of 4,836 tons valued at Rs. 13 lakhs in 1943-44, disappeared from the export list in the following two years.

Exports of pig iron fell from 186,250 tons valued at Rs. 98 lakhs in 1943-44 to 159,090 tons valued at Rs. 81 lakhs in the following year and were reduced drastically to 26,696 tons valued at Rs. 14 lakhs in the year under review. Iron and steel manufactures declined in the year under review to 1,300 tons valued at Rs. 7 lakhs after improving from 1,686 tons valued at Rs. 6 lakhs to 2,859 tons valued at Rs. 9 lakhs.

Lead retreated to 309 tons after advancing from 154 tons to 1,738 tons, while manganese ore, which had dropped from 549,200 tons valued at Rs. 1.85 lakhs in 1943-44 to 156,695 tons valued at Rs. 53 lakhs in 1944-45, recovered slightly at 185,181 tons valued at Rs. 66 lakhs in the year under review.

Non-metallic Products (Rs. 2.50 lakhs).—Exports of non-metallic ores advanced from Rs. 2.91 lakhs in 1943-44 to 3.04 lakhs in 1944-45 but dropped to Rs. 2.50 lakhs in the year under review. The bulk of the shipments were in respect of mica which accounted for 149,650 tons, 76,734 tons and 125,213 tons in the three years, the value being Rs. 2.80 lakhs, Rs. 2.94 lakhs and Rs. 2.47 lakhs respectively for the three consecutive years.

Grain, Pulses and Flour (Rs. 2.74 lakhs).—Exports declined from 94,724 tons valued at Rs. 2.31 lakhs in 1943-44 to 37,838 tons valued at Rs. 1.23 lakhs in the following year and doubled to 75,948 tons valued at Rs. 2.74 lakhs in the year under review. The improvement was partly attributable to larger shipments of rice not in the husk which reached 44,936 tons valued at Rs. 1.78 lakhs after dropping from 27,258 tons valued at Rs. 60 lakhs in 1943-44 to 10,020 tons valued at Rs. 33 lakhs in 1944-45. The bulk was meant for Ceylon. Exports of wheat were reduced to zero in the year under review after falling from 31,299 tons to only 1,500 tons in quantity and from Rs. 60 lakhs to Rs. 24 lakhs in value. Shipments of wheat flour were up by 231 tons and Rs. 3 lakhs after registering a sharp fall from 10,090 tons valued at Rs. 324 lakhs in 1943-44 to 812 tons valued at Rs. 24 lakhs in 1944-45.

Barley, jowar and bajra did not figure in the trade returns at all; but exports of *dalis* registered a sharp upswing from 5,284 tons valued at Rs. 19 lakhs in 1944-45 to 18,083 tons valued at Rs. 60 lakhs in the following year and compared favourably with 1943-44 for which shipments had amounted to 6,120 tons valued at Rs. 24 lakhs. Ceylon happened to absorb almost the whole of exports. Exports of gram mounted up from 2,150 tons valued at Rs. 6 lakhs to 2,800 tons valued at Rs. 8 lakhs and finally reached 8,459 tons valued at Rs. 20 lakhs, thus bringing the total shipment of pulses to 29,845 tons valued at Rs. 92 lakhs in the year under review against 25,506 tons valued at Rs. 84 lakhs in the preceding year and 15,041 tons valued at Rs. 52 lakhs in 1943-44.

Tobacco (Rs. 2.33 lakhs).—The overseas demand for Indian tobacco broadened in the year under review from 16.9 million lbs. valued at Rs. 76 lakhs in 1943-44 and 14.1 million lbs. valued at Rs. 1.40 lakhs in 1944-45 to 23.5 million lbs. valued at Rs. 2.33 lakhs. The bulk was unmanufactured tobacco in respect of which the shipments totalled 21.7 million lbs. valued at Rs. 1.85 lakhs showing an increase of 5.7 million lbs. valued at Rs. 1.27 lakhs over 1943-44 and of 9 million lbs. valued at Rs. 89 lakhs over 1944-45. Half the shipments went to the United Kingdom. Manufactured tobacco went up from 84 lakhs lbs. valued at Rs. 18 lakhs in 1943-44 to 144 lakhs lbs. valued at Rs. 44 lakhs in the following year and further to 184 lakhs lbs. valued at Rs. 48 lakhs in the year under review. Ceylon was the main customer in this category.

Gums, Resins and Lac (Rs. 4.97 lakhs).—The upward trend noticed in the preceding two years was fully maintained in 1945-46 for which exports amounted to Rs. 4.97 lakhs showing an increase of Rs. 22 lakhs over 1944-45 and of Rs. 2.04 lakhs over 1943-44. Of this, exports of lac stood at 434,614 tons valued at Rs. 4.34 lakhs in the year under review as against 236,029 tons valued at Rs. 2.47 lakhs in 1943-44 and 437,856 tons valued at Rs. 4.32 lakhs in 1944-45. Shell fluctuated within a narrow range with exports for the three consecutive years placed at 203,557 tons valued at Rs. 2.16 lakhs, 208,242 tons valued at Rs. 3.12 lakhs and 280,127 tons valued at Rs. 3.01 lakhs with the bulk finding its way to the U.S.A. Exports of seeds rose by five times in quantity and a little over four times in value from 20,894 tons valued at Rs. 20 lakhs in 1943-44 to 105,008 tons valued at Rs. 86 lakhs in 1944-45 and touched 120,076 tons valued at Rs. 1.05 lakhs in the year under review.

Exports of gums and resins stood at 91,936 cwt. valued at Rs. 63 lakhs in the year under review showing an increase of 16,793 cwt. valued at Rs. 20 lakhs over 1944-45. In 1943-44 exports have totalled 84,763 cwt. valued at Rs. 45 lakhs.

Oils (Rs. 1.70 lakhs).—Shipments of oils declined from 1.8 million gallons in 1943-44 to 1.2 million gallons in the following year and managed to recover nearly 1.8 million gallons in 1945-46; but the value remained upward rising from Rs. 83 lakhs to Rs. 1.06 lakhs and further to Rs. 1.70 lakhs respectively. The overseas demand for sandalwood oil broadened from 3,698 gallons valued at Rs. 3 lakhs to 2,780 gallons valued at Rs. 8 lakhs and 6,100 gallons valued at Rs. 16 lakhs respectively, while the total of essential oils stood at 65,344 gallons valued at Rs. 22 lakhs, 134,412 gallons valued at Rs. 54 lakhs and 168,395 gallons valued at Rs. 1.00 lakhs respectively.

Exports of vegetable oils, which amounted to 1.7 million gallons valued at Rs. 61 lakhs in 1943-44, declined in the following year to one million gallons valued at Rs. 51 lakhs but recovered in the year under review to 1.6 million gallons valued at Rs. 60 lakhs. The bulk of the shipments related to linseed oil which improved from 0.6 million gallons valued at Rs. 25 lakhs in 1943-44 to 0.7 million gallons valued at Rs. 37 lakhs in the following year and advanced further to 1.1 million gallons valued at Rs. 46 lakhs in the year under review. Castor oil was shipped to the tune of 38,097 gallons valued at Rs. 2 lakhs in 1943-44; but the shipments nearly doubled

to 70,739 gallons valued at Rs. 44 lakhs in the following year and further rose by 100 per cent. to 157,259 gallons valued at Rs. 9 lakhs in 1945-46. In both respects, South Africa was the most important customer.

Exports of groundnuts were nearly steady, the top being 147,692 gallons valued at Rs. 6 lakhs in 1944-45. In the following year, they totalled 126,864 gallons valued at Rs. 51 lakhs compared with 130,471 gallons valued at Rs. 31 lakhs in 1943-44. Iraq increased its takings from 33,510 gallons in 1943-44 to 69,055 gallons in the following year and absorbed 119,138 gallons in the year under review. A broadening of exports was witnessed in respect of sesameum oil which was shipped to the extent of 75,256 gallons valued at Rs. 5 lakhs in 1945-46 as against 17,456 gallons valued at a little less than Rs. 1 lakh in 1944-45 and 41,453 gallons valued at Rs. 14 lakhs in 1943-44.

Spices (Rs. 3.09 lakhs).—Exports totalled 548,370 cwt. valued at Rs. 3.09 lakhs in 1945-46 as against 235,099 cwt. valued at Rs. 1.11 lakhs in the preceding year and 248,473 cwt. valued at Rs. 1.45 lakhs in 1943-44. Bombay and Madras were the principal sources of shipments.

Exports of pepper, after declining from 69,573 cwt. valued at Rs. 39 lakhs in 1943-44 to 36,222 cwt. valued at Rs. 21 lakhs owing to a drastic cut in the United Kingdom's demand, registered a sharp upswing to 178,594 cwt. valued at Rs. 1.17 lakhs in the year under review. The spectacular increase was due to the restoration of the United Kingdom's demand and fresh openings in Near and Middle East.

Shipments of chillies were slightly upward at 113,295 cwt. in 1943-44, 120,801 cwt. in 1944-45 and 126,637 cwt. in 1945-46, their respective values being Rs. 49 lakhs, Rs. 47 lakhs and Rs. 59 lakhs. A phenomenal increase in exports was noted in respect of ginger whose exports jumped from 41,531 cwt. valued at Rs. 22 lakhs in 1944-45 to 104,870 cwt. valued at Rs. 55 lakhs in 1945-46 and compared very favourably with 1943-44 for which they totalled only 28,199 cwt. valued at Rs. 18 lakhs. Cardamoms to the tune of 16,711 cwt. valued at Rs. 36 lakhs were shipped in the year under review as against 6,811 cwt. valued at Rs. 13 lakhs in the preceding year and 9,320 cwt. valued at Rs. 30 lakhs in 1943-44.

Exports of turmeric hardened from 25,223 cwt. valued at Rs. 6 lakhs in 1943-44 to 27,865 cwt. valued at Rs. 7 lakhs in the following year; but rose by nearly four and a half times to 116,356 cwt. valued at Rs. 35 lakhs in the year under review. Betelnuts were shipped to the tune of 5,025 cwt. valued at Rs. 7 lakhs in the year under review as against hardly 1,719 cwt. valued at Rs. 3 lakhs in the preceding year and 2,145 cwt. valued at Rs. 3 lakhs in 1943-44.

Chemicals, Drugs and Medicines (Rs. 80 lakhs).—Exports of this group doubled from Rs. 41 lakhs in 1944-45 to Rs. 80 lakhs in the following year at which they showed a gain of Rs. 14 lakhs over 1943-44. Chemicals showed a rise of Rs. 14 lakhs over the preceding year and of Rs. 9 lakhs over 1943-44 and amounted to Rs. 25 lakhs. Magnesium compounds and saltpetre were the most important items on the export list while the exports of soda compounds showed a downward trend. Shipments of drugs in the year under review were valued at Rs. 55 lakhs showing an increase of Rs. 28 lakhs over the preceding year and of Rs. 33 lakhs over 1943-44. Nux Vomica and Sena were the major items.

Dyes and Colours (Rs. 65 lakhs).—Exports totalled Rs. 65 lakhs in 1945-46 showing an increase of Rs. 15 lakhs over 1944-45 and of Rs. 31 lakhs over 1943-44. Out of these, two-thirds related to myrobalans, the shipments of which rose from 31 lakhs cwt. valued at Rs. 18 lakhs in 1943-44 to 5 lakhs cwt. valued at Rs. 31 lakhs in the following year and to 61 lakhs cwt. valued at Rs. 44 lakhs in the year under review. Nearly 95 per cent. of the exports went to the United Kingdom and the U.S.A. Myrobalan extracts, cutch and gambir and barks were other notable items.

INDEX NUMBERS OF PRICES

INDEX numbers of prices reflect the movement of prices within the economic system of a country. From the point of the Provincial Governments in this country, they are the basis for determining the land revenue assessments.

The index number of wholesale prices in the sub-continent during 1861-1931 are available in the publication "Index Numbers of Indian Prices, 1861-1931" issued by Director-General of Commercial Intelligence and Statistics, Calcutta. This publication contains (1) the unweighted index numbers of 28 articles of export, (2) the unweighted index numbers of 11 articles of import, (3) the general unweighted index numbers for 39 articles of export and import, and (4) the weighted index numbers of 100 articles. These series are a continuation of the series first compiled by F. J. Atkinson of the Indian Finance Department and published in the Journal of the Royal Statistical Society in March 1897. The index numbers subsequent to 1931 are available in the addenda to the Index Numbers of Indian Prices, 1861-1931.

The compilation was discontinued in August 1941 since the basis became out of date.

The following table contains these index numbers over a period of years :—

(Prices in 1873 = 100)

| Year | General Index No. (39 Articles Unweighted) | Weighted Index No. (100 Articles) |
|---------|--|-----------------------------------|
| 1900 .. | 116 | 143 |
| 1905 .. | 110 | 135 |
| 1910 .. | 122 | 150 |
| 1914 .. | 147 | 187 |
| 1918 .. | 225 | 215 |
| 1920 .. | 281 | 302 |
| 1926 .. | 216 | 260 |
| 1931 .. | 127 | 157 |
| 1934 .. | 119 | 136 |
| 1937 .. | 136 | 155 |
| 1938 .. | 132 | 147 |
| 1939 .. | 134 | 157 |

WHOLESALE PRICE INDEX

The compilation of index number of wholesale prices in India has been undertaken since 1913. For this purpose, 1914 is taken as the basic year and the data is collected for Calcutta and Bombay. In the later case, another series is being undertaken on the basis of the 1929 price level computed as 100. Several provincial governments also publish fortnightly and monthly statements of retail and wholesale prices of certain important commodities.

The following table gives the index numbers of wholesale prices for Calcutta and Bombay up to 1939 :—

INDEX NUMBER OF WHOLESALE PRICES (End of July 1914 = 100).

| Year | Calcutta | Bombay |
|---------|----------|--------|
| 1914 .. | 100 | 100 |
| 1920 .. | 201 | .. |
| 1921 .. | 179 | 193 |
| 1933 .. | 87 | 98 |
| 1936 .. | 91 | 96 |
| 1937 .. | 102 | 106 |
| 1938 .. | 95 | 101 |
| 1939 .. | 108 | 109 |

The outbreak of the Second World War brought to the forefront the need for better compilation of price statistics and the Economic Adviser to the Government of India proposed the week ended August 19, 1939 as the base for compilation of index numbers of wholesale prices in India by groups of articles. This is a sensitive index. Subsequently, another index for general purposes was also introduced with the year ended August 1939 as the base.

GROUPS OF ARTICLES

The following table relates to the index numbers of wholesale prices in India by groups of articles since 1939-40 on the basis of the average of monthly figures and of the week ended August 19, 1939 being equivalent to 100 :—

| Year | Agricultural commodities | Raw Materials | Primary commodities | Manufactured Articles | Chief Articles of Export | General Index |
|----------|--------------------------|---------------|---------------------|-----------------------|--------------------------|---------------|
| 1939-40* | 127.5 | 118.8 | 124.2 | 131.5 | 130.5 | 125.6 |
| 1940-41 | 108.6 | 121.5 | 113.4 | 119.8 | 114.1 | 114.8 |

COST OF LIVING INDEX

The provincial Governments also publish the working class cost of living index numbers. Some of the industrial towns for which these are compiled are : Bombay, Ahmedabad, Sholapur, Jalgaon, Nagpur, Jabulpore, Madras, Bangalore, Jamshedpur and Calcutta.

The working class cost of living index number for Bombay was originally compiled on the basis of 1914 year ; but it was revised in 1937 when the July 1933 to June 1934 was adopted as the base.

The original index, with July 1914 as the base, declined from 173 in 1921 to 97 in 1934. For the following year, it recovered to 101, while the revised index stood at 100. The latter rose to 106 in 1937 at which it remained unchanged during the next two years. The war signalled a sharp upward trend reaching 250 in 1946. It touched 285 in September 1947, declined to 258 in January 1948.

Since then, month by month, the index number for Bombay has been steadily rising, the number reaching an all-time high of 310 in December, 1948, as the following table shows :—

INDEX NUMBERS OF COST OF LIVING (WORKING CLASS)

| | Base : August 1939 = 100 | | | | | | | Base : 1944 = 100 |
|--------------------|--------------------------|-----------|----------|------------------|-------------------|------------|-----------------|-------------------|

(Compiled by Reserve Bank from Labour Gazette, Government of Bombay, and Indian Labour Gazette.)

PRICE TREND

The five years ended 1866 coincided with the American civil war which imposed heavy demand for Indian cotton and resulted in imports of bullion and heavy coinage of silver. This, in turn, brought about a sharp rise in prices. But the following 15 years witnessed a downward trend in sympathy with the similar tendency in the West. The depreciation of the rupee signalled the reversal of the trend of commodity prices in 1883 and the upward movement was sustained till 1920 with a break during 1893-99 as the result of the contraction of currency and closing of the mints for coinage.

The Prices Inquiry Committee appointed in 1910 reported that between 1890 and 1912, there was a general rise in prices throughout the sub-continent. Hides and skins, foodgrains, building materials and oilseeds rose by 40 per cent. or more above the level of the basic period, cotton and jute by 33 and 31 per cent. respectively and other articles including food by about 25 per cent. The Committee attributed the rise to internal factors such as shortage of supply in the face of growing demand, development of transport and increase in the volume of currency and to external factors such as increased gold production and wars.

The upward trend accelerated during the First World War owing to the conditions created by it. Food grains rose between 1914 and 1919 by 93 per cent. and other commodities followed suit. A feature of the rise was that the prices of imported goods rose more steeply than those of exports. But the year 1921 signalled the downward movement following the lead of the United Kingdom, and the sale of reserve councils and deflation of currency accelerated its pace. The world depression contributed its mite subsequently to the falling prices and the Calcutta Index number of wholesale prices which stood at 179 in 1921 slumped to 141 in 1929 and to the bottom at 87 in 1933. The loss was subsequently retrieved partially following the world's economic recovery and the index number rose to 108 in 1939.

The outbreak of the Second World War in September 1939 introduced a new chapter in the history of Indian commodity prices. After an initial rise, the prices received a sharp setback following the loss of export markets in Europe; but Japan's entry into the war placed on India the responsibility of being the supply base for the East which brought about rapid expansion of currency and an equally rapid rise in prices. The Economic Adviser's index number of wholesale prices with the week ended August 19, 1939 as the base rose from 114.8 in 1940-41 to 137 in the following year, 171 in 1942-43 and 236.4 in 1943-44. The rise in the following two years was, however, comparatively small.

The end of the hostilities kindled the hopes that the rising spiral of prices would cry halt. These hopes were strengthened by a small rise of 0.7 in 1945-46; but the inflationary movement gained fresh impetus from domestic shortages.

COMMODITY INFLATION

The rise in prices in 1948 was primarily the result of scarcity of commodity and not of increased money supply. Caught between an increasing shortage of commodities and the depreciating purchasing power of the rupee, the consumer in the country was bearing the brunt of commodity inflation. Each month the average householder found that some fresh item of the domestic budget had become dearer. The working class cost of living index in Bombay (assuming the price level in August 1939 to be 100) which was 271 at the end of 1947, rose to 292 in June 1948 and steadily moved up to 310

in the following December. Wages kept on chasing prices up the spiral without ever catching up.

An idea of the trend of prices may be obtained by an examination of the movements of wholesale prices, as measured by the Economic Adviser's Index. Taking the August 1939 level to be equal to 100, we find that the index of food articles, which stood at 347.7 in January 1948, rose to 397.5 in December that year; while industrial raw materials, which had reached 403.9 in January 1948, soared to 457.7 by the end of the year. During the same period, semi-manufactures went up from 272.9 to 328.3, and manufactured articles from 292.9 to 347.5. Likewise the General Index, which stood at an average of 297.4 in 1947, went up to 329.2 in January 1948, and steadily zoomed to 383.6 at the end of the year.

The point to be borne in mind is that what the country was experiencing was not a limitless expansion of currency giving rise to a senseless spiral of costs, but the pressure of money on production: Production having steadily gone down, prices necessarily had to take an upward trend in order to secure adjustment. It should be noted that there was no increase in notes in circulation; there was, in fact, a steady contraction of currency. While the total notes in active circulation in April 1948, was approximately Rs. 1,313 crores, the aggregate notes in active circulation at the end of that year had been progressively reduced, month by month, to Rs. 1,188 crores. As against this currency disinflation, however, there was an increase in the velocity of circulation of bank money, and a substantial accretion of purchasing power in the hands of the lower income groups. The continual fall in output accentuated this process, with the inevitable consequence of an unhealthy race between the quantity of money and the quantity of goods available. That was why, during the very period of heavy currency withdrawals, the price level and the cost of living index had continued in an upward trend. Each fresh bout of wage increases only widened the gap between earnings and prices.

Declining production is illustrated in the following typical instances. Textile—the total production of cloth in 1948 was estimated at 4,500 million yards against 4,826 million yards in 1943-44, and against the target fixed for the post-war period of 8,000 million yards. Likewise, yarn production totalled 1,475 million lbs., as against 1,625 million lbs. during the years 1943 to 1945. The decline became more pronounced from July 31 when cloth control was reimposed. Steel-production totalled about 850,000 tons in comparison with 808,000 tons in the year previous and the installed capacity of 1,264,000 tons, and with the estimated demand of 23 million tons. The aggregate food output in 1947-48 was 45 million tons, or three million tons less than in 1944. The stagnation in agricultural production is at the bottom of the country's meagre real per capita income, seeing that the population has continued to swell in the face of the shrinkage in output.

On the top of all this, Government had to resort to deficit financing for a variety of reasons, political and economic. In 1945-46, there was a surplus of Rs. 276.11 crores on India's account, whereas in 1947-48, this had turned into a deficit of Rs. 228 crores. It was realised on all hands that the time had definitely come when the Central, Provincial and State Governments called a halt to all unremunerative schemes and unproductive projects, as, indeed, they began doing thanks to the recommendations of the Central Economy Committee.

The Government of India, on October 4, 1948, announced their anti-inflation measures. They expressed their awareness of the necessity for taking all possible measures to keep Government

expenditure as low as possible, and to increase revenue by all available means. They also declared their intention to make concerted efforts to ensure that there was no further rise in prices and the cost of living. The third consideration was to conduct future policy so as to secure progressive reduction in prices to reasonable levels, and the supply of an increasing volume of goods and services. Certain concessions to industry were also announced. Effective steps were also proposed to mop up the surplus purchasing power of the community. Subsequently, Government spokesmen expressed their intention to peg prices at current levels with the definite objective of gradually bringing them down to a basis where, on a long-term view, they can be stabilised. In his Budget proposals, Dr. Mathai announced certain reliefs to industry to stimulate production. He also pointed out that, on a review of Governmental expenditure, the total provision for capital and development schemes and loans was substantially reduced. Provinces were also warned that they should not count on Central assistance for implementing their schemes of social or agrarian reform. Since these measures were announced, an improvement in production became evident, in commodities like cloth and yarn and so on. The flow of raw materials to industry also improved. If the favourable trends in production continued, there would be much hope of the rise in prices being arrested and gradually brought down.

INADEQUACY OF DATA

The inadequacy as also the general unreliability of Indian price statistics has been the subject of comment by many committees and commissions of enquiry including the Indian Economic Enquiry Committee of 1925, the Royal Commission on Indian Labour and also by Messrs. Bowley and Robertson who were invited by the Government of India to advise them on the question of obtaining more accurate and detailed statistics. The eleventh Industries Conference held at Mysore in December 1939 and the first Conference of the Labour Ministers held at New Delhi in January 1940 recommended that the Central Government should undertake legislation to facilitate the collection of statistics relating to industries. In pursuance of this recommendation, the Government of India introduced in the Legislative Assembly in February 1942 a bill on the subject which was subsequently passed by the Central Legislature and received the assent of the Governor-General. This Act which is called the Industrial Statistics Act, 1942, empowers the provincial Governments to arrange for the collection of statistics relating to prices of commodities as also certain other matters like wages, employment, industrial disputes, etc.

In view of the inadequacy of the existing retail price data, especially from the point of view of compiling cost of living index numbers, the Court of Enquiry constituted in August, 1940, under the Trade Disputes Act 1929 under the Chairmanship of the Hon'ble Sir B. N. Rau to investigate the question of dearness allowance for the railway employees recommended that the Central Government should take up the work of preparation and maintenance of cost of living index figures for three distinct classes of areas in India, viz., city, urban and rural. In pursuance of this recommendation, the Government of India outlined a tentative scheme for the preparation and maintenance of cost of living index numbers for important centres in the sub-continent. The scope of the Scheme has been limited to the preparation of figures for industrial labour. A special post of Director, Cost of Living Index Scheme has been created and a Committee of experts has been appointed to assist him. Unweighted retail price index numbers for 15 selected rural centres where cost of living index numbers are not available are being published by the Director, Cost of Living Index Scheme.

TRADE MARKS

THE Trade Marks Act, 1940 (Act V of 1940) was passed by the Indian Legislature in March 1940, to provide for the registration and more effective protection of trade marks. Sections 1 and 85 of the Act came into force at once, and under the latter section, intending applicants for registration were enabled to deposit their trade marks. About 1,58,000 trade marks were so deposited, which have since been classified and indexed.

Before the other provisions of the Act could be brought into force the Act was amended in 1941 (Act XXVII of 1941) to establish a separate Trade Marks Registry at Bombay under a Bombay Registrar with jurisdiction over textile marks only. The Amended Act came into force on the 1st June 1942, but had again to be amended by the Trade Marks Amendment Act, 1943. The Act was further amended in April 1946 (Act XII of 1946) with a view to avoiding conflict of registration in various States which have either passed Trade Marks Act of their own or proposed to do so in the near future, and also to make trade marks registered in any territory effective in all territories in which trade marks legislation has been enacted.

Infringement actions of trade marks and certification trade marks registered in India can accordingly be filed in any of the reciprocating States thus making it unnecessary for the proprietor of a trade mark to register a trade mark more than once. The Trade Marks Registrar is kept at the Registry at Bombay under the control and management of the Registrar of Trade Marks, Mr. K. S. Shavakaha, B.A. (Oxon.), Barr-at-Law, is at present the Registrar of Trade Marks.

A branch of the Trade Marks Registry is established at Calcutta, at which a copy of the Registrar and the Refused Textile Marks List are kept. The Branch Registry is in charge of the Deputy Registrar who is empowered under section 4 (2A) of the Act to discharge, under the superintendence and direction of the Registrar, any function which under the Act may be discharged by the Registrar. Any reference in the Act to the Registrar includes a reference to the Deputy Registrar when so discharging any such function. Where the Registrar directs the Deputy Registrar to deal with a particular matter, he has in disposing of such matter the same powers as the Registrar. At present, the Deputy Registrar of Trade Marks is Mr. C. V. Nagaraja Sastri, M. A. (Oxon.), M.A. (Edin.), Barr-at-Law.

The following is a summary of the important provisions of the Trade Marks Act, 1940 :

A "mark" includes a device, brand, heading, label, ticket, name, signature, word, letter or numeral or any combination thereof; a "trade mark" means a mark used or proposed to be used in relation to goods for the purpose of indicating or so as to indicate a connection in the course of trade between the goods and some person having the right to use the mark. A trade mark may be registered only in respect of particular goods or classes of goods. Any person who is desirous of registering a mark should apply to the Registrar in the prescribed manner. The application may be made either at the Registry at Bombay or at the branch office at Calcutta.

Under section 6 (1), distinctiveness is the prime requisite of a trade mark for registration. A registrable trade mark must consist of or contain at least one of the following essential particulars: (1) name of a company or individual represented in a special or particular manner,

(2) signature of the applicant or some predecessor in business, (3) one or more invented words, (4) word or words, having no direct reference to the character or quality of the goods and not being according to its ordinary meaning a geographical name or surname or the name of a sect, caste or tribe in India and (5) any other distinctive mark. A mark consisting of a name, signature, or any word other than such as fall within the above description is not registrable except upon evidence of distinctiveness. In determining whether a trade mark is distinctive the extent of the inherent distinctiveness of the mark, as well as its acquired distinctiveness by use or otherwise, will be considered. The commonly accepted name of any single chemical element or chemical compound is not registrable in respect of a chemical substance or preparation. Trade marks which are contrary to law or morality, or disentitled to protection in a Court of law by being likely to deceive or cause confusion or which are likely to hurt religious susceptibilities, are not registrable. The Act contains also special provisions for the registration of certification trade marks, and for defensive registration.

When an application for registration has been accepted subject to such conditions, if any, as the Registrar might think fit to impose, the Registrar shall cause the application to be advertised accordingly. Under section 15 (2) any person may in the prescribed manner oppose an application so advertised within 4 months, and after hearing the parties, the Registrar will decide whether registration is to be permitted. The date of registration of an application shall be the date of filing such application in the Registry.

The registration of a mark will be in force for 7 years in the first instance, after which it may be renewed for a period of 15 years. In all legal proceedings relating to a registered trade mark, the fact of registration shall be *prima facie* evidence of validity of the registration and of all subsequent assignments and transmissions. Further, after seven years from the date of registration, the validity of the original registration cannot be questioned except on grounds of fraud or deception or unless the mark offends against section 8.

The registered proprietor of a trade mark is entitled to an action for infringement under the Act. This valuable right is extended to owners of "old" marks, who had applied for registration of their trade marks within five years from the commencement of the Act and registration of which has been refused by the Registrar. The rights of action to passing off are not affected by registration, and are expressly preserved under the Act. Registration gives to the registered proprietor the exclusive right to the use of the trade mark in relation to the goods for which the mark is registered. Where a mark is already registered by one person, the same or nearly similar mark cannot be registered by another person, except in case of honest concurrent use or of other special circumstances section 10 (2).

The proprietor of a registered trade mark has power to assign the mark, and may assign it whether in connection with the goodwill of the business or not. A registered proprietor may also assign an unregistered trade mark without the goodwill of the business along with a registered trade mark under certain circumstances. Any assignment made without the goodwill of the business must be advertised as directed by the Registrar.

A person other than the proprietor of a mark may be registered as a registered user, on application being made both by the proprietor and such person to the Registrar in the prescribed manner, accompanied by particulars relating to their relationship, the control of the one over the other, and other facts relevant to the "permitted" use. The registered user may under certain circumstances file an action for infringement in his own name as if he were the proprietor, but cannot assign or transmit the mark.

Any person aggrieved by the presence of a mark or entry on the Register may apply in the prescribed manner to the Registrar or to a High Court for rectification of the Register. The registered proprietor may apply to the Registrar for correction or cancellation of any entry in the Register, relating to his trade mark. He may also apply for alteration of the registered mark in any manner not substantially affecting its identity.

With effect from the 1st January, 1947, it will be an offence to describe a trade mark as registered when it is not so registered. This will not however apply to a trade mark, for the registration of which an application had been filed at the Trade Marks Registry before 1st January 1947, and which has not been disposed of by the Registrar. The use of the word "Registered" however, is permissible if it is clearly indicated that the reference is to registration of the mark under the law of a country outside India or if the word is used solely in relation to goods to be exported to a foreign country where the mark is registered. Declaration of ownership of a trade mark under the Indian Registration Act of 1908 is not equivalent to registration under the Trade Marks Act, 1940, and the use of the word "registered" to signify registration of declaration of ownership would therefore be an offence with effect from the aforesaid date. The use of Royal Arms, Heraldic devices, and State emblems without due authority may be restrained by injunction from the Registrar or at the suit of any other person who is duly authorised to use such Arms, etc., but the rights to their use acquired before the coming into force of the Act, are not affected.

All appeals from the decisions of the Registrar lie to the High Court.

There are also special provisions for registration of textile trade marks and for the constitution of an Advisory Committee to advise the Registrar with respect to usages of the textile trade.

The criminal law relating to trade marks is contained in the Merchandise Marks Act (IV of 1889), which has recently been amended. Section 3 of this Act enacts sections 478-489 of Chapter XVIII of the Indian Penal Code.

During the transitional period, i.e. from the 15th August 1947 to the 31st March 1948, the Trade Marks Registry, Bombay, had been registering trade marks for both the Dominions of India and Pakistan in accordance with the special provisions made in the Indian Independence (Miscellaneous Transitional Provisions) Order, 1947. These arrangements, however, terminated on the 31st March 1948. The Trade Marks Act, 1940 now extends only to all the provinces of India. But under the Law, as it stands, trade marks registered before the partition (i.e., 15th August 1947) are automatically valid in both the Dominions.

PATENTS AND DESIGNS

PRIOR to 15th August 1947, the granting of Patents for new inventions and the registration of new or original Designs in what used to be known as British India were regulated by the Indian Patents and Designs Act, 1911 (No. 2 of 1911). As a result of the partition of India, the said Act, with suitable modifications has become the law of all the Provinces of India and Pakistan, and the Patents granted and the Designs registered by the Patent Office in India prior to 15th August 1947 continue to be operative in the Provinces. Patents granted and Designs registered by the Patent Office in India after the 15th August 1947 are operative only in the Provinces of the Indian Dominion.

The texts of the Indian Patents and Designs Act, 1911, and the Indian Patents and Designs Rules and the Indian Secret Patent Rules which regulate the practice under the Act, are contained in the PATENT OFFICE HANDBOOK. The seventh edition of the Handbook published in 1947, contains also a thoroughly revised set of instructions for the guidance of inventors and applicants for the grant of patents and for the registration of designs. Copies are available for sale with the Manager of Publications, Civil Lines, Delhi, at Re. 1 a copy.

The Indian Patents and Designs Act does not extend to the United Kingdom, or any British possession, or any State in India. The States of Baroda (now merged into Bombay), Cochin, Cooch Behar, Hyderabad (Deccan), Indore (now part of Madhya Bharat), Jodhpur (now in the Union of Rajasthan), Kashmir and Jammu, Mysore, Rampur and Travancore, have separate Patent Offices and Patent Laws of their own. For information regarding Patents and Designs in those Countries or States, application should be made to the Patent Offices of the Countries or States concerned.

India is not a party to the International Convention for the Protection of Industrial Property. But, arrangements for giving "Priority" patents and registered designs exist between India on the one side and each of the following countries and States on the other, viz., Australia, Canada, New Zealand, Elre, the United Kingdom, the Union of South Africa, and the States of Baroda, Mysore and Rampur. In the case of Ceylon, priority arrangements exist in respect of patents only and not in respect of designs.

PATENTS

The main provisions of the Indian Patents and Designs Act which regulate the granting of patents and patent rights are briefly as follows:—

Varieties of Patents.—The Act provides for the granting of four kinds of patents, namely:—

- (i) a patent, which is dated as of the official date of the application for the patent;
- (ii) a patent of addition, for improvement or modification of an invention for which invention a patent has already been applied for or granted;
- (iii) a secret patent for an invention relating to instruments or munitions of war;
- (iv) a patent claiming "Priority," which is dated as of the official date of the corresponding application for patent first made in a country outside India which has established reciprocal arrangements with India for mutual protection of inventions.

What may be Patented.—The subject-matter of a patent should be a "manner of new manufacture," which may be any process or apparatus for producing, preparing, or making an article, or any article of manufacture. It is essential that the process, apparatus or article of manufacture should suggest an act to be done or an operation to be performed, and that the result must be a vendible product.

Illustrations of patentable inventions are new textile machines, power plants, agricultural implements, domestic appliances, drying and moistening apparatus and processes, and sanitary appliances. New compositions of matter may also be patented if their properties would not be deducible from known properties of their constituent substances. In the field of chemical industry, new processes and apparatuses for manufacturing synthetic products, food-stuffs, dyes, soda ash, caustic soda, bleaching powder, toilet preparations and processes for the treatment of oil seeds, by-products and waste materials, would be patentable inventions.

The discovery of a hitherto unknown natural law is not patentable. Similarly, a method of calculation or a new notation for writing music, a new method of curing diseases, natural substances suitable for food, cannot be classed as 'manufactures,' and are, therefore, not patentable.

What are commonly called "patent medicines" are medicines prepared by secret formulae and are not usually protected by the grant of patents. The proprietors of such medicines may in most cases possess trade mark rights in the names by which the medicines are known. "Patent or proprietary medicines" may be registered under the Drugs Act, 1940, which contains provisions for the prohibition of the import, manufacture and sale of mis-branded drugs. Applications for registration of patent or proprietary medicines should be made to the Central Drugs Laboratory, 110, Chittaranjan Avenue, Calcutta.

Who may obtain Patent.—Any person in possession of an invention may obtain a patent, irrespective of his nationality. The term "person" includes a company, a firm or a partnership. An application for an ordinary patent (i.e., a patent which would be dated as of the official date of the application) may be made by any person either alone or jointly with others. An application for a patent of addition may be made only by the applicant for the original patent to which it is an addition as long as the application for the original patent is pending, or by the registered proprietor of the original patent if it has been granted. An application for a secret patent should be made by the inventor himself. An application for a patent which claims a "Priority date" may be made by the person who has made the application on which the claim to priority is based, or by his legal representative, or assignee, either alone or jointly with others.

Government Servants.—Subject to any special conditions of service or to any special orders applicable to the persons employed in any particular department, all government servants are at liberty to apply for a patent direct to the Patent Office. Government servants employed in the Defence Services, in the Royal Indian Navy and in the Royal Indian Air Force should not apply for patents except in the manner laid down in the Special Regulations applicable to them. Government servants employed on scientific or technical research should not apply or cause or permit any other person to apply for a patent for an invention made by them, save with the permission of the Government and in accordance with such conditions as the Government may impose. Railway servants are also subject to similar restrictions.

PROCEDURE FOR OBTAINING PATENTS

An application for a patent should be drawn up on the prescribed form and forwarded to the Controller of Patents and Designs, the Patent Office, No. 214, Lower Circular Road, Calcutta 17. As a rule, the inventor, or his legal representative or his assignee should be a party to the application. The application should be accompanied by a specification in duplicate, prepared on the appropriate prescribed form, and also the prescribed fee.

Specifications.—The specification which should accompany an application may be either a Provisional Specification or a Complete Specification. A Provisional Specification should describe the nature of the invention. A Complete Specification must particularly describe and ascertain the nature of the invention and the manner of performing it in practice. A Provisional Specification cannot be filed in respect of an application claiming "Priority date." A Complete Specification should, therefore, accompany every such application.

If a Provisional Specification accompanies an application it will be necessary to file the Complete Specification within 9 months from the date of the application. This period of nine months may be extended by one month by paying an additional fee of Rs. 10.

Drawings.—If the invention is capable of illustration by means of drawings, suitable drawings should also be filed in duplicate.

Fees.—The fees payable in respect of the filing of an application accompanied by a Provisional Specification is Rs. 10, and in respect of the filing of an application accompanied by a Complete Specification is Rs. 30. The fee payable in respect of filing a Complete Specification following a Provisional Specification is Rs. 20.

The fees may be paid in cash at the Patent Office, or may be sent by Postal Order, Money Order or Cheque, made payable to the Controller at Calcutta.

Examination.—An application properly filed in the Patent Office is accorded a serial number and date. Every application in respect of which a Complete Specification has been filed is, before it is accepted, examined with a view to ascertaining mainly whether the invention is *prima facie* a manner of new manufacture or improvement, whether the nature of the invention or the manner of performing it is particularly described, and also whether the statement of claim sufficiently defines the invention.

Acceptance.—On the acceptance of an application (other than an application for a secret patent), the specification and drawings in respect of it become open to public inspection. The acceptance is advertised by the Patent Office in the Gazette of India. The specification and drawings are also printed and a limited number of printed specifications are made available for sale. Printed specifications are identified by their serial numbers and are sold by the Manager of Publications, Civil Lines, Delhi, at Re. 1 a copy.

Opposition.—The grant of a patent on any application (other than an application for a secret patent) may be opposed by any person within 4 months of the date of advertisement of its acceptance.

Some of the grounds on which the grant of a patent may be opposed are—that the invention sought to be patented has been publicly used or made publicly known in any part of India; that the nature of the invention or the manner of performing it is not sufficiently or fairly described in the specification; or that the applicant for patent is not the true inventor but the applicant obtained the invention from the opponent or from a person through whom he claims.

Sealing the Patent.—In the absence of any opposition, or in the event of an opposition if the application passes the opposition successfully, the Patent Office would send the applicant a sealing fee demand notice, and on receipt from him of his request for sealing the patent accompanied by a sealing fee of Rs. 30, a patent is sealed on the application and the sealing is notified in the Register of Patents.

TERM AND CONTINUANCE

The normal term of a patent other than a patent of addition is 16 years from its date; but in special circumstances the term may be

extended for a further period not exceeding 10 years. A patent of addition remains in force as long as the main patent is in force.

The continuance of a patent other than a patent of addition and a secret patent is subject to the payment of certain renewal fees. No renewal fees are payable for the continuance of patents of addition and secret patents.

Effect of Grant.—The grant of a patent under the Act confers upon the patentee the exclusive privilege of making, selling and using the invention throughout India and of authorising others to do so.

After a patent is obtained, the patentee may sell the patent outright, or may grant licences for its exploitation, or may work the patent himself.

Infringement of Patents.—If, during the continuance of a patent, any person makes, sells, or uses the invention protected by the patent without obtaining a licence from the patentee, or counterfeits or imitates it, the patentee may institute a suit for infringement against such person. The defendant in an infringement suit may counter-claim the revocation of the patent.

A suit for infringement may be instituted in a District Court having jurisdiction to try the suit, but when a counter-claim has been made for the revocation of the patent, the suit along with the counter-claim is decided by a High Court.

Compulsory Licences and Revocation.—An order for the grant of a compulsory licence or for revocation of any patent may be obtained on application to the Central Government by any interested person on the ground that the patentee has abused his rights under the patent. What constitutes an abuse of patent rights is laid down in Sections 22 and 23 of the Act.

A patent may also be revoked on other grounds by the Controller, or the Central Government, or a High Court in certain circumstances.

DESIGNS

The main provisions of the Act relating to the registration of designs and registered designs are briefly as follows :—

A Design means only the features of shape, configuration, pattern or ornament, applied to an article by any industrial process or means. To be registrable under Part II of the Act, a design must be new or original, and must be applicable to an article. A model or principle of construction of an article, or anything which in substance is a mere mechanical device cannot be registered as a design. Trade Marks and trade names are not designs for the purpose of the Act. Literary or artistic creations such as books, pictures and music which fall under the Indian Copyright Act III of 1914, do not also come within the scope of the Indian Patents and Designs Act.

The novelty or the originality of a design is judged solely by the eye with reference to the external appearance of the finished article to which the design is applied. Neither the constructional details of the article which would not be visible in the finished article, nor the utility of the article, would be relevant for deciding the registrability of the design. The novelty and the originality of a design will be destroyed by the publication of the design.

For purposes of registration of designs, goods to which the designs are to be applied have been grouped into fourteen classes according to the substances composing the article. If an article is composed of more than one substance, it is classified according to the predominant substance.

WHO MAY APPLY AND HOW

Any person claiming to be the proprietor of a new or original design not previously published in India may apply for the registration of the design.

An application for the registration of a design should be drawn up on the prescribed form and should be forwarded to the Controller of Patents and Designs. The prescribed fee and four copies of the design should accompany the application. The fee payable for filing an application for registration of a design in any one of the classes Nos. 1-12 is Rs. 3, and for registration in class No. 13 or 14 is annas eight only.

The copies of the design which should accompany an application may be drawings, photographs, tracings or specimens. The representation of the design should be such as would enable a person looking at it to form a mental picture of the shape, configuration, pattern or ornament of the finished article to which the design is to be applied. Representations illustrating merely the method or principle of construction or the operation of the article, are not suitable.

It is possible to register a design in more than one class, if the article to which it is to be applied is composed of substances included in different classes.

Copyright on Registration.—The registration of a design confers upon the registered proprietor, for a limited period, the exclusive right to sell or to make for sale any article to which the registered design has been applied.

The period of copyright obtainable on registration of a design is initially five years, but this initial period can be extended to two further periods of five years each, on payment of a fee of Rs. 10 for each period of extension.

Infringement.—During the existence of copyright in a registered design, the unauthorised application of the design to the article in question for purpose of sale is prohibited. The penalty for each infringement is a sum not exceeding five hundred rupees recoverable as a contract debt; the proprietor may, in the alternative, elect to bring a suit for the recovery of damages and for an injunction against the repetition of the infringement, in which case the infringer is liable to pay such damages as may be awarded. By an amendment made in Section 18 of the Indian Sea Customs Act (No. VIII of 1878), it has been rendered possible to stop the importation into India of goods bearing a pirated design.

Cancellation.—The registration of a design may be cancelled on the ground that the design has been previously registered in India, or the design has been published in India prior to the date of registration, or the design is not new or original. An application for cancellation may be made by any interested person at any time to a High Court, or to the Controller within one year from the date of registration on the ground of prior registration or prior publication mentioned above.

GENERAL

The Patent Office at Calcutta which was established under the Indian Patents and Designs Act for the purpose of administering this Act continues to be the Patent Office for all the Provinces of the Dominion of India. The office at Calcutta is in charge of the Controller of Patents and Designs. It has no branches anywhere.

Registers.—The Patent Office maintains a Register of Patents and a Register of Designs. Particulars of name, addresses, nationalities of the granters of patents, the titles of inventions, dates of patents, renewal of patents and transactions affecting the proprietorship or validity of patents are notified in the Register of Patents. Similar particulars in respect of designs accepted for registration are notified in the Register of Designs. The Registers are open to inspection by the public on payment of a fee of Rs. 1 in respect of each patent or design.

Certificates.—Certified copies, sealed with the seal of the Patent Office, of any entry in the Register of Patents and the Register of Designs may be obtained by any person on application to the Controller, accompanied by the prescribed fee.

A technical library is attached to the office. The library is open to the public, free of charge.

PATENTS ENQUIRY COMMITTEE

The Central Government in the Ministry of Industry and Supply have appointed a Committee, known as, the Patents Enquiry Committee to review the Patent Laws of India.

The terms of reference to the Committee are as follows :—

- (1) to survey and report on the working of the Patent System in India;
- (2) to examine the existing Patent legislation in India and to make recommendations for improving it, particularly with reference to the provisions concerned with the prevention of abuse of patent rights;
- (3) to consider whether any special restrictions should be imposed on patents regarding food and medicine;
- (4) to suggest steps for ensuring effective publicity to the patent system and to patent literature, particularly as regards patents obtained by Indian inventors;
- (5) to consider the necessity and feasibility of setting up a National Patents Trust;
- (6) to consider the desirability or otherwise of regulating the profession of patent agents;
- (7) to examine the working of the Patent Office and the services rendered by it to the public and make suitable recommendations for improvement, and
- (8) to report generally on any improvement that the Committee thinks fit to recommend for enabling the Indian Patent System to be more conducive to national interest, by encouraging invention and the commercial development and use of inventions.

The address of the Committee is C/o Ministry of Industry and Supply, Government of India, New Delhi. The Report of the Committee is expected to be issued shortly.

COPYRIGHT

COPYRIGHT in every original literary, dramatic, musical and artistic work means the sole right to produce or reproduce the work or any substantial part thereof in any material form whatsoever; to perform or in case of a lecture to deliver the work or any substantial part thereof in public; if the work is unpublished, to publish the work or any substantial part thereof. Amongst other things it includes the sole right to produce, reproduce, perform or publish any translation of the work. In the case of a dramatic work, to convert it into a novel or other non-dramatic work and in the case of a novel or other non-dramatic work or of an artistic work, to convert it into a dramatic work by way of performance in public or otherwise, and in the case of a literary, dramatic or musical work, to make any record, perforated roll, cinematograph film or other contrivance by means of which the work may be mechanically performed or delivered. Copyright also includes the right to authorise any such acts as aforesaid.

Publication in relation to any work means the issue of copies of the work to the public but does not include the performance in public of a dramatic or musical work, the delivery in public of a lecture, the exhibition in public of an artistic work or the construction of an architectural work of art.

COPYRIGHT ACT

Copyright in the Indian sub-continent is governed by the Indian Copyright Act III of 1914 which made the Imperial Copyright Act of 1911 applicable to India with such modifications as appeared to be desirable for adapting its provisions to the circumstances of India. The portions of the Imperial Act made applicable to India form the First Schedule to the Indian Copyright Act III of 1914.

Copyright subsists throughout the parts of His Majesty's dominions to which the Imperial Act extends. Registration is no longer necessary but the publisher of every book has to supply a copy thereof as provided in the Copyright Act and in the Press and Registration of Books Act XXV of 1867. The author of a work is the first owner of the copyright therein and may assign the right either wholly or partially (copyright being a bundle of different rights) and either generally or subject to limitations, or may grant any interest in the right by license to another person but no such assignment or grant is valid unless it is in writing signed by the owner of the right in respect of which the

assignment or grant is made or by his duly authorised agent.

DURATION OF COPYRIGHT

Generally the term for which copyright subsists is the life of the author and a period of 50 years after his death but at any time after the expiration of 25 years or in the case of a work in which copyright subsisted at the time of the passing of the Imperial Act of 1911, 30 years from the death of the author of a published work, copyright in the work is not deemed to be infringed by the reproduction of the work for sale if the person reproducing the work proves that he has given the notice in writing prescribed by the Governor-General in Council of his intention to reproduce the work and that he has paid in the prescribed manner to or for the benefit of the owner of the copyright, royalties in respect of all copies of the work sold by him calculated at the rate of 10 per cent. on the price at which he publishes the work.

If, at any time after the death of the author of a literary, dramatic or musical work, which has been published or performed in public, a complaint is made to the Judicial Committee of the Privy Council that the owner of the copyright in the work has refused to re-publish or allow the re-publication of the work or has refused to allow the performance in public of the work and that by reason of such refusal the work is withheld from the public, the owner of the copyright may be ordered to grant a licence to reproduce the work or perform the work in public as the case may be on such terms and subject to such conditions as the Judicial Committee may think fit.

DURATION OF SOLE OWNERSHIP

In the case of works first published in India copyright is subject to this limitation that the sole right to produce, reproduce, perform or publish a translation of the work subsists only for a period of 10 years from the date of the first publication of the work but if within the said period the author or any person to whom he has granted permission so to do publishes a translation of any such work in any language, copyright in such work as regards the sole right to produce, reproduce, perform or publish such translation in that language is not subject to the limitation above prescribed.

COPYRIGHT OF PHOTOGRAPHS

The term for which copyright subsists in photographs is 50 years from the making of

the original negative from which the photograph was directly or indirectly derived and the person who was owner of such negative at the time when such negative was made is deemed to be the author of the work.

MUSICAL INSTRUMENTS

The provisions of the Act as to mechanical instruments for producing musical sounds were found unsuitable to Indian conditions. "The majority of Indian melodies," it was explained in Council, have not been published, i.e., written in staff notation, except through the medium of the phonograph. It is impossible in many cases to identify the original composer or author, and the melodies are subject to great variety of notation and tune. To meet these conditions s. 5 of the Indian Act follows the English Musical Copyright Act of 1902 by defining musical work as meaning any combination of melody and harmony, or either of them, which has been reduced to writing.

The Copyright Act does not apply to designs capable of being registered under the Patents and Designs Act II of 1911 except designs which though capable of being so registered are not used or intended to be used as models or patterns to be multiplied by any industrial process.

INFRINGEMENT OF COPYRIGHT

Copyright in a work is considered to be infringed by any person who without the consent of the owner of the copyright does anything, the sole right to do which is conferred by the Copyright Act on the owner of the copyright. Where copyright in any work has been infringed, the owner is entitled to all remedies by way of injunction, damages and accounts. Every suit or other civil proceeding regarding infringement of copyright must be instituted and tried in the High Court or the Court of the District Judge. An action in respect of infringement of copyright cannot be commenced after the expiration of 3 years next after the infringement. No Court inferior to that of a Presidency Magistrate or a Magistrate of the First Class can try any offence against the Copyright Act. It is not an infringement of copyright to publish a report in a newspaper of an address of a political nature delivered at a public meeting.

Where a married woman and her husband are joint authors of a work the interest of such married woman therein shall be her separate property.

BULLION

PRECIOUS metals have always held a great place in the Indian economy both for the purpose of ornamentation and for their value as store mainly because of the insecurity, lack of alternative sources of investment, and the general illiteracy of the people. The demand, however, depends on the state of the crops and their prices, or the season of the year. If it is the season of festivals and marriages, for instance, the demand will be higher and so on.

SILVER
Prior to the more intensive exploitation of the Mexican silver mines in 1552, Spain was the world's biggest supplier of silver; but thereafter the American Continent began to assume increasing importance and now its production represents under normal conditions about 80 per cent of the world's total silver output, while Australia is considered highly important as a potential source of supply. The downward trend

in world silver production, noticed since 1940, was reversed during 1947, the estimated output of the Western Hemisphere rising to 120.2 million ounces, an increase of 8.5 per cent over 1946. The increase was accounted for entirely by the United States whose output rose from 21.7 million ounces to 33.5 million ounces.

Production.—The following table gives details about the world's production of silver (in millions of fine ounces) since 1939 :—

| | 1939 | 1940 | 1941 | 1942 | 1943 | 1944 | 1945 | 1946 | 1947 |
|--|-------|-------|-------|-------|-------|-------|-------|-------|-------|
| United States of America | 57.8 | 67.1 | 69.1 | 54.5 | 41.5 | 34.9 | 28.2 | 21.7 | 33.5 |
| Mexico | 81.5 | 86.3 | 78.4 | 80.7 | 71.2 | 63.0 | 61.1 | 48.3 | 48.0 |
| Canada | 24.2 | 25.4 | 22.0 | 22.0 | 18.2 | 14.7 | 13.9 | 13.7 | 12.7 |
| Other Central and South American Countries | 30.9 | 34.5 | 32.4 | 16.0 | 15.1 | 25.8 | 30.5 | 27.1 | 26.0 |
| Total | 204.2 | 213.2 | 201.9 | 173.2 | 146.0 | 138.4 | 133.7 | 110.8 | 120.2 |
| India and Pakistan | 0.023 | 0.023 | 0.023 | 0.020 | 0.019 | 0.014 | 0.014 | 0.010 | 0.015 |

History.—The history of silver since 1934 has been dominated by the acquisition programme under the U.S. Silver Purchase Act passed in that year according to which one-fourth of the total monetary value of gold and silver stocks is to be in silver. While the domestic production was purchased at a specially favourable price by the U. S. Treasury, the country's stocks of the metal progressively increased till they reached 3,343 million ounces in 1942. Between 1934 and 1940 China, usually a buyer, lost large quantities of silver to the U.S.A., estimated at about 1,200 million ounces. India which had always been a major consumer of the metal could import on an average only 20 million ounces per year under the stress of the world trade depression during the 'thirties' as against 97 million ounces during the quinquennium ended 1939-41, while the Government of India had been a consistent seller since 1927.

During the War, the demand for silver increased for coinage as well as for war industries with the result that the U. S. stocks of silver declined by 340 million ounces, that is, from 3,343 million ounces in 1942 to 3,003 million ounces in 1944. To meet the demand, the U. S. A. passed the Green Act in July 1943 by which 410.9 million ounces of silver was given by the U. S. A. as loan—lend to be returned again, ounce for ounce, within five years after the declaration of the end of the emergency by the U. S. President. But this condition forced India and Britain to withdraw silver currency after the end of the war, with the result that the monetary demand for silver in the post-war period showed a downward trend. Simultaneously, the higher prices checked the consumption of silver by industries. After three successive years of decline, the U. S. Government holdings of silver showed a small gain of 1½ million ounces at 2,718½ million ounces at the end of 1946. The United States Government's holdings of silver, which in 1940, tended to rise after three years of successive decline, rose phenomenally in 1947, the Treasury stocks including coins in circulation, soaring by 80 million ounces, from 2,718 million ounces to 2,748 million ounces. The large increase was due principally to purchases of domestic newly mined silver.

In the absence of an announcement by the U.S. President regarding the official termination of the war, no date had been fixed for the final settlement of the lend-lease silver accounts. The total outstanding of lend-lease silver as on December 31, 1947, stood at 104.5 million ounces.

Price movements of silver were largely governed by developments in silver legislation in the United States, the trend towards demonetisation and by the various restrictions on imports and exports. Following the expiry of the Green Act on December 31, 1945, a Silver Bill was enacted on July 31, 1946 authorising the Treasury to sell or lease for manufacturing use any silver, not pledged as monetary backing for silver certificates, at not less than 90½ cents per fine ounce and also to purchase all domestic silver mined after that day, if offered within one year after being mined, at a net price of 90½ cents. At the same time, the U. S. Treasury's buying price of foreign silver, which had been raised from 44½ cents to 71.11 cents per fine ounce on September 21, 1945, continued to be in force. But when the silver legislation came into force, it was sold freely at 90½ cents. This continued between November and January and on January 20, 1947, the rate declined following the flow of demonetised silver to 70½ cents. The Indian buying boosted the price; but the ban on private imports of bullion into India checked the rise thereafter.

Owing to the control in the United Kingdom over the export and import of silver and its disposal for internal uses as well as control over foreign exchange, four categories of markets have been evolved in that country. They are: (1) Official silver made available for essential purposes at the official price fixed by the Treasury, (2) "Internal Free Silver" for domestic users who do not have to account in detail for the use they make of the metal acquired from private stocks, (3) "Exportable Silver" not involving any dollar payment, (4) "American Silver" purchased against dollars and resold for payment in dollars.

The trend towards progressive relaxation of restrictions, which had characterised in 1946-47, was reversed from about the close of that year, following the action taken by certain countries like India to ban silver imports. An important factor governing the position of world silver markets during 1947 was the acute shortage of dollars which a number of countries had to face. Several Continental and Far Eastern countries sold large quantities of the white metal in the New York Market. Price movements were also affected by other factors, including the pursuance by some countries of important coinage programmes and by adoption by others of demonetisation.

In the market for foreign silver in the U.S. after the sharp fall noticed during March 1947, a temporary revival was noticed on renewed buying by London based on a realisation that valid Indian import licences for substantial amounts were still outstanding. The quotation recovered from 71 cents on March 20 to 75-76 cents in April, but with a decline in domestic demand, the price slipped back to its original low level by the end of May, and later to 59½ cents by end of June. From August onwards a steadier tendency was in evidence on buying by Mexico and increased domestic demand. The quotation, in October, moved up to 74½ cents and continued at that level up to the rest of the year.

During the year, the official price of silver in London moved more or less in sympathy with New York prices. Thus, when the New York price slumped to 59½ cents in June, the London price also fell to 37 d. on June 26, 1947. From August, the rate tended to improve, following the advance in New York, the spot price recovering to 45½ d. by November. During the first quarter of 1948, there was no variation in the rate, which continued at 45 d. with the New York price remaining unchanged at 74½ cents.

GOLD

Gold has played a key role in shaping the life and history of the world. Between 1493 and 1600, world's production of gold was placed at 24.2 million ounces. It steadily rose to 38 million ounces during the 50 years ended 1850. Since then, however, the production has risen rather spectacularly. The annual average output mounted from 3.6 million ounces in 1850 to 19.6 million ounces in 1929 and then to 35.2 million ounces in 1930, reaching the peak figure of 41 million ounces in 1940. The greatest part of this enormous increase came since the U. S. Administration raised its price of gold from \$20.67 per ounce to \$35 an ounce which made the U. S. A. a sort of magnet strongly attracting the world's entire gold production. Details of Russian output since 1940 are not available; but it is believed to be considerable. During the war production received a setback owing to the diversion of manpower and equipment from gold mines to war requirements, but the downward trend started in 1941 was reversed in 1946. The following table, gives the figures for world gold production in thousands of fine ounces (see also next page for another estimate):

| Countries | 1939 | 1940 | 1941 | 1942 | 1943 | 1944 | 1945 | 1946 | 1947 |
|---------------------------------|--------|--------|--------|--------|--------|--------|--------|--------|--------|
| I. British Empire | 22,471 | 24,054 | 24,151 | 22,497 | 19,103 | 17,500 | 17,143 | 17,201 | 16,830 |
| (a) Union of South Africa | 12,822 | 14,047 | 14,386 | 14,121 | 12,800 | 12,277 | 12,214 | 11,918 | 11,200 |
| (b) Canada | 5,094 | 5,311 | 5,345 | 4,811 | 3,651 | 2,914 | 2,651 | 2,808 | 3,050 |
| (c) Australia | 1,646 | 1,644 | 1,497 | 1,154 | 751 | 657 | 656 | 840 | 875 |
| (d) New Zealand | 179 | 186 | 175 | 166 | 149 | 142 | 140 | 140 | 100 |
| (e) India & Pakistan | 317 | 289 | 298 | 280 | 252 | 187 | 168 | 231 | 172 |
| II. United States | 4,621 | 4,863 | 4,882 | 3,583 | 1,381 | 1,022 | 988 | 1,625 | 1,950 |
| III. All Countries | 39,038 | 40,702 | 39,595 | 34,200 | 27,500 | 24,900 | 24,300 | 25,000 | 23,500 |
| British Empire percentage | 57.6 | 59.1 | 61.0 | 65.8 | 69.5 | 70.3 | 70.5 | 65.8 | 71.2 |

It will be seen that the recovery in production noticed after the war in 1946 continued in 1947 when world output aggregated 23·65 million ounces. During 1947, some countries, e.g., Canada and Australia, adopted measures intended to help stepping up production. In Canada, the scheme of subsidies announced in November 1947, for the repayment of a subsidy of \$ 7 per fine ounce on domestic output in

excess of the quantity produced by a mine during the year ended June 1947, was revised later, following the issue, by the International Monetary Fund, of a statement on gold policies in relation to subsidies. The Prime Minister of Australia, announced in the course of his budget speech for 1947-48, Government's decision to suspend, with effect from September 20, 1947, the operation of the gold tax.

ESTIMATE FOR 1948.

According to the estimates made by Messrs. Samuel Montague & Co., a leading firm of bullion merchants in London, the world production of gold during 1948 was about 24,200,000 fine ounces, an increase of about 500,000 ounces as compared with the output in 1947. The following table gives figures of estimated production during the past five years:—

(In thousands of fine ounces)

| | 1944 | 1945 | 1946 | 1947 | 1948 |
|---|---------|---------|---------|---------|---------|
| South Africa | 12,280 | 12,225 | 11,927 | 11,200 | 11,585 |

* Estimated or provisional figure.

N.B.—Nominal figures of Russian and Far Eastern production are included in order to arrive at an estimated world total. Messrs. Samuel Montague & Co. say that they are indebted to the Union Corporation Ltd. for the foregoing table.

The rising trend in the U.S. stocks of gold noticed in 1946, gathered further momentum during 1947, reflecting the country's continued favourable balance of payments position. The stocks mounted to \$22,754 million, and touched a new record level of \$23,000 million by February 1948. Russia is ranked as the world's second largest gold-holding country. Her stocks of gold at the beginning of 1948 is estimated to be of the value of \$2,575 million.

As a sequel to the freezing of the balance of \$400 million left out of the loan of \$4·4 billion granted by the U.S.A. to the U.K. under the Anglo-American Financial Agreement of July 15, 1946, following the suspension of convertibility of sterling from August 21, 1947, the British Treasury started selling gold from its gold reserves with effect from September 15 with a view to meeting a part of the country's growing dollar needs.

Less Gold for Coins.—While production was falling during the war period, the net consumption in industrial arts of gold was steadily on the increase and the upward trend has not received a set-back even in the post-war period. From the following table, it will be seen that the net consumption of gold in industrial arts has steadily mounted from one million ounces in 1940 to the peak level of 9·3 million ounces during 1946. The Eastern countries which, since September 1931, were exporting gold on a substantial scale again resumed imports on private account from 1942. On account of the dwindling world output of gold on the one hand and the rising industrial demand on the other, the balance available for monetary use has continuously fallen, the quantity of 14·6 million ounces available for monetary use during 1946 representing a fall of 66 per cent. over the figure for 1940.

The United States Treasury price of gold remained unchanged at \$35 per fine ounce. It was reported that in the New York free market, foreign gold was quoted in November at about \$44 per fine ounce. The London Treasury price of gold continued unchanged at £8-12s-3d. per fine ounce.

GOLD SALES AND I. M. F.

In the world free gold markets, a disquieting feature was the practice indulged in by certain Central Banking authorities who made handsome profits through sales of gold at premium prices beyond the gold point margin permitted under the Articles of Agreement of the International Monetary Fund. With a view to checking this unhealthy practice which, if allowed, would have undermined the exchange stability of currencies, the International Monetary Fund issued, on June 18, 1947, a directive to member countries to abstain from affording any facilities for such operations. The response was encouraging. Mexico soon announced her decision to suspend such sales. In August, the London authorities ruled that gold coming into the United Kingdom for refining on behalf of non-residents, or held in the United Kingdom by non-residents, could only be returned to its country of origin, or in the case of deposits, could only be sent to the permanent residence of the depositor.

The South African Government, on February 7, 1949, announced their intention to sell 100,000 ounces of gold, alloyed to 22 carats, in instalments of 12,500 ounces, extending over a period of eight weeks. The purchase was reported to have been arranged by a prominent and long-established London house of bullion brokers, who had offered a price of \$38·20 per fine ounce, i.e., a premium of \$3·20 per ounce above the monetary parity of \$35 per fine ounce. In view of the International Monetary Fund's interest in matters relating to the price of gold, South Africa was

asked to furnish full details of the deal. The Fund emphasised its point of view that external sales of gold at premium prices were allowable only if adequate safeguards existed to ensure that the gold was, in fact, used for *bona fide* and customary artistic, industrial or professional purposes. Mr. Havenga, the South African Finance Minister, gave assurances that the gold sales were only for specific and customary industrial or professional purposes. The Fund justifiably felt that the existence of markets which were prepared to satisfy all verifiably genuine international demands for non-monetary gold at approximately \$35 per ounce was strong evidence that the ultimate disposition of the gold purchased at the substantial premium of nearly 10 per cent would not be for *bona fide* or customary purposes. The Fund, therefore, could not approve the South African action. Subsequently, however, the Fund sent a mission to South Africa to make on-the-spot investigations and came to the conclusion that the sales did not factually infringe the I.M.F. directive. But South Africa was advised to consult the Fund prior to entering into negotiations for similar transactions in future.

RICH GOLD STRIKE

Late in May, 1949, the sensational discovery of a "richest ever" reef in the Orange Free State in South Africa was announced. The reef was reported to contain 529 ounces of gold to a ton of ore on the farm Erfdeel in the Orange Free State. Feverish excitement in London and Johannesburg followed the announcement, and the shares of the main company concerned, the Free State Gold Areas Limited, quickly trebled in value, the market capitalisation of the company rising by £2,500,000. The discovery did not make it certain that a further rich mine would necessarily come into existence, but the prospects seemed favourable.

Here are the figures for gold consumption and distribution in millions of fine ounces :—

| | 1940 | 1941 | 1942 | 1943 | 1944 | 1945 | 1946 | 1947 |

INDIAN MARKET

Though India happened to be an important consumer of the world's production of silver and gold, the bullion markets were not on an organised basis nor had the merchants any direct contact with London until 1905. The Exchange Banks in prominent cities used to negotiate all the deals before 1901 when a prominent *choksey* in Bombay opened his London office. In 1913-14 an Association of Silver Merchants was formed for the first time in Bombay and rules were framed for the settlement of accounts. Forward trading in gold was started in 1915 when for the first time gold was directly imported by a merchant from the U.S.A. It was, however, in January 1923 that the Bombay Bullion Exchange, Ltd. was floated and forward trading in bullion was put on an organised basis. 13 years later, the Exchange established a Clearing House to facilitate the settlement of forward accounts. The market thereafter worked smoothly till the outbreak

of the Second World War when trading was frequently interrupted and recourse to court had to be taken for interpreting the bye-laws. The question of reorganising the bullion trade on a sound basis was taken up by the Government of Bombay.

The Government of Bombay, in their Budget for 1949-50, proposed to levy a stamp duty in respect of forward bullion transactions in the Bombay market. The rates as finally adopted, including the surcharge, are as follows: (i) 3 annas for every 2,800 tolas of silver, (ii) 12 annas for every 250 tolas of gold, and (iii) 9 annas for every 250 sovereigns.

On March 21, 1949, the Finance Minister Dr. John Mathai told the Indian Parliament that Central Government had considered the suggestion from some sections of the commercial community for a relaxation of the restrictions on bullion imports, but had decided not to alter their policy at present. The high prices of

silver in India tempted many people to import chemical compounds of silver in order to extract the metal from the compounds. The Government of India, in April 1949, decided to exclude from the scope of O.G.L. XI Imports of silver nitrate and all other silver compounds.

Fifty boxes containing 5,400 lbs. of gold, valued at Rs. 2,48,40,000 were flown to Karachi from Bombay, in February 1949. The gold was consigned by the Reserve Bank of India to Pakistan, under the provisions of the Pakistan (Monetary System and Reserve Bank) Order, 1947, which embodied the arrangements for the division of assets and liabilities of the Issue Department of the Reserve Bank between India and Pakistan. Gold was released to Pakistan from time to time and up to January 13, 1949, six instalments, aggregating 1,386,435 tolas in weight and Rs. 2,86,95,832 in value, at the Reserve Bank's statutory rate, was released by the Reserve Bank to the Pakistan State Bank.

The following statement gives the highest and lowest prices of gold and silver in Bombay with import duties since 1926-27 :—
Gold (per fine tola). Silver (per 100 tolas gross).

PRICE FLUCTUATIONS

Until the outbreak of the Second World War, the prices of gold and silver in the sub-continent remained approximately on world parity, although there were occasionally independent fluctuations due to local speculative movements. Upto September 1931 when the United Kingdom went off the gold standard, the gold price in Bombay represented the import parity equivalent to the rate in London plus the cost of importing gold from abroad. After that date, India became an exporter of gold and the price was based on the export parity, namely, the London price minus the cost of shipment to the U.S.A. or Britain. In the case of silver the price movements were affected by the reimposition of the import duty in 1930 and by the subsequent change in rate of duty. The price of silver, on the whole, remained on the basis of the import parity subject to speculative fluctuations.

During the War, however, the suspension of private trade in bullion with overseas countries, the growing value of bullion as inflation hedge and the heavy speculative activity pressed heavily against the available stocks of bullion in India and Pakistan and the prices mounted up rapidly leaving the world prices far behind. Even the official sales of gold amounting to 7.5 million ounces and of silver amounting to 181 million ounces during the war period could have only a temporary effect of arresting the rise in prices and generally, the bullion market maintained a remarkably firm front.

In view of the abnormally high and artificial levels of Indian prices of gold and silver as compared with the prices in the United Kingdom and the United States, the Central Budget for 1946-47 imposed with effect from February 28, 1946 a specific duty on gold at the rate of Rs. 25 per tola and raised the duty on silver from three annas an ounce plus a surcharge of one-fifth to a composite duty of eight annas an ounce.

In 1946-47, the bullion market started shedding to a certain extent its wartime insularity following the partial relaxation of control over the movement of bullion and was subjected in a fuller degree to the impact of developments in foreign countries. The internal factors influencing the market were (1) increased speculative activity, (2) acute shortage of the actual stock, (3) bulls' control over the spot market, and (4) reduction of the import duty on bullion by 50 per cent. During the year, forward trading in bullion, which had been banned during the war, was permitted; but it had to be suspended often on account of frequent differences between bears and bulls over the fulfilment of forward contracts. The bullish trend was accelerated by the suspension by Government of the issue of licences for import of bullion from March 6, 1947 onward and both gold and silver touched all time record levels in September 1947.

The factors responsible for the bullish tone in the bullion market in 1947 asserted themselves strongly in 1948. The continuation of the ban

on bullion imports by Government, tightening of the measures to check the evasion of this ban, predominance of bulls who commandeered the bulk of the floating stocks, diversion of black market money into the trade to avoid taxes, hoarding of the precious metals to escape from the proposed estate duty, all these had the cumulative effect of maintaining bullion prices near peak levels. Concentration of the yellow metal in strong hands and paucity of floating stocks were visible in gold on a more aggressive manner than in silver.

BULLION ASSOCIATION

During the year, the Government of Bombay initiated steps to control the bullion trade on a constitutional basis as recommended by a two-man cabinet committee appointed by Government. One of the Committee's suggestions was the establishment of a new Bullion Association to take the place of the three trading organisations, namely, the *Tukda* market, the Marwar Chamber of Commerce, and the Bombay Bullion Exchange. The suggestion having been accepted, the office-bearers of the new Association were elected on October 5, 1948. Owing to prolonged negotiation between this Association and the Bombay Bullion Exchange regarding the purchase of assets and liabilities of the latter, the new Bullion Association was not able to arrange trading under its auspices before the end of the year. It was only from April 2, 1949, that forward trading, which had remained

suspended since December 25, 1948, was resumed under the newly-formed Bombay Bullion Association. The trading was officially resumed on that day under the new rules and regulations approved by the Bombay Government. The Premier, Mr. B. G. Kher, in his inaugural address stated that Government had appointed a committee under the Presidentship of Dr. S. K. Muranjan to examine the need for recognising associations for carrying on forward trading in mofussil centres. He hoped that the new rules and regulations for forward trading in bullion would be scrupulously followed by members.

However, within a month, during the currency of the May contract, unbridled speculation and bull cornering led to a state of emergency being declared by the Bullion Association, which sought Government intervention. Fortunately, due to the timely measures taken by the Board itself, the emergency in the May contract dissolved and the Government of Bombay did not, therefore, consider it necessary to confirm the resolution of the Board for declaring an emergency.

Subsequently, the Board of the Bullion Association appointed a Sub-Committee to make

recommendations for tightening the control on forward trading in the market. In the first week of June, 1949, the Committee reported that, when a state of emergency is declared, the Board should have powers to demand from the members the payment of Rs. 500 per bar of silver and from Rs. 7 to Rs. 10 per tola of gold as margin for their outstanding transactions in respect of purchases or sales or both. A penalty of Rs. 280 per silver bar and Rs. 7 per tola of gold will be imposed on traders giving false numbers of bars sold by them. These recommendations were awaiting confirmation by the Government of Bombay.

Here are the figures since 1900-01 for the quantity and value of imports and exports of silver for India, Pakistan and Burma :—

| | IMPORTS | | | | EXPORTS | | | | Net Total Imports (+) or Exports (—) | | | |

Note :—Since 1941-42 the figures are on post-separation basis.

Firm Trend—The range of fluctuations in the ready rates for gold in the Bombay market during 1946-47 was Rs. 26-12 as against Rs. 34-6 in the preceding year. The average rate of gold worked out higher at Rs. 101-1-2 as against Rs. 80-3 in the preceding year. The premium of the ready over the forward rate varied between Rs. 12-12 and Rs. 1-8 against Rs. 6-5 and nil in 1945-46. In April 1946, the rise was temporarily arrested by news about discovery of a new gold mine in South Africa and a steep fall in Egyptian gold prices; but from Rs. 96 on April 18, the spot rate was lifted to Rs. 111 by May 25 owing to acute shortage of stocks. In July again the price receded to Rs. 84-4 owing to gold sales by the Bank of Mexico and reduction in import duty; but the suspension of import licences on March 6 provided the requisite stimulant for the upward movement.

Most of the factors which affected silver prices, influenced the prices of gold also. Gold stood at Rs. 104-10 at the beginning of the year, and soon declined to Rs. 104-3 following news of Government control of forward trading in bullion. The political aftermath of partition and communal disturbances in Karachi occasioned a rise in gold price. The death of Mahatma Gandhi occasioned a downward trend on some days, but on the whole prices tended to move up. Apart from the foregoing bullish factors, which affected silver, the upward tendency was strengthened by the efforts to avoid the sales tax which worked out to Rs. 3-8 per tola. The price zoomed to Rs. 118-3 on May 5. Forward rate was quoted at Rs. 118-4 in April. As might be expected, profit-taking and increased offerings soon brought down the price to around Rs. 110-2 early in July. Subsequently, however, sustained bull manipulations, coupled with diversion of surplus money into gold, caused a precipitous rise to Rs. 122 on August 31—beating all previous records. The peak level attracted heavy offers, further, rumours were afloat that Government might sell gold as an anti-inflationary measure. Consequently, ready gold dropped to Rs. 112-10

within a month. But the absence of any reference to bullion in the actual announcement of Government's anti-inflationary policy, acted as a stimulus to bull activity. After narrow fluctuations during the following months, the spot price was quoted at Rs. 112-15.

The firm trend in the silver market was assisted by (1) reports of transactions in the London market at above the pegged price of 44d., (2) the raising of the U. S. Treasury's purchase price of domestic silver on July 31, 1946 from 71-11 cents to 90-50 cents, (3) increase in the London Treasury's price of silver for essential purposes from 44d. to 55d. on August 6, (4) the acute scarcity of floating stocks, and (5) manipulations by bulls. The extent of fluctuations in the rates for ready silver was Rs. 68 as against Rs. 41-6 in the preceding year. The monthly average spot price for the year worked out at Rs. 162-4-10 as compared with Rs. 135-1-11 in 1945-46. The premium of the ready over the forward rate varied between Rs. 13-8 and minus Rs. 2-8 as against Rs. 5 and nil in the preceding year.

SILVER PRICES

Silver opened the year, on January 2, 1948, at Rs. 169 for ready delivery. In the forward section trading continued unofficially, with selling prices of Rs. 171 for silver and Rs. 108 for gold. During the following weeks, a definitely lower trend became pronounced in view of the political tension after partition. The assassination of Mahatma Gandhi also adversely affected the sentiment of the market. Silver declined to Rs. 143-8 on February 9—the lowest level for the whole year. Forward trading was suspended due to disagreement between bears and bulls. Subsequently, due to heavy demand largely for investment, prices moved up to 153-12. The declaration of Pakistan as foreign country and the consequent application of land customs duty was one contributory factor. The tension over Hyderabad also acted as a bull point. On May 11, 1948, silver jumped to Rs. 180-12-0, the highest

level for the year. In unofficial forward trading which had just been resumed, silver was quoted at a discount of four annas. Profit-taking, which inevitably ensued, resulted in a fall in price during the following weeks. There was no notable development during the second half of 1948, barring the occasional emergence and liquidation of bull syndicates. During the police action in Hyderabad in September, spot rate went up to Rs. 178-13. On the successful termination of the incident, the price declined to Rs. 167-14. In October, owing to the absence of any measures against bullion in Government's anti-inflationary proposals, prices improved to Rs. 179-11. However, the *Moorat* trading on October 31, was uneventful with prices ruling at about Rs. 173-1. In December, Government's announcement to close forward trading in bullion temporarily with a view to facilitating the regulation and control of forward trading under a single Association, adversely affected the value of silver which declined to Rs. 176-3.

MOVEMENT OF BULLION

The statements below give the average quantity and value of imports and exports of gold coin and bullion as also of silver for each quinquennium from 1900-01 to 1929-30 and for each of the financial years from 1930-31. Prior to the departure of sterling from gold, India and Pakistan were net importers of both gold and silver but since the delinking in September 1931 which coincided with the world depression they became large exporters of gold. So far as silver was concerned, they continued to be net importers on private account. Since 1943-44, however, they again became net importers of gold, taking into account the gold sales in India and Pakistan on behalf of the Allied Governments. For the entire period from 1931-32 to the end of 1946, India and Pakistan have been net exporters of gold to the tune of 36 million ounces, while during the same period, their net imports of silver on private account amounted to about 237 million ounces.

Movement of Gold—Here are the figures since 1900-01 for the quantity and value of imports and exports of gold coin and bullion for India, Pakistan and Burma.

Note:—Since 1941-42 figures are on post-separation basis. The figures for 1943-44 to 1945-46 exclude sales of about 7½ million ozs. in India and Pakistan on behalf of the Allied Governments.

FINANCE

THE gradual evolution of the present financial organisation of India is in many respects a reflection of her constitutional development. In the earliest days of British rule, the Provinces, and especially the older Presidencies, were for all practical purposes independent of the central government and responsible only to the authority sitting in London. After the middle of the nineteenth century the process was reversed, and the Government of India became all-powerful, controlling the Provinces down to the smallest items of their expenditure. This centralization reached its highest point during the long Viceroyalty of Lord Curzon, who was so jealous of his supreme authority that he sought to deprive the Presidency Governors of their right to correspond direct with the Secretary of State for India. This system was found to be too top-heavy in the days of his successors, and a continuous process of devolution set in. In the matter of finance the measures took the form of long-term "contracts" with the Provincial Governments, and later in the assignment of definite heads of revenues to the Provincial Governments, thus removing the dual authority and responsibility which had clogged progress. A much clearer cut was made when the reform scheme embodied in the Government of India Act of 1919 was passed. Here, for all practical reasons, Provincial finance was entirely separated from the finances of the Government of India. The system of provincial contributions to the Centre disappeared for the first time from the Budget in 1928-29.

Federal Finance Committee

The financial organisation was again reviewed in 1931 as part of the work of the Round Table Conference. A sub-committee of the Federal Structure Committee was appointed under the Chairmanship of Lord Peel to examine the question of federal finance and the principles embodied in the sub-committee's report were endorsed by the parent Committee as a suitable basis. A Federal Finance Committee with Lord Eustace Percy as Chairman was appointed at the end of 1931 to subject to the test of figures, the suggested classification of revenues by the Peel Committee and to estimate the probable financial position of the Federal and of the Provincial Governments under the proposed scheme.

In the course of their report the Federal Finance Committee said that the transfer to the Provinces of taxes on income though defensible in principle would leave the Centre in deficit. Therefore the Peel Committee suggested a method of transferring to each Province a percentage of the share of income-tax estimated to be attributable to it. But in view of the incomplete data on which the estimates were made, a special review was held to be necessary at the time federation is established in order to fix the initial percentages. A strict allocation on a percentage basis would still leave some Provinces in deficit and so to right their finances the Committee suggested spreading the charge over the other Provinces by giving them back less of the income-tax proceeds than they were entitled to.

Niemeyer Report

A necessary prelude to the introduction of the Constitutional Reforms was an investigation of their safety in the light of the financial situation and prospects of India. The investigation was carried out by Sir Otto Niemeyer whose report was published in April 1936. The Report proposed immediate financial assistance from the beginning of provincial autonomy to certain provinces partly in the form of cash subventions, partly in the form of cancellation of the net debt incurred previous to April 1, 1936, and partly in the form of distribution to the jute growing provinces of a further 12½ per cent. of the jute tax.

Annual cash subventions are as follows.— To the U. P. Rs. 25 lakhs for 5 years only, to Assam Rs. 30 lakhs, to Orissa Rs. 40 lakhs, to the N.-W. F. Province Rs. 100 lakhs (subject to reconsideration after 5 years), and to Sind Rs. 105 lakhs to be reduced by stages after 10 years.

The total approximate annual relief in lakhs aimed at by Sir Otto Niemeyer is as follows:— Bengal 75, Bihar 25, C. P. 15, Assam 45, N.-W. F. Province 110, Orissa 50, Sind 105, and U. P. 25, extra recurrent cost to the Centre Rs. 102 lakhs.

Orissa is to get a further non-recurrent grant of Rs. 19 lakhs and Sind of Rs. 5 lakhs by six equal steps beginning from the sixth year from the introduction of provincial autonomy, but subject to the proviso to section 138 (2) of the Act. The Centre is to distribute the income-tax to the provinces so that finally 50 per cent. of the distributable total has been relinquished in the intermediate five years, so long as the portion of the distributable sum remaining with the Centre, together with any contribution from the Railways, aggregates 13 crores.

As regards the provincial share of the proceeds from income-tax, Sir Otto Niemeyer recommended that half of the proceeds should remain with the Centre, while the other half should be distributed among the provinces on the following percentage division:—Madras 15, Bombay 20, Bengal 20, U. P. 15, Punjab 8, Bihar 10, C. P. 5, Assam 2, N.-W. F. Province 1, Orissa 2 and Sind 2.

Sir Otto Niemeyer suggested that the Centre would not be in a position to distribute any part of income-tax proceeds for the first five years from the beginning of provincial autonomy but that it might be in a position to distribute some of the proceeds, though not necessarily the percentage allocated, within the first ten years of provincial autonomy. But this, he said, largely depended on the financial condition of the railways and their ability once again to contribute to general revenues.

RECENT INDIAN FINANCE

India, in common with other countries of the world, felt the full impact of the economic blizzard which began in 1930 and attained its maximum the following year. The net result from the view point of the Government of India was the introduction in 1931 of two budgets, the ordinary budget in the spring and a supplementary budget containing fresh taxation proposals in September. In the following two years, there was no change, but in 1934-35 the need for improving the revenue by Rs. 1.53 lakhs was felt. The proposals included an excise duty on sugar, a reduction in the import duty on silver by as. 2½ to as. 5 an ounce and the abolition of the export duty on raw hides, handing over half the proceeds of the jute export duty to the jute producing provinces, and the levy of an excise duty on matches.

In 1935-36 budget the estimated surplus of Rs. 1.50 lakhs was used for lowering the silver duty to as. 2, abolition of export duty on raw skins, restoration of the emergency cuts in pay and reduction in surcharges on income-tax, leaving a nominal surplus of Rs. 6 lakhs. Further improvement in the finances helped the Government of India in 1936-37 to cut the surcharges by half, to abolish the income-tax on incomes below Rs. 2,000 and to raise the weight of the one anna letter from half to one tola and to adopt a scale of an additional half anna for every additional tola.

The improvement in finances proved short-lived and the 1937-38 budget, estimating a prospective deficit of Rs. 1.58 lakhs owing to trade depression after transferring Rs. 1.84 lakhs from the revenue reserved fund, forced an increase in the sugar duties on a graduated scale import and excise duties from as. 2 to as. 3 per ounce, and in postal rates.

The budget of 1938-39 preserved the *status quo* in regard to taxation but provided for finance for the inauguration of provincial autonomy.

Second World War

On the basis of the maintenance of existing taxation and the adoption of the new system of income-tax embodied in the Income-Tax (Amendment) Act of 1939 and the "slab system" of assessment, the budget for 1939-40 estimated a revenue of Rs. 82.15 lakhs and an expenditure of Rs. 82.65 lakhs. To meet the prospective deficit, import duty on raw cotton was doubled to one anna per lb. From then on the growing need for financing war expenditure and counter-acting inflation became the key-note of Government's taxation policy. The first measure was an excess profits tax to provide for an impost of 50 per cent. on abnormal war profits above Rs. 30,000. For the same year (1940-41) petrol duty was raised by as. 2 per gallon and the excise duty on sugar from Rs. 2 to Rs. 3 with a corresponding increase in import duty on sugar. The supplementary budget of November 1940 imposed a surcharge of 25 per cent. on all taxes on income and an increase in postal rates and telegram and telephone charges. The 1941-42 budget raised the E.P.T. from 50 per cent. to 66½ per cent. and the surcharges on income-tax and super-tax from 25 per cent. to 33½ per cent. Other proposals covered a 100 per cent. increase in match duty, an increase in import duty on artificial silk yarn and thread by as. 2 to as. 5 per lb. and an excise duty on pneumatic tyres and tubes.

The intensification of the tempo of the war in 1942-43 necessitated a further increase of 10½ per cent. in surcharge on taxation of incomes, a levy of 20 per cent. surcharge on import duties excepting cotton, petrol and salt, a 25 per cent. increase in petrol tax and a rise in post and telegram rates. In the following year the surcharges on taxation of income were raised to 66 per cent. and were applied uniformly over all levels of incomes.

The budget for 1944-45 placed the revenue deficit at Rs. 78.21 lakhs almost equally to the pre-war revenue. The Finance Member, Sir Jeremy Kainsman, therefore, introduced (1) the system of advance payments of tax on incomes from which tax was not deducted at source and (2) the increase in compulsory deposit from 1½ of the E.P.T. to 19-64 of the tax, and (3) a rise in the scale of income-tax and surcharges on tobacco and spirits under customs duties, and (4) brought betelnuts, coffee and tea under Central Excise besides raising the excise duty on tobacco. The latter duty was further raised in the following year along with an increase in the rate for postal parcels from as. 6 for the first 40 tolas and as. 4 for every 40 tolas thereafter to a uniform basis of as. 6 for every 40 tolas, an increase in the surcharge on telephone rentals from 1 to 1½, on trunk calls fees from 20 per cent. to 40 per cent., and on telegrams by one anna for ordinary and two annas for express ones. A feature of the budget was the recognition of the practice prevailing abroad of differentiating between earned and unearned incomes.

War-Time Budgets

To understand the implications of the change in the wartime finance, it may be noted, that (a) the aggregate war expenditure in India, including recoverable war expenditure during the period 1939-40 to 1945-46 came to Rs. 3,484 crores, India's share being Rs. 1,744 crores or about 50 per cent. and (b) that the over-all Government outlay (war and civil expenditure) amounted to Rs. 3,996 crores of which Rs. 1,402 crores or 37 per cent. was met out of revenue, the balance being partly reflected in the accumulation of sterling balances and partly in the form of an addition to India's public debt which increased by Rs. 1,077 crores. The following table gives an idea of the change brought about by the war in

India's public revenue, expenditure and debt between 1938-39 and 1945-46 :—
(Rs. in Crores)

| | 1938-39 | 1944-45 | 1945-46 |
|---|--------------|---------------|---------------|
| I—Central Government Budget : | | | |

| (v) Total Interest Bearing Advances. | 1,205.76 | 1,860.44 | 2,282.38 |

General Rise

Total revenue, both tax and non-tax, increased during this period rapidly. Customs receipts in contrast began to shrink owing partly to transport difficulties as the war reached its climax. From being the main source of revenue in 1938-40, at Rs. 40.51 crores, it dwindled to Rs. 25.12 crores in 1942-43, although it recovered to Rs. 39.76 crores by 1944-45. Central excise duties expanded during war years to a remarkable extent reflecting the increased purchasing power in the hands of the public. This expansion was secured not only by enhancing the rate on existing items but also by adding new items such as tobacco, vegetable products, betelnuts, coffee and tea.

The largest expansion in yield was, however, from direct taxation under corporation, income and excess profits taxes. These three taxes contributed from 20.2 per cent. in 1940-41 to 49.1 per cent. in 1944-45. From 1942-43 to 1945-46 one half to three fifths of the total revenue came from these taxes. Total tax revenue increased from Rs. 72.34 crores in 1938-39 to the peak figure of Rs. 282.67 crores in the revised estimates for 1945-46. Non-tax revenue also spurted up, specially after 1940-41, owing mainly to increased contributions from Railways and Post and Telegraphs and the larger profits of the Reserve Bank of India.

The expenditure under Defence mounted up steadily, especially after 1941-42, i.e., after the entry of Japan into the war. From Rs. 49.54 crores in 1939-40 it rose to the peak figure of Rs. 458.32 crores in 1944-45, the last full year of the war. The charges for the servicing of debt more than doubled from Rs. 14.12 crores in 1938-39 to Rs. 22.21 crores in 1944-45 and Rs. 35.85 crores in the revised estimates for 1945-46 and this might have been larger still but for decreases in the effective rates of interest.

Deficits on revenue account grew in size from Rs. 6.53 crores in 1940-41 to Rs. 12.69 crores in 1941-42 and Rs. 112.17 crores in 1942-43 reaching the peak figure of Rs. 189.78 crores in 1943-44. With the deficit of Rs. 161.14 crores during 1944-45 and Rs. 144.05 crores in the following year, the total volume of deficits during the period 1940-41 to 1945-46 came to Rs. 627.26 crores.

Post-War Period

The year 1946-47 may be regarded practically as the first post-war year. Governmental finances in India, as in other belligerent countries reflect in some respects, the effects of the termi-

nation of the war. Defence expenditure was reduced appreciably, enabling Government to afford a measure of relief to the tax payer and also to reduce substantially the huge wartime deficits on revenue account. But the budget for 1947-48, despite the new taxation imposed under it, discloses a deficit of about Rs. 30 crores which is partly explained by the fact that India's revenue in the post-war years has tended to fall from the wartime high levels. The Finance Member, therefore, stressed the need on the part of the Centres as well as the provinces for exploiting to the full their tax resources with due regard to the part played by private enterprise in the scheme of the country's industrial development.

The year 1946-47 had also for its background the possible effects on the country's economy of a steep fall in wartime expenditure and income levels, as well as the continued need closely to watch and control the position arising from the wartime legacy of inflation. The budget therefore, laid stress on subordinating fiscal policies to the broader aims of national economy with revenue receipts at Rs. 311.65 crores and total expenditure at Rs. 355.71 crores. The deficit envisaged was of the order of Rs. 44.06 crores, after taking into account new taxation measures and the transfer to revenue of the balance in the two War Risks Insurance funds amounting to Rs. 26.10 crores.

The new taxation proposals for 1946-47 offered a number of substantial concessions to industry and to persons of moderate means. Such concessions to industry included (1) the complete abolition of the Excess Profits Tax after the 31st March 1946, (2) the grant of special initial depreciation allowances of 10 per cent. on new buildings and 20 per cent. on new plant and machinery as well as allowances for expenditure on scientific research for purposes of income tax; (3) the scope of the obsolescence allowance will be widened so as to include the loss of an asset by destruction or demolition, and also extended to buildings, (3) the relief from Customs duty on raw materials imported for industry and reduction of rates on such imported plant and machinery as are now dutiable, (4) a net reduction of 12 annas in the present total rate of Super Tax and Income Tax (payable by a company) from 7½ annas to 6 annas, as a result of the lowering of Super Tax by 2 annas and the raising of the Income Tax by ½ anna, and (5) the exemption from Income Tax for two years in the case of buildings for residential purposes and an initial depreciation allowance of 15 per cent. for buildings used as business premises. In addition, the total rate on life insurance companies has been reduced from 5 annas 3 pies to 5 annas.

Other Concessions

Other concessions included (1) the reduction of the rate on the second slab of income of Rs. 3,500 from 15 pies to 12 pies and the rate on the third slab of Rs. 5,000 from 2 annas 1 pie to 2 annas, and (2) the raising of the earned income allowance from one-tenth of the earned income (subject to a maximum of Rs. 2,000), to one-fifth (subject to a maximum of Rs. 4,000). Similarly in the Super Tax range there will be differential treatment in favour of earned income at the rate of 1 anna in the rupee between Rs. 25,000 and Rs. 2 lakhs and of ½ anna between Rs. 2 lakhs and Rs. 5 lakhs.

Under indirect taxation, the duty on kerosene oil was reduced by nine pies from 4 annas 6 pies to 3 annas 9 pies per imperial gallon, and on motor spirit from 15 annas to 12 annas per imperial gallon, the latter as an incentive to increased motor transport.

The following further concessions estimated to cost Rs. 5.12 crores to the Central Exchequer were announced by the Finance Member during the course of discussion on the Budget: (1) reduction in the duty on kerosene by an anna and half instead of only 9 pies as was originally proposed, (2) reduction in the excise duty on betelnuts from two annas to one anna per lb., (3) reduction by 6 pies of the increase in the customs duty on betelnuts originally proposed in the budget and (4) reduction in the duty on cinematographs film (not exposed) from 6 pies per linear foot as originally proposed to 3 pies. Other concessions announced were a reduction in the price of a match-box from 9 pies to 6 pies and a similar reduction in the price of a post-card from 9 pies to 6 pies to come into force respectively from August 1 and July 1, 1946.

Reductions in expenditure arising from the cuts by the Legislative Assembly amounted to Rs. 93.34 lakhs on revenue account and Rs. 3.46 crores under capital disbursements. In consequence of the changes in taxation and expenditure, the deficit of Rs. 44.06 crores for 1946-47 was expected to move up by Rs. 4.19 crores to Rs. 48.25 crores, with revenue at Rs. 341.87 crores and expenditure at Rs. 390.12 crores.

An innovation in the budget was the presentation of a Capital Budget separately from the Revenue Budget.

The 1947-48 Budget

The budget estimates for 1947-48 placed expenditure at Rs. 327.88 crores as against the revised estimate of Rs. 351.48 crores for the preceding year and Rs. 484.57 crores being the actual for 1945-46. The revenue, on the other hand, was placed at Rs. 279.42 crores on the basis of existing taxation as compared with Rs. 336.19 crores in the revised estimates for the preceding year and Rs. 360.67 crores in the actual for 1945-46.

In his budget speech, the Finance Member stated that the proposals he was making, whether involving the abolition of existing taxation or the levy of fresh imposts, were based not merely on financial considerations but the need to achieve certain social objectives the chief of which was the reduction as far as possible of the glaring disparities of income between the classes and the masses. Proposals to afford relief to the lower income groups included the abolition with effect from 1st April, 1947 of the salt duty, involving a net loss to revenue of Rs. 8.25 crores, and the raising of the minimum exemption limit in respect of Tax on Incomes from Rs. 2,000 to Rs. 2,500, involving a loss of Rs. 25 lakhs. In view of the loss to revenue on account of these two measures, the deficit of Rs. 48.46 crores estimated on the basis of existing taxation would be increased to Rs. 56.96 crores (excluding any additional expenditure that may be incurred in giving effect to the recommendations of the Central Pay Commission). Of this gap, about Rs. 40 crores (apart from Rs. 4 crores which would go to the

provinces as their share) was proposed to be met by additional taxation as shown below:—

| | Estimated yield. | |
|--|------------------|--|
| | Crores | |
| 1. A special Income Tax of 25 per cent. on business profits exceeding Rs. 1 lakh | 30-00 | |
| 2. A graduated tax on capital gains exceeding Rs. 5,000 made in recent years from the disposal of capital assets | 3-50 | |
| 3. A change in the scale of super-tax so as to reach the maximum of 104 annas in the rupee at Rs. 1-2 lakhs for unearned income and at Rs. 1-5 lakhs for earned income | 2-50 | |
| 4. Doubling of the rate of Corporation Tax to 2 annas | 4-00 | |
| 5. An increase in the export duty on tea from 2 annas per lb. to 4 annas | 4-00 | |
| 6. A further tightening up of the Dividend Tax imposed last year | NIL | |

The reports of the Select Committee on the bills relating to business profits tax suggested *inter alia* an abatement of five per cent. of the capital at charge in the case of non-director controlled companies or Rs. 1 lakh or whichever is greater and a similar abatement of six per cent. in the case of director-controlled companies and also for the raising of the exemption limit in the case of Hindu undivided families as well as partnership firms. As regards the capital gains tax, the Committee recommended for the raising of the exemption limit from Rs. 5,000 to Rs. 15,000 and for the fixation of the rate of tax at one anna in the rupee on the whole of Capital gains up to Rs. 50,000, rising by stages upto a rate of as. 5 in the rupee on the whole amount of capital gains exceeding Rs. 10 lakhs.

Further concessions were given in the final acts including (a) a reduction in the rate of business profits tax from 25 per cent. under the original proposal to 16½ per cent., (b) the fixation of a uniform abatement at six per cent. of the capital at charge or Rs. 1 lakh or whichever is greater in place of the different criteria for companies, and (c) the exemption from the capital gains tax of gains from personal effects.

AUGUST 15, 1947

Following the political division of the country on August 15, 1947, Mr. Shanmukam Chetty, first Finance Minister of the Dominion of India presented the budget for the period August 15, 1947 to March 31, 1948 to the Constituent Assembly (Legislative). He announced: (1) For the present both the Dominions will continue the existing taxes and duties. (2) Till the end of September 1948, the two Dominions will remain under a common currency system managed by the Reserve Bank, although from April 1 next Pakistan will have its own over-printed notes and coin. (3) The initial liability for the outstanding loans, guarantees and financial obligations of the late Central Government at the time of the partition and for the pensions chargeable to it has been placed by law on the Indian Dominion subject to an equitable contribution from Pakistan. (4) The net deficit on revenue account, with a revenue of Rs. 171.15 crores and a revenue expenditure of Rs. 197.30 crores in the period covered by these estimates will be Rs. 26.24 crores; but the final figure may be higher. (5) The expenditure estimates include Rs. 22 crores for the evacuation and relief of refugees and inflated defence expenditure. (6) The existing export duty of three per cent. on cotton cloth and yarn will be replaced by a duty of as. 4 per square yard on cotton cloth and as. 6 a lb. on cotton yarn.

"This is the eighth consecutive deficit budget," said the Finance Minister, presenting the estimates. He added: "I do not wish in any way to minimise our present difficulties but once we reach fairly normal conditions . . . we should be able to balance the budget. It will be too optimistic to expect normal conditions for the next year." He also assured the Assembly that it has not been the intention of Government to so arrange its taxation policy as to stifle the growth of industries in the country.

General Statement of the Revenue and Expenditure of the Indian Dominion.

| Budget Estimates, 1947-48 | | (Rs. in lakhs) |
|--|--|----------------|

Public Debt.

The public debt of India (including the unfunded debt and other obligations) registered a further increase of Rs. 198.17 crores at the end of March, 1947, with the total outstanding rising to Rs. 2,198.82 crores from Rs. 2,000.65 crores at the end of 1945-46. The sterling debt showed a slight decline from Rs. 63.70 crores at the end of 1945-46 to Rs. 59.06 crores made up of loans

amounting to Rs. 55.44 crores and service funds Rs. 3.62 crores.

The outstanding Public Debt of the Government of India is expected to amount to Rs. 20,000 million at the end of the current year, and Rs. 20,490 million at the end of 1949-50. A broad analysis of the present debt compared with the outstanding debt at the end of 1938-39 is given below.

(In millions of Rs.)

| | As on 31st March 1939 | As on 31st March 1949 | As on 31st March 1950 |

CENTRAL BUDGET, 1949-50

Dr. John Matthai, India's Finance Minister, presented the second annual Budget of the Indian Dominion to the Constituent Assembly (Legislative) on February 28, 1949. The main features of the Budget were: the abolition of Capital Gains Tax, relief in Income-tax for lowest and medium income groups, reduction in Super-tax, removal of export duty on oilseeds and vegetable oils, new export duty on cigars and cigarettes, additional customs duties on luxury items, increase in excise duty on sugar and motor tyres and its extension on cotton cloth, and revision of postal rates. The Revenue for 1949-50 was estimated at Rs. 3,077.4 million (existing level of taxation) and expenditure at Rs. 3,225.3 million leaving a deficit of Rs. 147.9 million. The fresh taxation proposals were, however, expected to convert this deficit into a nominal surplus of Rs. 4.5 million.

The following noteworthy points were made by the Finance Minister—as summarised by the Commerce Ministry's "Indian Trade Bulletin"—

The main problem before the country was that of keeping inflationary trends under control, and the Finance Minister mentioned the various measures taken to fight inflation.

The food position continued to cause anxiety, necessitating the import of four million tons of foodgrains from overseas this year.

The balance of payments position was on the whole satisfactory, but the position with regard to hard currency areas, from where substantial imports of food had to come, continued difficult.

The current year's deficit was placed at Rs. 15.5 million against Rs. 21.4 million originally anticipated.

At the existing level of taxation, revenue for 1949-50 was estimated at Rs. 3,077.4 million, expenditure at Rs. 3,225.3 million, leaving a deficit of Rs. 147.9 million.

Defence Services were estimated to cost Rs. 1,564.3 million this year and Rs. 1,573.7 million next year. In addition, capital outlay on defence will cost Rs. 99.1 million this year and Rs. 150 million next year.

For relief and rehabilitation of refugees, next year's Budget provided Rs. 98.5 million. In addition, a provision of Rs. 232.7 million had been made in the capital budget for loans and capital expenditure.

Expenditure on food subsidies in 1949-50 was estimated at Rs. 329.7 million. The expenditure this year would be Rs. 319.6 million.

Substantial provision had been included for expenditure on development in the Budget for next year and all productive and essential schemes would go forward.

Borrowings from the market next year were expected to amount to Rs. 850 million.

FINANCIAL YEAR 1948-49

Reviewing the financial position in the current year, Dr. Muttiah disclosed that revenue receipts were now estimated at Rs. 3,383.2 million against the budget estimate of Rs. 2,552.4 million. Expenditure was estimated at Rs. 3,398.7 million—an increase of Rs. 824.9 million over the budget figure, "which nearly wipes out the increase in revenue."

On the revenue side, customs duties were expected to yield Rs. 364.9 million more than the budget estimate; central excise Rs. 42.8 million more; income-tax an increase of Rs. 206.2 million (of which Rs. 53.8 million will accrue to Provinces as their share); the contribution from Posts and Telegraphs and Railways, an increase of Rs. 29.5 million and Rs. 28.4 million, respectively; profits from currency, an increase of Rs. 36.5 million. There were also certain pre-partition receipts amounting to Rs. 134 million and a carry-over of Rs. 13.3 million on account of Government's share of the profits on sugar stocks frozen in December 1947.

As regards increase in expenditure, the Finance Minister said that defence services accounted for Rs. 343.5 million of this increase, and civil estimates for the balance of Rs. 481.4 million.

FINANCIAL YEAR 1949-50

Referring to the new financial year 1949-50, Dr. Muttiah said that, at the existing level of taxation, he estimated the expenditure charged to revenue at Rs. 3,225.3 million, leaving a deficit of Rs. 147.9 million. The main heads of revenue were: Customs (Rs. 1,072.5 million), Central Excises (Rs. 677.5 million, including Rs. 70 million from the excise duty on cotton cloth); Income-tax (Rs. 1,550 million including Rs. 112.2 million on account of E.P.T., Rs. 120.1 million on account of Business Profits Tax, and Rs. 125 million advance payments of income-tax). He estimated the divisible pool of income-tax at Rs. 907 million, the Centre retaining Rs. 408.5 million, and leaving Rs. 438.5 million, as the share of the Provinces. Profits from currency and mint, after allowing for Pakistan's share, would amount to Rs. 97 million; revenue from Posts and Telegraphs to Rs. 302.6 million and working expenses and interest to Rs. 286.3 million, leaving a surplus of Rs. 16.3 million. The railways' contribution next year would be Rs. 47.2 million.

Of the total expenditure of Rs. 3,225.3 million, the defence services would account for Rs. 1,573.7 million and Civil expenditure for Rs. 1,651.6 million.

Making a reference to Indian States merged with Provinces, he said that ultimately, the revenue and expenditure of these States would be merged in those of the Provinces concerned or the Centre, as the case may be, depending on the subjects to which they relate. "But the process of integration is still incomplete and, for the present, the transactions of these States have been kept separate in a deposit account and not included in the revenue and expenditure of India. If, as may be hoped, the integration is completed in the course of the coming year, these transactions will be included in the revised estimates for the year."

PLANNING AND DEVELOPMENT

Regarding post-war planning and development, the Finance Ministers said that substantial amounts had been included in the budget for grants to Provinces and Central schemes. It was not the Centre's intention that the scale of assistance promised to the provinces for development schemes and on which plans had been formulated should be reduced. "All that is happening is that the pace of this assistance is being temporarily slowed down in view of the urgent need for economy." A provision of Rs. 208.1 million for grants and Rs. 492.5 million for loans had been included in the budget for next year. For Central schemes of development, including resettlement, provision of Rs. 128.3 million had been made in the revenue budget and Rs. 149.7 million in the capital budget. The preliminary investigations into the various river valley projects would go forward and a beginning would be made in the starting of basic industries such as the setting up of a shipping corporation, new steel works, and the manufacture of telephone and wireless equipment, synthetic oil, machine tools, cables, diesel engines, and heavy electrical equipment.

Special transactions in the capital budget this year included a payment to the U.K. Government for the purchase of annuities for meeting sterling pensions, amounting for a net debit of Rs. 2,156.8 million this year and a recovery of Rs. 74.2 million next year for which credit had been taken; payment, again, to the U.K. as part of the sterling balances agreement of Rs. 1,333.3 million for defence stores and installations against which Rs. 515.7 million would be recovered this year and Rs. 118 million next year from Pakistan, as also from the sale of surpluses and outlay of Rs. 59.3 million on the acquisition of shares of the Reserve Bank of India this year.

WAYS AND MEANS

Regarding the ways and means position, the Finance Minister said that, owing to the stagnation in the capital market, it had not been able to borrow on the scale originally contemplated. For next year, he had made a modest provision of Rs. 850 million for market loans, but if conditions improved, the scale of borrowing would be raised. This include repayment during the year of the 3 per cent. loan 1949-52.

FINAL REVENUE POSITION

Coming to new taxation proposals, including reliefs, the Finance Minister indicated that the final position, after taking into consideration the effect of the new taxation proposals, would be as follows:—

(In Millions of Rs.)

| | Final Budget Estimates for 1949-50 |
|-------------------|---------------------------------------|
| Revenue | 9,229.8 |
| Expenditure | 3,225.3 |
| Surplus | 4.5 |

TAX RELIEFS

In the field of direct taxation reliefs, the first proposal was to abolish the Capital Gains Tax. Loss of revenue would be Rs. 10 million, approximately.

The second proposal was to reduce income-tax on incomes up to Rs. 10,000 by a quarter of an anna.

The third proposal was to give a reduction in super-tax on earned incomes in excess of Rs. 150,000 and in the maximum rate of super-tax on unearned incomes. The rate of tax on earned incomes above 150,000 will be reduced by 14 annas in each slab, leaving the maximum tax—taking income and super-tax together, at 14 annas. The maximum rate of tax on unearned incomes will be reduced by half an anna to 10 annas. These concessions were estimated to cost Rs. 61 million.

As for indirect taxation reliefs, the Finance Minister proposed the abolition of the export duty on oilseeds and vegetable oils with a loss of revenue of Rs. 15 million. As a measure of aid to civil aviation, he proposed to give a rebate of half the duty on aviation spirit used by air companies, flying clubs and others. This was estimated to cost Rs. 4 million.

NEW AND ADDITIONAL TAXES

Here is a list of new taxes and other changes: the existing surcharge on air mails was abolished and the rate for letters and postcards revised. The rate for letters was raised from 14 annas to 2 annas for the first tola, the rate for each subsequent tola or for fraction of a tola remained unchanged at one anna per tola. The rate for postcards was raised to nine pices. Estimated net revenue from all this is Rs. 28.4 million.

The import duty on motor spirit, and with it the excise duty was raised from 12 annas a gallon to 14 annas a gallon. The import duty on betelnuts was raised from 5 annas a lb. to 7 annas a lb., with the existing preference of half an anna on imports from British colonies to yield Rs. one million. A new export duty of 15 per cent. *ad valorem* was levied on cigars, cigarettes, cheroots which will yield Rs. 6 million. The duty on liquor, finer fabrics like silk, earthenware, china, paper other than newsprint, stationery articles, glass, photographic appliances, watches and clocks was increased so as to bring in Rs. 24 million.

CENTRAL EXCISE DUTIES

Turning to Central excises, the Minister referred to the increase in the duty on motor spirit as complementary to the increase in the import duty. He proposed further changes in respect of sugar, tyres for motor vehicles and cotton cloth. The excise duty on sugar was raised from Rs. 3 per cwt. to Rs. 3-12 per cwt. to yield Rs. 15 million. Duty on tyres was raised from 15 per cent. to 30 per cent. to yield 7 million. The duty of 25 per cent. on superfine cloth levied this year was to continue, and in addition, a duty of 64 per cent. on fine cloth and 3 pias a yard on coarse and medium cloth was to be imposed. The estimated yield was Rs. 90 million.

BUDGET AT A GLANCE

LAND REVENUE

The principle underlying the land revenue system in the sub-continent has been from time immemorial on the basis that government is the Supreme Landlord and the revenue derived from land is by way of rent. The official term for the method of collection is "Settlement". These are of three types. The permanent *Zamindari* System is mainly found in the Bengal area, Bihar, the U. P. and parts of Madras and covers roughly an area of 120 million acres equivalent to 19 per cent. of the total agricultural area of the two Dominions. In the second group are the temporarily settled *Zamindars* such as *Malguzari*, *Maharwari*, *Khoti*, *Narwadari*, *Bhagdari*, *Inami* and *Taluqdari*. These are found mostly in the

C.P. the Punjab area, Sind and parts of the U.P. the Bengal area and Bombay covering about 30 per cent. of the area of the two Dominions. The remaining 51 per cent. or approximately 285 million acres are under the *ryotwari* system covering parts of Bombay and most parts of Madras, Berar, Sind, Assam and the Punjab area.

ABOLITION OF ZAMINDARIES

The Governments of Madras, the United Provinces, Bihar, Assam, C. P. and Berar, and West Bengal have decided to abolish the *Zamindari* system. To Madras goes the credit of being the first province to put a measure of this kind on the Statute Book. The Madras Bill received the assent of the Governor-General early in April, 1949.

In comparison with the Bihar Bill, the Madras enactment has less severe provisions. The latter legislation includes *inam* lands, over the treatment meted out to which there was much heated controversy both in the provincial press and legislature. Many of the *inamdars* were stated to belong to the lower middle class section of society, and their inclusion in the measure, it was pointed out, would mean their ruin in most cases.

The measure affects nearly 14 million acres of land and approximately 2,800 *Zamindaris* and 3,500 *inams*, and the total compensation to be paid to all the dispossessed is estimated at Rs. 17.50 crores. This works out to a flat rate of Rs. 12.5 per acre. The compensation per acre will be even less for the bigger *Zamindars*. The manner of payment of compensation has not been decided yet.

The Governor-General, it was reported, had made a specific suggestion while giving his assent to the Bill, that, when the rules relating to compensation were framed, they should be submitted to him for assent.

The Government of the United Provinces released, on June 10, 1949, the U. P. *Zamindari* Abolition and Land Reforms Bill, 1949. The salient features of the Bill are:

The acquisition of the interests of all the intermediaries on land on the payment of compensation amounting to eight times their net income to all the *Zamindars*, and rehabilitation grants at a graded rate, ranging from twenty to two times to all the smaller *Zamindars*, paying annual land revenue not exceeding Rs. 5,000.

The Bill seeks to evolve a new and simple and uniform system of land tenure, which combines the wholesome feature of peasant proprietorship with the development of self-governing village communities. In whom will be vested the ownership of all common lands and powers of land administration and management. In order to remedy the inefficiency and waste involved in the cultivation of the existing uneconomic holdings, the Bill makes provision for the encouragement and rapid growth of co-operative farming suited to Indian conditions.

To overcome financial and legal difficulties, the tenants are being asked to make voluntary contributions of ten times their rent. This will provide finance for the speedy abolition of *Zamindaris*, check inflation and utilise the peasants' savings for a productive purpose.

The Bill further protects the interests of those cultivators who do not at present enjoy any permanent rights in land, but whose displacement would lead to social injustice and grave economic difficulties. The general body of tenants to whom hereditary rights do not accrue and of the existing sub-tenants will be given security of tenure for a period of five years, after which they can, on payment of fifteen times the hereditary rate or the rent of their tenant-in-chief, acquire *ikhmidiari* rights (rights of a tenure-holder).

To prevent the re-emergence of the landlord-tenant system, the Bill restricts the right to letting only to disabled persons, such as minors, widows and persons suffering from physical or mental infirmity. To avoid accumulation of large holdings and the consequent exploitation of labour, no person will be permitted to acquire by sale or gift a holding of more than thirty acres.

It is proposed to extend the provisions of the Bill to Government estates when it becomes an Act. Separate legislation is under contemplation in respect of agricultural areas lying within the limits of municipalities, cantonments, notified areas and town areas. The question of scaling down the debts of intermediaries whose rights will be acquired, will also be dealt with by a separate Bill.

The Premier of the U. P. explaining the provisions of the Bill said that the total compensation and rehabilitation grants payable

under the Bill would amount to Rs. 140 crores. The proceedings for the determination of compensation to Zamindars would be completed within a year after the enactment of the Bill.

Pandit Pant added that the Bill "steered clear of the rocks which the Bihar and Madras Governments met over rules regarding payment of compensation to Zamindars."

In the case of Bihar, the Bill for abolition of Zamindari, passed earlier by the provincial legislature, was referred back by the Governor-General for a second time, suggesting a number of amendments in respect of certain clauses concerning mines minerals and compensation.

An Assam State Acquisition of Zamindari Bill, 1948, which provided for the abolition of the Zamindari system, is also passed by the provincial legislature.

As regards the West Bengal measure, the provincial government, in September 1948, received a communication from the Central Government indicating certain general principles. They included: (1) any policy with regard to the abolition of rent-receiving interests should have a certain uniformity all over India; (2) the Centre's capacity to help with grants or loans was strictly limited; and (3) as far as possible, nothing should be done to encourage inflationary tendencies. In another communication, the Central Government was reported to have stressed that if the scheme was to be proceeded with, the finance involved should be met from current revenues and paid in cash, and not from provincial reserves, and that it was desirable to go slow in the matter. In view of this, the West Bengal Government revised its programme and decided to implement its scheme by instalments by proposing to make a beginning with the Sunderbans.

In Bombay, with the introduction of the Bombay Tenancy Amendment Bill, the issue of abolition of non-ryotwari proprietary estates appears to have been shelved for the time being till the outcome of the Tenancy legislation, as amended in its latest form, is ascertained. The Revenue Minister, however, has given an assurance that the matter has not been altogether dropped by the Ministry and a comprehensive legislation would be introduced in course of time.

The abolition of Zamindari is not likely to augment provincial revenues over the next 30 to 40 years. Besides, the amount of compensation for all the provinces would be to the extent of Rs. 350 crores, and it is no easy task for the Central or Provincial Governments to raise the required amount by issue of loans.

The Bill to amend the Khoti Settlement Act, 1880, which became law in the Bombay Province in 1946, lays down that the Khoti villages will lapse to Government in the event of the co-sharers concerned failing to nominate a managing Khoti for two successive years. Towards the end of 1946, the Bombay Fragmentation (Prevention) and Consolidation of Holdings Bill was published for eliciting public opinion. The Bill seeks to prevent fragmentation and to achieve consolidation of scattered holdings and has now become Law.

INCIDENCE OF THE REVENUE

The incidence of the revenue charges varies according to the nature of the settlement, the class of tenure, and the character and circumstances of the holding. Under the Permanent Settlement in the old undivided Bengal Government derive rather less than Rs. 600,000 from a total rental estimated at Rs. 12,000,000. Under Temporary Settlements, 50 per cent. of the rental in the case of Zamindari land may be regarded as virtually a maximum demand. In some parts the impost falls as low as 35 and even 25 per cent. and only rarely is the proportion of half the rental exceeded. In regard to ryotwari tracts it is impossible to give any figure that would be generally representative of the Government's share. But one-fifth of the gross produce is the extreme limit, below which the incidence of the revenue charge varies greatly.

About sixty years ago, the Government of India were invited in an influentially signed memorial to fix one-fifth of the gross produce as the maximum Government demand. In reply to this memorial and other representations the Government of India (Lord Curzon being Viceroy) issued a Resolution in defence of their Land Revenue Policy. In it was stated that "under the existing practice the Government is already taking much less in revenue than it is now invited to exact" and "the average rate is everywhere on the down grade." This Resolution, together with the statements of Provincial Governments on which it was based, was published as a volume; it is still the authoritative exposition of the principles controlling the Land Revenue policy of the Government of India.

In a series of propositions claimed to be established by this Resolution the following points are noted:—(1) In Zamindari tracts progressive moderation is the keynote of the Government's policy, and the standard of 50 per cent. of the assets is more often departed from on the side of deficiency than excess; (2) in the same areas the State does not hesitate to interfere by legislation to protect the interests of the tenants against oppression at the hands of the landlords; (3) in Ryotwari tracts the policy of long-term settlements is being extended, and the proceedings in connection with new settlements simplified and cheapened; (4) local-taxation (of land) as a whole is neither immoderate nor burdensome; (5) over-assessment is not, as alleged, a general or widespread source of poverty, and it cannot fairly be regarded as a contributory cause of famine. At the same time the Government laid down as principles for future guidance: (a) large enhancements of revenue when they occur, to be imposed progressively and gradually, and not *per saltum*; (b) greater elasticity in revenue collection, suspensions and remissions being allowed according to seasonal variations and the circumstances of the people; (c) a more general resort to reduction of assessments in cases of local deterioration.

EXCISE

The Excise revenue in the sub-continent can be classified into two divisions— one derived from the Central Excise Duties and belonging to the Central Government's finance and the other derived from the manufacture and sale of intoxicating liquors, hemp drugs, toddy and opium. The latter is a provincial revenue. The revenue from the Central Excise Duties has increased by six times during the past decade. As against a comparatively small revenue of Rs. 7.66 lakhs in 1937-38 and Rs. 12.79 lakhs in 1942-43, the actuals for 1945-46 totalled Rs. 46.36 lakhs. The budget for 1949-50 estimated the revenue at Rs. 57.75 lakhs. These duties are at present levied on motor spirit, kerosene, sugar, matches, steel ingots, tyres, tobacco, vegetable product, betel-nut, coffee, tea and coal cess.

The Budget of the Government of India for 1944-45 brought in force important changes in the field of Central Excises. It raised the rates of duty on unmanufactured tobacco and on cigars and cheroots and included in the Central Excise Tariff betel-nuts, coffee and tea.

The following table shows provincial excise, together with the percentage they form of total revenue: (Source: "Commerce", April 30, 1946).

| | Excise Revenue | | Percentage to total revenue | |
|---------------------|----------------------------------|---------|-----------------------------|---------|
| | 1938-39 (In crores of rupees) | 1949-50 | 1938-39 | 1949-50 |
| Madras | 3.72 | 0.40 | 23.06 | 0.72 |
| Bombay | 2.90 | 4.95 | 23.29 | 10.14 |
| U.P. | 0.33 | 5.90 | 10.39 | 11.68 |
| C.P. | 0.64 | 1.78 | 14.98 | 0.37 |
| West Bengal | 1.59* | 5.97 | 12.40 | 18.75 |
| Orissa | 0.33 | 1.25 | 18.13 | 14.04 |
| East Punjab | 1.02* | 2.09 | 8.98 | 14.54 |
| Bihar | 1.20 | 4.00 | 22.90 | 16.36 |
| Assam | 0.35 | — | 13.56 | — |

* Undivided

A further change in respect of tobacco was proposed in the following year. Accordingly, the highest class of blue-cured tobacco in the excise tariff was sub-divided into three and subjected to a duty of Rs. 7-8, Rs. 5 or Rs. 3-8 per lb., according as it was intended for use in manufacturing cigarettes containing more than 60 per cent. more than 40 but not more than 60 per cent. or more than 20 but not more than 40 per cent. by weight of imported tobacco. In order to avoid double incidence, some of the provincial governments reached an agreement with the Centre by which they withdrew the provincial excise duty on tobacco in lieu of a share in the proceeds from the Centre's tobacco excise. Tobacco excise has been responsible for nearly half the receipts under Central Excise Duties.

In his Budget speech, Dr. Matthai announced that the import duty on motor spirit would be raised from 12 annas a gallon to 15 annas a gallon, and that the excise duty would also be similarly raised. This, he said, would bring the duty on motor spirit to the level of 1945-46, and bring in an additional revenue of Rs. 25.50 lakhs, taking Central Excises and Customs together. He further proposed changes in respect of sugar, tyres and cotton cloth. Accordingly, the duty on sugar was increased from Rs. 3 per cwt. to Rs. 3-12-0 per cwt., to yield Rs. 1.5 crores. The duty on tyres used for motor vehicles was raised from Rs. 15 per cent. *ad valorem* to 30 per cent. *ad valorem*, to bring an additional revenue of Rs. 70 lakhs.

The duty of 25 per cent. *ad valorem*, imposed on superline cloth from January 1, 1949, was not only proposed to be continued but also to levy a duty of 6½ per cent. *ad valorem* on fine cloth and a quarter anna per yard on coarse and medium cloth. Handlooms were exempted. The revenue from this additional duty on cotton cloth was estimated at Rs. 9 crores.

The Finance Minister also announced a rebate of half the duty on aviation spirit used by air companies, flying clubs and others. The loss of revenue expected was Rs. 0.40 crores. Other proposals included the rationalisation of the duty on matches. It was decided to have only two sizes, namely, 40's and 60's, and some slight readjustment was made in the rate of the duty. Factories whose annual output is less than five lakhs gross boxes, would benefit by the levy of a somewhat lower rate of duty. But these were not expected to involve any change in the revenue estimates. It was hoped the retail prices would not exceed 6 ples and 9 ples per box.

The provincial excise revenue in the sub-continent is derived from the manufacture and sale of intoxicating liquors, hemp drugs, toddy and opium. The percentage of excise to total revenues of the provincial Government increased from 16.0 to 24.5 between 1938-39 and 1945-46. Since then, however, excise revenue has been pushed into the background by the prohibition policy of the provincial governments. The budget estimates for 1948-49 foreshadowed a loss of over Rs. 3 crores in revenue of which Rs. 8.41 crores would be in Madras, Rs. 60 lakhs in the United Provinces and Rs. 37 lakhs in C.P. & Berar.

together with the percentage they form of total

SALT

The duty on salt is now abolished. The salt revenue was inherited by the British Government from Pre-British rule, together with a miscellaneous transit dues. These transit dues were abolished and the salt duty consolidated and raised. The demand for the abolition of salt duty was pressed by Mahatma Gandhi in 1928 who later launched a Civil Disobedience Movement to enforce it. Under the Gandhi-Irwin Pact, the right of an individual to manufacture salt for his own needs without paying the duty was recognised. The establishment of the Interim Government was, however, followed by the Local abolition of the duty with effect from April 1, 1947. As per the Finance Act, 1949, the duty on salt manufactured in, or imported by sea, or by land into, the provinces of India was discontinued.

There are four great sources of supply: rock salt from the salt range and Kohat Mines in the N.-W.F.P.; brine salt from the Sambhar Lake in Rajputana; salt brine condensed on the borders of the lesser Rann of Cutch; and a few salt factories in Bombay, Madras and at the mouth of the Indus. Broadly, one-half of the indigenous salt is manufactured by Government Agency; and the remainder under license and excise systems. In the Punjab before the partition and Rajputana today the salt manufacturers are under the control of the Northern India Salt Department, a branch of the Commerce and Industry Department. In Madras and Bombay the manufacturers are under the supervision of Local Governments. Special treaties with States permit of the free movement of salt except from the Portuguese territories of Goa and Daman, on the frontiers of which patrol lines are established to prevent the smuggling of salt into Dominion Territory.

From 1888-1903 the duty on salt was Rs. 2-8 per maund of 42 lbs. In 1903, it was reduced to Rs. 2. In 1905 to Rs. 1-8-0; in 1907 to Re. 1 and in 1910 it was raised to Rs. 1-4-0. The successive reductions in duty have led to a largely increased consumption, the figures rising by 25 per cent. between 1903-1908. In 1923 the duty was doubled bringing it again to Rs. 2-8. In 1924 it was reduced to Rs. 1-4-0. The duty remained at Rs. 1-4-0 from March 1924 to 29th September 1931. It was raised to Rs. 1-9-0 with effect from 30th September 1931. Prior to 17th March 1931, the excise duty and import duty on salt were always kept the same, but by the Indian Salt (Additional Import Duty) Act XIV of 1931, a temporary additional customs duty of 4½ annas per maund was imposed on foreign salt. In March 1933 the customs duty was reduced by two annas. With the last change the duty on salt manufactured in or imported by land stood at Rs. 1-9-0 per maund. This duty mentioned above is now abolished.

CUSTOMS

Import duties have varied from time to time according to the financial condition of the country. Before the 1857 upheaval they were five per cent. In the days of financial stringency which followed they were raised to 10 and in some cases 20 per cent. In 1875 they were reduced to five per cent.; but the opinions of Free Traders, and the agitation of Lancashire manufacturers who felt the competition of the Indian mills, induced a movement which led to the abolition of all customs dues in 1882. The continued fall in exchange compelled the Government of India to look for fresh sources of revenue and in 1894 five per cent. duties were reimposed.

Since the Great War of 1914-18, there has been a growing tendency towards larger reliance on Customs duties to meet the financial needs of the Centre. Between 1913-14 and 1924-25, a certain amount of shifting of the burden from the richer class to the masses was evident. Then came the policy of discriminating protection and of Imperial Preference in terms of the Ottawa Trade Agreement of 1932, which, in addition to the financial consideration shaped the Customs

tariffs. The Customs schedule was completely recast in the Budget of 1916-17 in order to meet the budgetary deficit and the tariffs were raised again in 1921-22 to fill in the large gap between the revenue and the expenditure. The Supplementary Finance Act of 1931 imposed fresh increases in the import duties and the Tariff Amendment Act of January 1, 1933, provided for giving effect to the Ottawa Agreement.

On the eve of the First World War, the revenue from Customs duties had totalled only Rs. 11.13 crores. By 1929-30 it reached Rs. 51.28 crores when the law of diminishing returns became operative and by 1938-39 it declined to Rs. 40.51 crores following the reduction in the international trade in the subsequent years of the war. The proceeds from the Customs duties in 1942-43 amounted to only Rs. 25.12 crores being the lowest for a quarter of a century. Since then, however, there has been a reversal of the trend and the revised estimates for 1946-47 placed the receipts at Rs. 87½ crores and those for 1947-48 at Rs. 93 crores. The revised estimates of Customs revenue for 1948-49 were Rs. 117.25 crores, and the Budget for 1949-50 placed Customs revenue at Rs. 107.25 crores.

The upward trend of receipts after 1942-43 is partly due to the improved situation in regard to imports and exports; but in the main it is to be traced to the surcharge imposed in that year and raised thereafter.

CHANGES IN 1949-50

The following changes should be noted in regard to the Customs in 1949-50: In pursuance of the policy of Government to give relief in respect of Customs duty on imports of materials for industry, the Finance Minister proposed to give relief in the case of a number of imported articles, the total cost of such remissions being estimated at Rs. 35 lakhs.

He also proposed to retain on the tariff the changes made by Ordinance in November last as part of the campaign against inflation and complete the process of raising the duties on luxury items, which was then begun, by a number of further minor changes in the tariff. To this effect, he announced the levy of a surcharge on liquor equivalent to the basic duty, to raise the surcharge from one-fifth to one-half on fabrics containing silk, art-silk, woollens, and cotton knitted apparel, to double the surcharge on artificial silk yarn and thread, earthenware and china, and to raise the duty on paper (other than newsprint), stationery articles, glass and glassware, cutlery, metal furniture, flashlights, photographic appliances, and clocks and watches. The additional revenue from all these changes was estimated at Rs. 2.4 crores.

It was also proposed to raise the import duty on motor spirit from 12 annas to 15 annas a gallon. This was estimated to bring an additional revenue of Rs. 2.55 crores—including the duty on motor spirits. The next proposal was to raise the import duty on beet-salts from 5 annas a lb. to 7½ annas a lb., with the existing preference of 6 pies a lb. for imports from British colonies. The yield from this was estimated at Rs. one crore.

In the sphere of export duties, it was proposed to have a new duty of 15 per cent. *ad valorem* on exports of cigarettes, cigars and cheroots. The estimated yield was Rs. 60 lakhs.

INCOME-TAX

Income-tax was first imposed in India in 1880, in order to meet the financial dislocation caused by the 1857 upheaval. It was levied at the rate of four per cent. on all incomes of five hundred rupees and upwards. Many changes have from time to time been made in the system, and the present schedule was consolidated in the Act of 1886. This imposed a tax on all incomes derived from sources other than agriculture which were exempted. On incomes of 2,000 rupees and upwards the rate was five pies in the rupee, on incomes between 500 and 2,000 rupees

the rate was four pies in the rupee. In March 1903 the minimum taxable income was raised from 500 to 1,000 rupees. The income-tax schedule was completely revised, raised, and graduated in the Budget of 1916-17. In the general scale of increased taxation imposed to meet the deficit arising out of war conditions.

Since then the process has been almost continuous and in every financial difficulty the authorities have turned to the Income-Tax as a means of raising fresh revenue.

The Supplementary Finance Bill of 1931 imposed surcharges on income-tax and super-tax to meet the emergency of that year. The surcharges were subsequently scaled down in succeeding years, but were not completely abolished until after the passage of the Income-Tax (Amendment) Act of 1939.

Taxation on income under Corporation, Income and Excess Profits Taxes provided the largest expansion in yield during the war. These three taxes contributed an increasingly higher portion of the total revenue, from 20.2 per cent. in 1940-41 to 49.1 per cent. in 1944-45. In 1945-46 it was as much as 57.2 per cent. whence it started declining. The rise in the rates of income-tax and the introduction of the Excess Profits Tax were the main contributory factors.

Relief to Industry.—The financial proposals for 1946-47 marked an important step in the direction of giving relief to the industry and the ordinary tax payer, though the year witnessed the amalgamation of the surcharges with the basic rates of income-tax and super-tax. These measures included:—(1) the grant of special initial depreciation allowances of 10 per cent. on new plant and machinery as well as allowances for expenditure on scientific research, (2) widening the scope of depreciation allowances so as to cover the loss of the asset by destruction or demolition and its extension to buildings, (3) the exemption from income-tax for two years in the case of buildings for residential purposes and an initial depreciation allowance of 15 per cent. for buildings used as business premises, (4) a net reduction of 1½ annas in the present total rate of income-tax and super-tax payable by a company from annas 7½ to annas 6 and additional super-tax at steepening rates on dividends, other than those payable at a fixed rate, in excess of 5 per cent. of the capital of a company (other than a private company) including reserves or 30 per cent. of the total income, whichever is higher, with a view to keeping the dividends within reasonable limits and encouraging the ploughing back of profits into industry, (5) reduction in the rate of tax in lower ranges and increase in the earned income allowance from one-tenth of the earned income, subject to a maximum of Rs. 2,000 in terms of income to one-fifth, subject to a maximum (in terms of income), of Rs. 4,000, (6) carry-over of the differential treatment in favour of earned income to the super-tax range at the rate of one anna in the rupee between Rs. 25,000 and Rs. 2 lakhs and of half an anna in the rupee between Rs. 2 lakhs and Rs. 5 lakhs, (7) an increase in the rate of income-tax on the balance of the income above Rs. 15,000 from annas 4-9 to annas 5-0, (8) an increase in the number of slabs subject to super-tax, resulting in a more gradual steepening of the rates, which will be more severe on the largest incomes than at present, (9) a reduction of the rate on life insurance companies from annas 5½ to annas 5, and (10) discontinuance of the provision for funding a portion of the tax in the case of income upto Rs. 6,000. In the following year, the minimum exemption limit was raised to Rs. 2,500.

POSITION IN 1949-50

Reviewing the financial position in the financial year 1948-49, Dr. Mathial stated that Income-tax receipts were placed at Rs. 20.62 crores more than what was estimated in the budget, largely as a result of the intensive drive for the clearance of arrears and the ordinance authorising the provisional collection of tax on the basis of the statements of the income of the assesses; but of this increase, he pointed out, Rs. 5.38 crores would accrue to the provinces as their share of the revenue.

Turning to the estimates for the next financial year 1949-50, the Finance Minister said that receipts from income-tax, which included Rs. 11.22 crores on account of Excess Profits Tax and Rs. 12.01 crores on account of Business Profits Tax, had been placed at Rs. 155 crores.

Referring to tax reliefs, Dr. Matthai proposed to give relief to income-tax payers in the lowest and medium income groups. The tax on incomes up to Rs. 10,000 was reduced by a quarter of an anna from one anna to nine pies in the second slab. This class, it was stated, had been severely hit by the rise in prices and a certain degree of relief in their case had been amply justified. The loss on this score was estimated at Rs. 3 crores.

As regards super-tax, the Finance Minister proposed two reliefs designed to meet the criticism that the existing level of taxation left little incentive for saving and investment, and that it was illogical to ignore the differentiation between earned and unearned income above Rs. 14 lakhs. In respect of earned income, he announced a reduction of an anna and a half in the rates charged on incomes above Rs. 14 lakhs, leaving the maximum rate of tax for income-tax and super-tax together at 14 annas. For unearned income, he announced a reduction of 6 pies in the maximum rate of super-tax. The cost of the two concessions was placed at Rs. 2.1 crores.

Of the total loss of Rs. 6.1 crores involved in the above two concessions (plus the loss of Rs. 1 crore on account of the abolition of the Capital Gains Tax), Dr. Matthai said, Rs. 3 crores would fall on the provinces, by reducing the divisible pool of income-tax, and the balance on the Centre.

Two further changes were also announced in this connection. In the budget for 1948-49, the previous Finance Minister had given a concession to companies with an income of Rs. 25,000 and below by reducing their income-tax to half the usual rates. This concession was meant to encourage the growth of smaller companies, but the reduction, which was allowed in income-tax, Dr. Matthai said, had given rise to considerable administrative difficulties wholly out of proportion to the amount involved or the benefit accruing to the companies. On a careful review of the position, Dr. Matthai came to the conclusion that, while the concession should be maintained, it should take the form of a rebate of half the Corporation Tax, and should be limited to public controlled small companies which are not branches or subsidiaries of bigger companies. The result of this change would be that the entire cost of the concession would fall upon the Centre, and the Provinces would not have to share it. But the amount involved was expected to be small and no specific provision was considered necessary on this account in the estimates for 1949-50.

ANOMALY REMOVED

The second change related to the taxation of incomes of privately controlled companies which do not declare their dividends in India. Dr. Matthai recalled that there was a serious anomaly in the administration of Income-Tax Law relating to the recovery of super-tax from shareholders in respect of dividends paid out of Indian profits, by companies incorporated outside this country. It was difficult to obtain from those companies information concerning the names of their shareholders and the amounts of dividends paid out of Indian profits, and there was, consequently, considerable loss of revenue. The problem of plugging this leakage was considered by the previous Finance Minister, Mr. R. K. Shanmukham Chetty, who introduced a scheme whereby an extra tax of one anna was imposed on all such companies, with a view partially to recouping the loss. As part of the scheme, an amendment was made to the Income-Tax Act so as to confer personal immunity from further taxation upon the shareholders of such companies. The amendment, however, had the effect of conferring immunity from super-tax

not only upon the dividends actually received, but also upon the dividends, which, under the operation of Section 23-A of the Act, could be deemed to have been received from privately owned companies. Therefore, if the matter had been left there, the profits of those companies would have escaped with an overall impost much lighter than that to which they were subject under the previous law. This point was met by applying to this category of companies the rates of income-tax and super-tax prescribed for individuals or associations, and the definition of "company" was altered to permit of this being done by executive action.

The arrangement, Dr. Matthai pointed out, had, however, not been satisfactory, and after a careful review of the matter, he decided that instead of attempting to tax each such privately controlled company as an individual, the principle of applying an average rate should be adopted. He accordingly announced that all corporations, whether Indian or non-Indian, should continue to be treated as companies, but a further super-tax of one anna should be paid by those privately-controlled companies that do not distribute their profits in India. This method was decided to be applied with the commencement of the year 1949-50. It would not, the Finance Minister said, involve any change in the revenue estimates.

Mention may also be made here of the complaint made by industry that the calculation of depreciation allowance for purposes of taxation on the original cost of the asset involved great hardship. The Government of India, in October 1948, decided that, for all new plant and machinery installed during the five years from April 1, 1948, depreciation allowance at double the ordinary rate would be allowed. Dr. Matthai announced that it had also been decided that, if by April 1, 1953, there was a drop in the general level of prices, the difference between the written down value of the assets and the corresponding value at the reduced price would be allowed as an additional depreciation allowance. For existing plant and machinery, it was decided to grant extra-depreciation allowance for increased wear and tear, if triple shifts were worked.

TAX LAW AMENDMENT

The Government of India introduced in the Constituent Assembly, on April 2, 1949, the Taxation Laws (Amendment) Bill to implement certain tax concessions to industry in order to stimulate production. The Bill was referred to a Select Committee on April 8 with instruction to report thereon before the last working day of the first week of the next session.

As the concessions to industry applied with effect from the assessment for the year 1949-50, and as the three Ordinances which the Bill sought to replace would expire before the Bill would be passed, it became necessary that the provisions of the Bill, till it was passed by the Assembly, be promulgated by an Ordinance. The Governor-General accordingly issued, on June 10, an Ordinance called the Taxation Laws Amendment Ordinance, 1949, incorporating therein such provisions of the Bill as were non-controversial.

The Ordinance amended the Income-tax Act to give effect to the concession of depreciation at double the existing rates on new buildings, plant and machinery set up on or after April 1, 1948, and also to the exemption from income-tax of the new industrial undertakings up to a limit of 6 per cent. of the capital employed. Both were for five years beginning with the assessment year 1949-50.

The life of the Ordinance, as usual, was only for six months.

OTHER TAXES ON INCOME

The Excess Profits Tax.—Was introduced in the budget proposals for 1940-41 when an impost of 50 per cent. on all abnormal War profits

above a taxable minimum of Rs. 30,000 earned since September 1, 1939 was introduced. These excess profits were calculated on the basis of a standard year between 1935-36 and 1939-40 at the option of the assessee. In the following year the tax was raised to 66½ per cent. The total collection under this head since its introduction in April 1940 to the end of 1946-47 (Budget) amounted approximately to Rs. 3.50 crores or 43 per cent. of the total taxes on income or 19.3 per cent. of the total revenue during these years before deducting the provincial share. The tax was completely abolished after March 31, 1946. However, refund of the collections from the E.P.T. has not been made. In March 1949, Dr. Matthai, Finance Minister, announced that it had been decided to postpone, for a further period of three years, the refund of deposits of the E.P.T., except for approved purposes. It might be noted that this tax was also in force in 1919 and 1920.

The Business Profits Tax.—Was imposed in 1947-48. In justification of the proposal, the Finance Member stated that the complete abolition of the Excess Profits Tax in the last years' budget was premature. The object of the Bill was to impose a special income-tax on the profits exceeding Rs. one lakh of business, professions and vocations. The charge proposed was 25 per cent. of the taxable profits; but the exemptions to agricultural income, life insurance business, etc., granted by the Excess Profits Tax were continued. The final Act reduced the rate of tax from 25 per cent. to 16½ per cent., and fixed a uniform abatement of 6 per cent. of the Capital or charge or Rs. 1 lakh or whichever is greater in place of the different criteria for companies and, for the purpose of computing abatement, the inclusion under paid-up capital of so much of the premia realised by a company for the issue of any of its shares as is retained in the business. The tax has been extended for the period 1949-50. Certain changes have also been announced. The following are relevant extracts from the Finance Act, 1949:—

(1) In sub-clause (a) of clause 4 of section 2 of the Business Profits Tax Act, 1947, for the figures "1948", the figures "1949" shall be substituted.

(2) The tax imposed by section 4 of the said Act shall, in respect of any chargeable accounting period beginning after 31st March 1948, be an amount equal to 10 per cent. of the taxable profits.

(3) For the purposes of the said Act "abatement" shall mean, in respect of any chargeable accounting period beginning after 31st March, 1948, a sum which bears:—

(a) in the case of a company not being a company deemed for the purposes of section 9 of the said Act to be a firm, to a sum equal to six per cent. of the capital of the company on the first day of the said period, computed in accordance with Schedule II to the said Act, or two lakhs of rupees, whichever is greater, or

(b) in any other case, to two lakhs of rupees, the same proportion as the said period bears to the period of one year.

Receipts on account of this tax is estimated at Rs. 12.01 crores.

The Taxation of Income (Investigation Commission) Bill.—Was also passed by the Legislature with certain amendments, recommended by the Select Committee, the most important of which is in regard to the Initiative for investigation which will rest entirely with the Central Government who will refer to the Commission for investigation and report any *prima facie* case of tax evasion. "It is notorious", stated the statement on objects and reasons of the Bill "that recently businesses and properties have changed hands for very large sums of money. Government are anxious to know how in spite of very high rates of taxation the large fortunes which these transactions imply have been accumulated." Towards the end of 1947, the Government of India announced the personnel of the commission.

The Act assigned two important duties to it, namely, to investigate and report on all matters relating to taxation on income, with particular reference to the extent to which the existing law relating to and procedure for the assessment and collection of such taxation is adequate to prevent evasion and to investigate specific cases referred to the Commission by the Central Government.

On a study of the working of the Income-tax Law and its administration during recent years, the Commission came to the conclusion that, on a long-term view, the first task was no less important than the second, and as work on the second had for various reasons necessarily to be slow, the Commission devoted a great part of its time till recently to the first task. This involved the examination of voluminous evidence tendered in reply to a comprehensive questionnaire which was issued, and the Commission recently submitted a long report in which it made recommendations on many points of law and of administration. These recommendations were being examined with a view to the necessary legislation being introduced as early as possible.

The Finance Minister, during the Budget session in March, announced that the Commission had completed investigation of a few specific cases referred to it by Government. But much progress, he said, was not possible for a variety of reasons. Firstly, it was only in April 1948 that the necessary staff for investigation work could be placed at the disposal of the Commission. This difficulty had since been overcome to some extent. Secondly, it was found that a good deal of general inquiry and collection of facts and figures was a necessary preliminary to the investigation of specific cases. These general inquiries and the collation of the materials collected took a considerable time but the work was now proceeding apace. Once this was completed, it was hoped that the disposal of the specific cases would be expedited.

The Finance Minister added that the possibility of disposing of the referred cases by agreed settlement was being explored, and a bill would shortly be placed before the Dominion Parliament for vesting the necessary powers for making such settlements in the hands of the Commission.

Progress of Revenue.—Prior to 1914, the receipts from taxation on income were hardly Rs. 3 crores; but they went up to Rs. 22 crores in 1921-22 owing to the increases in the rates. The industrial depression however, resulted in a setback in the following years and even in 1938-39, it did not exceed Rs. 17.28 crores. The war period witnessed a strong emphasis on this source for the purpose of Governmental finance

and the revenue from this source realised in 1945-46 amounted to Rs. 178.03 crores representing 49.4 per cent. of the total revenue. The revised estimates of taxes on income for 1948-49 were Rs. 158 crores, while the budget estimates for 1949-50 amounted to Rs. 148.90 crores..

SALES TAXES

The credit for introducing the sales tax first in India goes to Mr. C. Rajagopalachari, the Governor-General, and former Finance Minister and Premier of Madras. In 1939, when he was faced with the problem of finding an alternative source of revenue consequent on the introduction of prohibition in certain parts of Madras province, he hit upon the sales tax as a means of making up the loss of revenue. The yield could not be correctly assessed then, but it was roughly estimated to fetch anything between Rs. one crore and Rs. 10 crores in that province alone. Today sales tax forms the mainstay of most of the Provincial Governments. The sales tax in Madras, for instance, yielded a revenue of Rs. 13.03 crores in the financial year ended March, 1949. This was Rs. one crore more than the anticipated amount, and nearly Rs. 5 crores more than the realisation in 1947-48.

The following are the main features of the sales taxes in the provinces:—

In Madras dealers having a turnover of more than Rs. 10,000 have to pay at 3 pies in the rupee. For certain articles like automobiles, radio sets, electrical goods and cameras, 3 pies general sales tax, *plus* a special tax at 6 pies in the rupee in some cases and 3 pies in other cases at such single point in the series of sales by successive dealers as may be prescribed. For hides and skins and newspapers (which, in future, may have to pay an advertisement tax in lieu of sales tax), the tax is three pies per rupee on the turnover only at such single point in the series of sales as may be prescribed. In respect of bullion, the tax is leviable at the rate of one-fourth of one per cent. of the turnover, and only at such single point in the series of sales by dealers as may be prescribed. Exemption from the tax is granted to sales by licensed dealers of cotton, handspun yarn, and any cloth woven on handlooms wholly with handspun yarns, and sold by persons dealing exclusively in such cloth. An annual fee has to be paid to obtain licences for this purpose. A rebate of one half of the tax levied is granted to certain finished articles of industrial manufacture if they are meant for delivery outside the province.

Bengal, Bihar and Bombay have adopted a single-point sales tax on the last sales. From the following table (prepared by "Commerce"),

it will be seen that the sales tax fetches 9.87 per cent. of the total revenue in the C.P. and Berar and 20.18 per cent. in Madras:—

| | Sales tax (Rs. crores) | Percentage to total revenue |
|----------------|---------------------------|--------------------------------|
| Madras | 12.25* | 20.18 |
| Bombay | 6.83 | 13.99 |
| West Bengal .. | 4.85 | 15.23 |
| U. P. | 6.76 | 12.18 |
| Bihar | 2.80 | 11.45 |
| C. P. | 1.87 | 9.87 |

* Without taking into account new proposals.

The need for uniformity of sales tax has been increasingly felt, in view of the divergent methods and rates of the tax as between the provinces. Several changes were evident in the provincial budgets for 1949-50. The Government of Madras proposed to remove the exemption allowed on the first sale of agricultural products in regard to certain commercial crops. The tax on groundnut and cashewnut was increased by 50 per cent. The exemption on tea for export was withdrawn. Cotton, so far free from the tax, was to be taxed at three pies at one stage. (Later, on June 6, 1949, the Government published a Bill seeking to raise the rate of the general sales tax from 3 pies for every rupee to 4½ pies in the turnover). Bombay proposed to impose a sales tax of 3 pies per rupee on exports from the province. The schedule of exemptions was curtailed and a few more articles were added to the list of articles on which a tax at one anna was levied.

The Central Government asked the provinces to submit their views for bringing about uniformity in the administration, assessment and rates of the sales taxes. They were all reported to have expressed themselves against any centralisation of the tax. Some were in favour of exempting certain articles (like cement, steel and paper) from the tax, while others opposed it. Bombay, U.P. and W. Bengal wanted a single-point sales tax, while certain others, like Madras, wanted to maintain multi-point taxes. In view of such differences the Central Government have been urged by the business community, to evolve a well co-ordinated all-India policy in respect of the tax. It was reported in mid-June that the Government of India would bring before the Constituent Assembly before long certain proposals to ensure uniformity and restrict the levy of sales tax by the provinces under the new constitution of India. If a still earlier decision became necessary, it was felt that the Government of India Act, 1935, would have to be suitably amended.

Guide to Taxes on Income (1949-50)

Part I.

RATES OF INCOME-TAX

A. In the case of every individual, Hindu undivided family, unregistered firm and other association of persons, not being a case to which paragraph B or C of this Part applies—

| — | Rate. |
|---|--------------------------------------|
| 1. On the first Rs. 1,500 of total income | <i>Nil.</i> |
| 2. On the next Rs. 3,500 of total income | Nine ples in the rupee. |
| 3. On the next Rs. 5,000 of total income | One anna and nine ples in the rupee. |
| 4. On the next Rs. 5,000 of total income | Three and a half annas in the rupee. |
| 5. On the balance of total income | Five annas in the rupee. |

Provided that—

- (i) no income-tax shall be payable on a total income which, before deduction of the allowance, if any, for earned income, does not exceed the limit specified below;
- (ii) the income-tax payable shall in no case exceed half the amount by which the total income (before deduction of the said allowance, if any, for earned income) exceeds the said limit;
- (iii) the income-tax payable on the total income as reduced by the allowance for earned income shall not exceed either—
 - (a) a sum bearing to half the amount by which the total income (before deduction of the allowance for earned income) exceeds the said limit the same proportion as such reduced total income bears to the unearned total income, or
 - (b) the income-tax payable on the income so reduced at the rates herein specified,—whichever is less.

The limit referred to in the above proviso shall be—

- (1) Rs. 5,000 in the case of every Hindu undivided family which satisfies as at the end of the previous year either of the following conditions, namely:—

- (a) that it has at least two members entitled to a share on partition who are not less than 18 years of age; or
- (b) that it has at least two members entitled to a share on partition neither of whom is a lineal descendant of the other and both of whom are not lineally descended from any other living member of the family; and

- (2) Rs. 3,000 in every other case.

B. In the case of every company, not being a company to which paragraph C of this Part applies—

| — | Rate. |
|------------------------------|--------------------------|
| On the whole of total income | Five annas in the rupee. |

Provided that in the case of an Indian Company—

- (i) where the total income, as reduced by seven annas in the rupee and by the amount, if any, exempt from income-tax exceeds the amount of any dividends (including dividends payable at a fixed rate) declared in respect of the whole or part of the previous year for the assessment for the year ending on the 31st day of March, 1950, and no order has been made under sub-section (1) of section 23A of the Indian Income-tax Act, 1922 (XI of 1922), a rebate shall be allowed at the rate of one anna per rupee on the amount of such excess;
- (ii) where the amount of dividends referred to in clause (i) above exceeds the total income as reduced by seven annas in the rupee and by the amount, if any, exempt from income-tax, there shall be charged on the total income an additional income-tax equal to the sum, if any, by which the aggregate amount of income-tax actually borne by such excess (hereinafter referred to as "the excess dividend") falls short of the amount calculated at the rate of five annas per rupee on the excess dividend.

For the purposes of the above proviso, the expression "dividend" shall have the meaning assigned to it in clause (6A) of section 2 of the Income-tax Act, but any distribution included in that expression, made

during the year ending on the 31st day of March, 1950, shall be deemed to be a dividend declared in respect of the whole or part of the previous year.

For the purposes of clause (ii) of the above proviso, the aggregate amount of income-tax actually borne by the excess dividend shall be determined as follows:—

- (i) the excess dividend shall be deemed to be out of the whole or such portion of the undistributed profits of one or more years immediately preceding the previous year as would be just sufficient to cover the amount of the excess dividend and as have not likewise been taken into account to cover an excess dividend of a preceding year;
- (ii) such portion of the excess dividend as is deemed to be out of the undistributed profits of each of the said years shall be deemed to have borne tax, —
 - (a) if an order has been made under sub-section (1) of section 23A of the Income-tax Act, XI of 1922, in respect of the undistributed profits of that year, at the rate of five annas in the rupee, and
 - (b) in respect of any other year, at the rate applicable to the total income of the company, for that year reduced by the rate at which rebate, if any, was allowed on the undistributed profits.

C. In the case of every local authority and in every case in which, under the provisions of the Income-tax Act, income-tax is to be charged at the maximum rate:—

| — | Rate. |
|------------------------------|--------------------------|
| On the whole of total income | Five annas in the rupee. |

Part II.

RATES OF SUPER-TAX

A. In the case of every individual, Hindu undivided family, unregistered firm and other association of persons, not being a case to which any other paragraph of this Part applies—

| — | Rate, if income wholly earned. | Rate, if income wholly unearned. |
|---|--------------------------------------|-------------------------------------|
| 1. On the first Rs. 25,000 of total income | <i>Nil.</i> | <i>Nil.</i> |
| 2. On the next Rs. 15,000 of total income | Two annas in the rupee. | Three annas in the rupee. |
| 3. On the next Rs. 15,000 of total income | Three annas in the rupee. | Four and a half annas in the rupee. |
| 4. On the next Rs. 15,000 of total income | Five annas in the rupee. | Six annas in the rupee. |
| 5. On the next Rs. 15,000 of total income | Six annas in the rupee. | Seven annas in the rupee. |
| 6. On the next Rs. 15,000 of total income | Six and a half annas in the rupee. | Eight annas in the rupee. |
| 7. On the next Rs. 50,000 of total income | Seven annas in the rupee. | Nine annas in the rupee. |
| 8. On the next Rs. 1,00,000 of total income | Eight annas in the rupee. | Nine and a half annas in the rupee. |
| 9. On the next Rs. 1,00,000 of total income | Eight and a half annas in the rupee. | Ten annas in the rupee. |
| 10. On the balance of total income | Nine annas in the rupee. | Ten annas in the rupee. |

B. In the case of every local authority—

| — | Rate. |
|------------------------------|-------------------------|
| On the whole of total income | Two annas in the rupee. |

C. In the case of an association of persons being a co-operative society (other than the Sankatta Saltowners' Society in the Bombay Province) for the time being registered under the Co-operative Societies Act of 1912, or under an Act of a Provincial Legislature governing the registration of co-operative societies—

| | Rate. |
|---|-------------------------|
| 1. On the first Rs. 25,000 of total income. | Nil. |
| 2. On the balance of total income .. | Two annas in the rupee. |

D. In the case of every company —

| | Rate. |
|------------------------------------|--------------------------|
| On the whole of total income | Four annas in the rupee. |

Provided that —

- (i) a rebate at the rate of three annas per rupee of the total income shall be allowed in the case of any company which—
 - (a) in respect of its profits liable to tax under the Income-tax Act for the year ending on the 31st day of March 1950, has made the prescribed arrangements for the declaration and payment in the Provinces of the dividend payable out of such profits and for the deduction of super-tax from dividends in accordance with the provisions of sub-section (31) or (3E) of section 18 of that Act, and
 - (b) is a public company with total income not exceeding Rs. 25,000;
- (ii) a rebate at the rate of two annas per rupee of the total income shall be allowed in the case of any company which satisfies condition (a), but not condition (b), of the preceding clause; and
- (iii) a rebate at the rate of one anna per rupee of the total income shall be allowed in the case of any company which, not being entitled to a rebate under either of the preceding clauses, is—
 - (a) a public company the shares of which were offered for sale in a recognised stock exchange at any time during the previous year, or
 - (b) a company all of whose shares were held at the end of the previous year by one or more such public companies as aforesaid;

Provided further that the super-tax payable by a company the total income of which exceeds Rs. 25,000 shall not exceed the aggregate of—

- (a) the super-tax which would have been payable by the company if its total income had been Rs. 25,000, and
- (b) half the amount by which its total income exceeds Rs. 25,000.

Explanation.—For the purposes of this paragraph of this Part, a company shall be deemed to be a public company only if it is neither a private company within the meaning of the Indian Companies Act, 1913 nor a company in which shares carrying more than fifty per cent. of the total voting power were, at any time during the previous year, held or controlled by less than six persons.

E. In the case of an association of persons; being a co-operative society, other than the Sankatta Saltowners' Society in the Bombay Presidency, for the time being registered under the Co-operative Societies Act, 1912 (II of 1912), or under an Act of a Provincial Legislature governing the registration of co-operative societies—

| | Rate. |
|--|-------------------------|
| (1) On the first Rs. 25,000 of total income. | Nil. |
| (2) On the balance of total income .. | Two annas in the rupee. |

F. In the case of every company —

| | Rate. |
|------------------------------------|---------------------------|
| On the whole of total income | Three annas in the rupee. |

Provided that a rebate at the rate of one anna per rupee of the total income shall be allowed in the case of any company which, in respect of its profits liable to tax under the Indian Income-tax Act, 1922, for the year ending on the 31st day of March, 1949, has made the prescribed arrangements—

- (a) for the declaration and payment in the Provinces of India of the dividend payable out of such profits, and
- (b) for the deduction of super-tax from dividends in accordance with the provisions of sub-section (31) or (3E) of section 18 of the said Act.

INSURANCE

GENERAL BACKWARDNESS

Though during the period of the last war, Life Insurance business in the sub-continent registered a great progress over the past, when we compare the present position of Life Insurance business in the sub-continent with that of the other more advanced countries of the world we realise that India has yet a long way to go. The figures published in the Insurance Year Book show that at the end of the year 1935 the total Life Insurance business in force amounted to Rs. 235 crores distributed over 11 lakhs Policies, whereas the total Life Insurance business at the end of the year 1947 amounted to Rs. 619 crores distributed over 25 lakhs Policies. As the sub-continent holds within its borders 400 million people constituting one-fifth of the total population of the World, the figures appear insignificant altogether. On an average taking 4 members in a family there should be 100 million families in India over which are distributed 25 lakhs policies of Life Insurance. Thus only 2.5 per cent of families can claim protection of Life Insurance, while 97.5 per cent of the families are without such protection. This backwardness in the progress of Life Insurance in this country can only be attributed to the lack of development in the Commercial, Industrial, Agricultural and other allied fields, the lack of education and literacy in the masses, and above all the poverty of the Indian Nation. With the formation of National Government at the centre and with the popular ministries in the Provinces and with the various schemes for Post-war agricultural, industrial and economic development of the country envisaged by these Governments, Life Insurance is bound to thrive in the country. There are in all about 230 indigenous Life Offices in India. All have not enough business owing mostly to the backward economic condition of the country. Due to the requirements under Insurance Act, 1938, as well as owing to the strict supervision of the department of the Superintendent of Insurance, Indian Insurance Companies in general have been improving from day to day. The three main factors on which the life insurance business depends are (1) Mortality experience (2) Interest yield and (3) Expenses. Mortality experience of Indian Companies is very satisfactory on the whole. However, it could not be said of the other two factors. In the year 1938 the average yield realised on the funds of Life Insurance Companies was 5.15 per cent, while in 1947 it was reduced to 3.03 per cent, which is likely to show further reduction in 1948 owing to the disturbed political and economic conditions in India and elsewhere. The first consideration in regulating the investments of Funds of Life Offices should be to safeguard the Capital. Without jeopardising the safety of Capital, Insurance Companies can be enabled to earn better interest yield, if more investments are permitted by Law in Securities other than the Government Approved Securities under Section 27 of the Insurance Act, 1938.

INCOME-TAX

Linked with the question of yield on investments is the question of income-tax to be paid by Life Offices. Insurance Associations have already made representations to the Government of India to the effect that we should be assessed on the interest less expenditure basis as is done in the United Kingdom since the year 1925. The amounts paid to, reserved for or expended on behalf of the policyholders should be exempted from the income-tax. Pending consideration by the Government of the major question of the revision in the basis of the assessment of life offices, they have urged upon the Government of India to grant immediate relief to Life Offices by lowering the ceiling rate of tax from 60 to at least 45 pias in a Rupee. Insurance Companies claim that immediate relief in this respect is very necessary as the low interest yield now realised is being further reduced owing to its being subjected to a rate of tax as high as 5 annas in a Rupee. Further in the case of Life Offices which are being taxed on the surplus

basis it has been found that several such offices during recent years had not been able to disclose a substantial surplus owing mainly to the operation of the interest factor, in their business. However, tax is always deducted at the source at the highest rate prevailing under the provisions of the Income Tax Act which amounts to their credit with the Income Tax Department and is refunded only subsequently if no surplus is disclosed at their following valuation. Owing to deductions of income-tax at source at the high rate of 60 pias in a Rupee a substantial amount of the revenue of interest on the investments remains locked up with the Income tax Department which is refunded without interest after a considerable lapse of time. It is therefore essential in the interests of life policyholders that the Government of India should lower the ceiling rate of tax from the present high level to at least 45 pias in a Rupee. That, broadly speaking, is how the case is presented.

THE INSURANCE AMENDMENT BILL

The expenses of procuration of business as well as overhead expenses in this country are very high compared to other countries. The Insurance (Second) Amendment Bill contemplates the working of a Company through Chief Agents or Branches and licensed Agents. The present system of organisation adopted by a few big Companies who have large resources is having a Branch or Branches, under which are Inspectors paid on salary basis and licensed Agents. Medium sized and small companies being not sure of the turnover of the business, have put in place of paid-inspectors, special agents or (Employer of Agents other than Chief Agents who are paid on the basis of commission). The provision in the Bill preventing the employment of intermediaries, either inspector or organiser or special agents, on terms other than salary basis, will hamper the working of companies by Chief Agents and as a consequence the increase in costs will be inevitable. Such a provision will also place a handicap on companies at a time when companies will be required to make great efforts to reduce their costs to the limits in the Bill. It is suggested for the consideration of the legislature that Insurance Companies should be allowed the freedom to employ intermediaries like the Inspectors or Organisers or Special Agents on the basis of commission or fixed remuneration or both. Such a provision would considerably assist Insurance Companies both in building up their business and in complying with the provision of the Bill as regards restriction of over-all costs.

DISTRIBUTION OF COMPANIES

The total number of insurers registered under the Insurance Act, 1938, up to 30th September, 1948 was 333 of which 232 Insurers were Indian insurers and 107 were non-Indian insurers.

Of the 232 Indian insurers 89 had their head offices in the Bombay Presidency, 57 in the West Bengal, 33 in the Madras Presidency, 11 in the East Punjab, 18 in Delhi Province, 8 in the United Provinces, 3 in the Central Provinces, one each in Bihar and Ajmer-Merwara, and 10 in Indian States.

Of the 107 non-Indian insurers 67 (including 5 insurers holding standing contracts with Lloyds) were constituted in the United Kingdom, 21 in the British Dominions and Colonies, 9 in the United States of America, 3 in Switzerland, 1 in Java and 6 in Pakistan.

Most of the Indian insurers carry on life insurance business only. They are 144 in number, and of the remaining 88 Indian insurers, 47 carry on life business along with other insurance business, and 41 carry on insurance business other than life only. Of the Indian insurers, 40 are either Mutual Insurance Companies or Co-operative Insurance Societies. Further there are a few pension funds, mostly connected with Government services, and the Postal Insurance Fund which are exempt from the operation of the Insurance Act.

As regards non-Indian insurers, most of them carry on insurance business other than life. Out of the total number of 107 non-Indian insurers, 87 carry on insurance business other than life, 5 carry on life business only, and 15 carry on life business along with other insurance business.

LIFE INSURANCE BUSINESS

The total net new life insurance business effected in India during the year 1947 amounted to 511,000 policies insuring a sum of Rs. 12,640 lakhs and having an annual renewal premium of Rs. 9.93 crores, of which the new business done by Indian insurers amounted to 5,34,000 policies insuring a sum of Rs. 114 crores and having a yearly renewal premium income of Rs. 6.22 crores. The new life business effected by non-Indian insurers amounted to 20,000 policies insuring a sum of Rs. 12.31 crores and having a yearly renewal premium income of 0.71 crores.

The average sum insured per policy under the new policies issued in India by Indian insurers was Rs. 2,177 and under those issued by non-Indian insurers Rs. 6,170.

The total net life insurance business effected in India and remaining in force at the end of 1947 amounted to 1,36,000 policies insuring a total sum of Rs. 6,49.07 crores including bonus additions and having an annual premium income of Rs. 32.81 crores. Of this the share of Indian insurers is represented by 2,70,000 policies insuring a sum of Rs. 3,47.17 crores and having an annual premium income of Rs. 26.98 crores. The share of non-Indian insurers is represented by 220,000 policies insuring a sum of Rs. 101.90 crores and having an annual premium income of Rs. 6.83 crores.

The following table shows the New Sums Insured by Indian Life Offices, the Average Sum Insured Per Policy and the Total Sums Insured in Force at the end of the year—

| Year. | New Sums Insured. | | Total Sums Insured in Force. |
|-------|--------------------------|---------------------------------|--|
| | Sum insured (in crores). | Average sum insured per policy. | Sum insured including bonus additions (in crores). |
| | Rs. | Rs. | Rs. |
| 1932 | 19.66 | 1,697 | 105.02 |
| 1935 | 24.83 | 1,673 | 118.77 |
| 1934 | 28.92 | 1,547 | 136.65 |
| 1935 | 32.81 | 1,565 | 151.63 |
| 1936 | 37.80 | 1,532 | 174.67 |
| 1937 | 41.74 | 1,520 | 196.74 |
| 1938 | 46.68 | 1,498 | 218.86 |
| 1939 | 45.06 | 1,511 | 232.42 |
| 1940 | 35.23 | 1,685 | 243.91 |
| 1941 | 36.68 | 1,841 | 256.43 |
| 1942 | 37.89 | 2,193 | 266.80 |
| 1943 | 65.24 | 2,258 | 310.95 |
| 1944 | 99.20 | 2,208 | 366.15 |
| 1945 | 122.78 | 2,128 | 459.42 |
| 1946 | 131.43 | 2,205 | 514.50 |
| 1947 | 114.06 | 2,177 | 547.17 |

ANNUITY BUSINESS

The total new annuity business effected during the year 1947 was for the amount of Rs. 10,77,000 per annum, of which the share of Indian insurers was Rs. 3,28,000 per annum. The total annuity business remaining in force at the end of the year was the amount of Rs. 65,35,000 per annum, of which the amount payable by Indian insurers was Rs. 29,80,000 per annum, and by non-Indian insurers Rs. 35,55,000 per annum.

Some Indian Life Offices have been operating outside India also. The total new sums insured by these offices outside India in 1945 amounted

to 16,500 policies insuring Rs. 5.51 crores having an annual renewal premium of Rs. 0.35 crore, and the total business remaining in force at the end of 1947 amounted to 84,500 policies insuring Rs. 25.35 crores and having an annual premium income of Rs. 1.43 crore.

The total income of Indian and non-Indian insurers during 1947, in respect of their life insurance business amounted to Rs. 49.56 crores, while the total outgo was Rs. 24.10 crores.

The total income of Indian and non-Indian insurers during the year 1947, in respect of their life insurance business was made up of :-

(In lakhs of rupees.)

| Particulars of Income | Indian Insurers | Non-Indian Insurers |
|--------------------------------------|-----------------|---------------------|
| | Rs. | Rs. |
| Premium | 29.60 | 5.74 |
| Interest, Dividend and Rents | 3.63 | 1.21 |
| Other Receipts | 50 | 48 |
| Total | 33.13 | 7.43 |

The total outgo of these insurers during the year in respect of the life insurance business was made up of :-

(In lakhs of rupees.)

| Particulars of Outgo | Indian Insurers | Non-Indian Insurers |
|--|-----------------|---------------------|
| | Rs. | Rs. |
| Claims by death | 3.56 | 8.4 |
| Claims by Maturity | 3.98 | 1.81 |
| Annuities | 4 | 13 |
| Surrender value | 39 | 76 |
| Expenses of Management | 8.83 | 1.15 |
| Depreciation and Transfer to Investment | | |
| Reserves, etc. | 50 | 25 |
| Miscellaneous | 17 | 1.58 |
| Transfer to Shareholders' Reserves and dividends | 6 | 1 |
| Total | 17.57 | 6.53 |

INTEREST RATE & EXPENSE RATIO

The net rate of interest earned on the mean life insurance funds during the year 1947 by Indian insurers was 3.03 per cent. The net rates of interest realized on mean life insurance funds by the Indian insurers in each of five years were as follows :-

| Year. | 1943 | 1944 | 1945 | 1946 | 1947 |
|------------------------------------|------|------|------|------|------|
| Rate of Interest per annum | 3.88 | 3.64 | 3.48 | 3.20 | 3.03 |

The total expenses of management of Indian insurers in respect of life insurance business, expressed as a percentage of the Premium Income during each of five years was as follows :-

| Year. | 1943 | 1944 | 1945 | 1946 | 1947 |
|-----------------------|------|------|------|------|------|
| Expense Ratio | 27.9 | 31.2 | 32.2 | 31.2 | 30.4 |

If the figures of half a dozen insurers having the largest premium income are excluded, the expense ratio in the case of remaining insurers would be as under :-

| Year. | 1943 | 1944 | 1945 | 1946 | 1947 |
|-----------------------|------|------|------|------|------|
| Expense Ratio | 31.4 | 36.1 | 37.6 | 37.8 | 35.1 |

The net rates of interest realised in India on mean life insurance funds by the non-Indian insurers in each of five years were as follows :-

| Year. | 1943 | 1944 | 1945 | 1946 | 1947 |
|------------------------------------|------|------|------|------|------|
| Rate of Interest per annum | 2.79 | 3.35 | 3.22 | 3.18 | 3.10 |

The total expenses of management of non-Indian insurers in respect of life insurance business in India expressed as a percentage of the premium income during each of five years was as follows :-

| Year. | 1943 | 1944 | 1945 | 1946 | 1947 |
|-----------------------|------|------|------|------|------|
| Expense Ratio | 16.0 | 18.6 | 19.3 | 20.7 | 20.0 |

NON-LIFE BUSINESS

The net premium income of all insurers under insurance business other than life insurance during 1947 was Rs. 13.78 lakhs (Rs. 11.50 lakhs in 1946) of which the Indian insurers share was Rs. 8.41 lakhs and that of the non-Indian insurers Rs. 5.37 lakhs. The total amount was composed of Rs. 6.57 lakhs from Fire, Rs. 2.60 lakhs from Marine, and Rs. 1.00 lakhs from Miscellaneous Insurance business.

The Indian insurers received Rs. 4.71 lakhs from Fire, Rs. 1.31 lakhs from Marine, and Rs. 2.16 lakhs from Miscellaneous Insurance business.

The non-Indian insurers received Rs. 2.17 lakhs from Fire, Rs. 1.39 lakhs from Marine, and Rs. 1.81 lakhs from Miscellaneous Insurance business.

Some Indian insurers who transact fire, marine and miscellaneous insurance business also operate outside India. These insurers had a net premium income of Rs. 2.11 lakhs in 1947 from business outside India showing an increase of Rs. 69 lakhs over last year.

ASSETS OF INSURERS

The assets of all the Indian insurers amounted to Rs. 16,785 lakhs on 31st December 1947, which were held invested in :-

(In lakhs of rupees.)

| Particulars. | Amount. |
|--|---------|
| Indian Government Securities | 16 |
| Securities of Indian States | 96.07 |
| British, Colonial and Foreign Government Securities | 1.24 |
| Municipal, Port Trust and Improvement Trust Securities | 1.36 |
| Mortgages on Property | 9.66 |
| Loans on Policies | 3.08 |
| Loans on Stocks and Shares | 6.90 |
| Other Loans | 42 |
| Shares in Indian Companies | 95 |
| Land and House Property | 19.27 |
| Agents' Balances, outstanding Premium and Interest, etc. | 6.23 |
| Deposit, Cash and Stamps | 10.24 |
| Miscellaneous | 9.59 |
| | 2.84 |

The following table shows the assets in India of non-Indian insurers :-

(In lakhs of rupees.)

| Insurers constituted in | Total Assets in India of | Life or composite companies | Non-life companies |
|--------------------------------|--------------------------|-----------------------------|--------------------|
| United Kingdom | 17.10 | 2.75 | |
| Dominions and Colonies | 20.65 | 1.56 | |
| U.S.A. | | 23 | |
| Switzerland | 45 | 6 | |
| Java | | 1 | |
| Total | 38.20 | 4.64 | |

PROVIDENT INSURANCE SOCIETIES

On 30th September 1948 there were in existence 108 provident societies.

The total new business effected by the societies during the year 1947 amounted to 19,926 policies insuring a sum of Rs. 1,23,19,500 and annuities for Rs. 700 per annum. The premium income received during the year on these policies amounted to Rs. 5,07,500. The business in force at the end of the year amounted to 76,835 policies, insuring a total sum of Rs. 3,01,67,300 including bonuses and annuities for Rs. 26,100.

The total life insurance fund of these societies at the end of 1947 amounted to Rs. 6,82,22,000 showing a net increase of Rs. 7,12,000 over 1946.

The net rate of interest realized on mean life funds of the societies in the year was 3.08 per cent., and the total expenses of management expressed as a percentage of the premium income was 45.22.

INSURANCE AGENTS

Insurance agents constitute an important pillar of the insurance structure. The rapid increase in their number during the last few years, as indicated by the table below, naturally raises the question whether the growth has kept within healthy limits or whether the evil of overcrowding is present in this profession as well.

| Year. | 1943 | 1944 | 1945 | 1946 | 1947 |
|--------------------------|--------|--------|---------|---------|---------|
| Number of Agents | 65,921 | 89,202 | 122,926 | 156,992 | 171,169 |

It will be seen that the increase in the total number during 1947 was 11 per cent. of the total number of the licences issued during 1946. It is also evident that as many as about 43 per cent. of the total number of licensed agents did not renew their licences for the next year, these apparently being "casual" agents who did not care to continue in the line.

This gradual increase in the volume of new business for the past several years does not in itself indicate that the country has become more insurance-minded. It is more or less a result of the war-time prosperity of the class taking to insurance. In this connection it is important to stress once again the oft-repeated warning about the relative importance of quality and quantity in life insurance business. Quantity implying merely the size of the premium income should never be the objective. Where insurance is at its best, the underwriter is supreme, ignoring the demand for premium income at the cost of the quality of the business.

In the case of companies doing insurance business other than life, the premium incomes, in the majority of cases, show a shrinkage in the Marine branch. This is an inevitable result of the complete cessation of war risk premiums. The disturbed post-war conditions have also contributed to this decline in as much as normal trade facilities are still lacking and war-time controls have not yet completely disappeared. It will be some time yet before the normal flow of trade begins. The claims have increased.

The premium incomes of both the Fire and Miscellaneous branches of these companies have generally increased. The claims in the Fire business show a welcome drop; while in the Miscellaneous business the position remains where it was in 1946.

Insurance in modern times plays an important part in civilian life. The world is engaged in far-reaching schemes of reconstruction and India is particularly engaged in schemes of industrial expansion which will help in raising the standard of living of its teeming millions. When these schemes come to maturity insurance business of all classes is bound to increase.

TARIFF BOARD

UNTIL 1919 India had no authority to shape her fiscal policy without the approval of the Secretary of State for India. In that year, the Joint Select Committee on the Government of India Bill recommended that "a satisfactory solution of the question (of fiscal policy) can only be guaranteed by the grant of liberty to the Government of India to devise those tariff arrangements which seem best fitted to India's needs." It further recommended that "the Secretary of State should, as far as possible, avoid interference on this subject when the Government of India and its Legislature are in agreement, and they think that his intervention, when it does take place, should be limited to rate-guarding the international obligations of the Empire or any fiscal arrangements within the Empire to which His Majesty's Government is a party." It, however, took two more years for the acceptance of this principle by the Secretary of State.

Armed with this convention and as a preliminary step towards devising the guiding principles of a fiscal policy for the country, a Resolution was issued on October 7, 1921 about the appointment of a Fiscal Commission "to examine with reference to all the interests concerned the Tariff Policy of the Government of India including the question of the advisability of adopting the principle of Imperial Preference, and to make recommendations." It was the report which really laid the foundation of the tariff policy for the country and should be given credit for what the industrial process took place during the last quarter of a century.

THREE PRINCIPLES

The Commission came to the conclusion that the industrial development of the country had "not been commensurate with the size of the country, its population and its natural resources" and, therefore, recommended "a policy of protection to be applied with discrimination." It distinguished between basic and non-basic industries and recommended that, as a rule, non-basic industries might be subject to certain conditions, be assisted by means of import tariff and basic industries should be helped by means of bounties in order to see that the cost of the manufactured articles used by other industries did not rise. Again, it emphasised that export duties on raw or semi-manufactured goods should not be resorted to as a means of assisting industries.

For the purpose of enabling the Government of India to pursue this policy, the Fiscal Commission recommended the creation of a permanent Tariff Board charged with the task of examining the claims of various industries to protection and of watching the operations of the fiscal measures that might be taken by Government from time to time. Simultaneously, the Commission laid down three important conditions for the guidance of the Board as a prerequisite to any recommendation by it for State help. They were: (1) The industry must have natural advantages; (2) The industry is such that without protection it is not likely to develop at all or so rapidly as is desirable in the interest of the country; (3) The industry must be one which will eventually be able to face world competition without protection. It further made clear that the question of the renewal of protection to an industry should also be examined by the Tariff Board from time to time.

FIRST TARIFF BOARD

The Government of India accepted the recommendation of the Fiscal Commission in regard to the establishment of a Tariff Board and set up the first Tariff Board in July 1923 for a period of one year. The life of the Board, however, was extended from year to year until the outbreak of the World War II though the personnel changed from time to time. During this period, the Tariff Board examined the

claims of a number of industries for protection and, as a result of its recommendations, help by means of protective tariffs, bounties or subsidies was given to steel, railway wagons, wire and wire-nails, bolts and nuts, paper, printers' ink, plywood, safety matches, transmission belting, glass, sugar, silk, the cotton textile industry and a variety of other industries.

During the Second World War, the need for starting new industries to fill in the gap created by the cessation of imports was keenly felt and the Government of India made a definite promise about protection and help if the need arose after the termination of the war. In the statement on industrial policy issued by the Central Government on April 25, 1945, it was announced that pending the formulation of a tariff policy appropriate to the post-war needs and conditions of the country and the establishment of permanent machinery for the purpose, Government would set up machinery for investigation claims from various industries, which were started or have developed in war time and are established on sound lines, for assistance or protection during the transition period.

WAR-TIME INDUSTRIES

For the purpose of these and any subsequent investigation, the Government of India set up, on August 1, 1945, a wartime Tariff Board for a period not exceeding two years in the first instance. The Board consisted of Sir R. K. Shannukham Chetty (President), Mr. C. C. Desai, Dr. H. L. Dey and Dr. Nazir Ahmed. The communication issued in this connection stated:

In the case of each industry, the Board will, after such examination as it considers necessary, report whether the industry satisfies the following conditions:—

(1) that it is established and conducted on sound business lines; and (2) that having regard to the natural or economic advantages enjoyed by the industry and its actual or probable costs, it is likely, within a reasonable time, to develop sufficiently to be able to carry on successfully without protection or State assistance; or (3) that it is an industry to which it is desirable in the national interest to grant protection or assistance and that the probable cost of such protection or assistance to the community is not excessive.

Where a claim to protection or assistance is found to be established, the Board will recommend:

(i) whether, at what rate and in respect of what articles or class or description of article, a protective duty should be imposed; (ii) what additional or alternative measure should be taken to protect or assist the industry; and (iii) for what period, not exceeding three years, the tariff or other measures should remain in force.

In making its recommendations, the Board was directed to give due weight to the interests of consumer in the light of the prevailing conditions and also to consider how the recommendations affect industries using the articles in respect of which protection was to be granted. Since relief, to be effective, should be attended to without delay, the Board was requested to complete its inquiries with all possible expedition.

With these general terms of reference, the Board was entrusted with inquiries concerning numerous industries in the first one year and a half. Following the division of India, however, the Board's activities became rather restricted owing to the appointment of the President, Mr. Chetty, as Finance Minister, Government of India, the transfer of its Member-Secretary, Mr. C. C. Desai, to the States Ministry, Government of India, and the decision of its third member, Dr. Nazir Ahmed, to opt out for service with Pakistan.

RECONSTITUTED BOARD

The Tariff Board was reconstituted in November 1947 with the following members: Mr. G. L. Mehta (President), Dr. H. L. Dey and Dr. B. V. Narayanaswamy Naidu. The Government resolution issued on November 3 stated that it would function for a period of three years. In addition to the terms of reference fixed earlier, the reconstituted Board is now entrusted with the following functions:

(1) To report to Government, as and when required, factors that lead to increase in the cost of production of Indian manufactured goods as against imported articles; and

(2) To advise Government, as and when required, on measures whereby internal production may be secured on the most economical cost basis.

The Government of India have since expanded the Board to enable it to cope with the pressure of work pending for disposal. They have appointed two new Members to the Board, namely, Mr. M. L. Rahman and Mr. B. N. Adhikari. The latter joined the Board on July 1, 1949.

NEW FUNCTIONS

Subsequently, by Resolution dated August 6, 1948, Government entrusted the Board with the following new functions besides those already enumerated above:

(1) to enquire, as and when required by Government, into the cost of production of a commodity produced in the country and to determine its wholesale, retail or other prices, and to report on the same;

(2) to recommend to Government, as and when required, measures necessary for the protection of India's industries from dumping from abroad;

(3) to undertake studies, as and when necessary on the effects of *ad valorem* and specific duties and tariff valuations on various articles and the effects of tariff concessions granted to other countries;

(4) to report to the Government, as and when necessary, on combinations, trusts, monopolies and other restraints on trade, which may tend to affect the industries enjoying protection by restricting production, or maintaining or raising prices, and to suggest ways and means of preventing such practices;

(5) to maintain a continuous watch over the progress of protected industries by conducting enquiries, as and when necessary, on the effect of the protective duties or other means of assistance granted, and advise the Government regarding the necessity or otherwise of modifying the protection or assistance granted; to keep a careful watch to ensure that conditions attached to the grant of protection were fully implemented and that the protected industries were being run efficiently.

The reconstituted Board began to function, as already stated, in November 1947. Investigations into the claims for protection or assistance from certain wartime industries which had been referred to the Interim Tariff Board had not been completed owing to the fact that the Board was working short of staff. These industries were: Pickers, Enamelware, Small tools, Wire heads, Batteries for motor vehicles, Expanded metals and Bobbins.

Since the present Board began to function, in addition to the inquiries into the above mentioned industries, it has been asked to conduct the following inquiries:—

NEW CASES

(1) Plastic goods including moulding powder used in the manufacture thereof, (2) Glass and glassware, including bangles, (3) Slate and slate pencils, (4) Hydraulic brake fluid, (5) Textile machinery.

REVIEW CASES

(1) *Pre-war industries*: (a) Magnesium chloride, (b) Sericulture, (c) Artificial silk, and cotton and artificial silk mixed fabrics, (d) Gold and silver thread and wire, (e) Sugar.

(2) *Wartime industries which received protection on the recommendations of the interim Tariff Board and of the present Board*: (a) Alloy, tool and special steels, (b) Antimony, (c) Bichromates, (d) Coated abrasives, (e) Cocoa powder and chocolate, (f) Cotton and hair belting, (g) Dry battery, (h) Electric motors, (i) Ferro-silicon, (j) Glucose, (k) Grinding wheels, (l) Hurricane lanterns, (m) Non-ferrous metals, (n) Phosphates and phosphoric acid, (o) Photographic chemicals, (p) Plywood and tea chests, (q) Potassium permanganate, (r) Sewing machines, (s) Starch, (t) Stearic acid and oleic acid, (u) Steel baling hoops, (v) Steel belt lacing, (w) Wood screws, (x) Motor vehicle battery, (y) Pickers.

PRICE INQUIRIES

(1) Cotton cloth and yarn, (2) Steel, (3) Paper, (4) Superphosphates.

Of the foregoing, protection, if granted, to wartime industries is to be for a period not exceeding three years. In respect of industries established before the war and which were

granted protection on the recommendations of the previous Tariff Boards, the protection was extended from time to time and was continued with effect from April 1, 1948, for a period of one year by the Protective Duties Continuation Act.

By January 31, 1949, the Board had completed 12 tariff inquiries relating to the following:

(1) Batteries for motor vehicles, (2) Wire heads, (3) Pickers, (4) Silver thread, (5) Magnesium chloride, (6) Robbins, (7) Hydraulic brake fluid, (8) Sericulture, (9) Artificial silk, (10) Sugar, (11) Bicycles, (12) Preserved fruits. Reports in respect of all these industries have been submitted to Government. The Board has also submitted its report on the prices of cloth and yarn at the end of June, 1948, and that on paper at the end of November, 1948. The report on fair retention prices for steel products has also been submitted subsequently.

PROTECTIVE DUTIES ACT

With a view to implementing the recommendations of the Indian Tariff Board, a composite Bill called the Protective Duties (Miscellaneous Provisions) Act of 1949, was introduced on March 18, 1949, in the Indian Dominion Parliament, which sought to give or extend protection to certain industries for varying periods up to 3 years, exclude certain types of alloys from protection and terminate protection altogether for

some other industries. The Bill which was passed with slight amendments on March 25, came into force on April 1, 1949.

The industries which will continue to enjoy protection or receive fresh protection are: (1) Sugar, (2) Artificial silk and artificial silk and cotton mixed fabrics, (3) Sericulture, (4) Bicycles and bicycle parts and accessories, (5) Preserved fruits, (6) Calcium chloride, (7) Phosphoric acid, (8) Bichromates, (9) Sodium phosphates, (10) Potassium permanganate, (11) Oleic and stearic acids, (12) Coated abrasives, (13) Antimony, (14) Hurricane lanterns, (15) Sewing machines, (16) Dry batteries, (17) Steel baling hoops, (18) Alloy, tool or special steel, (19) Pickers, and (20) Motor vehicle batteries and plates therefor.

In respect of alloys containing nickel in low proportion, protection has been sought to be restricted, while in the case of magnesium chloride and gold and silver thread industries, protection has been discontinued. The case for continuance of protection for sugar industry for two more years from April 1, 1949, came in for special consideration in Parliament. The Tariff Board had recommended that within two years normal conditions might return and protection might be extended for two more years only. The House, however, curtailed the period to one year only.

MINES AND MINERALS

MINERALS form the starting-point of those endless series of manufactures on which modern industrial civilisation rests. Mineral resources of India (and Pakistan, though most of them lie in India) cannot be described as enormous for a country of its size and population. Except in mineral such as iron ore, aluminium ore, and possibly mica, manganese, magnesite, thorium and titanium of which the exportable surpluses are large and of world importance the deposits are of decidedly limited extent and call for a policy of strict conservation and planning. Certain new methods of discovery have just come into vogue and it is possible that by using these methods new deposits of petroleum, a few new coalfields, ore-bodies, large underground water deposits may yet be unearthed. But on the whole it is safer to take a modest view of India's mineral resources. The present position may be described as follows: Minerals of strategic importance are adequate in parts only; there is a serious deficiency in non-ferrous metals like tungsten, tin, lead, zinc, mercury, graphite and liquid fuels. But in the basic metals, such as iron, manganese, aluminium, magnesium and chromium, the country is well supplied, in the first three, in large excess.

India's position on the mineral map of the world may be described as follows.

1. Minerals of which India's exportable surplus can dominate world markets are iron ore, titanium ore, mica. 2. Minerals of which India's exportable surplus forms an important factor are manganese ore, bauxite, magnesite, refractory minerals, natural abrasives, steatite, silica, gypsum, monumental granites, monazite, cerandium, cement materials. 3. Minerals in which India may be considered self-sufficient for present needs and those of the immediate future are coal, aluminium ore, gold, chrome ore, building-stones, marble, slate, industrial clays, limestone and dolomite, mineral pigments, sodium salts and alkalies, rare earths, beryllium, alum, glass sand, pyrites, borax, feldspars, nitrates, phosphates, zircon, arsenic, antimony, barytes, precious and semi-precious stones, vanadium. 4. Minerals for which India has to depend largely or entirely on foreign imports are copper ore, silver, nickel, petroleum, sulphur, lead, zinc, tin, fluorides, mercury, tungsten, molybdenum, platinum, graphite, asphalt, potash.

A short note can be added on the resources of areas formerly known as States.

COAL. Hyderabad leads all States in the production of coal. Coal is produced or found in the following places also, Korea, Kewar, Bikaner, Raigarh, Bhopal, Surguja, Cochin and Kashmir.

MANGANESE. The former States areas produce about one-fifth of the total production of Manganese ore in the sub-continent, and deposits have been located in Bihar, Bonai, Gangpur, Kalandi, Konthar, Patna, Mayurbhanj, Mysore, Talcher, Sandur, Idar, Indore, parts of Travancore, and in the Bidar and Nizamabad Districts of Hyderabad.

IRON. Rich deposits of iron ore are found in Mayurbhanj, Sandur, Bhopal, Nilgiri, Salem, Mysore, Bonai, Raigarh, Dhar, Bastar, Bandh Talcher, Surguja, Mandi, Patiala, Alwar, Jhalawar, Nawanganar, Adilabad and Nizamabad districts of Hyderabad.

GOLD. The Kolar Goldfields of Mysore State are responsible for over 99 per cent. of the total Indian output.

BAUXITE. Large deposits of bauxite have been located in Bhopal, Bonai, Nandgaon, Kashmir, Surguja, Kolhapur and Gwalior.

CHROME. Mysore produces part of the total annual output of chrome ore in India, the chief producing centres being parts of Hassan and Mysore districts. Chrome ore is also found in Seralikela, Konthar, and Sawantwadi.

MICA. Mica is chiefly produced in Jalpur, Tonk, Kawardha, Kishengharh, Talcher, and in Mewar (in the districts of Saharan, Jhazpur, and Rashihi). Muscovite mica also occurs in

Hyderabad in the districts of Warrangal and Nizamabad.

THORIA. The Monazite sands of Travancore have assumed great strategic significance as they contain Thoria, the source of thorium, which is one of the radio-active elements held by experts as next in importance to uranium. Ilmenite and Zircon are also found in association with monazite.

Some of these areas can also claim deposits of other minerals and metals, e.g., copper, lead, zinc, wolfram, asbestos, ochres and graphite.

COPPER. Copper deposits are found in Indore, Sikkim, Bikaner, Kharaswan, Patiala, Bonai, Mayurbhanj, Gwalior, Alwar, Kishengharh, etc.

LACK OF POLICY

Till recent times the subject of mineral development had received scant attention; and Provinces whose annual mineral production amounted to scores of rupees had no agency whatever for development and conservation of its mineral resources. Even today mining on systematic basis is almost wholly confined to foreign capitalists who have exclusively owned petroleum, gold and copper mines and have had a controlling share in other mines such as those of coal, manganese and chromium. Thus an unregulated traffic grew up, and by far the largest quantity of manganese ore, mica, ilmenite, gold, chromite, refractories and a number of minor minerals were extracted mainly for the purpose of export trade in the raw and at a rate which will in future years deplete the reserves of key minerals.

The attempt therefore lately made by the Ministry of Works, Mines & Power to take under Federal control the regulation and development of minerals of All-India and strategic importance is not made too soon. But one cannot stop here. One has to go on to supplement this by a wide-range improvement in recent mining practice, measures for conservation of mineral assets, introduction of mining research and so on.

BUREAU OF MINES

The Indian Bureau of Mines was set up during the year under the Ministry of Works, Mines and Power. Although it was at first expected to work only as an advisory body, the Bureau bids fair to grow into a full-fledged body of experts, capable of tackling all problems connected with the mining industry. It was stated in May 1949, that the Bureau of Mines had drafted certain rules under the preliminary sections of the Indian Mines and Minerals Act, embodying the minimum conditions relating to the grant of mineral concessions which were considered as desirable for the Centre to prescribe, as well as the procedure in connection with such grants. The draft rules, it was reported, had been circulated to the provinces and were expected to be finalised at a conference of representatives of Provincial Governments and States and mining interests, scheduled to meet in New Delhi in June.

In a communication to provincial Governments, the Central Government emphasised that, whatever the wording of the rules, a great deal would depend upon the spirit and the technical competence with which they were administered. Minerals, it was stressed, were really assets of the country as a whole, although, by reason of geographical accident, they may happen to be within the boundaries of a particular province. The Government of India, therefore, urged the provinces not to exercise any discrimination against persons domiciled in other provinces.

Steps are being taken to expand the organisation of the Geological Survey of India, which is engaged in the task of protecting, investigating, and mapping mineral deposits, and tackling the engineering problems connected with the country's big hydro-electric projects.

The Government of India have granted exploratory permits to private companies to cover an area of 9,000 square miles. The pros-

pecting licences and the mining leases granted by Government cover up-to-date only 2,340 and 40 square miles respectively. Judging from these figures, the extent of mining operations in a country of the dimensions and resources of India is considered "most inadequate", and authorities at the Centre have begun to feel that the task of utilising the country's mineral wealth to the greatest advantage of the nation should be increasingly taken over by Government.

FUTURE POLICY

Future policy has to be along three different lines. First, control should be vested in the Central Government, second, there should be one single authority to deal with the whole problem and third, policy should be directed to secure the following objectives: 1. Attainment of mineral and metal self-sufficiency as far as possible; 2. regulation amounting to stoppage of export of some key minerals such as manganese, celestite, ilmenite, glimmerite, beryl, rare-earth, etc. without a compensatory barter of minerals and metals in which the country is deficient; 3. encouragement of local manufacture, especially of non-ferrous metals and products now imported from abroad; 4. better adjustment of mineral tariffs in the levying of import and export duties and fixing of quotas; 5. revision of mineral taxation, royalty and lease laws, and lastly 6. a progressive change-over to state-ownership where economically feasible of coal, petroleum and basic metals mines.

STATEMENT SHOWING THE TOTAL VALUE OF MINERALS AND METALS DURING THE YEAR 1946.

| | (Rs.) |

* Includes 1,250 tons of Lignite.

COAL

The coal industry passed through a critical year in 1948. The industry continued to be under Government control. Cost of production remained at a high level owing to higher wages and other concessions to labour. Transport bottlenecks resulted in stockpiling of coal at the pitheads and rendered distribution increasingly difficult. Retrenchment of labour force and closure of collieries became inevitable at several production centres.

The Government of India, early in the year, announced their intention to constitute a Coal Transport Advisory Committee with a view to organising quicker movement of coal from pitheads. As against the demand made by the Bihar and Bengal coalfield owners for a daily rolling stock of 3,580 wagons, the Railway Board was able to offer only 2,400 wagons. Efforts were directed towards a faster turnaround of

wagons, but with no notable success owing mainly to lack of co-operation from traders. The pressure on railways was sought to be relieved to some extent by diverting a portion of the accumulated coal stocks to water transport. The worst sufferers of the situation were the smaller collieries producing low grade coal.

According to the Coal Commissioner, the monthly average output of coal during the first half year of 1948 aggregated 2.6 million tons, while the average allocations to railway bunkers, industries, and all other consumers, were 2.3 million tons. But despatches were still smaller at 2.1 million tons per month on the average.

The Payment of Wages Act 1936 was applied to the coal industry from January 15, 1948, which made workers in mines eligible for the recommendation of the Board of Conciliation for an annual bonus equal to four months' basic

wages. Subsequently, the Central Legislature passed necessary legislation making it obligatory on the part of colliery owners to pay the bonus on a quarterly basis. In the result, an average miner became entitled to get Rs. 20 as cash bonus every three months, besides his daily wages averaging Rs. 2.8.

Further, as recommended by the Board of Conciliation, the scheme of compulsory provident fund to miners was enforced. Each worker has to pay one anna in the rupee to the fund and the employer contributes an equal amount. In August, a central fund for the benefit of colliery workers was also set up.

During the year, colliery concerns in Bihar, which had owned mining rights on zamindari lands on leases, were affected by the decision of the Bihar Government to abolish zamindari in the province. The abolition of zamindari was

considered as going counter to the Central Government's declared policy of allowing private enterprise to continue their mining operations unhindered by the State for a period of ten years. The anomalous position was sought to be remedied by bringing all mining lands under

Central control. The Government of India, in August, 1948, introduced in Parliament the "Mines and Minerals (Regulation and Development) Act 1948," empowering Government to frame rules and regulations on the terms and conditions on which licences and leases might be

given in respect of any mineral. The Act, which has since been passed, is designed to give the Central Government a fair measure of power for controlling, directing, and co-ordinating mineral development in Provinces and States.

COAL OUTPUT. (in thousands of tons)

| Year | 1939 | 1940 | 1941 | 1942 | 1943 | 1944 | 1945 | 1946 | 1947 | 1948 (Jan-Sept.) |
|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|---------------------|
| Output | 27,749 | 29,388 | 29,464 | 29,433 | 29,369 | 29,966 | 28,973 | 29,277 | 28,430 | 20,081 |

Iron

On account of the high ash of Indian metallurgical coke, it is usual in estimating the Indian iron ore reserves to accept only ores with an iron content of 60% and above. Ores below this iron content are used only in very small quantities in Indian blast furnaces. Large deposits of high grade ores are limited to a few areas of which the following fields require special mention:—

(i) *Singhbhum and Orissa*: In what is known as the Singhbhum Iron Belt, consisting of the Singhbhum District, in which the Tata Iron & Steel Company's Steel Works are situated, and the neighbouring States, there exist some of the richest iron ore deposits in the world. The iron content of the ore considered usable varies from 60% to 65% and these deposits have

recently been estimated at 8,000 million tons, which are sufficient for the iron and steel requirements of India for centuries. In other parts of the world, Brazil for example, equally rich iron ore may be found, but rarely can it be loaded at the iron works so cheaply as in India. The advantage India possesses in the shape of iron ore is, therefore, very great.

(ii) *Mysore*: There are big deposits of quartz magnetite ore in Mysore but they are of low grade and would require concentration before using them. The ores used in the Bhadravati Iron Works can be compared to Singhbhum ores containing about 60% Fe. Incidentally, the total quantity of coal available is not less than 100 million tons.

(iii) *Madras*: Very large deposits, mainly magnetite, occur in the Salem and Ceded Districts and in Sandur. They have been estimated at 200 and 150 million tons respectively. They will, however, require concentration before use, and there may be considerable losses in the process.

(iv) *Bastar*: The deposits of Bastar are as rich in grade as those of Singhbhum and are estimated at 600 million tons.

(v) *Other districts*: Similar rich ores occur in the Durg District (200 million tons), and Goa (estimates not available).

Salt

The main sources of production of salt in India are in Sambhar Lake, in Bombay, and in Madras. Salt factories in Rajasthan are managed by Government.

The total quantity of salt manufactured in the Indian Dominion and Pakistan from all sources in the year 1945-46 was 5 crore and 46 lakh maunds. Out of this the quantity manufactured in Pakistan was about one crore maunds, leaving 4 crore and 46 lakh maunds as the share of the Indian Dominion in 1945-46, and 3 crore 92 lakh maunds in 1946-47. These figures do not include production in Kathiawar and Travancore.

Salt was imported into the Sub-continent to the extent of 85 lakh maunds in 1945-46 and 40 lakh maunds in 1946-47. Salt was not exported from the sub-continent in any appreciable quantity during the above two years.

The Government of undivided India abolished the salt duty on March 1, 1947 to satisfy national sentiment. But subsequent events soon compelled them to reimpose the tax. In western Bihar, U.P., East Bengal, Bombay and the C.P. the price of salt rose higher than before the abolition of the duty. The stoppage of supply of salt from Pakistan areas added to the upland. In areas where supplies were deficient, the benefits of the abolition of salt tax went solely to the producers and middle-men and not to the consumers. The remission of the salt tax caused the Government of India a loss of Rs. 9½ crores.

Plans for the development of salt industry, both short-term and long-term are being contemplated by the Government of India. A complete survey of salt production, consumption, distribution, quality, imports and prices, has been

undertaken. The necessity for fostering and directing the salt industry having been established, outlines of method of control have also been drawn up. To increase the production of salt in the sub-continent the Government deputed an expert officer in June 1946, to study the whole question of salt supply and demand, and suggest the changes in the administrative machinery necessary to make the sub-continent self sufficient in the matter of salt.

In 1947 the controlled whole-sale rate for salt was Rs. 6-2-0 per maund.

On April 25, 1948, the Government of India declared that thenceforth individuals or groups might freely produce salt in any land to which they had lawful access: no licences were needed.

THE ALCOHOL INDUSTRY

ALCOHOL has three uses. It can be used as a drink. That is the use for which it is best known. Second, it can be used for industrial purposes, for instance in the manufacture of a number of chemicals. Third, it can be used as a motor fuel, for the production of mechanical power, when we call it power alcohol.

Alcohol does not occur free in nature. It is produced by a slow decomposition of the juices of certain fruit specially grapes, of palms or other sugary substances when they are exposed to warm or moist atmosphere. The process is called fermentation, caused by the presence of certain micro-organisms popularly called yeast. Commercially alcohol is obtained by the conversion of certain plant products called carbohydrates which include celluloses, starches and sugars. The celluloses and starches are first broken down to simpler sugary matter and then fermented by yeast to produce alcohol.

Potable Alcohol. Let us now deal with alcohol as drink in more detail. Three types of potable alcohol are produced in the sub-continent, beer, toddy, arrack and certain varieties of 'foreign liquors.' Beer and toddy contain

2 to 10% alcohol while arrack and other liquors contain as much as 30 to 50%. Beer is produced from malted barley, and there are about 7 breweries in different parts of India and Pakistan. Arrack, a more popular drink, is obtained from the flowers of the mahua or mihwa tree or from fermented gur or molasses. But the most commonly used drink in the sub-continent is 'toddy' to give it its South Indian name. Toddy is obtained from the date palm. The palm is tapped and the juice is allowed to ferment.

There are, of course, the imported liquors but these are consumed chiefly by non-Asians and upper class Indians.

To pass to a statistical view of the liquor question, a great number of old pot, and coffee stills have always been in use but the major part of potable liquor is made in proper distilleries of which there are about 70 in India. Here is a table which gives a few facts about the production position in India. Asterisk shows that the figure is only an estimate.

Here are the figures for India —

| Year | No. of Distilleries and Breweries | Production in million gallons | Capital invested in lakhs | No. of men employed | Cane-molasses produced in tons | No. of Sugar factories working |
|------|-----------------------------------|-------------------------------|---------------------------|---------------------|--------------------------------|--------------------------------|
| 1930 | 26 | 4 | 150 | 2,000 | 52,000 | 29 |
| 1942 | 52 | 61 | 250 | 2,600 | 3,69,100 | 150 |
| 1946 | 71 | 12 | 350 | 3,000 | 3,50,000 | 145 |
| 1947 | 68 | 10.7 | 400 | 3,000 | 3,19,000 | 137 |
| 1948 | 68 | 10 | 400 | 3,000 | 4,12,000 | 137 |

And here are the corresponding figures for Pakistan —

| Year | No. of Distilleries and Breweries | Alcohol in million gallons | Capital invested in lakhs | No. of men engaged | Cane-molasses produced in tons | No. of sugar factories working |
|------|-----------------------------------|----------------------------|---------------------------|--------------------|--------------------------------|--------------------------------|
| 1947 | 5* | 3* | 50* | 200* | 9,000 | — |
| 1948 | 5* | 3* | 50* | 200 | 14,000 | 4 |

The figures for the imports of foreign liquors are given below:—

| Year | Ale, beer, porter, stout in gallons | Spirits, liquors, wines, in gallons | Total gallons | Value of ale, beer, etc. in rupees | Value of spirits, etc. in rupees | Total Rs. |
|---------------------|-------------------------------------|-------------------------------------|---------------|------------------------------------|----------------------------------|-------------|
| 1945-46 | 1,42,632 | 10,75,446 | 12,18,078 | 5,83,805 | 2,31,69,313 | 2,37,53,118 |
| 1946-47 | 5,56,335 | 9,10,683 | 19,06,423 | 27,19,794 | 2,52,54,508 | 3,62,69,256 |
| 1947-48 | .. | .. | 25,03,420 | .. | .. | 3,71,05,387 |
| 1948-49 (10 months) | .. | .. | .. | .. | .. | 2,03,97,827 |

In comparison U.S.A., the country with the largest world-production (179 million tax gallons) and consumption (1.7 million gallons) of potable liquors, had in 1942, 280 distilleries, 600 breweries and 1,100 wineries. Its liquor industry spent 3 billion dollars on taxes, wages and raw materials.

So much for the production side. Now for the revenue. The Provinces derive their excise revenue from taxes, fees and rents on local production and sale of liquors. Central Government derives its revenue from customs. Here are the customs figures in lakhs of rupees for the old undivided India:—

| Year | Ale, beer, porter and other fermented liquor | Spirits and liquors | Wines | Total |
|---------|--|---------------------|-------|--------|
| 1944-45 | 7.18 | 297.75 | 7.22 | 312.15 |
| 1945-46 | 2.0 | 480.0 | 20.0 | 502.0 |
| 1946-47 | 3.0 | 400.0 | 25.0 | 428.0 |

Prohibition.—Prohibition is now the accepted policy in India and Pakistan, and in every Province there is partial prohibition which is to attain completion in a definite number of years. For instance, there is prohibition in about half of U.P. Madras went completely dry on October 1, 1948 and Bombay expects to go completely dry on April 1, 1950. 9 out of 49 districts in U.P. are dry and it is proposed to extend prohibition to two more districts. Some States and States Unions have accepted prohibition and Mysore expects to go completely dry in five years' time.

Prohibition is mainly enforced by the Excise police but in certain Provinces there are non-official voluntary bodies such as Vigilance Committees for detection and checking, or Prohibition Guards to help the regular Excise police. In Bombay no liquor advertisements are allowed in newspapers or liquor scenes in films. Liquor shops have been converted into tea and refreshment hotels in Madras, while Bombay has opened centres where 'milk' is served in the place of liquor. In nearly every Province one day or more have been declared as dry days. In the old undivided Punjab, students were prohibited from drinking and in Sind today liquor licences cannot be given to Muslims or liquor served to young men below the age of 25.

Now that drunkenness is an offence in certain Provinces punishable with imprisonment or fine or both the need for an objective test for intoxication arises. It has been suggested in this connection that it would be a good idea if we applied the same test as is being increasingly applied in the U.S.A. In some of the American courts intoxication is considered as present if the concentration of alcohol in the person's blood is .15%, or more. If the concentration is less than .15%, and more than .05%, the person's general behaviour and other circumstances are considered. The U.S. Courts have recognized the admissibility of such evidence and devised means of making such tests compulsory. One Supreme Court has ruled that the test of intoxication is not the amount of alcohol drunk, but the amount of alcohol present in the blood. A second test is the detection and estimation of alcohol vapour in the breath.

It is fully recognized, however, that legal prohibition alone is not enough to stamp out the evil of drink. Something must be done to remove the causes that produce alcoholism. Among the major causes which produce alcoholism are poverty, overwork and a certain feeling of ennui. In the case of chronic alcoholics the cause may lie deeper still, in a pathological condition of the person's mind or body. Therefore to achieve any lasting result a policy of negative prohibition should be backed by a constructive effort to provide better food, better housing, better living conditions, greater facilities for recreation and the proper type of education for the younger people. The need for a constructive effort of this nature is fully realized and every Provincial Government has its own programme for mass education and enlightenment in this direction.

When Prohibition is enforced there will naturally be a great loss in excise revenue at a time when nearly every Government is sorely pressed for money. But the loss will be partly made up by fresh taxation such as sales taxes, industrial profits taxes or the raising of duty on liquor as in U.P. And second, the palms and the mihwa trees no longer tapped for toddy would now be available for the production of power alcohol resulting in a general increase of the country's fuel resources.

INDUSTRIAL ALCOHOL

We have already mentioned that alcohol is used not only as a drink but also for industrial purposes. Industrial alcohol is a very valuable material in the manufacture of chemicals like acetone, acetic acid, ether, chloroform, ethyl

acetate, etc. It is also necessary as a solvent in the manufacture of fine chemicals, medical preparations, toilets, etc. Since the last war its importance if at all has increased. It is now essential in the manufacture of ammunition and of artificial rubber.

In 1942 there were only 22 plants in the sub-continent for the manufacture of industrial alcohol. In 1946 there were as many as 33 capable of producing 12 million gallons. But the actual production was as low as 5,031,460 gallons in 1945-46 and 3,734,606 in 1946-47. The undivided Government of India's Panel of Fine Chemicals, Drugs and Pharmaceuticals estimated that the medical requirements of the sub-continent are one million gallons annually and industrial requirements 10 millions, a target which they said ought to be reached in 15 years' time. To make this possible, it is argued, the first essential is to abolish the present excise duty on industrial alcohol and the second is to have a uniform policy for the country as a whole. Industrial alcohol should not cost more than a

few annas a gallon. As it is it costs the distiller about eight annas to make it. When the producer's and middleman's profit is added the price will increase to a point where it becomes uneconomical to use it.

AMERICAN RECORD

In this connection the experience of U.S.A. may be helpful. Before the war the normal production in the U.S.A. was 100 million gallons. As more alcohol was needed to make smokeless powder for anti-aircraft shells and artificial rubber tyres for Army lorries the production rose to 600 millions between 1941 and 1945, as whisky distilleries were turned to the production of industrial alcohol. Synthetic alcohol was produced at 4 plants from natural and petroleum refinery gases. The point about synthetic alcohols is that it is cheaper than alcohol from molasses. Synthetic alcohol costs only 12 to 15 cents a gallon while molasses alcohol costs 40 cents when the price of molasses is 13-6 cents a gallon. The future lies therefore with synthetic alcohol.

ETHYL ALCOHOL IN U.S.A. (In millions of proof gallons)

| Raw Material | 1941 | 1942 | 1943 | 1944 | 1945 | 1946 | 1947 |
|--------------------------|-------|-------|-------|-------|-------|-------|-------|
| Potatoes | | | | | | 3.7 | 12.8 |
| Grain | 17.5 | 38.5 | 107.8 | 206.2 | 281.6 | 104.9 | 39.7 |
| Molasses | 219.1 | 289.3 | 159.1 | 207.5 | 190.2 | 87.1 | 51.1 |
| Synthetic Ethyl Sulphate | 69.9 | 90.6 | 96.7 | 113.7 | 111.6 | 127.5 | 133.3 |
| Sulphite liquors | | | | | 1.0 | 2.8 | 4.3 |
| TOTAL | 298.8 | 424.8 | 447.7 | 636.5 | 683.4 | 353.5 | 298.8 |

Here are the production figures in million gallons for power alcohol in U.S.A.

| Year | Synthetic | Molasses | Grain | Import | Total |
|------------|-----------|----------|-------|--------|-------|
| 1941 | 42 | 143 | 31 | .. | 217 |
| 1942 | 50 | 114 | 133 | 1 | 298 |
| 1943 | 56 | 81 | 300 | 12 | 449 |
| 1944 | 60 | 150 | 359 | 32 | 602 |
| 1945 | 112 | 190 | 281 | .. | 683 |
| 1946 | 130 | 87 | 105 | .. | 353 |
| 1947 | 137 | 39 | 54 | 31.9 | 298 |

And here finally are the consumption figures (the figures for 1945 are for six months only) :—

| Year | Military | Lend-Lease | Synth. rubber | Anti-Freeze | Civilian and indirect military | Total |
|------------|----------|------------|---------------|-------------|--------------------------------|-------|
| 1939 | .. | .. | .. | .. | 104 | 104 |
| 1940 | .. | .. | .. | .. | 130 | 130 |
| 1941 | 18 | 9 | 23 | .. | 165 | 215 |

POWER ALCOHOL

We now come to the third use of alcohol, i.e. as motor fuel for the production of mechanical power. A great many countries in the world have to depend on imported petrol. So as a security measure some power alcohol is always being produced in nearly every big European country from local raw material such as surplus potatoes, wheat, molasses and so on. Thus in 1941 about 200 million gallons of power alcohol were being produced all over the world from 187 plants in various countries. Of these France had 47, Czechoslovakia 38, Germany 11, Italy 15, Brazil 16, South Africa 4 and Australia 3. During the War, of course, all the countries expanded their output.

Like the countries we have mentioned India and Pakistan too are large importers of petrol. There is no reason therefore why India as any rate should not develop a power alcohol industry of her own especially when she is such a large producer of sugar. A great deal of the molasses which is a by-product in the manufacture of sugar is now going waste. Here are some figures which make the position clear. India and Pakistan had 150 factories in 1942 in the sub-continent producing sugar. Now out of the 485,000 tons of molasses produced in that year about 100,000 tons were fermented to make potable alcohol, and another 50,000 tons used as fuel or manure or for tobacco curing or for making inferior sweets. The rest, that is to say, as many as 335,000 tons were simply wasted. But if all the wastage was to be used for the production of power alcohol a secure market had to be guaranteed to the producer. This meant some sort of legislation to compel the users of petrol to mix in a certain proportion power alcohol with petrol in the ratio 20:80. The Joint Power Alcohol Enquiry Committee of U.P. and Bihar, the Indian Chamber of Commerce and the Indian Tariff Board were all recommending a scheme for the starting of a power alcohol industry before the war for it was clear that alcohol-petrol was superior as a fuel to neat petrol. But an appeal to the Government of India failed as it was frightened of antagonising oil interests. Some of the Provincial Governments, however, went ahead. Between 1939 and 1942, U.P., Bihar, Bombay, Hyderabad and Mysore all passed appropriate legislation for the purpose of encouraging use of power alcohol. Mysore giving the lead in this matter. During the War the Government of India fell into line but it was too late to get the necessary plant and equipment from the U.S.A. All it could do was to allow local fabrication of power alcohol plants. In 1946 there were 5 plants with a capacity of 2½ million gallons but the actual production was about a million gallons. In 1947 the number of plants increased to 9.

In 1948 the production was only 3 million gallons. Two additional plants are expected to be in commission this year and the total output expected to go up to 4 million gallons. Even this increased production falls far short of the country's needs and more intensive planned development is necessary, as the report of the panel shows. More power alcohol plants, smaller in capacity to suit the sugar factories and further improvements in fermentation practice are needed to step up output.

Power Alcohol should also be made as in U.S.A. from the wood sulphite liquors, a by-product of the paper factories proposed to be established.

Panel Report.—The report of the Panel appointed by the undivided Government of India to review the situation and make recommendations estimates that with the expected surplus of 430,000 tons of molasses 26 million gallons of alcohol can be produced. And out of 26 millions as many as 20 million could be used as fuel. They recommend therefore that all the existing plants should be modernized and if necessary expanded, and that 20 new plants with a capacity of ½ to 1 million gallons a year should be built. As far as possible all plants were to be fabricated locally. The capital cost of

the 20 plants is estimated at Rs. 2 crores. 20% of this will have to be used on imports of equipment which cannot yet be made in India or Pakistan such as boilers, generators, air compressors, yeast separators and control instruments. The rest of the equipment could be made in India with the help of the existing personnel. It is not necessary to import foreign experts but it may be useful to send out technicians from here to study the working of foreign plants so that they might be able to employ the latest methods in Indian and Pakistani factories. Further recommendations are a reduction in the excise duty on power alcohol to enable the blended fuel to be sold at the same price as neat petrol, and the appoint-

ment of an Alcohol Commissioner to regulate matters relating to molasses and the price and distribution of alcohol.

The Panel also makes a few recommendations about industrial alcohol. It recommends, for instance, the development of subsidiary industries for making chemicals, solvents, food-yeast, dry-ice, fertilizers, potash, etc. from alcohol and the by-products, and the starting of a research organization, to investigate possibilities of expanding production and discover alternative sources and raw material and further applications of industrial alcohol. To encourage such application it suggests that industrial alcohol should be free from any tax. Finally,

to encourage the growth of the whole industry the Panel recommends a general reduction in railway freights on molasses and alcohol.

After the division of the sub-continent the position is roughly as follows: ~75% of cane-acegare, and 97% of sugar, molasses and alcohol remain in India and the balance goes to Pakistan. U.P. and Bihar produce 10 to 14 million gallons of alcohol. Out of this 2½ to 4 millions may be used for blended fuel in the Provinces and the rest could be exported.

Alcohol is of national importance as a strategic fuel and a uniform country-wide policy in regard to excise and power alcohol is imperative.

THE CEMENT INDUSTRY

IN the history of Trade Associations in India, the cement industry provides an illustrious example of successful co-operative endeavour. The cement industry owes its origin to the fortunes of the original companies through early vicissitudes, through subsequent co-operative endeavour to the attainment of the present position of strength and solidarity.

CEMENT FACTORIES

The first venture in the manufacture of Portland Cement in India took place in 1904, in a small factory just outside Madras, but it quickly went out of business.

A few years later three new companies came into existence and laid the foundation of the industry as it exists today.

GROWTH OF INDUSTRY

Towards the end of the first Great War, the output of all cement factories was commanded by the Government. The boom period which followed that war witnessed the springing up of a number of new cement factories. Most of these were erected within the geographical marketing areas of the existing Works and internal competition set up an immense scramble for business at any price, and for delivery over any distance, ignoring entirely the basic economic principle that as a cheap building material, it cannot carry heavy distribution of freight charges. This intense competition almost brought the industry to its knees. Three of the new companies went into liquidation and the shareholders lost between 2 and 2½ crores of rupees.

FORMATION OF ASSOCIATIONS

In 1925, following the result of an enquiry by the Tariff Board, the necessity for co-operation amongst the manufacturing units was clearly emphasised and as a result, an Association known as the Indian Cement Manufacturers' Association was formed. This proved to be a complete success as could be seen from the fact that during the four years of its existence not one single case of price cutting was recorded. Although described as the "Manufacturers' Association", its functions were only to fix and regulate selling prices. Each Manufacturing Co. was still a separate entity with its own selling arrangements and each was out to obtain as much business as it could possibly secure.

The Association was also responsible for the next step in co-operation. Its members agreed to a levy of 5 annas per ton on the sales to finance a joint service known as the Concrete Association of India which was formed in 1927 for the purpose of educating the public in the uses of cement and to provide free technical aid and advice to the consumer.

CEMENT MARKETING COMPANY

With a certain measure of confidence inspired, the next step taken was the formation of the Cement Marketing Company of India, Ltd., but, over this, negotiations were both delicate and protracted. No member company liked the idea of giving up control of its own sales; on the contrary, it wanted to secure as large a sales quota as possible. This latter point presented a very thorny problem and after considering various formulae, an agreement was reached and a quota fixed based on the capacity of each.

In 1934, two new companies joined the pool adding a further tonnage. With the aid of the Concrete Association of India and a comprehensive publicity programme, sales were increased and during the Marketing Company's regime the average selling price of cement throughout the whole of the country was reduced by over 25%.

Its real charter was to operate the agreement entered into between the member companies and in this, there were a number of defects which were the cause of many uncertainties and suspicions. The quota was fixed rigidly but there was nothing in the agreement to prevent any company from enlarging its works to any extent it deemed fit and it was soon apparent to all that provision for future expansion had to be undertaken.

ASSOCIATED CEMENT COMPANIES

It was to put an end to all doubts and uncertainties about the future that the late Mr. F. E. Dinshaw mooted the Merger Scheme, its object being to make and deliver cement as cheaply as possible through rationalised production and distribution. This brought about the fusion of all the Indian cement manufacturing companies then in operation (with the exception of the Sone Valley Cement Co. Ltd.) into one unit known as the Associated Cement Companies Ltd., in 1936 whose Managing Agents are Cement Agencies Ltd., operating fourteen factories. The benefit that accrued to the industry by the development of new sites taken over from member companies at suitable centres was passed on to the consumer by way of reduction in selling prices. This reduction resulted in an increased off-take which made it possible to make further reductions. Thus, there was an average total reduction all over India of about Rs. 10 per ton from 1930 to 1936, which, resulted in the consumers benefitting to the extent of crores of rupees.

The policy of the cement companies which eventually merged into the Associated Cement Companies, aimed at the establishment of a great national industry on sound business lines. Foreign competition was reduced to a minimum

and as sales increased prices were reduced consistently each year. This was along the lines recommended by the Tariff Board and has definitely led to the advantages envisaged by them, i.e., efficient running, cheaper production, low distribution costs and lower selling price to public.

DALMIA GROUP

The Industry was, however, again affected when, in 1938, the Dalmia Group of Companies which came into being competed with the Associated Cement Companies. Happily, this state of affairs did not last long, and by the end of 1940, an agreement was concluded between the two major groups to market their output through a central organization. The Cement Marketing Co. of India, Ltd., was again brought into operation. Prices were reduced further and thereafter stabilised at an economical level restoring the industry again to a healthy footing.

The Cement Marketing Company then controlled and managed the sales and distribution of all the cement manufactured by the Associated Cement Cos., and the Dalmia Group of Companies, the former having 12 factories in operation and the latter five factories. The output of all these factories represented about 85% of the whole industry as there were four other cement companies operating independently.

EFFECTS OF WAR

As in other industries, so also in cement, the recent War has had many effects. With the rise in the cost of all materials required for the manufacture and packing of cement, production cost naturally increased. To offset this, in part, the price of cement had to be raised but it was still maintained at a very reasonable level, the rate being controlled by the Industries and Civil Supplies Department. Even with the increase allowed by the Government after prolonged examination, the price of cement compares very favourably with the price of other building materials as most of them have gone up by over 200 to 400 per cent.

Just before and for some time after the outbreak of hostilities, the demand from export markets both for Government and public use began to develop, and India eventually became the supply centre of cement to the Middle and Far East. The internal demand similarly increased. Practically 80% of the total output was taken by Government and the balance was strictly rationed for essential repairs. With the cessation of hostilities, the proportion of Government demand fell considerably but the total demand both of the Government as well as the public has increased enormously.

The two groups separated by mutual consent with effect from March 1948 and now market their output independently.

BENEFITS

The part which the cement industry plays in the welfare of the country may not be fully appreciated. Not only does it afford employment to thousands of men in the factories alone but also it is one of the largest consumers of Indian coal. The lime industry is also benefited because over 40 million jute bags are used annually for packing purposes. Then, there is the large freight revenue accruing to the Railways by the transport of coal, gunny bags and cement estimated at some crores per annum.

The progress which has been made has been largely due to the energy and enterprise of the Cement Marketing Company and the Concrete Association of India in educating the country in the uses of cement. Branch offices are maintained throughout India with a staff of

over a hundred engineers, overseers and skilled masons who give technical assistance to cement users.

That the cement industry is working on the right lines and with an eye to the future, there is no doubt. They are spending a large amount annually on educational propaganda which will be repaid by increased sales, a matter of vital importance.

FUTURE DEVELOPMENT

With the return of peace, the cement industry has retained its national importance in the sense that it is one of the few commodities that can enter into every one of the main schemes of national programme, i.e., communications, irrigation and agricultural development generally and proper housing of the working classes. The cement industry owing to the urgency of demand placed on it in the immediate post-war

years and the orderly planning of future development has received due consideration from the Government. The industry has already a programme of expansion, with years of investigation and preparation behind it which will ensure its being fully utilised in the post-war years.

The capacity of the industry has increased during the last twelve months and several projects are actively being pursued, which by 1951 or '52 should add considerably to the industry's capacity for output.

Its plant, technical personnel, financial resources and vast All-India sales organization—all afford an assurance of its maintaining an important position in the country today, and the continuance of its policy to make available to the public the highest quality of cement at the lowest possible price. Meanwhile the scope of labour welfare is being continuously extended.

THE CHEMICAL INDUSTRY

FOR purposes of industrial production, chemicals fall easily into one of two major groups—(a) Heavy Chemicals, and (b) Fine Chemicals. Heavy chemicals are produced in enormous tonnages and at a low cost, and are consumed almost wholly in industrial and agricultural operations. The term "Heavy Chemicals" is applied usually to substances such as the common acids, alkalis, fertilizers, etc., which are the foundation of the entire chemical industry. Their industrial utility is determined by their use of processing the raw materials of other industries, manufacturing essential commodities such as textiles, paper, soap, glass, leather, kerosene, motor spirit, lubricating oils, etc. Thus, while the cost of the basic chemicals undoubtedly influences the development of the consumer industries, there must be an all-round development of the

latter to enable the heavy chemicals industry to be placed on a sound footing.

Fine chemicals, on the other hand, are manufactured generally in relatively small amounts since their purity is important; their production requires great skill and care in each operation under accurately controlled conditions. In this category are included photographic materials, drugs and pharmaceutical products, paints, varnishes and pigments, dyestuffs, etc.

HEAVY CHEMICALS

With the notable exceptions of borax, nitre and elemental sulphur, the heavy chemicals do not occur in nature and they have therefore to be manufactured from naturally occurring raw materials. The names of the various heavy chemicals manufactured in India and Pakistan, are given in the first column of the following

Table (the upper half of the table gives the figures for sulphuric acid and its derivatives, and the lower half for alkalis and allied products). The figures for their estimated production and imports during the pre-war period (1935-40) are given in columns 2. In column 3 are given the figures of production for the year 1946-47 except where otherwise stated. For imports though recent figures are not available, generally speaking, there has been no appreciable change during 1948-49. The figures for consumption are equal usually to the sum of the amounts produced and those imported. The figures for the targets for future production, suggested by the Advisory Planning Board of the Government of India and by other planning committees, are given in column 4. The last column indicates the main uses to which these chemicals are put. All the figures are in tons per annum.

| Chemical | Average pre-war (1935-40) figures of | | Average figures | | Target estimated for next five years. | Main uses. |
|-----------------------------------|---|---------|-----------------------|--------------------|--|--|
| | Production | Imports | Production 1946-47 | Imports 1947-48 | | |
| Sulphuric acid | 26,000 | 700 | 20,000 | 11 | 200,000 | Chief basic chemical |

SULPHURIC ACID

The production of sulphuric acid has been tripled during the last ten years (see below), the present figures for production being in the neighbourhood of 80,000 tons annum. Even with this substantial increase in the production figures, our per capita consumption of sulphuric acid is very far below that in the U.S.A., being 0.45 lbs. and 187 lbs. respectively. The pre-war production figures of hydrochloric and nitric acids were 350 tons and 500 tons per annum, respectively; their production increased substantially during the period of the World War II and, at present, nearly 2,500 tons of hydrochloric acid and 2,750 tons of nitric acid are manufactured annually.

Here are the production figures for sulphuric acid:—

| | Thousands of Tons. |
|---------|--------------------|
| 1937-38 | 26.8 |
| 1938-39 | 25.6 |
| 1939-40 | 30.7 |
| 1940-41 | 43.0 |
| 1941-42 | 43.0 |
| 1942-43 | 40.7 |
| 1943-44 | 59.0 |
| 1944-45 | 65.0 |
| 1945-46 | 80.0 |
| 1946-47 | 80.0 |
| 1947-48 | 80.0 |

About 60 per cent of the sulphuric acid produced in the Indian sub-continent is by the Chamber process and the remainder by the Contact process. The Chamber acid is obtained from 32 small-sized plants, many of which are old and inefficient. There are only 7 Contact plants functioning at present, and 4 additional plants are in the process of being erected. Hydrochloric and nitric acids are manufactured at present by the action of sulphuric acid on common salt and nitre, respectively. This process is wasteful, and effort should be made to manufacture the former by burning chlorine in hydrogen (both of which are by-products in the electrolytic alkali industry), and the latter by the oxidation of synthetic ammonia.

Manufacture.—Sulphuric acid is manufactured from elemental sulphur, and since the small quantities available at Koh-i-Sultan have proved uneconomical, the sulphuric acid industry is almost entirely dependent on imported sulphur. During the pre-war period (1935-40), India and Pakistan used to import about 28,800 tons of sulphur annually at a cost of about Rs. 100/ton. In 1946, after the War 37,900 tons of sulphur were imported at a cost of Rs. 210/ton.

In Western countries where native sulphur deposits are not available, the acid is manufactured as far as possible from other sulphur-bearing materials locally available. For instance, sulphuric acid was manufactured in Germany from gypsum or anhydrite, with cement as a by-product. In Great Britain, the spent oxide from Gas Works is used to recover its sulphur content in the form of sulphuric acid. Also, sulphurous gases obtained in the smelting industries, involving the roasting of iron and copper pyrites and copper glance, are utilized in many countries as a source of sulphuric acid. There appears to be no reason why all the above mentioned methods should not be practised in India or Pakistan to make them at least partly self-sufficient with regard to this basic chemical.

Other Methods.—Further, in countries with meagre sulphur resources, it is considered desirable that industries should become independent of sulphuric acid as far as possible, with a view to avoiding the dependence of important chemical industries on imported sulphur. For instance, ammonium sulphate and superphosphate among fertilizers, and hydrochloric and nitric acids among the chief heavy chemicals, are manufactured now by processes which do not involve the use of sulphuric acid. Thus, ammonium sulphate is made from gypsum and ammonia, phosphatic fertilizers by the use of electrical energy, hydrochloric acid by burning chlorine in hydrogen, and nitric acid by the

oxidation of synthetic ammonia. In India or Pakistan it may not be possible to apply all the above-mentioned methods immediately. For instance, the manufacture of phosphatic fertilizers by the electrical method might not be possible for some time to come. Until this is done, the production of large quantities of superphosphates will require large amount of sulphuric acid, because the manufacture of this fertilizer must go hand in hand with that of ammonium sulphate which is now being produced to some extent from gypsum and ammonia, while another larger plant is under erection according to the plans prepared by the Fertilizer Mission. Similarly, the expansion of the already existing textiles, paint and metallurgical industries, and the starting of the rayon and dyestuffs industries, will take up huge quantities of this acid. It is surmised that the two latter industries alone will require about 30,000 tons and 20,000 tons per annum, respectively, of sulphuric acid in the initial stages.

ALKALIES

As a heavy chemical, caustic soda is of equal importance in the soap, paper, paperized cotton, explosives, dyestuffs, vegetable oil, rayon, and other chemical industries. At present, about 55,000 tons of caustic soda are consumed annually out of which soap (45 per cent), textiles (30 per cent) and paper (15 per cent) are the major consumers. The figures for consumption may increase up to about 100,000 tons annum within the next few years, with the probable expansion of the different industries and the establishment of the rayon industry here.

There is a general tendency abroad to change over from the lime-soda to the electrolytic process for the manufacture of caustic soda, as there is an increasing demand in the synthetic organic industry for the by-product chlorine obtained in the latter method. In India, or Pakistan however, there is every danger that all the chlorine may not find suitable outlets in the immediate future. Hence, the decision to set up electrolytic caustic soda plants must be considered in relation to the possibility of the utilization of the by-product chlorine. Among the possible uses for chlorine may be mentioned the manufacture of hydrochloric acid, bleaching powder, hypochlorite solution, chlorinated rubber products, chlorinated plastics, D.D.T., etc.

Soda ash is manufactured at present in India by 3 factories, the production capacity of which is equal to about 70,000 tons/annum. However, the actual production is of the order of only 28,500 tons/annum, and hence the remaining 70,000 tons of the consumer demand are met by imports. It is recommended that (i) the production of the existing plants be increased to their capacity, and (ii) new plants be located at places where good quality lime and common salt occur together.

OTHER INORGANIC CHEMICALS

The World War II gave considerable impetus to the production of several heavy chemicals

in the sub-continent. For instance the manufacture of important industrial chemicals, such as copper sulphate, sodium sulphide, anhydrous ammonia, bleaching powder, chlorine, dichromates, etc., was started, and the production of salts, such as aluminium sulphate, iron sulphate, etc., increased to a considerable extent. There was, however, no planning in these endeavours, and in some cases the quality of the product was also not sufficiently high.

The present position regarding most of these chemicals is fairly sound inasmuch as their manufacture depends essentially on the availability of sulphuric acid and the alkalis discussed earlier. The production of these chemicals can be stepped up whenever necessary without much difficulty.

The anhydrous ammonia being manufactured at present is converted almost entirely into ammonium sulphate, and very little is thus left for refrigeration, medicine, and other uses. It should be possible to produce about 300 tons/annum of anhydrous ammonia for these uses when the new plant for the manufacture of ammonium sulphate from gypsum and ammonia, now under construction, starts functioning. The bleaching powder manufactured at present is poor in quality, and the defect is attributed to low quality lime. It is necessary therefore to find deposits of and utilize high quality lime so that the available chlorine in the product is at least 30 per cent. Aluminium chloride and sulphate are now manufactured on the West Coast from sea and subsoil bitumens. Large quantities of the former were exported before the War (about 1,300 tons in 1939-40), and it is gratifying to note that the exports have now increased to 1,920 tons.

Calcium carbide is a very important heavy chemical both in peace as well as in war. Its manufacture has not been undertaken in India or Pakistan due largely to difficulties in finding a suitable site where coal and high-grade lime occur together, and a cheap supply of electricity is also available. It is unfortunate that not much progress has been made in the erection of the 5,000 tons plant that was to be installed in Bihar.

FERTILIZERS

Food is one of the three due necessities human existence. To maintain crop yields in any established agriculture, it is essential to add the plant-food elements (nitrogen, phosphorus and potassium) to the soil year after year. The question of chemical fertilizers is thus of major importance in India and Pakistan with their rapidly increasing rate of population.

Pre-war production of ammonium sulphate and superphosphate was about 30,000 and 2,000 tons/annum, respectively, and it has remained almost steady at these figures.

The figures for production and imports of some of the important fertilizers are given in the following table. All figures are in tons per annum.

| Fertilizer. | Average pre-war (1935-40) figures of | | Average figures of | | Target estimated for next five years |
|--------------------|--------------------------------------|---------|--------------------|-----------------|--------------------------------------|
| | Production | Imports | Production 1946-47 | Imports 1947-48 | |
| Ammonium phosphate | .. | 3,750 | .. | 225 | 7,918 |
| Ammonium sulphate | 30,000 | 63,500 | 26,000 | 6,100 | 133,751 |
| Potassium chloride | small | 2,500 | 500 | 50 | 2,989 |
| Potassium nitrate | 6,500 | .. | 15,000 | .. | .. |
| Superphosphate | 2,000 | 7,000 | 21,000 (47-48) | small | 380 |
| Fish manures, etc. | .. | 2,100 | .. | 550 | 5,068 |

It has been estimated that to provide a well-balanced diet for the whole population, the existing production of agricultural food products should be stepped up by the following margins: Cereals (10 per cent); Pulses (20 per cent); Oil and Fats (250 per cent); Fruits (50 per cent); and Vegetables (100 per cent). It has also been estimated that food production can be increased by about 25 per cent if about 400,000 tons of ammonium sulphate are used annually. To produce that amount plant at Belgaum (capacity 1,500 tons per annum) has been working for some years and is being further expanded. The plant at Alwaye (capacity 150 tons per day) started functioning last year but the highest of these all, the plant at Sindhu is still under

erection. Although there is difference of opinion among some agricultural experts as to the utility of superphosphates in certain parts of the sub-continent, it is considered that a reasonable target for this fertilizer should be 100,000 tons/annum. The possibility of using ammonium nitrate as an alternative fertilizer to ammonium sulphate should also be investigated.

FINE CHEMICALS

The term "fine chemicals" is applied usually to substances such as photographic materials, drugs and pharmaceutical products, paints, pigments and varnishes, and dyestuffs. The raw materials necessary for the fine chemicals

industry are derived from both inorganic and organic heavy chemicals, the former of which were dealt with in the preceding pages. Among the organic chemicals, by far the most important are coal and wood distillation products, fermentation products, and aliphatic and aromatic synthetic chemicals. Only a few of these organic chemicals are produced in India or Pakistan and their figures for production and imports, targets for their future production, and main uses are presented in the following table. Figures for production are for the year 1946-47 but there has been very little change in these industries since then. All the figures are in tons per annum except where otherwise stated.

| Chemical | Average pre-war (1935-45) figures of | | Average figures of | | Target estimated for the next five years | Main uses |
|-------------------------|--------------------------------------|---------|--------------------|-----------------|--|--|
| | Production | Imports | Production 1946-47 | Imports 1947-48 | | |

Photographic Materials. The basic chemicals required for the photographic industry are (i) gelatin, silver halides and sensitizers in the coating of film, plate and paper base, and (ii) hypo and sodium sulphite in the processing stages. Of these chemicals, the three former are not being manufactured in India or Pakistan. There was no production of sodium thiosulphate and sodium sulphite during the pre-war years, but due to the impetus given by World War II, production of these two chemicals was started and their present annual output is about 800 tons and 300 tons respectively.

The manufacture of gelatin for photographic purposes is a comparatively easy matter, particularly as we have abundant raw materials for its manufacture by way of hides, skins, bones, etc. The manufacture of potassium bromide and liquid bromine has been started by one

concern on the west coast of India, but the quantities produced are very small. The manufacture of sensitizers, most of which are complex organic compounds, will perhaps present some difficulties.

Pre-war imports of raw film base into India and Pakistan were enormous, the film industry alone consuming some 80 million ft. per annum. The Celluloid Industries Panel has recommended the installation of a factory for manufacturing 50 million sq. ft. of all types of raw film, and this should synchronise with the manufacture of gelatin, silver halides, sensitizers and other photographic materials in adequate quantities.

Drugs and Pharmaceutical Products.—Prior to World War II, India and Pakistan were almost entirely dependent on imports for the major portion of their requirements of drugs and medicines. The pharmaceutical industry

developed considerably during the war period but is still in its infancy. Synthetic drugs manufactured at present in India or Pakistan are mostly made out of imported chemicals, and, to place the industry on a sound footing, it is of fundamental importance that the fine chemicals necessary as raw materials are produced in requisite quantities. The figures for production of certain natural vegetable drugs and synthetic chemicals, and the targets for their expansion, are given in the following table. These figures are for the year 1946-47. And just as in the previous cases there has been no improvement since then in this industry either. In the case of penicillin, however, efforts are being made to instal a plant near Bombay which will produce 105 million units in the next 2 years and four times that much in the next five years. All the figures are in lbs. per annum except where otherwise stated.

| Drug | Average production figure in 1946-47 | | Target recommended for the next five years |
|---------------------------------------|--------------------------------------|----|--|
| | .. | .. | |
| Caffeine | 20,000 | .. | 30,000 |
| Emetin | nil | .. | 2,000 |
| Ephedrine | 3,000 | .. | 5,000 |
| Morphine | 2,000 | .. | 3,000 |
| Pyrethrum | nil | .. | 50,000 tons of dried pyrethrum flowers |
| Quinine | 100,000 | .. | 2,000,000 |
| Santonin | 2,000 | .. | 3,000 |
| Strophanthine | 15,000 | .. | 16,000 |
| Carbarsone | 2,000 | .. | 50,000 |
| D.I.T. | very little | .. | 30,000 tons |
| Mepacrine | unknown | .. | 160,000 |
| Penicillin | unknown | .. | 1,000,000 million Oxford units |
| Streptomycin | nil | .. | As much as possible |
| Sulpha drugs | unknown | .. | 500,000 |
| Sulpharsphenamine and Near-sphenamine | unknown | .. | 50,000 |
| Vitamin A | 3,500 gallons | .. | 1,000,000 gallons |
| Anaesthetic ether | 120,000 | .. | .. |
| Calcium gluconate | 500 | .. | .. |
| Chloral hydrate | 200 | .. | .. |
| Chlorosulphonic acid | 25 | .. | .. |
| Potassium permanganate | 36,000 | .. | .. |
| Tannic acid | 13,450 | .. | .. |

The raw materials from which drugs and pharmaceutical products are derived consist of various inorganic chemicals, coal and wood distillation products, fermentation products, petroleum products, animal and vegetable products, and aliphatic and aromatic synthetic chemicals. It should be possible to produce sufficient quantities of drugs and pharmaceutical products in India or Pakistan in the very near future if (i) the heavy chemicals industry is expanded, (ii) the manufacture of intermediates

from the coal tar distillation products is immediately taken in hand, and (iii) the manufacture of adequate quantities of solvents of proper quality is well organized.

Paints and Varnishes.—There are at present 38 paint factories and 5 pigment and colour manufacturers in India and Pakistan. The raw materials employed in the manufacture of (a) paints and enamels, and (b) varnishes and lacquers, are pigments,

drying oils and driers, solvents and thinners and naturally occurring and synthetic resins. With the exception of synthetic resins, all the other raw materials are available in the Indian sub-continent in sufficient quantities. The figures for the existing production and proposed targets for the various major items are given in the following table. All the figures are in tons per annum except where otherwise stated.

| Item | Average production figure in 1946-47 | Imports 1947-48 | Target recommended for next five years |
|--|--------------------------------------|-----------------|--|
| Paints and Enamels | 50,000 | | 100,000 |
| Varnishes: All types | 2,500,000 gals. | 410 tons | no target proposed |
| Superior | 155,000 gals. | | 500,000 gals. |
| Pigments: | | | |
| Titanium | | 650 | 5,000 |
| Zinc oxide | 4,000 | 1,170 | 6,000 |
| White lead, red lead, litharge and lead chrome | 4,500 | 120 | 8,000 |
| Titanium whites | | | 3,000 |
| Carbon black | | 925 | 500 |
| Aluminium powder | 250 | | 500 |
| Acetone and cuprous oxides | 1.. | | 500 |

It has been recommended that the extra production of 50,000 tons/annum of paints and enamels should be achieved by increasing the capacity of the existing plants by 25,000 tons, and by the installation of new plants of 25,000 tons capacity.

Dyestuffs.—In the days prior to World War I, the vegetable dyestuff Indigo was produced in large quantities in India, and was actually being exported to Europe and

elsewhere. The outbreak of World War I and the establishment of a synthetic dyestuffs industry in Germany marked the end of the Indian indigo industry. Although, to keep abreast of the rapidly increasing rate of industrialization in the U.S.A. and in the West, we would naturally like to establish a synthetic dyestuffs industry in India and Pakistan shortly, it might be useful to revive the Indigo industry with Government support because, besides keeping a large sum of money in the country that now goes abroad, it (i)

would give considerable employment, (ii) has great use to the peasant grower as a change crop, and (iii) has a peculiar value as an organic manure since the leguminous plant brings nitrogen from the atmosphere into the soil.

There is no production of synthetic dyestuffs in India or Pakistan at present and we are therefore entirely dependent on imports, the figures for which are given in the following table. All figures are in lbs. per annum except where otherwise stated.

| Dyestuff or Colouring material | Average figures of imports in | | | Value (in Rs.) of imports in | | |
|--------------------------------|-------------------------------|-----------|-----------|------------------------------|------------|--------------|
| | 1935-40 | 1946 | 1947-48 | 1935-40 | 1946 | 1947-48 |
| Barks for tanning (cwts.) | 6,98,328 | 7,65,235 | 1,44,981 | 44,57,970 | 77,81,524 | 20,72,881 |
| Chemical (cwts.) | 1,186 | 12,907 | 67 | 2,17,136 | 9,10,970 | 44,024 |
| Cutch and Gambier (cwts.) | 82,162 | 8,086 | 16,598 | 12,82,659 | 9,08,811 | 14,36,542 |
| Alizarine | 8,04,544 | 11,21,337 | 24,37,552 | 6,07,291 | 32,07,906 | 70,65,337 |

| Rhodamine | | 6,516 | 2,932 | | 74,735 | 83,794 |
| Aniline salts | 2,38,40 | 9,00,291 | 3,05,249 | 1,09,583 | 13,42,659 | 3,12,355 |
| Others | 34,81,604 | 36,19,551 | 57,46,254 | 77,80,062 | 113,69,841 | 3,86,47,212 |
| Saffron | 7,189 | 5,771 | 6,148 | 5,83,529 | 6,56,263 | 6,82,335 |
| Total | 3,52,51,119 | | | 8,45,76,689 | | 15,80,29,467 |

The cotton textile industry is by far the **staple** industry in India, the capital invested in it being nearly 50 per cent of the total capital invested in all industries. Realizing that there is an acute cloth shortage in India the National Planning Committee has recommended that the present output of cloth be doubled in the very near future. It is thus necessary to stress the need and urgency of also establishing a dyestuffs industry in India and Pakistan. A survey made recently by the Department of Scientific & Industrial Research of the Government of India has shown that the position is on the whole favourable for the manufacture of dyestuffs, and that all the dyes which are now in substantial demand could be manufactured in large quantities within the next 15 to 30 years.

Raw Materials.—The raw materials necessary for the dyestuffs industry, namely, benzene, toluene, naphthalene, anthracene, carbazole, pyridine, etc., are derived from coal-tar. It is

regrettable that in spite of an abundant supply of coal (about 30 million tons are raised annually) neither India nor Pakistan has developed the coal-tar-distillation industry to any appreciable extent. In pre-war years about 60,000 tons of coal were distilled; this had dwindled to about 25,000 tons, but recently there has been some improvement again. There are, at present, 9 tar-producing plants with a total capacity of 7,375 tons, and 5 tar-distilling plants of 4,900 tons capacity. In pre-war years about 21 million lbs. of dyestuffs, were being imported for the production of which about 250 million lbs. of refined coal-tar-distillation products would be required. Our present production of the latter is only about 66 million lbs./annum.

The major inorganic heavy chemicals required for the dyestuffs industry are sulphuric, nitric and hydrochloric acids, caustic soda and soda ash, salt, lime and alum. It is estimated that the dyestuffs industry will consume about 30,000

tons/annum of the three acids which consumption is not provided for in the targets presented in the Table on p. 380. Although these acids, alkalies and other salts are being produced in India and Pakistan they are more or less fully allocated to existing consumer industries, and hence it is doubtful whether the dyestuffs industry will be able to draw upon their present production. Further, the prices in most cases may be too high, and it is therefore desirable from all points of view that the proposed Indian dyestuffs industry should manufacture its own requirements of heavy inorganic chemicals.

Besides coal-tar derivatives and inorganic heavy chemicals, the dyestuffs industry also requires aliphatic raw material, i.e. ethyl alcohol, acetic acid and acetic anhydride. Of these, only ethyl alcohol is produced in sufficient quantities, and hence it will be necessary to establish the manufacture of the other two chemicals.

EXISTING UNITS

The distribution of the existing units of production in the sub-continent is shown in the following table:

| | Small-scale establishments | Large-scale establishments | Total |
|-----------------------|----------------------------|----------------------------|-------|
| INDIA | 436 | 35 | 471 |
| PAKISTAN | 37 | 3 | 40 |
| HYDERABAD STATE | 6 | .. | 6 |
| Total | 479 | 38 | 517 |

The total capital invested in the Chemical industry is about Rs. 5 crores, which is only 2.5 per cent of the total capital invested in various industries.

The plants being erected by the Government of India for the manufacture of ammonium sulphate from gypsum and ammonia, in accordance with the recommendations of the Fertilizer Mission, will cost about Rs. 11 crores. The cost of the capital equipment required to achieve the sulphuric acid target is of the order of Rs. 35 to 40 lakhs. It has been recommended that the target for caustic soda be achieved by manufacturing 4,000 tons by the electrolytic and the remainder 88,000 tons by the lime-soda process. Each new 5-ton/day plant for the former process is estimated to cost about Rs. 16 lakhs.

Plant and Equipment. A rapid expansion of our chemical industry in the immediate future is possible only if a very large amount of capital equipment is imported from abroad. The equipment so obtained ought to be of the most modern design and maximum efficiency, and on a basis of production should be of an economic size. With such limits the cost of production in the Indian sub-continent will not compare unfavourably with that in other countries. It is desirable also that the erection and tuning up of these plants be entrusted to foreign experts and the equipment manufacturers asked to guarantee the performance of each plant. The foreign technicians should also train Indian personnel to take charge of all the operations within a specified period of about 2 to 3 years.

For most of the subsidiary industries, such as those connected with the manufacture of salts, drugs and pharmaceutical products, paints and

pigments, etc., very elaborate equipment is not required and the plants can be set up locally with the available talent.

An important pre-requisite for a well established and self-sufficient chemical industry is the manufacture of equipment and precision instruments, such as, reaction vessels, vacuum pumps, pressure gauges, pyrometers, thermometers, etc., and every encouragement should be given to efforts made in this direction in India and Pakistan.

Labour and Skilled Personnel. A fundamental pre-requisite for rapid industrialization is technical education and perhaps the most serious problem facing the chemical industry in India or Pakistan is the lack of competent technical personnel. There has recently been some realization of this vital gap in our industrial equipment, and attempts are being made to fill the breach.

The running of chemical industries requires skilled personnel comprising (i) managers, (ii) supervisors, and (iii) skilled workers. To meet the first need, the Government of India have plans for the establishment of 4 higher technological institutes on the model of the Massachusetts Institute of Technology, U.S.A. These will be located one near Bombay, one near Calcutta, one in North India and one in South India. The Government of India have also had a scheme in operation since 1945 for sending students for post graduate and research work in foreign universities. This scheme has now been modified to include more of the teaching staff from the technological institutions with a view to improve the quality of teaching and research in the country. Supervisory personnel are the most important; the Bevin Training scheme played an important role in supplying the needs of war-time industry, but

it is no longer in operation and nothing has been devised as yet to take its place. To meet the need for skilled workmen in the engineering trades, a special Committee was appointed in 1944 which drew up an elaborate scheme for training, but although the Committee reported in August 1945, no action seems to have been taken on its recommendations.

It will be necessary in the initial stages to import foreign technicians to assist most industries in varying degrees, and it would be highly desirable that the training of local personnel in workshop management and supervision, methods of production, and in the laying out and running of a modern factory, should be made one of the terms of such employment.

INDIA'S PLACE

The world production figures for recent years of the major heavy chemicals are not available as yet. However, it is interesting to compare the figures of production for some of the important chemicals manufactured in the Indian sub-continent and in the U.S.A., in order to obtain a fair picture of our position.

That the heavy chemicals industry in India or Pakistan has not developed to the same extent as in the U.S.A., is due to the fact that major consuming industries, such as, plastics, rayon, cellulose fibres, dyestuffs, petroleum, etc., which consume large amounts of acids, alkalis and organic heavy chemicals, have not been established either. Expansion programmes in the chemical process industries have a direct bearing on chemical production because the volume of chemicals made available for use must be attuned to the needs of the consuming outlets. Therefore, to achieve a planned economy, it is necessary that the setting up of these industries in India or Pakistan should synchronize with the growth of the heavy chemicals industry.

An apparent conflict has arisen in the minds of some between the claims of cottage industries and those of large-scale industries—whether we should go back to the villages or whether we should harness the atom. This conflict is largely one of emphasis. It is clear that in India and Pakistan today the development of cottage industries on a vast scale is essential for the well-being of the masses. It is equally clear that the rapid development of large-scale machine industry is an urgent need of the country. Without industrialization, no country can have political or economic freedom, and even cottage industries cannot develop to any large extent if economic freedom is absent.

| Chemical | Unit | Average production figures for 1946-47 | | |
|-----------------------------------|-------|--|-----------|--------------------|
| | | U.S.A. | | INDIA Per annum |
| | | Per annum | Per day | |
| Ammonium Sulphate | Tons | 350,000 | 1,166 | 26,000 |
| Calcium (super) phosphate | Tons | 150,000 | 500 | 3,000 |
| Hydrochloric acid | Tons | 400,000 | 1,333 | 2,500 |
| Nitric acid | Tons | 600,000 | 2,000 | 2,750 |
| Sulphuric acid | Tons | 9,000,000 | 30,000 | 80,000 |
| Caustic soda | Tons | 2,500,000 | 8,333 | 4,000 |
| Chlorine | Tons | 1,000,000 | 3,333 | 2,400 |
| Soda ash | Tons | 8,000,000 | 26,666 | 37,000 |
| Ethyl alcohol | Gals. | 560,000,000 | 1,866,666 | 26,000,000 |
| Methanol | Gals. | 75,000,000 | 250,000 | 18,414 |
| Benzene | Gals. | 170,000,000 | 566,666 | 2,400,000 |
| Cresote oil | Gals. | 150,000,000 | 500,000 | 500,000 |
| Naphthalene | Tons | 375,000,000 | 1,250,000 | 600 |

THE COFFEE INDUSTRY

SUCH historical evidence as is available on the subject shows that coffee was first introduced into the sub-continent from Mecca as early as the 16th century. The first coffee garden was planted by a European about 1840 but the industry thus started did not begin to flourish till about 1860.

The production of coffee in the sub-continent is almost entirely confined to the South. The acreage under production in 1942 was estimated at 194,474 and there has been some increase since then. The crop fluctuates considerably from year to year, but the average annual crop may be taken at approximately 16,500 tons.

The following is a statement of coffee acreage and production during the six years ended 1947-48:—

| Year | Acreage | Production (in tons) |
|---------|---------|----------------------|
| 1942-43 | 194,474 | 16,257 |
| 1943-44 | 198,446 | 17,215 |
| 1944-45 | 198,147 | 17,345 |
| 1945-46 | 198,700 | 25,000 |
| 1946-47 | 208,700 | 15,500 |
| 1947-48 | 210,000 | 15,059 |

The crop for 1945-46 was a record crop for many years. The crop for 1946-47 and 1947-48 was small because of adverse weather conditions.

During the War, the coffee industry in India lost a considerable proportion of its export markets, resulting in a large accumulation of coffee within the country. Prices fell to such a level that a vigorous propaganda drive had to be undertaken to increase the internal consumption. In 1946 no less than 17,000 tons were absorbed by the internal market and it appeared as if the industry did not have to depend upon foreign markets.

Indian Coffee Board.—In 1942 legislation was enacted whereby the entire coffee crop of India was to be handed to the Indian Coffee Board Pool. The Board was responsible for marketing the coffee thus received. The growers expressed much satisfaction with the working of this scheme which helped to maintain fair prices for all and provide a market for the whole of the produce. The scheme at first was only intended to be in force for a period of five years, but it has now been extended without a time limit by the Coffee Market Expansion Act of 1947.

The average market prices at the beginning of 1949 were reported to be as follows:—

| Plantation A | Arabica cherry flats | Robusta cherry flats |
|--------------|----------------------|----------------------|
| Per cwt. | Per cwt. | Per cwt. |
| Rs. | Rs. | Rs. |
| 101 to 223 | 157 to 182 | 126 to 144 |

Towards the end of 1947, in response to growers' appeal for an enhanced price, the Govt. of India deputed a Cost Accountant to enquire and report on the matter. In Feb. 1948, however, the Government of India withdrew the statutory control over prices. The immediate effect of this was the temporary disappearance of coffee from the markets and a rise in price to very high levels. These high prices continued to prevail for the whole of 1948. As the 1948 crops is a large one it is expected that the prices will show a drop in 1949.

During the War there was a serious shortage of labour supply. But after the War the position has much improved.

THE COIR INDUSTRY

COIR is the trade name given to the fibre obtained from the husk of the coconut fruit. India and Ceylon have a virtual monopoly in the production of this by-product of the coconut industry and its development in these countries has been rendered possible by the fact that these coconuts are usually harvested when the husk of the fruit is still green, though the coconut within is ripe. Good quality coir can only be produced from the fresh green husk of the ripe fruit. If the nut is not fully ripe the fibre in the husk has not developed its full strength, and if the fruit has dried the fibre is weak, dark coloured and difficult to extract.

In Ceylon, the extraction is done by mechanical means on a factory scale after the husks have been retted in water for two or three weeks, and under such methods it is not possible to obtain either the colour or cleanliness of the fully retted Indian coir. The process consists of holding the husk against a revolving spiked drum which combs and extracts the fibre. The shorter fibres collect in the drum and after cleaning are classed as "mattress fibre." The longer fibres are retained in the hand of the operator and are classed as "bristle fibre" which is exported for use in the manufacture of brushes, etc. About 75 per cent. of the Ceylon produce is exported as raw fibre and only 25 per cent. as yarn or manufactured coir.

The industry as far as the export trade is concerned, is confined to the backwater regions of the Malabar coast, Cochin, Travancore, and to the Laccadive and Divi Islands, which are administered by the Madras Government. The extraction of the fibre and the manufacture of coir yarn forms a well organised cottage industry. The freshly harvested nuts are purchased by merchants, dehusked and the husks are then conveyed down the backwaters to suitable places for retting. Such places are situated along the tidal reaches of the backwaters, and sites for retting are selected in places where the ground contains a considerable admixture of sand. Here, pits are dug, either in the backwater itself or on the banks and after lining these with palm leaves they are filled with the husks. After filling they are covered with platted coconut leaves and weighed down with soil or mud. The husks

are left to ret in these pits for a period of about eight months, the tidal rise and fall of the water and the porous nature of the ground ensuring constant water movement through the mass of retting husks and thus supplying aeration for the necessary bacterial action.

Women's Work.—At the end of this period, the husks are removed from the retting pit, washed in clean water and distributed among the local people who extract the fibre. This is usually spare time work done by the women of the house. Firstly, the outer skin of the husk is removed and the husk is then beaten with a wooden mallet on a block of wood or stone. This separates the fibre from the decaying pithy matter in which it is embedded in the husk. The fibre thus extracted is dried in the shade and then beaten or willowed with thin bamboo canes. The fibre is then returned to the merchant who further cleans this in a revolving drum furnished with projecting spikes resembling thin saw blades made of iron. Then the fibre is sorted out into colour grade and distributed among the local people who spin this into yarn. This is fundamentally a cottage industry. The fibre is first made into "silvers" and is then either spun by hand or on a wheel. Then it is returned to the merchant who again grades this for colour and splices the short lengths into a continuous length of 450 yards. Finally it is tied into bundles and is sold to the factories where it is either baled up for export or is manufactured into matting, door mats, braid, ship's fender rope, etc.

The yarn is very carefully graded, both for manufacture and for export, according to its colour, which is, in reality, a gauge of proper retting. The best quality coir is of a golden-yellow colour and the lowest grade grey which shows that the husks have either been over-retted or that the conditions for retting have not been satisfactory.

Properly retted coir is much more easily spun than machine made coir, because its fibres are clean and free from adhering pith and much more even yarn is obtained from it. It is also much stronger than machine made coir because none of the long or "bristle" fibres have been removed in the process of extraction.

The colour is not only attractive, but is an indication that retting has been carried through to the correct stage.

Coir fibre, when made into ropes, is extremely elastic and thus yields to heavy strains, and has therefore special uses. It does not rot easily when exposed to atmospheric conditions, or to salt or fresh water, and in manufacture it is found to take dyes readily.

The Government of Madras are conducting a coir training school at Beyeore near Calicut under the control of the Director of Industries and Commerce, where students are trained in improved methods of cleaning fibre, of spinning of coir yarn on the wheel, of producing ropes, bells, mats, rugs, etc.

A Coir industrial school will also be started by the Madras Department of Industries and Commerce, in the Uddanam tract of the North Vizag District for giving training in improved methods of coir industry for the benefit of fishermen and other educationally backward communities of the area.

The Government of Madras have constituted a coir Advisory Board consisting of non-official businessmen, traders in coir and representatives of Chambers of Commerce with the Joint Director of Industries and Commerce as chairman to advise Government as to the steps necessary for the development of coir industry on up-to-date lines on the measures necessary for the proper grading of coir and coir products and to lay down suitable specifications with a view to maintaining the standard of quality, especially for export and also to explore the possibilities of developing export trade in coir.

Coir Workers' Co-operative Societies exist in the districts of Malabar, South Kanara, Tanjore and North Vizagapatnam of the Madras Presidency engaged in the production of coir yarn, ropes and other coir goods under the control of the Co-operative Department. The Department of Industries and Commerce, renders technical assistance and advice.

The Trade.—During normal times the value of the coir trade is considerable, the imports into Great Britain alone, which represent less than 20

per cent. of the Indian exports, are shown in the Board of Trade returns as amounting in value to more than one million pounds per annum. It is an industry which provides a profitable occupation to the densely populated back water tracts of Western India, and it provides the raw material in the shape of yarn and fibre for a considerable part of industry in Europe. More than 80 per cent. of the manufactured coir products and more than 90 per cent. of the Coir Yarn Imported into the United Kingdom are produced in India. The imports of coir fibre from India are inconsiderable and amount to only 25 per cent. of the quantity

imported. The export of coir fibre from India represents in value only 0.85 per cent. of that of the total Indian exports of coir and coir products.

The War made a change to the Coir trade. Coir production in India considerably dwindled owing to the shrinkage of overseas markets. The United Kingdom which was India's principal market before the War reduced her imports very considerably, while all the European markets were lost to India on account of restrictions imposed by all the importing countries on imports of coir. But the U.S.A. and Canada

became important buyers of coir floor-coverings from India which took the place of Japan, China and Java which were supplying weed and grass mats in the pre-war years. During the War, coir was found to be a suitable substitute for hemp and sisal for cordage purposes and began to be used as such on a large scale on account of the non-availability of Manila hemp and Japanese sisal, consequent on the Japanese occupation of the Philippine Islands and the Dutch East Indies. The War has shown that coir can be used for various other purposes also like making of roads or a good wearing face.

THE FILM INDUSTRY

THE Indian film industry, which is now 35 years old, can well claim to be the largest of the medium-scale industries of the country. Early development took place in Bombay, which can today be called the "Hollywood of India". Up to 1946 about 66 per cent. or two-thirds of the total annual production of Indian films came from Bombay studios. Since the trouble in Calcutta and the Punjab the proportion has risen to 90, the balance coming from Madras and to a small extent Calcutta. Production in Lahore has for the time being been abandoned.

There are today about 50 film studios in India, and over 250 concerns engaged in producing films. The principal film producing studios are located at Bombay, Poona, Kolhapur, Calcutta, Madras, Salem and Coimbatore. Of the 3 studios in Lahore, one was burnt in the riots of 1947 and the other two were sealed by the Government and later handed over to the owners on the condition that they will continue their business in Lahore.

Although exact figures are not available in certain cases, it is roughly estimated that about Rs. 10 crores is invested in the Production, Distribution and Exhibition branches of the Indian film industry, in which some 15,000 persons find employment. Investment in production

and distribution amounts to about Rs. 4½ crores. Investment in the construction and equipment of studios about Rs. 1½ crores, and investment in the construction and equipment of Cinemas about Rs. 4½ crores.

Of the 15,000 employed in the industry some 4,000, mainly artistes and technicians are engaged in production, some 4,500, mainly clerical, are engaged in the distribution, and some 6,500 are engaged in the exhibition of films. The total salaries paid out in a year are estimated at about Rs. 4 crores.

(The statistical information given here relates mostly to the period ending 31st March 1948).

The average number of workers employed in film studios registered under the Factories Act as on 31st December 1942 was:

| | |
|---|-------|
| Bombay Province | 2,224 |
| Madras | 462 |
| Calcutta numbers are not available but are estimated at | 650 |
| Total | 3,336 |

No reliable information about Lahore studios is available.

These employees receive under Rs. 200 a month. If the average salary is Rs. 100,

the annual pay-bill of these employees will be Rs. 40,003,200. (i.e., excepting Author, Photo-playwriter, Scenario Writer, Composer of Songs, Production Manager, Assistant Production Manager, Costume Designer and his assistants, Art Director and his assistant, Music Director, Cameraman-in-chief, Sound Engineer, Chief Recorder, Sculptor, Make up Supervisor, Painter, Decorator, Property Man, and Orchestra.)

Raw Film Imports

The following are the import figures for raw films since 1937-38 :-

| Year of Import. | Footage of Raw Film Imported. |
|-----------------|-------------------------------|
| 1937-38 | 7,42,35,103 |
| 1938-39 | 7,38,65,853 |
| 1939-40 | 8,30,00,000 |
| 1940-41 | 7,00,00,000 |
| 1941-42 | 9,30,00,000 |
| 1942-43 | 8,05,53,000 |
| 1943-44 | 7,87,58,000 |
| 1944-45 | 8,72,13,284 |
| 1945-46 | 8,08,98,568 |
| 1946-47 | 12,86,23,000 |
| 1947-48 | 17,42,00,000 |

35 MM. FEATURES

The following table gives the number of short and feature films exhibited in the sub-continent. The table has been compiled from reports of censored films published by the Boards of Film Censors at Bombay, Calcutta, Madras and Lahore.

| Year | FEATURES | | SHORTS | | GRAND TOTAL | |
|--------------|----------|---------|-----------|-----------------|-------------|---------|
| | Indian | Foreign | Indian | Foreign | Indian | Foreign |
| 1924 | 59 | 405 | 26 | 903 | 85 | 1308 |
| 1926 | 95 | 456 | 53 | 1076 | 148 | 1532 |
| 1928 | 117 | 598 | 120 | 1009 | 237 | 1607 |
| 1930 | 261 | 699 | 63 | 1029 | 324 | 1728 |
| 1931 | 342 | 472 | 138 | 989 | 480 | 1461 |
| 1932 | 237 | 393 | 96 | 1153 | 333 | 1526 |
| 1933 | 202 | 440 | 69 | 1491 | 271 | 1940 |
| 1934 | 196 | 417 | 109 | 1470 | 305 | 1887 |
| 1935 | 247 | 397 | 91 | 1416 | 338 | 1813 |
| 1936 | 229 | 399 | 97 | 1425 | 326 | 1824 |
| 1937 | 180 | 395 | 64 | 1181 | 244 | 1576 |
| 1938 | 163 | 277 | not known | 826 | 163 | 1103 |
| 1939 | 146 | 224 | " | 672 | 146 | 896 |
| 1940 | 162 | 201 | " | 604 | 162 | 805 |
| 1941 | 137 | 169 | " | 201 | " | 370 |
| 1942 | 165 | 197 | " | 153 | " | 360 |
| 1943 | 183 | 212 | " | 202 | " | 414 |
| 1944 | 124 | 298 | 630 | 812 | 754 | 1110 |
| 1945 | 98 | 332 | 689 | 664 | 787 | 996 |
| 1946 | 200 | 364* | 134** | { 502 207† } | 334 | 1052 |
| 1947 | 283 | 313 | " | " | " | " |
| 1948 | 264 | 291 | " | " | " | " |

The 16 mm. features and shorts for 1946 were features (foreign) 39, shorts (Indian) 21†, shorts (foreign) 178, grand total (Indian) 21 and grand total (foreign) 217.

* Including 4 narrated in Hindustani. ** Being newsreels.
† Newsreels. ‡ Including 5 newsreels reduced from 35 mm.

The following table gives the country of origin of feature films exhibited in the sub-continent for the years 1938 to 1948 :—

| | 1938 | 1939 | 1940 | 1941 | 1942 | 1943 | 1944 | 1945 | 1946 | 1947 | 1948 |
|--------------------|------|------|------|------|------|------|------|------|------|------|------|
| India and Pakistan | 163 | 146 | 162 | 137 | 165 | 183 | 124 | 98 | 200 | 250 | 260 |
| America | 220 | 178 | 178 | 167 | 167 | 180 | 250 | 290 | 295 | 225 | 190 |
| Britain | 55 | 39 | 22 | 33 | 22 | 30 | 30 | 30 | 63 | 50 | 50 |
| Other Countries .. | 2 | 9 | 1 | .. | 2 | 2 | 18 | 12 | 6 | .. | .. |
| Total | 440 | 370 | 363 | 337 | 356 | 395 | 422 | 430 | 564 | 525 | 500 |

The substantial increase in Indian feature film production since 1946 is explained by the fact that the industry could take full advantage of the removal of the control on the import and consumption of raw films which would enable many an independent producer to try his hand at production. The general inflation also helped the expansion. On the other hand the drop in Indian short films is due entirely to the fact that the Government of India stopped production of their Information Films on 1st April 1946. Thereafter the News Parade was produced for 6 months but this was also stopped with the lapse of D.I.R. 44-A on the 30th September 1946.

As Government have revived the documentary and news films activity from June 1949, at least two Provincial Governments have set up their own documentary film units, and it is expected that some 60 short films will be completed in the year 1949.

The import of foreign feature and short films on the other hand showed a gradual decline owing to the departure of most foreigners from India and the increasing patronage by Indians of Indian films. The foreign film continued in the 16 mm. field in a bid to introduce the foreign film in the many small towns which had not yet shown the foreign film. This attempt was

not very successful mainly because of the fact that the people in these small towns could not follow spoken English. For the same reason, the attempt to introduce the 35 mm. foreign films with the original English dialogue toned down and the story made intelligible by intermittent commentary in Hindustani also failed.

DISTRIBUTORS

There are about 150 distributors in all, of whom 9 are distributors of foreign films. Seven of these represent American films, one distributes both Indian, British and American films while the ninth distributes British films and American films produced out of the earnings of British films in the U.S.A. These distributors imported on an average about 280 Feature Films and 300 Shorts every year.

During the period of Second World War, the import of feature films fell by one-fourth, while that of short films became negligible as exhibitors were compelled under the Defence of India Rules to exhibit not less than 2,000 ft. of such films as were approved or produced by the Government of India which took away all the time that was formerly used for showing imported short films. Also the Government of India once again emphasised that an exhibition show shall be conducted from June 3, 1949 with not

less than 1,000 ft. of film approved by Government with the result that the import of short films will once again fall.

The distributors are mainly centred in Bombay, Calcutta, Delhi, Madras, Bangalore and Bhusawal to supply cinemas, throughout the country with pictures for exhibition. Distribution in Western Pakistan was very greatly upset following the disturbed conditions in that region but has established itself again so far as leading cities are concerned. The Government of India distributes its own short films from exchanges at the principal centres with an additional one at Nagpur.

CINEMAS

When compared to the world's film business, the Indian film industry rates below 3 per cent. For a population of 400,000,000 in India and Pakistan there are about 1,501 cinemas whether permanent or touring. Of these the number in Pakistan is 117. Britain for a population of 47,416,842 has nearly 5,000 cinemas while America with a population of 122,775,040 has as many as 17,000 cinemas.

There is no prospect of the number of cinemas increasing either in India or Pakistan unless the needs for residential accommodation is satisfied and there is peace and quiet throughout the two Dominions.

The gross annual income of cinemas showing Indian films amounted pre-war time to about Rs. 2.40 crores. Although there is a source of income from abroad for Indian films this does not amount to much. About 5 per cent. only of the total income from Indian films came from abroad until the embargo on trade with Africa was imposed as a measure of retaliation against South Africa's anti-Indian policy, but now it is only a nominal figure. It is therefore safe to say that the industry does not have any worthwhile foreign income. About 95 per cent. of the total income comes from the sub-continent itself. The gross annual income of cinemas showing foreign films was estimated pre-war at about Rs. 60 lakhs.

| Country. | Population. | Cinema Houses. | Persons per cinema. | Cinemas per 1,000 population. |
|---------------------|-------------|----------------|---------------------|-------------------------------|
| Great Britain | 47,416,842 | 5,000 | 9,483 | 0.01 |
| U. S. A. | 122,775,046 | 17,000 | 7,222 | 0.14 |
| India | 310,000,000 | 1,384 | 235,294 | 0.0040 |
| Pakistan | 90,000,000 | 117 | 769,231 | 0.00001 |

The following table gives the production of films in the year 1942 to 1948 :—

| Language | 1942 | 1943 | 1944 | 1945 | 1946 | 1947 | 1948 |
|--------------------------------|------|------|------|------|------|------|------|
| Tamil | 21 | 11 | 18 | 11 | 13 | 29 | 32 |
| Telugu | 10 | 4 | 5 | 4 | 10 | 6 | 7 |
| Kanarese | 2 | 4 | .. | 1 | .. | .. | .. |
| Bengali | 15 | 20 | 12 | 9 | 14 | 33 | 37 |
| Punjabi | 3 | 3 | 1 | .. | .. | .. | .. |
| Sindhi | 1 | .. | .. | .. | .. | .. | .. |
| Marwari | 1 | 1 | .. | .. | .. | .. | .. |
| Gujrati | .. | .. | .. | .. | 1 | 11 | 28 |
| Marathi | 13 | 7 | 5 | .. | .. | 6 | 7 |
| Urdu | .. | .. | .. | .. | 9 | .. | .. |
| Other regional languages | 7 | 9 | 1 | 7 | 2 | 12 | 6 |
| Hindi | 99 | 98 | 88 | 67 | 151 | 187 | 147 |
| Grand Total | 172 | 157 | 125 | 99 | 290 | 283 | 264 |

The provincial production showed that Bombay maintained its old ascendancy in production.

The remarkable increase in the number of local films in 1947 and 1948 is attributable partly to the inflationary conditions of the money market, and partly to the stabilization of internal conditions following the achievement of independence albeit by a division of the sub-continent. The sudden spurt in the production of Gujarathi films is due to the fact that with the apportionment to Pakistan of the Punjab, Sind and the N.W.F.P., which yielded 50 per cent of the returns from Hindi-Hindustani films, a substantial section of the independent producers felt that production of pictures in that language was no longer economical. The switch-over justified itself in 1947, and, therefore, many more followed suit in 1948. But 39 pictures in two years were far too many and nearly 50 per cent of the producers of these pictures found themselves in difficulties.

The majority of the films produced since 1943 came from independent producers who shot their films in rented studios.

TAXATION

The taxation includes (1) Import Duty on Raw Films and Production and Projection Machinery, (2) An Octroi or Terminal Tax which is levied by most District Municipalities, (3) An Advertisement Tax on cinema publicity of every sort including slides shown on the screen in the cinemas. This tax is levied by important Municipalities, (4) Government Electricity Duty, (5) Entertainment Tax, (6) Income Tax, Super Tax and Excess Profits Tax upto 31st March 1946. In West Bengal and the C. P. and Berar the Entertainment Tax works out at almost 50 per cent of the box-office collections. The sum total of these taxes is estimated at 40 per cent of the gross annual income of the industry. Thus, on the industry's gross income in 1946 of approximately Rs. 600 lakhs roughly Rs. 240 lakhs were paid in taxes.

IMPORTS OF FILMS

The following table gives in footage and value the totals of raw and exposed films— from 1927 imported into the sub-continent and of the import duty paid to Government:—

| Year | Footage | | Value | | Total Import Duty |
|---------|-------------|----------------|---------------|-----------|-------------------|
| 1922-23 | | 7,310,429 | | 13,23,393 | 2,55,935 |
| 1923-24 | | 7,201,655 | | 14,10,637 | 2,25,407 |
| 1924-25 | | 9,444,760 | | 15,02,823 | 2,60,709 |
| 1925-26 | | 13,017,190 | | 21,05,553 | 3,54,295 |
| 1926-27 | | 17,482,664 | | 23,21,508 | 4,22,854 |
| | Raw Films | | Exposed Films | | |
| | Footage | Value | Footage | Value | |
| 1927-28 | 12,372,003 | 5,89,355 | 10,372,288 | 20,28,976 | 4,42,330 |
| 1928-29 | 19,161,293 | 8,60,478 | 10,792,341 | 19,81,911 | 4,99,691 |
| 1929-30 | 21,690,579 | 8,49,321 | 10,247,051 | 19,06,341 | 5,17,005 |
| 1930-31 | 28,309,211 | 11,07,665 | 10,179,609 | 19,80,495 | 6,03,984 |
| 1931-32 | 22,846,043 | 8,96,722 | 8,079,862 | 17,00,000 | 7,63,174 |
| 1932-33 | 25,579,887 | 10,86,217 | 9,501,023 | 19,10,051 | 9,48,370 |
| 1933-34 | 36,917,201 | 15,10,735 | 10,826,366 | 27,79,462 | 12,81,237 |
| 1934-35 | 60,101,131 | 21,49,246 | 9,025,721 | 24,88,818 | 13,59,483 |
| 1935-36 | 60,669,534 | 21,02,267 | 8,820,808 | 25,80,421 | 13,99,206 |
| 1936-37 | 67,832,111 | 23,73,890 | 9,407,888 | 24,89,887 | 14,45,544 |
| 1937-38 | 74,236,103 | 25,44,411 | 22,278,338 | 38,14,738 | 14,89,382 |
| 1938-39 | 73,855,853 | 24,99,188 | 26,034,479 | 37,69,305 | 18,09,356 |
| 1939-40 | 83,000,000 | 31,00,000 | 24,000,000 | 54,00,000 | 14,70,000 |
| 1940-41 | 70,000,000 | Not available. | 17,12,000 | | |
| 1941-42 | 95,000,000 | | 6,924,000 | | |
| 1942-43 | 86,553,000 | | 11,021,000 | | |
| 1943-44 | 78,758,000 | | 11,331,000 | | |
| 1944-45 | 87,213,284 | 29,59,197 | 11,249,716 | 38,84,555 | |
| 1945-46 | 80,893,563 | 29,14,396 | 16,229,682 | 45,45,814 | |
| 1946-47 | 128,623,000 | 54,11,000 | 15,115,000 | 19,08,508 | |
| 1947-48 | 174,200,000 | | | | |

IMPORTS OF CINEMA EQUIPMENT

The following table gives the figures of imports into the sub-continent of cinema talkie apparatus and equipment upto 1947-48:—

| | 1936-37 | 1937-38 | 1938-39 | 1940-41 | 1943-44 | 1944-45 | 1945-46 | 1946-47 | 1947-48 |
|---|----------|-----------|----------|--------------------|----------|----------|-----------|-----------|-----------|
| | Rs. | Rs. | Rs. | Rs. | Rs. | Rs. | Rs. | Rs. | Rs. |
| Cinema projecting apparatus and parts and accessories | 8,65,447 | 12,39,660 | 9,86,536 | Not yet available. | 1,62,315 | 5,66,766 | 19,10,229 | 46,57,934 | 62,07,997 |
| Sound recording apparatus and parts and accessories | 8,29,416 | 5,72,751 | 3,94,758 | Not yet available. | 41,214 | 1,87,293 | 15,37,559 | 23,17,223 | 84,63,968 |

HISTORY

When some peripetetic exhibitors showed pictures of the Coronation of King George V and Queen Mary on Bombay's Esplanade Maidan about 1911 they laid the foundations of the Indian film industry which now embraces all the three branches of production, distribution and exhibition. The pictures of the coronation proved to be so popular that the temporary structures became permanent ones. More pictures began to arrive in the country and the film industry got started on its career.

In the early days the entire business was controlled by four people: Alexander Hogue, F. H. Stihlwa, Chunilal Munim and J. F. Madan. Of the four the last was the most influential chiefly because of the large chain of cinemas which he had acquired throughout the sub-continent.

The American film held undisputed sway in the early days. The number of American films exhibited was much higher than even that of Indian films. And British films, chiefly because of their poor quality, were hardly in the picture so much so that the question was raised in the Council of State. In 1917, a Committee of Enquiry was set up by the Government. But no action was taken on any of its recommendations for two reasons. The recommendations lacked unanimity, and the Committee had nothing to say about the desirability of showing British pictures. The success of the foreign films, however, was fully deserved for not only were they technically superior but even in their intellectual or emotional content they were much better than anything which Indian producers could show. The hold which the American film had acquired over the Indian market lasted nearly two decades (1912-1930); it was shattered only when the talkie came to India and the silent film disappeared from the market.

INDIAN PRODUCERS

Meanwhile a number of Indian producers had entered the field, notably R. N. Putabkar and D. G. Phalke. Phalke produced in 1913 a four-reel mythological feature *Raja Harishchandra* which entitled him to be called the 'father' of the production branch of the film industry. This was shown in Bombay at the Kohnoor Cinema on Sandhurst Road. And later Phalke went round the country showing it to excited and appreciative crowds who flocked to see it both because of the novelty of the experience as well as the nature of the theme.

Then came World War I and a host of difficulties. But despite these difficulties Phalke succeeded in releasing further mythological features like *Krishna Janma*, *Kalsa Mardana*, and a comic strip called *Pithache Panje* which proved to be as popular as a Charlie Chaplin comedy. Phalke's successful career was suddenly interrupted when owing to disagreement with his financiers he retired to Benares. And though he did come back later to act as general advisor to the Hindustan Film Co.—the only company which never suffered any losses during its ten-year old career or engaged a woman to play feminine roles—he was never able to recapture the magic of his earlier effort.

There were others who had entered the production business, the more noteworthy among whom were Dwarkadas Narandas, Mancklal Chunilal, Ardeshir Irani, Mayasankar Thakkar and the successors of J. F. Madan (the last of whom tried to brighten up the pictures by getting European actresses to play leading roles). But, on the whole it was a sad story. For none of the producers were able to organize the film business on any thing like the solid foundation that it has built for itself in the U.S.A., for instance. In fact, the foundations were always shaky. There was a great deal which the Government or the bankers could have done to place the industry on a sound footing. The Government could have reduced the incidence of the taxation (most of it of an indirect nature), which fell so heavily on the infant industry. The bankers for their part, could have granted long or short-term loans at

reasonable rates of interest. But neither the Government nor the bankers proved to be of any help, and this despite the recommendations of the Indian Cinematograph Committee in 1928. The result was that the young industry had to fight for survival as best it could against much stronger and better organized foreign companies. When at last the talkies burst upon the country in 1930 the Indian companies found that they were totally unprepared to withstand the shock. A great many of them simply succumbed. But others gifted with ideas or inspired by enthusiasm made a fresh start under new conditions.

TALKIES

Foremost among these latter was Ardeshir Irani, a man who had started his career as a cinema projectionist. It was he who laid the foundations of the new industry with the first talkie *Alam Ara* which he produced in 1931. There were circumstances which favoured the growth of an indigenous film industry in the country. A great many people were unable to follow the spoken English of the foreign talkie and had to turn to talkies made in their own language for entertainment. Thus Indian talkies got a tremendous impetus. But investors were still hesitant and the industry was starved of finances. Nevertheless the industry made rapid progress: production rose, new talkie houses were constructed, theatres meant for stage-plays were converted into talkie houses. The exhibition of foreign pictures received a serious set-back.

Thus in 1939, the number of Indian films produced rose to 165, the number of permanent cinemas to 1,265 with some 400 as travelling cinemas. 80 per cent of the total exhibition time was (and still is) devoted to Indian films, with only 15 per cent to American films and a mere 2 per cent to British films. The income at the box office, computed for the first time, was estimated at Rs. 292 lakhs which together with the fact that a little over a third had to be paid as taxes and fees, led one for the first time to suppose that the cinema, in its three branches, was collectively an industry capable of development into a major industry as in the U. S. A.

This encouragement induced production ventures in Madras and occasionally in Lahore and established the reputation once for all of the Prabhat Film Co. of Poona in the Bombay Province and New Theatres of Calcutta in Bengal (now West Bengal) as producers of pictures that were assured of success and of huge box-office returns.

Mr. V. Shantaram, a partner of Prabhat, shot into fame as a producer of genius. After a tentative start the average quality of the Indian film rapidly improved between 1935 to 1937 so as to stand comparison with the best production of American and English studios. Mr. Shantaram's *Dharmatma* for instance can rank even today with the world's best pictures. But after 1937 production took on a different quality. There developed a tendency to blindly imitate Western themes and ideas, thus losing much of its value as an instrument of entertainment or of enlightenment.

WAR YEARS

Then came world War II. To the industry as a whole, with high profits as the sole motive, the war proved to be heaven sent boon. From a gross income of Rs. 292 lakhs in 1939 the income rose to the unprecedented figure of Rs. 12,82 lakhs in 1945, though the number of permanent cinemas remained throughout the war at practically the same level as in 1939. The principal reasons for this great prosperity were: the presence of large bodies of the armed forces in the sub-continent; the fact that almost every able-bodied male and a large proportion of the adult female population was engaged in some gainful occupation; and that the people as a whole, had more money in their pockets than in the past with no goods to spend it on. The gross income on each picture rose to unprecedented heights because owing to the shortage of material and rise in the cost of production

the number of talkies produced fell. The number of picture houses in the bigger cities too were relatively few and as the cities themselves were getting filled out the opportunity for graft and corruption increased. Financially, therefore, every section of the industry profited by the War. But this profit was not reflected in the artistic, technical or cultural aspects of the film. In fact the content, quality, technique, very greatly deteriorated. Moreover, the industry, not wishing to aid the war effort refused to produce the short "Information" films required by Government, even though these short films would have created for the production branch a new section which could have spread much useful information about India abroad and afforded a sort of training-ground for new technicians, artists and for new art-forms. The refusal in 1943 to produce the Information Films compelled the Central Government to undertake that responsibility at substantial loss to the public exchequer and by the promulgation of D.I.R. 44-A it served to introduce for the first time in India, the habit of regimentation of the entertainment—a regimentation introduced by the Government again as from June 3, 1949. Nor was all the war profit put aside for improvements in technical processes or for removing collective financial handicaps under which the industry has for years suffered.

PRESENT POSITION

The failure to use the profits for the benefit of the industry had the most disastrous effect immediately the War was over in September 1945. The box-office income began to fall. Another misfortune was the riots which broke out in Calcutta, Bombay, Noakhali and the Punjab.

Cinemas had to close in the disturbed towns, and business was restricted for months on end. This has produced a huge backlog of some 300 un-released pictures. Release in the 37 key towns is not possible except on payment of special gratuities or surrender of some right or concession such as sole distribution rights. All this has caused the major producers to severely restrict, if not altogether suspend production. The financiers who loan money for the production in 1947 of a new record number of pictures (287), of which more than about 80 have been released are also feeling unhappy.

In sum, the industry as much because of its failure to use the huge war-time profits as because of the effects of partition and the country-wide disturbances has been reduced, in a period of some 21 months, to the economic position it held in 1941. Of this no greater evidence is necessary than the fact that the gross income of the industry in 1949 is not estimated at higher than Rs. 545 lakhs, of which again roughly 20 per cent is in respect of foreign films and over 40 per cent represents taxes paid or payable.

The number of cinemas now is: India 1,384; Pakistan: 117. Of the 3 studios in Pakistan, one has been destroyed, while in the other two there is little or no production activity.

A PROPOSAL

A proposal which has been put forward in this connection is that all the producers should join together to form a corporation with a subscribed capital of a crore of rupees. The total demand for new pictures should be accurately assessed and no more pictures should be produced than can actually be shown so that backlog is avoided. A limit must be set on the cost of production of a picture in relation to what it can earn after release. Themes must be found not in foreign pictures or foreign literature but in indigenous literature. Well-known writers should be commissioned to prepare the script. The screen-plays should also be prepared under their direct supervision.

Again, as the industry itself has no production code of its own it should co-operate with Boards of Film Censors, who, in Bombay and Madras, have set up their own codes and submit to pre-censorship under those codes, so that loss

and wastage at a later stage could be avoided. Production time should be reduced from six months to about one and a half months. The salary of an artist should be restricted to about Rs. 1,000 a month, though he should be allowed a share in the net profits. There should also be an agreement that no artist might work on more than one picture at a time, and so on. It is clear that it is along some such lines as these that reorganization has to be sought without which even the film finance corporation formed in 1949 cannot help much the industry assuming of course, that the finance corporation secures the capital necessary.

NEW MARKET

A substantial portion of the serious depletion in income can be more than made good if the industry pays due attention to the large untapped market in India proper. India's 1,384 cinemas are spread in only about 550 cities and towns, and there are at least about 1,700 towns which do not yet have a cinema.

These towns have been without a cinema so far because the population of each of them is not large enough to maintain a 35 mm. cinema, the construction and maintenance of which are costly. But with the extraordinary advance made, mainly during the last War, in perfecting 16 mm. projection equipment, which is much less costly than the 35 mm. equipment, it is possible to provide these towns with small 16 mm. cinemas maintainable within the income they can yield. A beginning should be made in each of these towns with a temporary 16 mm. cinema which should be converted into a permanent house if the actual results of the travelling cinema warrant such action.

The exploitation of this new market calls for additional investment, which the industry ought to find from the profits which it made during the war. The provision and operation of these cinemas presuppose an organizational and technical effort, which is beyond the capacity of individual exhibitors, but the industry as a whole is in a position to finance the venture. This organized these cinemas can yield as much net profit as the present 35 mm. cinemas, which is the main reason why the effort should be made. It may be mentioned in passing that individual effort in this vast field was made in 1946 and 1947 but it failed badly.

PLANT AND EQUIPMENT

The plant and equipment required, whether for the production or exhibition has always been imported. The number of studios is too small to make manufacture of the production equipment economically possible, which must, therefore, continue to be imported. On the exhibition side, various mechanical parts were indigenously manufactured and used during the last War, though the quality was far below that of the imported article. There was some talk that immediately the War was over, and the necessary precision manufacturing capital goods were available, almost the whole range of projection equipment, except the optical parts, would be manufactured in the country, but nothing of the kind has materialised yet though the capital goods are available, mainly from the U. S. A. Nothing in fact can be done unless Government prohibit the import of any equipment which can be manufactured in this country. It is then possible that some American Manufacturer would establish the necessary factory in this country, exactly as has already been done in the United Kingdom. In the last resort it would appear that this manufacture would be undertaken only with the progress of the Machine Tools and Radio manufacturing in this country.

LABOUR

The majority of the people in the industry have been trained by practical experience in the studio or the cinema. There is a tendency, however, to engage qualified people as sound recordists and projectionists. But the tenure of service and employment is at present so uncertain, the organization so poor, that qualified people see no prospect for themselves in the industry.

Permanency can be assured only if the reorganisation on the lines mentioned above are adopted. The occasional foreign technician, who has seen things for himself, has been wholly dissatisfied with conditions in the industry. However, what is needed is not foreign help but facilities to test the advances in film technique reported in foreign journals. The industry is not in a position to provide these facilities, which can, in the circumstances, be provided only by Government as part of over-all industrial research. As long as studio technique does not reach American standards, it would be futile to invite foreign technicians or train Indian technicians in foreign lands because they will not have the equipment or other facilities to put into practice what they have learnt.

Comparison with World Position.—Beyond the fact that the number of pictures produced per year is second only to that of Hollywood, there is little to be said which is to

the credit of the Indian film industry. The mainstay of the film industry of any country is its cinemas, which in India amount to no more than 1,384, whereas Great Britain and France, whose individual output of pictures is much below that of India, have over 4,000 each. The greater the number of cinemas, the greater is the income per picture and the higher the quality of the picture produced. Lack of resources is no discouragement. For as an example of how a little money could be made to go a long way we have the French film industry the quality of whose production is second to that of none in the world.

CLASS-ROOM FILMS

In 1948, the 16 mm. class-room film was, for the first time, introduced with the active patronage of the Government at the Centre and in the Provinces of Bombay, the C. P. and Berar, Madras and the Mysore State.

The general policy is as follows :—

- (1) That such foreign educational films as are suitable for use in this country should be imported and should not be produced here;
- (2) that the films under (1) be dubbed into Indian languages if required and possible, and
- (3) that only on subjects not covered by (1) are films to be produced in this country.

In 1949, Government appealed for indigenous production by private producers, but without much response, as the producers felt that with Government undertaking to supply 16 mm. versions of their 35 mm. documentaries and newsreels, the share of the class-room film market open to them was hardly sufficient to warrant investment by them. Progress would be possible, if only the Government and non-Government spheres of production were clearly earmarked.

THE GLASS INDUSTRY

GLASS which was once only an article of artistic taste, has emerged as a material of wide utility and strategic importance, capable of meeting in a variety of ways the increasing requirements of both war and peace.

Glass was manufactured in the sub-continent centuries before Christ. Pliny mentions "Indian glass" as being of superior quality.

As a result of recent archaeological excavations a number of small crude glass vessels indicative of the very primitive stage of the industry at the time, have been discovered.

The first Indian references to glass are in the Mahavamsa, the Chronicles of the Sinhalese Kings (306 B.C.), when glass mirrors were carried in processions.

It is certain, according to Sir Alfred Chatterton, that by the sixteenth century, glass was an established industry in the sub-continent, producing mainly bangles and small bottles. The quality of the materials was bad and the articles turned out were very crude.

Glass manufacture in the sub-continent dates from the nineties of the last century and the first factory was established at Jhelum by the Murree Brewery. This was followed by the establishment of many other factories, but all went out of work at an early date. Over half a crore of rupees had been estimated to have been lost in these early attempts.

The sub-continent as a whole produced about 153,450 tons of glass including glassware. Of this 142,500 were produced in the two Dominions and 10,950 tons in the States. There are in all 174 factories manufacturing glass and glassware in the sub-continent. Of these, 162 are in the two Dominions, and 12 in the States. Passing next to Import-Export trade we find that the total value of the goods exported in 1940-41 (latest available) was Rs. 583,800 and the total value of the goods imported was Rs. 10,700,000, evidently the sub-continent imported goods worth about twenty times the value of its exports. Among the places to which the goods were exported are Aden, Bahrain, Ceylon, Burma, Malay States, Arabia and Iran. The predominance of the Far East in the export trade of the sub-continent is striking. As regards imports the total value of the goods which came in was about 108 lakhs.

The range of glassware manufactured in the sub-continent today is extremely wide. It extends from bangles at one end to glass instruments at the other and includes bottles, globes, tumblers, jars, beads, electric lamp shells, other lamp ware, boiler gauges, steamware, hospital-ware and technical articles required for defence purposes. It is estimated that the industry can meet about 80 per cent of the internal demand in the sub-continent today.

PREDOMINANCE OF U.P.

The industry is not uniformly spread over the sub-continent, but is concentrated in certain areas such as U.P., Calcutta, Belgaum in Bombay and in the Mysore State. The predominance of U.P. is striking. Out of the 170 glass factories in India as many as 70 are in U.P. alone, with Ferozabad leading in the manufacture of bangles. The U.P. supplies the bulk of the glass consumed in the sub-continent. Next to U.P. stands Calcutta, where a number of small and medium-sized factories have come into existence. In Bombay one old-established bottle factory has greatly enlarged the quantity and improved the quality of its products and has even ventured into the field of glass instrument making. There are also several other factories of recent origin in Bombay.

The position in U.P. where over 40,000 people are engaged in the glass trade is worth a separate note. The glass industry has flourished in U.P. because of three advantages—the availability of the right type of sands, the existence of skilled workers, and most important of all the help given to the industry by the Provincial Government which has been a pioneer in this field. In 1938 special action towards development of this industry was taken by the Government.

A glass Technology Section was established at Benares under the direction of Dr. A. Madel, Glass Technologist to the U.P. Government. Since then modern recuperative furnaces have been introduced, and the large-scale industry as a whole changed over from pot-furnaces to tank-furnaces which are more economical and better suited for mass production. Numerous glass shaping, refining and decorating machines of a modern type have been installed in factories, in some cases at Government expense, according to development plans implemented by the Section. Various new lines, never before attempted in the sub-continent like boiler gauges, steamware, hospital-ware, technical articles required by the Defence Departments, etc., have also been evolved in the Laboratory of the section and handed over to the industry for regular production.

The production of laboratory ware was initiated and also the manufacture of glass beads was introduced, as an entirely new cottage industry, following a process hitherto unknown in the sub-continent. The glass section strives to improve working conditions in Ferozabad and other centres, and experiments with new types of decorative glasses for the bangle and bead industry. Several modern glass factories were built by the section to cope with war supplies of articles never before made in the sub-continent. They are now in full production. In particular, the bottle industry has been organised on semi-automatic lines and the production of glass elements for the use of electric lamp factories has been established on a large scale. One factory situated at Shikohabad specialises exclusively in electric lamp shells.

ORGANIZATION

The glassware industry in the sub-continent is organized in two well-defined forms. (1) indigenous cottage industry and (2) modern factory industry. The former, which is represented in several parts of the country, has its chief centres in the Ferozabad area in the United Provinces. It is mainly concerned with the manufacture of cheap bangles made from glass blocks manufactured in large quantities. With the coming of the factory-scale manufacture of bangles, the cottage industry has had to struggle hard for its existence. The factory industry is turning out much better quality bangles and has also successfully eliminated Japanese imports. Ferozabad has been in full control of the bangle market since the Second World War. It expected great prosperity in the first three years of the war, later there was a slack due to shortage of coal. Records of pre-war Indian ventures have shown, however, that failure in some cases was due in part at least to lack of enlightened management and of expert guidance.

In other fields the factory industry is mainly concerned with the manufacture of bottles, lamp chimneys and globes, tumblers and jars, the chief centres of production being the United Provinces, Calcutta and Bombay.

THE FUTURE

It can be safely said that glass industry has bright prospects. It is an essential article of consumption and hence consumers' demand for the same mounts up. Glass is, in fact, being increasingly adopted for uses hitherto unsuspected. It is, for instance, being used to replace metal in centrifugal pumps, ball

bearing, gauge, pipe, etc. It is also being widely employed as conditioning material. Also the appearance of the unbreakable variety has helped to remove one of the material's most serious disadvantages. Altogether the glass industry has a great, expanding future.

There are, of course, obstacles which the Indian manufacturer has to overcome and adjustments which he has to make if he is to take full advantage of his opportunities. There is, for instance, the question of raw material. One of the three raw materials necessary for the production of glass, soda ash, has to be imported as only a very small amount is being produced at Dhrangadra. The Government have, it is true, agreed to give a rebate on customs duty on imported soda ash. And two leading firms are preparing plans to put Indian made soda ash on the market. But the supply of soda ash in sufficient quantity is a problem which has still to be tackled in any adequate degree. This is indeed part of a larger question for good glass cannot be manufactured without an adequate supply of standardized chemicals, high grade coal and refractories of standard quality.

WAR YEARS

The growth of the industry has been very rapid, specially during the last ten or twelve years. Here are a few figures to illustrate the rapidity of the expansion. In 1938-39 the total number of glass factories in the sub-continent was 60. Today the number has risen to 174. Before 1939 the internal production was estimated at 2 crores of rupees. In 1941-42 it increased to 4 crores. Before 1914 the Indian industry could supply only about 25 per cent of the country's needs. Today it is in a position to supply as much as 80 per cent of its needs. A look at the import and export figures tells the same story. In 1929-30 the imports were valued at 480.9 lakhs. By 1941 they had fallen to 107.9 lakhs. The exports have risen as rapidly as the imports have fallen. In 1928-30 the sub-continent exported glassware worth 103.6 lakhs. In 1941 the value of the exports had shot up to 583.8 lakhs.

The development of the industry has not been lopsided either: every type of glassware has shared in the general expansion. But progress has been most striking in respect to glass sheets, hollowware and bottles. The production of glass sheets, for instance has risen from about 1,000 tons in 1938-1939 to about 5,500 tons in 1940-41. Three sheet glass factories are at present in existence and two in construction while before the War there was only one sheet glass factory; and it is now believed that this section of the industry at least will be able to compete with foreign manufacturers on equal terms.

Equally striking progress has been made in the manufacture of hollow glassware like tumblers, lamps and globes. Plants engaged in the production of hollowware are fully equipped with tank furnaces and are in a position to meet the ever increasing demand in the country. It should be noted here that finishing machines for the manufacture of quality glassware were set up on the initiative of the Government. The introduction of jar making machines also owes a great deal to Government initiative and enterprise.

Talking of bottles, the U.P. alone is able to put on the market 10,000 tons of bottles a year. Besides, there are as many as 50 workshops which concentrate on the manufacture of toys and other fancy goods such as buttons, pendants, pearls and beads. Bombay has taken the lead in the manufacture of thermos flask refills. Attempts to produce precision instruments in the same place have already been mentioned. Then there is the manufacture of glass shells for electric bulbs which is yet another interesting development which is worth noting.

DEVELOPMENTS

The most important single development which revolutionized the technique of glass manufacture in the sub-continent was the change-over from the pot furnace to the tank furnace, to which reference has already been made. The chief

advantage is the economy in the use of coal and the regulation of temperature for fusion and melting which the tank furnace or the modern pot furnace makes possible. During the war, designs were obtained from abroad and the construction of the plant in the sub-continent subsidized. The furnace at the Ganga Glass Works at Balawal is the first of its kind in the sub-continent constructed wholly out of parts made in India. Since 1942 almost all factories have been using the tank furnace for the manufacture of quality glass. This has not only cheapened production, but it has also simplified the melting of glass and improved its quality.

STATEMENT OF TARGETS FOR THE FIRST 5 YEARS.

(All figures are given in tonnage and within brackets are estimates).

| Section. | Pre-war production 1937-38 | Pre-war Import 1937-38 | Pre-war total consumption | Present production capacity | Target. | REMARKS. |
|----------------------------------|-----------------------------|------------------------------|-------------------------------|-----------------------------|-----------------------------------|---|
| 1. Bangles .. | Rs. 80 lakhs (12,000 tons) | Rs. 20.3 lakhs (5,000 tons) | Rs. 109.3 lakhs (15,000 tons) | 18,000 tons | 19,800 tons | |
| 2. Beads and False Pearls .. | Rs. 18.9 lakhs (1,200 tons) | Rs. 18.9 lakhs (1,200 tons) | Rs. 37.8 lakhs (4,200 tons) | 120 tons | 4,200 tons | |
| 3. Bottles and Phials .. | Rs. 10 lakhs (20,000 tons) | Rs. 29.5 lakhs (60,000 tons) | Rs. 39.5 lakhs (80,000 tons) | 100,000 tons | 100,000 tons | Statistics of mineral water bottles and other bottles should be kept separately. |
| 4. Lampware .. | Rs. 20 lakhs (7,500 tons) | Rs. 6.9 lakhs (2,500 tons) | Rs. 26.9 lakhs (9,500 tons) | 10,000 tons | 11,900 tons | |
| 5. Tableware .. | Rs. 8 lakhs (2,500 tons) | Rs. 6.0 lakhs (2,500 tons) | Rs. 14 lakhs (5,000 tons) | 5,000 tons | 7,500 tons | |
| 6. Pressedware .. | Rs. 2 lakhs (1,000 tons) | Rs. 5.0 lakhs (1,500 tons) | Rs. 7 lakhs (2,500 tons) | 2,000 tons | 4,000 tons | Statistics of pressedware as well as of sheet glass and plate should be maintained separately. |
| 7. Sheet Glass .. | 6 million sq. ft. | 22 million sq. ft. | 28 million sq. ft. | 20 million sq. ft. | 42 million sq. ft. | |
| 8. Plate & neutral .. | | 3.4 million sq. ft. | 3.4 million sq. ft. | | 4 million sq. ft. | |
| 9. Scientific glass apparatus .. | Negligible | Rs. 1.9 lakhs | Rs. 1.9 lakhs | | Rs. 10 lakhs with proper quality. | Many of the Scientific apparatuses made in India lack in precision. Therefore, the production capacity is not set down. |
| 10. Glass shells .. | | | | 14 million pieces | 25 million pieces | Statistics of optical glass could not be obtained; hence the target could not be set. |
| 11. Optical Glass .. | | | | | | |

THE GLASS PANEL

In 1945 a glass panel was constituted by the Government of India, Department of Planning and Development, to recommend to Government such steps as are necessary for the development of the Indian glass industry and particularly to set targets which should be reached within five years and also to recommend the measures to achieve these targets.

The Panel easily recognised the versatility of glass as a key material of wide application in industrial development and stated that if India was to occupy a place in the industrial world, the aim should be to reach the level attained by the glass industries in other countries. In the course of the next ten years, the output of the glass industry in India has greatly increased during the Second World War and in several times the present productive capacity of the glass factories today is sufficient to meet the total requirements of the country, granted adequate transport facilities and supplies of the necessary raw materials and certain ascertained and proper grading, standardisation and marketing of products are arranged for.

It is reported that the Government of India have referred the claim for assistance to the glass and glassware industry to the Tariff Board for investigation and that the Board has issued a questionnaire for the producers of these articles, preliminary to holding of a public enquiry. It is also reported that Dr. Knecht has been appointed the director of the Central Glass and Ceramics Research Institute at Calcutta.

PRODUCTION IN 1945

| Provinces | Production in tons for 1945 | No. of factories included |
|-----------------------|-----------------------------|---------------------------|
| Bengal (E. and W.) .. | 55,290 | 29 |
| Bihar .. | 14,100 | 9 |
| Bombay .. | 20,700 | 15 |
| C.P. .. | 3,300 | 4 |
| Delhi .. | 2,100 | 1 |
| Madras .. | 11,400 | 4 |
| Orissa .. | 2,700 | 1 |
| Punjab (E. and W.) .. | 6,600 | 5 |
| U.P. .. | 24,300 | 18 |
| Sind .. | 1,200 | 1 |
| Total .. | 142,500 | 88 |

PRODUCTION IN 1945—contd.

| Province | Production in tons for 1945 | No. of factories included |
|-----------------------|-----------------------------|---------------------------|
| Bikaner .. | 1,800 | 1 |
| Chhapar .. | 1,000 | 1 |
| Faridkot .. | 900 | 1 |
| Gwalior .. | 900 | 1 |
| Hyderabad .. | 3,300 | 1 |
| Jaipur .. | 900 | 1 |
| Kota .. | 1,500 | 1 |
| Mysore .. | 450 | 1 |
| Total .. | 10,950 | 8 |
| Grand Total .. | 153,450 | 96 |

EXPORTS

| (Thousands of Rupees.) | | | |
|------------------------------|--------------|--------------|--------------|
| | 1929-30 | 1939-40 | 1940-41 |

HIDES, SKINS AND LEATHER

THE sub-continent is regarded as a surplus area in respect of its resources of raw hides and skins. It is estimated that normally it produces 20 million cattle hides, 5.7 million buffalo hides, 27.5 million goat and 17 million sheep skins a year. Only a portion of the cattle and buffalo hides is obtained from slaughtered animals and the bulk, about 75 to 80 per cent., is derived from animals that die a natural death. On account of this the output of hides increases when famine, flood, cattle epidemics, etc., take an undue toll of livestock. Goat and sheep skins are, however, derived from animals slaughtered for meat and their production remains more or less at a steady level. In normal times the sub-continent also imports annually mostly from the neighbouring countries about 1 million hides and 5 million goat and sheep skins. So the total quantities of hides and skins normally available are about 20.7 million hides and 50 million goat and sheep skins annually.

Just before the Second World War, about 10 per cent. of the buffalo hides, 22.5 per cent. of the cow hides (kips), 6.5 per cent. of the sheep skins and 80 per cent. of the goat skins available in the sub-continent annually were exported and the balance tanned in the sub-continent itself. But over a course of time the surpluses for export dwindled considerably except in the case of goat skins. This was due to the expansion of hide and sheep skin tanning in the sub-continent. Goat skin tanning did not expand much.

Curing Methods.—Cattle hides are cured for the export trade by air drying and dry salting. The better grades of the former are dried out, being stretched on frames, and are called "framed" hides, and the inferior ones are dried by spreading on the ground and are known as "crumpled" hides. Air dried hides are treated with a solution of arsenic to ward off insect damage before export.

Dry salt curing is done mostly in the Bengal area with a saline earth known as "Khari Salt" which consists principally of sodium sulphate mixed with varying proportions of sodium chloride and earthy matter. Goat skins are mostly dry salted and to a lesser extent air dried.

The Agricultural Marketing Adviser to the old undivided Government of India attempted to grade slaughtered cattle hides. Hide-grading stations were started at slaughter houses at Delhi, Agra, Pandra (Bombay), Bareilly, Karachi and Rampur, and specifications for grades were formulated. Hides and skins were included in the Schedule to the Agricultural Produce (Marketing and Grading) Act of 1937. An attempt was made by the Central Agricultural Marketing Department, Government of India, to improve tanning in the slaughter houses where grading stations were started by giving a bonus to fayers.

The Department has published a Report on the Marketing of Hides in India and Burma (Marketing Series No. 36) and another report on the Marketing of Skins in India and Burma (Marketing Series No. 40) which contain valuable information regarding Indian hides and skins.

Primitive Tanning.—The Indian tanning industry may be divided into 2 categories, primitive and modern.

Primitive tanning is carried out principally by the people of the tanning caste which is a depressed Hindu community known as the Chamar. They tan according to indigenous methods and their products may be divided into a number of types, groups, etc., (i) the miscellaneous crude leather produced in the villages to meet local needs, (ii) the bag tanned buffalo sole leather produced in the Punjab area, Calcutta, Bombay and many other places which is extensively used for making shoes, (iii) tanned sheep skins of the Punjab area known as "Kabuli Bheris" used as a cheap book-binding leather throughout the sub-continent, (iv) half-tanned leather of Madras and Bombay.

The first three varieties are all consumed in the sub-continent while the better grades of the fourth are exported chiefly to the United Kingdom and from there to other countries. The half-tanned cattle hides and calf skins are known in the international trade circles as Best India tanned Kips and Calf skins. These are retained and finished in the importing countries for making shoe upper and other varieties of dressing leather. The cattle hides used to be tanned formerly with avaram or turwar bark (*Cassia auriculata*) which occurs in south and Western India. But after the First World War they were tanned in Madras with wattle bark from South Africa until the imports were stopped. The goat and sheep skins in Madras and the cattle hides in Bombay are still tanned with avaram bark.

Modern tanning.—Leather for harness and saddlery for military equipment has long been manufactured at Kanpur by western processes of vegetable tanning in pits from buffalo and heavy cow hides using the local tanstuffs, babul bark (*Azadirachta indica*) and myrobalans (*Terminalia chebula*). At present large quantities of South African wattle bark and its extract (Almossa Extract) are also being used as the supply of babul bark is inadequate.

Since the First World War sole leather has also been manufactured in Cawnpore, Agra, Calcutta and Madras from buffalo hides according to modern process for use in ammunition boots and better types of civilian footwear. Its output is now quite considerable in the sub-continent and is increasing. The Second World War greatly stimulated the production of vegetable tanned harness and sole leather and all the big and medium sized tanneries in the sub-continent capable of producing these leathers were engaged in their manufacture. Most of them had to extend their plants to cope with the war demand for leather and all were supplying practically the whole of their output to the Government.

Forty-three tanneries producing pit tanned buffalo sole leather were brought under Government control and their productive capacity increased to about 2 million buffalo hides annually. During the war the tanneries could not work to full capacity through lack of raw hides. The supply of buffalo hides has not improved even after the war. Owing partly to this and also to post war falling off of demand for pit tanned sole leather the tanneries producing it are not still working to capacity.

Chrome tanning.—The outstanding feature in the field of modern tanning in the sub-continent since the first world war is the phenomenal development of chrome tanning, especially for the manufacture of the shoe upper leather, Box and Willow sides from cattle hides and Box and Willow calf from calf skins. A number of tanneries in Cawnpore, Calcutta and Madras are engaged in the production of these leathers. Some of the tanneries are quite big and equipped with the latest chrome tanning machinery while there are large numbers in Calcutta which are small. Indian Box and Willow sides are being regularly exported to the United Kingdom and their demand and consumption in India and Pakistan are considerable.

Other items of modern tanning which have made some progress are belting leather, chromo-leather, suede leather, vegetable and chrome-tanned leather, improved type of case leather, picking bands, roller skins, chrome lace leather, etc. India's tanning capacity is fairly large. It can tan all its buffalo hides and nearly all its cow hides and sheep skins. Exports of these hides and skins in the raw condition is not so necessary now as it was previously. As goat skin tanning has not developed in India satisfactorily Indian goat skins have to be exported in the raw state.

There are a few training centres among which the Bengal Tanning Institute in Calcutta, Jullundur Tanning Institute, Jullundur City, Government Tanning Institute, Bombay and Leather Technology Section of Alagappa

College of Technology, University of Madras may be mentioned. These Institutes are maintained by the respective Provincial Governments. A central leather research Institute is proposed to be established by the Central Government in Madras. The foundation stone of this Institute was laid a few months ago. There are also peripatetic tanning demonstration parties under the Industries Department of the Governments of U. P., Bihar and Orissa which hold instructional classes in rural areas to introduce improved processes of tanning.

To look after the interests of the Indian Tanning Industry a Tanners' Federation was started a few years ago. Its headquarters are at the Upper India Chamber of Commerce, Cawnpore. Most of the organised tanneries in India are members of the Federation.

Recent Developments.—There has not been any appreciable progress in the leather industry during 1948. Production of leather has decreased in comparison with that during the war period. This has been due to shortage of raw materials such as raw hides and skins, vegetable tanstuffs and tanning chemicals, insufficient transport and the partition of the sub-continent and consequent exchange of population. The stoppage of import of South African wattle bark has created a shortage of vegetable tanstuffs needed for the production of sole and half tanned leathers.

Future prospects of the leather industry are bright. The shoe wearing habit of the Indian people is increasing and the demand for shoes is also on the rise.

The glue kid industry is still undeveloped in the sub-continent. This holds out a good prospect of development as the area produces goat skins which are very suitable for making glue kid.

Other possible lines of development are industrial leather goods like leather belts, picking bands, pickers, roller skins, etc. Production in these lines has already commenced.

Tanning is the question of capital we find that the leather industry of the sub-continent is still mostly unorganised and consists of an innumerable number of small units for tanning and shoe and leather goods making. It is, therefore, not possible to secure accurate information regarding the capital invested in it. At a rough estimate it may be placed at about Rs. 20 crores.

Plant and equipment are partly locally manufactured and partly imported. In tanneries the tanning drums and paddles which are made of wood are locally made, while tanning machines are mostly imported. Recently four firms, 2 in the Punjab area and 2 in Calcutta started making tanning machines. They are still in a small way and can make only the simpler sort of machines. Shoe machinery is wholly imported.

Tannery labour is mostly recruited from the Chamar community. There is as yet no shortage, and the recruits pick up modern methods of work and machine operations quite well. Skilled personnel to work as technical assistants in tanneries are being trained in the provincial tanning institutes. The trained men are giving a good account of themselves in commercial tanneries. There appears to be a dearth of skilled supervisors for the shoe industry as training institutes for the shoe industry are still lacking in the sub-continent. There is thus a great need for provincial shoe institutes.

Foreign help is necessary to develop new lines of manufacture like glue kid. For other lines local talent appears to be adequate.

Compared with the leather industries of Europe and U.S.A., Indian leather industry is still unorganised and inadequately developed. It has to depend upon Europe and U.S.A. for machinery, chemicals and many other materials. Until these ancillary industries develop in the sub-continent the Indian leather industry will be handicapped in comparison with the leather industry of Europe and America.

THE JUTE INDUSTRY

JUTE, the golden fibre, is the sub-continent's greatest contribution to world trade. The growing of jute provides the agricultural population of eastern parts of the Bengal area (now mainly part of Pakistan) with an annual income averaging Rs. 44 crores, or about a half of their money income in normal years. As an export product it has, perhaps, no equal, considering that raw and manufactured jute has consistently represented by value about 25 per cent. of (undivided) India's outgoing merchandise trade. It has been truly stated that, as the world's foremost packing fabric, jute is practically omnipresent in world's commerce. The special characteristics of the jute fibre make it an ideal packing material for sugar, coffee, cocoa, cotton and wool, and a variety of textile products, including cordage, roofing felts and even decorative fabrics.

HISTORY

Considering its present dimensions, the jute industry of Bengal is of very recent origin. The first jute mill in Bengal was started at Rishra in 1855, and the first power-loom was introduced in 1859. The original outturn was only 8 tons per day. Another interesting thing about the jute industry is that, although it is practically a monopoly of Scotsmen from Dundee, the industry itself owes its inception to an Englishman. The founder of the industry was George Acland, an Englishman, who began life as a shipman in the navy, and was for some years in the East India Marine Service. He quitted this service while still a young man, and engaged in commercial pursuits at Ceylon, where he was successful.

Later on he turned his attention to Bengal, and arriving in Calcutta about 1853 he got into touch with the management of the paper works, then at Serampore, where experiments were being tried with country grasses and fibre plants to improve the quality or cheapen the manufacture of paper. This seems to have suggested to Acland the manufacture of rhea, and in 1854 he proceeded to England, with a view to obtaining machinery and capital in order to manufacture goods from that material. During this trip he visited Dundee, and while there Mr. John Kerr, of Douglas Foundry, suggested to him the importing of machinery into Bengal "where the jute comes from and spin it there."

This suggestion bore fruit, for shortly afterwards Acland placed orders with Kerr for a few systems of preparing and spinning machinery, and returned to India the same year accompanied by his two sons and a few Dundee mechanics who were to assist him in erecting and operating the first jute mill in Bengal. This, as has been stated, was at Rishra, the site of the present Wellington mills, near Serampore, and here, in 1855, the first machine-spun jute yarns were made. As not infrequently happens the pioneer got very little out of his venture. After several ups and downs the Acland interest in the Rishra mill ceased in 1867, and the company which Acland had formed in 1854 was wound up in 1868.

Power-Looms.—The pioneer's example was followed by Mr. George Henderson of that silk firm, and in 1859 the Borneo Jute Co.

was launched under his auspices. To this company is due the credit of introducing the power-loom for jute cloth. Unhampered by the financial difficulties which had burdened the Aclands, the Borneo Jute Co. made rapid progress, doubling their works in 1864, and clearing their capital twice over. In 1872 the mills were turned into a limited liability company, the present "Barnagore Jute Factory Co., Ltd." Four other mills followed in succession—Gouripore, Seralgunge, and India Jute Mills.

"From 1868 to 1873," writes Mr. David Wallace in "The Importance of Jute," "the five mills excepting the Rishra mill simply coined money and brought the total of their looms upto 1,250." To illustrate the prosperity of the industry at this period we may take the dividends paid by the Barnagore Company. On the working of their first half year, a 15 per cent. interim dividend was declared, which seemed to justify the enormous capital at which the company was taken over from the Borneo Company, and shares touched 68 per cent. premium. The dividend for the first year, ending August 1873, was 25 per cent., for 1874, 20 per cent., and for 1875, 10 per cent. Then came a change. The investing public had forgotten the effect of the Port Canning bubble, and the condition of the jute industry in 1872-73 seeming to offer a better return than coal or tea, both of which had just enjoyed a boom, it was only necessary to issue a prospectus of a jute mill to have all the shares snapped up in the course of an afternoon.

PROGRESS OF INDUSTRY

The record of the jute industry may well be said to be one of uninterrupted progress. The following statement shows the number of mills, the number of looms and spindles employed in the industry—from 1914 to 1939.

INDIAN JUTE-MILL STATISTICS

| Year. | Mills (number) | Looms (number) | Spindles (number) | Year. | Mills (number) | Looms (number) | Spindles (number) |
|-------|-------------------|-------------------|----------------------|-------|-------------------|-------------------|----------------------|
| 1914 | 70 | 38,379 | 795,528 | 1927 | 93 | 52,221 | 1,105,684 |
| 1915 | 70 | 39,890 | 812,421 | 1928 | 95 | 52,409 | 1,108,147 |
| 1916 | 74 | 39,697 | 824,815 | 1929 | 98 | 53,900 | 1,140,435 |
| 1917 | 76 | 40,839 | 834,055 | 1930 | 100 | 61,834 | 1,224,982 |

| 1919 | 76 | 41,045 | 856,307 | 1932 | 99 | 60,506 | 1,202,188 |
| 1920 | 77 | 41,588 | 869,879 | 1933 | 99 | 59,501 | 1,194,405 |
| 1921 | 81 | 43,025 | 908,359 | 1934 | 100 | 61,387 | 1,221,786 |
| 1922 | 86 | 47,528 | 1,003,179 | 1935 | 104 | 63,724 | 1,279,416 |
| 1923 | 89 | 49,038 | 1,043,417 | 1936 | 104 | 65,273 | 1,300,077 |
| 1924 | 90 | 50,359 | 1,067,633 | 1937 | 105 | 66,705 | 1,337,958 |
| 1925 | 90 | 50,603 | 1,069,700 | 1938 | 105 | 66,705 | 1,337,958 |
| 1926 | 93 | 51,061 | 1,088,916 | 1939 | 107 | 67,939 | 1,350,466 |

LATEST STATISTICS

According to the latest available statistics (that is, those for the year ended 31st Dec. 1947), the total number of mills in the Indian Union is 113 and their aggregate loomage 68,547. The total number of mill companies in the I.J.M.A. in the Bengal area are 69, and outside the Bengal area 6. The total number of mill companies outside the I.J.M.A. in the Bengal area are 3, outside the Bengal area 7. The grand total of all the mill companies is 85. The number of mills in the I.J.M.A. in the Bengal area are 97, and outside the Bengal area are 6. The total number of mills outside the I.J.M.A. in the Bengal area are 3, and outside the Bengal

area 7. The grand total of all the mills is 113. The number of looms in the I.J.M.A. in the Bengal area are 63,826, and outside the Bengal area 1711. The total number of looms outside the I.J.M.A. in the Bengal area are 1,531; and outside the Bengal area 1,479. The grand total of all the looms is 68,547.

The following statistics relating to the number of looms, spindles and hands employed will be found instructive:

| | | | |
|---|----|------|--------|
| (a) Total number of working looms in the Mills in January | | | |
| Do. | .. | 1947 | 56,201 |

EFFECTS OF PARTITION

The partition on 15th August, 1947, of India into the two Dominions of India and Pakistan split up the jute industry and the jute growing areas. The manufacturing centres were cut off from their sources of raw material. This has meant difficulties both for the jute cultivators and the burlap industry, which has been responsible for a large part of India's foreign exchange resources.

Approximately 70 per cent of the jute is grown in East Bengal (Pakistan) while the bulk of the exports is from West Bengal (India). All the jute mills are situated in and around Calcutta even those mills outside Calcutta being in the Indian Union while the better quality of jute and nearly 75 per cent of the total crop is grown in East Pakistan.

According to one forecast for 1946-47, the area under jute in Pakistan is 1,358,800 acres out of the total of 1,880,000 acres in the whole of the sub-continent a percentage of 72.3 to Pakistan. The yield of raw jute is estimated at 4,076,000 bales (one bale=100 lbs.) for Pakistan, while for India it is 1,471,500, the share of Pakistan being 73 per cent of the total yield. The yield in West Bengal is estimated at about half a million bales, while Nepal, Bihar, Assam and Orissa yield about one million bales.

It is clear from the above analysis that the Indian Union is the biggest consumer of raw jute, while Pakistan is the biggest supplier. In

other words, the prosperity of the grower of jute in East Bengal is dependent on the prosperity of the Indian Jute industry.

When partition was effected high hopes were entertained on both sides that until the completion of the transitional period, the *status quo* with regard to control, customs and tariffs would be maintained. In November 1947 the Government of Pakistan decided to levy a land tax on all raw jute passing over its borders. The rates of the new tax were the standard rates levied for exports—Rs. 15 per bale of 400 lbs. in the case of pucca bales and Rs. 3 per maund for kutcha bales and loose jute. This action resulted in killing the raw jute market involving crores of rupees in the then current contracts. There was the additional hardship arising from the order that remittances to jute districts from Calcutta should pass through the Foreign Exchange Departments of the two Dominions. Money had first to be remitted to Dacca where arrangements to handle it were deplorably poor. All this resulted in a huge hold-up.

The Government of India took parallel action on 23rd December 1947, by declaring Pakistan Dominion as foreign territory for purposes of customs duty on the export of raw jute and jute manufactures from India to Pakistan.

This unpleasant development in the jute trade began seriously to affect the supply position of the mills. As supplies of jute declined prices soared higher. The Stand-Still Agreement was allowed to lapse on 31st March 1948 by both the Dominions. This aggravated the economic hardships and inconveniences of traders owing to the creation of customs barriers and restrictions.

INTER-DOMINION CONFERENCE

On the initiative of the Government of India, an Inter-Dominion conference was held in Calcutta which concluded on the 19th April 1948, with agreement being reached among others on a number of points relating to jute.

The following were the two main recommendations approved by both parties to the conference.

Restrictions whether imposed by a Central or Provincial Government on the movement between the two Dominions of commodities, duties thereon must be removed.

Both the Dominions should re-examine their tariff schedule and their import and export control notifications to see what relaxations are possible.

Partition has completely disorganised the jute industry. Jute, which is the raw material of this industry and around which is built the industrial prosperity of West Bengal, became, on 15th August 1947, a foreign commodity in major part. There is now a movement in India to increase its own jute cultivation so as to make itself progressively self-sufficient in regard to this commodity. This, it is contended, can be done, first, by increasing acreage of jute cultivation, and secondly, producing better seed, better methods of cultivation and better controls over all that affects agricultural crop.

At its meeting held in Calcutta on 10th December 1947, the Governing Body of the Indian Central Jute Committee devoted serious attention to the question of increasing jute cultivation in the Indian Dominion. Sir Datar smth, who presided emphasised that the production of jute in the Union should be increased by nearly 20 lakh bales, by growing early varieties of jute as a second crop in some of the lands now confined to 'Amam' paddy in West Bengal, Bihar and Orissa. He pointed out that the area under 'Amam' crop in these three provinces was approximately 10 million acres, a considerable portion of which could be utilised for immediate cultivation of jute by adopting a system of double-cropping. The West Bengal Government was the first to take necessary action; especially procuring seed.

The Jute Committee decided to establish five research centres for investigation into the economics of jute growing in India. It resolved to close down its research station in Dacca and to open in India a most up-to-date and well-equipped central agricultural jute research institute.

The following table gives the Area and Yield of Jute Crop in the various Districts of the Indian Union and Pakistan :—

| | | | | | | Area under Jute (in Acres) | | Yield of Jute (in bales 400 lbs.) | | Average Yield |
|-----------------------------------|----|----|----|----|----|-------------------------------|-----------|--------------------------------------|-----------|------------------|
| | | | | | | 1940 | 1946 | 1940 | 1946 | (per Acre). |

AREA & YIELD IN 1947-48

According to the Jute statistics issued by the Economic and Statistical Adviser, Government of India, the total area under Jute in India, in 1947-48, was 646,000 acres, and that in Pakistan 2,050,000 acres. The production of Jute in India in 1947-48 was 1,658,000 bales, and that in Pakistan 6,843,000 bales. Below are figures of average yield per acre obtained by dividing production figures by acreage figures :—

AVERAGE YIELD PER ACRE (In lbs.).

| Province/State. | 1938-39. | 1944-45. | 1945-46. | 1946-47. | 1947-48. |
|----------------------|----------|----------|----------|----------|----------|
| Assam | 948 | 642 | 1,164 | 1,013 | 1,056 |
| Bihar | 789 | 564 | 689 | 602 | 1,119 |

| Twist Yarn of Jute .. . | | 30% ad valorem | 12% ad valorem. |
| Second hand or used gunny bags or cloth made of jute .. . | | Free | |
| Jute manufactures, not specified otherwise. | Revenue | 30% ad valorem | 12% ad valorem. |

EXPORT QUOTA SYSTEM

The control over export of jute and jute goods was first introduced as part of economic warfare during 1942-43. No quantitative restrictions were imposed at that time as the only object then in view was to prevent these goods reaching the enemy. Later on, it was discovered, in view of the world shortage of this essential commodity, that these arrangements were not satisfactory from the point of view of the recipient allied countries. The control over distribution was therefore assumed in 1943 by the Combined Raw Materials Board in Washington and definite allocations were made to various countries in consultation with that Board. Exports were allowed within those destination quotas on the basis of the "first come, first served" principle. This system continued in force till June 1946.

The war-time controls on jute trade were removed by the Government of India in October 1946. However, it immediately imposed a new control system based on quantity and destinations, the aim being to achieve an equitable distribution of the jute products and raw material among regular customers, particularly to those

from whom food was imported. This system was subjected to severe criticism by the business community on the ground that it affected free trade. The quota for 1947-48 was fixed at 476,000 tons for raw jute, and 877,000 tons for manufactures. There were 36 countries marked for export of raw jute and 85 countries for manufactures, the U.K. and the U.S.A. being given the first place.

The jute year is from the 26th June to the 25th June of the following year. For purposes of administration of jute export control, it is found convenient to divide the jute year into two half-yearly periods, namely, from the 26th June to the 25th December, and from the 26th December to the 25th June, and to distribute quotas on a half-yearly basis. The licensing procedure in vogue was to issue applications bi-monthly from intending exporters accompanied by evidence of sales and availability of freight. Licences were issued according to the quantities applied for and the quantities available for distribution on a *pro rata* basis. There was no restriction as regards the eligibility of applicants and the qualification prescribed was the ability of the applicant to the business. The system obtained upto the end of the jute year 1946-47.

The following table indicates the position of the export of Jute over a number of years :—

| Year | Jute Manufactures. | Raw Jute. | Total Export Trade. | Percentage of | |
|------------------------------|--------------------|--------------|---------------------|--------------------------------|------------------------------------|
| | | | | Raw Jute to Total Export Trade | Manufactures to Total Export Trade |
| | Rs. | Rs. | Rs. | % | % |
| 1938-39 | 26,21,96,737 | 13,35,14,680 | 162,77,36,883 | 8.20 | 16.11 |
| 1943-44 | 49,47,18,495 | 8,32,91,039 | 190,87,98,131 | 4.16 | 24.7 |
| 1944-45 | 60,42,51,752 | 7,50,01,446 | 211,05,10,586 | 3.07 | 28.6 |
| 1945-46 | 50,52,99,817 | 15,83,89,185 | 240,38,83,119 | 6.17 | 24.7 |
| 1st April to 31st Dec., 1946 | 47,86,06,926 | 12,69,53,740 | 207,54,07,609 | 6.11 | 23.06 |

NEW SYSTEM

Objections were however raised to this system on the ground that—

- (a) those firms which received information regarding the destination quotas or which had large funds and connections abroad were in a position to secure larger quotas;
 (b) wide powers were delegated to the local officials at Calcutta which were being misused;
 (c) the *pro rata* system held up allocations and impeded the smooth flow of trade; and
 (d) quotas were getting into the wrong hands and were being hawked in the streets.

In 1947, therefore, Mr. Chundrigar, the then Commerce Minister, decided that exports should be allowed on the basis of the Established Shippers principle according to which 90% of the quotas were reserved for established shippers and allotments were made on the basis of the percentage share of their exports in the year selected by them. They were given the option of selecting any basic year in the ten years ending 25th June 1946 in the case of raw jute and 31st December 1946 in the case of jute goods. The balance *viz.*, 10% of the quota, was reserved for new comers for which applications were invited at the beginning of the jute year. This system was brought into force on the 26th June 1947. The first half-yearly quotas for the established shippers (i.e., 45% of the total) and the new comers' quota for the entire year (i.e., 10%) have already been distributed.

This system came in for much adverse criticism both in the Legislature and in the Press as introducing an entirely new feature into the jute trade which had not existed even in the war years and as favouring mostly non-Indian firms in large numbers had actually started doing substantial business only in 1946 and in the beginning of 1947. Even during this period, since these firms had only just started business, they could not achieve much though they showed considerable improvement during the latter stages.

The Government of West Bengal, which came into office on partition, also pointed out the undesirable state of affairs that had arisen as a result of the introduction of the Established Shippers principle and statistics furnished by them are illuminating.

| | European firms. | Indian firms. |
|--|-----------------|---------------|
| Shipments Jan.-June 1947 (under the old system.) | 50% | 50% |
| Shipments July-October 1947 (under the Established Shippers Scheme.) | 70% | 30% |

Thus, whatever may have been the merits of the Established Shippers' Scheme, it certainly canalised under Government auspices, a larger proportion of the trade in the hands of non-Indians.

As regards the New Comers Scheme, since allotments were made on the basis of the orders produced by them before the Chief Controller of Exports and not on their ability to do business, a very large number of undesirable persons got licences which they openly advertised for sale in the press and in the bazaar.

As stated above, 45% of the quotas of the jute year 1947-48 were allotted to established shippers during the half year ended 25th December 1947 and the entire quota for the new comers (10%) was subsequently distributed. When the question of allotting the balance of 45% quota came up for consideration, it was decided, after careful consideration, to abandon the Established Shippers Scheme and to revert to the *pro rata* system with a view to securing for Indian exporters as large a share of the trade as possible. It was recognised, however, that there were drawbacks to this arrangement, but it was felt that the advantages were more than likely to

outweigh the disadvantages and that the drawbacks could be obviated by more careful attention being paid to the placing of orders and the entering into firm contracts. It was felt that a *pro rata* allocation supported by proof of confirmed sale and letters of credit would materially assist in avoiding the evils which had crept into the old system. To speed up exports a time limit of a fortnight was fixed for quota holders to produce letters of credit after the quotas had been provisionally allotted on the *pro rata* basis. In accordance with this decision, applications for quotas were scrutinised by the Ministry of Commerce and provisional quotas were allowed on a *pro rata* basis on the basis of firm orders produced by the applicants. They were informed that their provisional quotas would be confirmed only if they produced letters of credit within 15 days of the issue.

Instructions were also issued to the Deputy Chief Controller of Exports, Calcutta, to the effect that he should ensure that the letters of credit were (1) from the same parties who placed the orders originally and (2) in their own names. Those who were unable to produce the letters of credit in their own names from foreign buyers would have their quotas cancelled and would further be debarred from applying for the next shipping period.

CRITICISM

The new procedure also came in for a spate of criticism, which may briefly be summarised as follows:—

- The new procedure would automatically lead to black marketing as new comers in the trade would not be able to ship the goods against their quotas, but would sell their quotas to established shippers with insufficient quotas and that established shippers would also be seriously embarrassed as they would not be able to meet the demands of their regular customers abroad;
- nearly half the quotas have been granted to new-comers, i.e. firms which were not in the trade in the past and that most of these new-comers are firms in Bombay, Madras and other places which have no connection with the jute trade;
- another result of the new procedure would be that foreign countries would not be able to get the goods in time as new-comers would not be able to utilise their quotas. Mr. M. P. Hiria pointed out that exports in January were 26% below the average of the past six months and that local stocks are increasing; and
- even though applications were invited for the January to February period, quotas had been granted to countries like Australia, Canada and U.S.A. for the entire six-monthly period ending June 1948. Consequently those firms which wished to apply for the March-June

period would now have no chance of doing so.

In answer to the above, under the new arrangements provisional quotas were allotted by the Government of India strictly on the basis of firm orders and allottees were informed that their provisional quotas would be confirmed only on their producing within 15 days the necessary letters of credit in their own names. In the opinion of the Commerce Ministry, this step should prevent the sale of quotas and should allow a bona fide trader to secure his business without having to resort to the black market.

As regards the criticism that Calcutta had fared badly in the allocation of these quotas, the Deputy Chief Controller of Exports stated that Calcutta firms had got for the U.K. 12,000 tons against 6,300 tons allotted to non-Calcutta firms. For U.S.A. they had got 143,000 tons against 45,419 tons allotted to non-Calcutta firms. It should be remembered in this connection that out of the quantities which had gone to non-Calcutta firms, a good proportion must have gone to established shippers in Bombay who had done jute business even in pre-war years. It should also be remembered that the allocations to non-Calcutta firms were not final and that it was unlikely that all of them would be able to produce letters of credit in respect of the quotas issued to them in which event they would not be eligible for licences.

In the Government's view, misgivings that foreign countries would not be able to get their goods seemed unwarranted. A certain amount of delay had, of necessity, occurred due to the time taken in the issue of the quota slips, but this was unavoidable having regard to the fact that a switch over was made to the old arrangement and that a very large number of applications were received and had to be carefully scrutinised. This temporary hold-up in the despatch of goods to overseas destinations, the Government felt, would disappear and should cause no anxiety either to India or to the overseas buyers.

It was also argued that the *pro rata* scheme has shaken the confidence of overseas consumers in regard to the ability of Indian industry to meet world demands and that solution to the problem lies in the abandonment of the system of quota controls. The Government emphatically refuted this, asserting that nothing could be farther from the truth so far as the first part of the argument was concerned, the vociferous nature of the representations made being undoubtedly from vested interests who had lost some of their market as a result of the abandonment of the Established Shippers principle. So far as quota control is concerned, it is necessary in the case of jute and jute goods where the quantum of goods available for distribution is far from sufficient to meet the world demand. Such control is also inevitable if (a) directional trade to the hard currency areas is to be conducted, (b) jute goods are to be prevented from reaching South Africa and (c) bargains for foodgrains are to be effectively negotiated.

[JUTE IN 1948-49]

The adverse effects of the political partition continued to be felt by the Indian jute manufacturing industry during 1948. Despite the Government of India's repeated efforts to arrive at an amicable settlement with the East Pakistan authorities in the matter of raw jute supplies, the position did not improve. The export duty on jute from Pakistan to India imposed by the East Bengal Government in November 1947 was continued, and it resulted in increasing scarcity of and higher prices for, jute in Calcutta. Even at the end of 1948, it was found that Pakistan was in no mood to implement the Inter-Dominion Agreement of May 1948, whereunder Pakistan was to supply 50 lakhs of bales of raw jute to India annually. In these circumstances, it was natural for authorities in India to make every possible effort to boost raw jute production within the Indian Dominion.

According to one forecast, the 1948-49 jute crop of the Indian Union may yield between 2.3 and 2.5 million bales, while the estimate of her requirements is put at 8 million bales. The area under jute has been reportedly increased by about 49,550 acres, with an area of 15,000 acres in Orissa to be added. Some 50,000 acres in Travancore, Cochin and Madras could be brought into cultivation, and it is hoped this scheme will be pressed into commission.

Another problem for the jute mills in 1948 was the position of coal. Deliveries at several stages fell short of requirements and representations were made to the Central Government for adequate stocks. Despite this, however, jute goods production by mills was satisfactory, partly due to an improvement in the labour situation. During the first ten months of 1948, production aggregated 862,862 tons, as against 833,427 tons for the first ten months of 1947. The total output of jute goods for 1948 is estimated at about 10.4 lakh tons, as against 10.1 lakh tons in 1947. For the period January to June 1948, the Government of India allocated raw jute of various quantities to U.K., U.S.A., and several other countries. But, for the latter half year, owing to acute scarcity, Government had to ban export of raw jute until the end of October. Subsequently, however, as a special case, Government permitted 50,000 bales to the U.K.

In October 1948, the Pakistan Government revised its raw jute export policy, forcing Indian mills to buy a certain minimum quantity every month, irrespective of individual needs. The Government of India pointed out that Pakistan's unilateral action was a breach of the Inter-Dominion Agreement. The measure was subsequently withdrawn by Pakistan. In order to facilitate Inter-Dominion jute trade, the Government of India, in the middle of November 1948, issued instructions to the authorities in Calcutta to permit exports of jute goods up to 50,000 tons to Pakistan without any licence.

With a view to eliminating gambling in raw jute and facilitate normal trade, the West Bengal Government passed the Raw Jute Futures Bill, replacing the then existing Ordinance.

SUPPLY POSITION IN 1949

According to a rough estimate of the Indian Jute Mills Association, the supply position as it would be at the end of 1949-50 jute year is as follows:—

| Supply. | Lakh Bales. | Distribution. | Lakh Bales. |
|---|-------------|---|-------------|
| Estimated opening stock on July 1, 1949:— | | Consumption by Indian Mills:— | |
| (a) With Mills in Calcutta | 13 .. | (a) Association Mills | 63 |
| (b) With Balers and growers in India on June 30, 1949 | 4 .. | (b) Outside Mills | 3 |
| Crop from Indian Union | 17 | Domestic consumption | 66 |
| Deliveries from Pakistan | 21 | Exports from India | 3 |
| | 50 | Estimated stock with Balers and growers in India at the end of the season | 4 |
| | 88 | Estimated stock with Jute Mills | 12 |
| | | | 88 |

The opening stock of 12 lakhs of bales at the beginning of the new crop year is the lowest estimated carry-over. With continued shortage of raw material of the right quality, it is feared that the industry may not be able to maintain production at present levels.

The jute crop in India is placed at 21 lakhs of bales and in Pakistan at 90 lakhs of bales. Out of a reported total purchase of 374 lakhs of bales made from Pakistan during the period ended December 31, 1948, deliveries up to that date have been estimated at 25 lakhs of bales.

As regards exports of jute manufactures, the Government of India have decided to continue the policy, introduced in 1948, of free licensing so far as hard currency areas are concerned, while in respect of soft currency areas, quotas will be distributed as usual, 90 per cent. of the allotment going to established shippers and 10 per cent. to newcomers.

Indian Central Jute Committee—A Central Jute Committee is in being, constituted by the Government of India with 27 members. Representation is found in the Committee for trade and agricultural interests and for the Provincial Governments most concerned, namely, Bengal, Bihar and Assam. The formation of the Committee is the result of a recommendation made by the Royal Commission on Agriculture.

The functions of the Committee include agricultural, technological and economic research; the improvement of crop forecasting, of production, of testing, and of distribution of improved seeds; enquiries and recommendations relating to banking and transport facilities and transport routes; improvement of marketing in the interests of the jute industry; and collection and distribution of all relevant information on jute.

The Committee will also advise the Local Governments concerned on any points within its prescribed functions which may be referred to it.

A decision to change the constitution of the Indian Central Jute Committee, consequent on the partition of India into two Dominions, was taken at the Committee's annual meeting held on 10th December, 1947. The committee decided to exclude those members, who were representing the interest of jute growers in the areas, which lay in the Dominion of Pakistan. As provided by the Government of the Indian Union, it was decided to terminate the activities of the Committee outside the Dominion of India. Representation of communal organisations in the committee was also terminated.

The Offices of the Committee are situated in Calcutta.

THE LAC INDUSTRY

LAC is a resin which finds extensive application in industries chiefly for gramophone records, furniture polish, sealing wax, felt hats, abrasive wheels, electrical insulation, leather dressings, etc. India holds practically a monopoly for this kind of resin, as it accounts for 85 per cent of the world production.

Lac is secreted by insects known as *Laccifer lacca* which live on the twigs of trees mostly in Bihar, Central Provinces and the neighbouring regions. Important trees that lend themselves to successful lac culture are *Palas*, *Ber* and *Kumum*.

Lac cultivation is carried on extensively by thousands of villagers each of whom collects only a few pounds and sells it to manufacturers or their agents. The raw lac that is thus collected is converted by washing and melting into refined forms by about 350 factories which are mostly situated in Bihar. These factories

are small establishments with small capital outlay and employ labour only intermittently. Most of the operations are carried out by manual labour. There is, however, one large factory near Calcutta where refined lac of various grades is made on a large scale with mechanical equipment and processes.

For a few years before World War II, the production of lac was in excess of demand and prices were low. But prices increased and production decreased during the first phase of the war after which the prices were controlled by Government and for a time all purchases for export were channelled through the Ministry of Supply. With the cessation of hostilities and removal of restrictions prices have gone up but production is still below normal. If the output of raw lac is increased the existing factories could easily double their production without much additional capital or equipment and neither materials nor personnel need be imported.

The annual production of raw lac in India is about 50,000 tons which when refined yields about 30,000 tons of seed-lac, button-lac and shellac in which forms they are used in industries. But the world demand for lac is still in excess of supply and synthetic resins are seriously threatening to replace natural lac for the manufacture of gramophone records and other purposes because of the high prices now prevailing.

The Indian Lac Cess Committee is conducting a research institute at Nainkum, Ranchi, where investigations are in progress for better methods of cultivating lac and for its wider uses. Results already obtained are being demonstrated through a specially trained staff. Among new materials arising out of the recent researches of the Institute are plastic moulded articles, baking insulating varnishes and paints, waterproof emery paper and flexible micaite. A Lac Information Officer is attached to the Institute to answer all enquiries regarding the utilisation of lac in industries.

THE NON-FERROUS INDUSTRY

THE Non-ferrous Industry in the sub-continent is of comparatively recent origin, and most of the development has taken place during the present decade. The whole Non-ferrous Industry of the pre-partition India is located in the Union of India, and at present there is practically no Non-ferrous Industry in Pakistan.

The last war gave a great fillip to the Non-ferrous Industry. India was one of the principal bases of supply for the Allied armies. Foreign supplies of non-ferrous metals and manufactures, on which India was dependent till then, were practically cut off, but at the same time a large and urgent war demand for non-ferrous metals and semi-manufactures for the various Defence services had to be met somehow. This critical situation called for special effort and led to the establishment of a large and well diversified Non-ferrous Industry.

The Non-ferrous Industry has now been recognised by the Government of India as one of the basic industries of the country for whose development, Government is willing to give all financial and other assistance which may be necessary according to the statement of Government's industrial policy made by Sir Ardeshir Dalal in March, 1945. When the Tariff Board was appointed by the Government of India in November 1945, the Non-ferrous Industry was the first on the list of industries, which were referred to the Tariff Board for enquiry.

STRUCTURE

The Non-ferrous Industry falls under three distinct and well-defined stages:

- 1) Production of virgin metals from ores which covers mining of ores, and smelting and refining of metals from ores; 2) Refining of scrap and recovery of metals from scrap; 3) Processing of metals and production of what are called semi-manufactures of metals. This last falls under four main categories, which are as follows: (a) Sheets, strips and foils of copper, brass, aluminium, lead, zinc, etc.; (b) Rods, tubes, and other sections of copper, brass, aluminium, lead, etc.; (c) Cables and wires of copper, brass, aluminium, lead, etc.; (d) Alloys and castings of all kinds including bearing metals, anti-friction metals, type metals and solders, etc.

The actual structure of the Non-ferrous Industry in each country depends on a variety of circumstances prevailing in that country. The production of virgin metals in a country largely depends on the mineral resources of that country. But most of the highly industrialised countries have developed smelting and production of virgin metals from imported ores and ore concentrates. For instance, before the War the entire zinc ore produced in Burma was sent to Belgium in the form of concentrates containing 50% zinc. Practically all the production of virgin metals in U. K., Germany, Japan and Belgium was from imported ores and ore concentrates. In 1938-39 the United Kingdom imported 302,000 tons of Bauxite ore, 178,000 tons of zinc ore, 54,000 tons of tin ore, and 34,000 tons of copper ore and concentrates.

The refining of scrap and the production of semi-manufactures is largely dependent on the degree of industrialisation reached in the country. The use of non-ferrous semi-manufactures like sheets, rods, tubes, wires and alloys is essential in such basic industries as transport, electrical and chemical industry. The highly industrialised countries are the largest consumers of non-ferrous manufactures, and consequently the production of semi-manufactures and refining of scrap is developed most in such countries, irrespective of the production of virgin metals in those countries. The less advanced industrial countries, who are producers of virgin metals are exporting most of their production to countries like U.K., U.S.A., Germany and Belgium, which utilise them for semi-manufactures.

The United Kingdom produces 1,500,000 tons of non-ferrous semi-manufactures, for which she imports nearly 1,000,000 tons of non-

ferrous metals on an average, and utilises about 500,000 tons of metals produced in the country from imported ores and concentrates and by recovery from scrap. It will thus be seen that the development of the Non-ferrous Industry is not primarily dependent on the availability of non-ferrous metals in the country itself.

INDIA'S RESOURCES

According to Dr. D. N. Wadia, formerly Mineral Adviser to the Government of India, mineral resources of India for aluminium, copper and antimony are sufficient to meet our present and future requirements. As regards lead, zinc and tin, our resources are not likely to be sufficient and imports will be required to meet the deficiency in these metals. And about the rest of the non-ferrous metals, our mineral resources are negligible. The position regarding these metals is briefly described below:

(a) **Aluminium Ores**:—India is rich in deposits of high grade bauxite which are estimated at 250 million tons. These are generally located in Jubbulpore and Balaghat Districts of the C. P., Belgaum, Kolhapur, Thana and Khairata Districts in Bombay; Ranchi Plateau in Bihar; and Shevaroy Hills in Salem, Madras.

(b) **Copper Ores**:—Copper pyrites is the principal ore of copper. The deposits of copper pyrites in India are in Singhbhum and Baragunda in Bihar; Khetri mines in Jaipur; Sikkim State, Mysore State and in the Salem District of the Madras Province. Although only the Singhbhum deposits are worked at present, the copper belts of Sikkim and Khetri are very promising.

(c) **Lead Ores**:—Lead ores are known to occur at a number of places in India. Special mention may be made, however, of lead deposits in Jaipur and in Zawar Mines in Udaipur, where lead is found in association with zinc; in Chhotla Udaipur in Gujarat and in Hazaribagh in Bihar.

(d) **Antimony Ores**:—Antimony ore deposits have been found at the Shigree Glacier in Lahaul, Kangra District, East Punjab, and at Shagar in Chitral State (Pakistan).

(e) **Zinc Ores**:—At present zinc deposits are known to occur at only two places in India: Zawar mines in Udaipur and in the Khasi District in Kashmir State.

(f) **Tin Ores**: Several localities are known in India where tin stone (Cassiterite) has been found in small quantities. The most interesting of these areas is that in the Hazaribagh District of Bihar. None of these ores are said to be very promising.

POSITION BEFORE 1939

The only non-ferrous metal produced in India before the war was copper. The Indian Copper Corporation Ltd. started working the Singhbhum copper deposits in Bihar in 1928-29. The average production of refined copper before the war was 6,000 tons per annum.

There was practically no Refining Industry for the recovery of metal from scrap and most of the industrial non-ferrous scrap was exported to Japan and Germany.

As regards processing of semi-manufactures the only production was of brass sheets by the Indian Copper Corporation Ltd. averaging about 8,000 tons per annum, and electric copper wires and insulated cables by the Indian Cable Co. Ltd. According to the report of the Tariff Board in 1931, the production of this company in 1930-31 was about 1,250 tons and its maximum capacity was about 3,500 tons.

DEVELOPMENT SINCE 1939

(a) **Production of Virgin Metals**:—The Indian Aluminium Co. achieved production of *ALUMINIUM* ingots in 1943 and the Aluminium Corporation of India started production in 1944. The Indian Aluminium Co. started at first by reducing imported alumina from Canada into

aluminium in their Smelter Plant at Alwaye in the former Travancore State. The Company's Alumina Works is situated at Muri in Bihar; they have been engaged in production since 1947. The Aluminium Corporation of India has its Smelter and Alumina Plant near Assam. The combined capacity of both these concerns for aluminium ingots is 7,000 tons per annum. While their total production of aluminium ingots was 3,249 tons in 1946, 3,218 tons in 1947 and 3,372 tons in 1948.

A new Company was floated in 1948 in the C.P. with the financial support and backing of the Central Provinces Government for starting an aluminium factory in the C.P. which contains rich bauxite deposits. The management of the concern is now taken over by the C.P. Government. The capacity of the plant will be 5,000 tons per annum to start with, and production will start in about 3 years. The prospects for the economic production of aluminium in the C.P. seem to be very favourable, as both coal and high-grade bauxite are found in close vicinity and cheap power will be available from the use of low quality coal found in abundance. As India is importing about 12,000 tons of aluminium at present and as about 7,500 tons of extra aluminium sheets per annum will be required for the new programme of the manufacture of aircraft, wagons and buses, there is wide scope for more factories.

A Smelter was set up in Bombay by the Star Metal Refinery with a capacity of 300 tons of *ANTIMONY* per annum, a capacity which has now increased to 700 tons per annum. The ore brought from Chitral State was used for smelting antimony and the plant had reached full production in 1946-47. After the partition of the country, the ore supplies from Chitral have been cut off and the production has suffered. If ore cannot be obtained from Chitral due either to political difficulties or transport difficulties, antimony ore required for the Smelter could be obtained from Burma and China.

The average annual production of copper during the war years 1940 to 1946 was 6,100 tons showing only a slight increase over pre-war production. The production could be increased, if the lower grade ore was also utilised which at present is rejected in the process of mining. The prospecting of copper mines in Khetri at Jaipur was started about three years ago, but the work has not been pursued with enough vigour so far, and no concrete results have been achieved.

A new Lead Smelter with a capacity of 7,000 tons per annum has recently been put up at Kharagpur in Bihar. The production of lead in 1948 was, however, only about 600 tons due to difficulties of transporting ore from the Jawar mines in Udaipur. The Company has now set up an ore concentrating plant at the mines which will reduce the weight of the ore to be transported. The production of lead is likely to increase rapidly in a year or two.

No progress has been made in the production of zinc in India. Although the Jawar mines were originally prospected by the Geological Survey of India for zinc and although the ore in the Jawar mines contains about 13 per cent. lead and 3 per cent. zinc, there is no immediate proposal for producing zinc. The present plans are only to produce from the zinc-bearing ores Blipon and zinc oxide which are required for the paint industry.

(b) **Production of Semi-manufactures**:—The greatest progress in the Non-ferrous Industry made since 1939 is in regard to the semi-manufactures. Several brass and copper rolling plants have been started for rolling brass and copper *SHEETS* mainly in Bombay. The combined capacity of these new plants which are already set up is about 13,000 tons per annum, including one large rolling plant set up by Kamani Metals & Alloys Ltd. Two other plants with a total capacity of about 10,000 to 12,000 tons will be set up very shortly in the Bombay area.

The two aluminium producing companies have also set up plants for rolling aluminium sheets. The present combined capacity of both these plants is only about 3,000 tons.

Some lead sheets are also manufactured in the Calcutta area, but at present they are rolled in 3 ft. width, while the chemical industries require lead sheets of 7 to 9 ft. width. Aluminium and lead foils for tea-chests are also manufactured in the Calcutta area and the present capacity is estimated to be sufficient to meet India's requirements.

Several rolling plants for *RODS* and *RAILS* of brass, copper, etc. were started during the war, and recently an Extrusion Press has been set up in Calcutta by National Tubes and Pipes Ltd. Arsenical copper rods which are required for Railway locomotives as boiler stays, were manufactured in Jalpur by the Jaipur Metal Industries Ltd. during the war and all the requirements of Railways can be met by indigenous production. The present capacity for rods and tubes of brass and copper may be estimated at about 10,000 tons, which is enough to meet the present requirements of the country. The manufacture of lead pipes was started during the war at Konnagar in former undivided Bengal. The present production is about 500 tons per annum, but this could be increased to 700 to 800 tons, if required.

A plant for the manufacture of electrical *WIRES* and *CABLES* was set up near Calcutta during the war by the National Insulated Cable Co. The total production of electrical bare copper wire and cables of this company and the Indian Cable Co. is estimated to be about 10,000 tons per annum.

A plant specially designed for the manufacture of aluminium cables has been set up recently in Travancore at Kundara by Aluminium Industries Ltd. Another plant is likely to be put up at Jalpur shortly, which would make India self-sufficient as regards the requirements of aluminium cables estimated to be 8,000 to 10,000 tons per annum for the new electrification projects.

A number of concerns have been started for manufacturing different kinds of non-ferrous *ALLOYS*. The refining and reconditioning of Railways scrap and other industrial non-ferrous scrap is now done in this country, which was formerly largely exported. The total present alloying capacity in the country may be estimated at about 20,000 to 25,000 tons per annum.

GOVERNMENT POLICY

The Government have passed orders on the recommendations of the Tariff Board regarding the non-ferrous industry in their resolution dated 11th June 1948. In most cases, the Tariff Board had recommended that the existing revenue duty of 30 per cent should be converted into a protective duty of 30 per cent. In certain of the cases, the duty was converted into a protective duty at a lower rate, as in the case of zinc and lead sheets where it was fixed at 20 per cent. In the case of arsenical copper rods, brass rods and brass wires, a protective duty of 35 per cent was recommended. The Government have accepted all the recommendations of the Tariff Board, except the recommendation regarding remission of duty on all plant and machinery imported since the case of the non-ferrous metal industries was referred to the Board. Government said that though they could not accept the recommendation regarding the refund of duty on machinery already imported, they were considering the general question of the removal of the import duty on machinery. Government have since passed orders reducing the import duty on machinery from 10 per cent to 5 per cent which is applicable to all industries. In their resolution, Government have also drawn the special attention of the industry to the recommendation of the Tariff Board in regard to the appointment of qualified technical personnel and technical Directors, to which they attach very great importance. It is to be hoped that the industry will pay due attention to this recommendation and fully implement it in their own interests. One leading concern has already done so.

PROTECTION TO ALUMINIUM INDUSTRY

In a resolution dated May 15, 1949 the Government of India passed orders regarding protection to the Aluminium Industry. The Tariff Board had submitted its report about three years ago. The protection to the industry is given partly by customs duties and partly by the grant of subsidies to the two producing companies.

As regards the protective duty, the existing import duty of 30 per cent *ad valorem* is to be continued and in addition further specific duties are to be imposed as follows:—

| Year. | Rate of additional duty on ingots in rupees per ton. | Rate of additional duty on sheets, strips and circles in rupees per ton. |
|---------------|--|--|
| 1949-50 | 328 | 121 |
| 1950-51 | 237 | 46 |
| 1951-52 | 146 | <i>Nil</i> |

The rates of subsidies which will be paid to the two producing companies are as follows:—

| Year. | Indian Aluminium Company. | Aluminium Corporation. |
|---------------|---------------------------|--|
| 1949-50 | 330 (on sheets & circles) | 710 (on sheets & circles) 900 (on ingots) |
| 1950-51 | 230 (on sheets & circles) | 610 (on sheets & circles) 825 (on ingots) |
| 1951-52 | 130 (on sheets & circles) | 510 (on sheets & circles) 750 (on ingots) |

These rates of duty and subsidy are based on the landed cost ex-duty of aluminium ingots being Rs. 1,275 per ton, and of 20 gauge circles being Rs. 2,614 per ton and are liable to suitable adjustments if these prices vary appreciably. The Aluminium Pool was abolished from 15th May, 1949.

Before these orders were passed protection was granted through the working of a Pool arrangement which was introduced during the war. Under this arrangement the indigenous production is paid a price which is determined every year after examining the cost of production. As the price of indigenous production is higher than that of imported aluminium, the cost of indigenous aluminium and of imported aluminium are pooled together, and aluminium is issued to all the consumers in the country at a uniform price. Aluminium is allowed to be imported only through the Pool Agents. The 4 Pool Agents at present are:—(1) Messrs. Jeevanlal (1929) Ltd., (2) Messrs. Aluminium Hindusthan Ltd., (3) Messrs. Aluminium Corporation of India Ltd., and (4) Messrs. Kamani Brothers Ltd.

IMPORTS

A study of the import figures of non-ferrous metals and manufactures gives the best indication of the progress which has been made in India regarding the development of various metal processing industries mentioned above. Before the war the imports consisted predominantly of semi-manufactures. During the quinquennial 1930-31 to 1934-35, the imports of metals constituted only about 25% of the total imports, from which it increased to 50% during the quinquennial 1935-36 to 1939-40. During the war years the imports were very much restricted due to various factors and the imports of metals constituted about 75% of the total imports. The imports of both metals and manufactures during the period 1945-46 to 1947-48 increased very much due to the starving of the Indian market during the war years. The manufactures constituted about 40 per cent of the total imports during this period. Detailed statistics are given below:—

IMPORTS OF NON-FERROUS METALS & MANUFACTURES

| | 1945-46 (Tons) | 1946-47 (Tons) | 1947-48 (Tons) |
|---------------------------|-------------------|-------------------|-------------------|
| METALS: | | | |
| Aluminium | 3,078 | 7,365 | 2,642 |
| Brass | 2,004 | 13,665 | 1,951 |
| Copper | 8,785 | 13,636 | 14,457 |
| Lead | 7,548 | 7,080 | 4,563 |
| Tin | 141 | 823 | 1,015 |
| Zinc | 11,223 | 51,334 | 25,039 |
| Totals | 32,779 | 93,903 | 49,657 |
| MANUFACTURES: | | | |
| <i>Aluminium</i> | | | |
| Sheets & Circles | 2,219 | 3,176 | 6,389 |
| Other sorts | 179 | 1,106 | 2,963 |
| <i>Brass</i> | | | |
| Sheets | 1,779 | 662 | 386 |
| Rods, Tubes & Pipes | 1,544 | 1,317 | 535 |
| Other sorts | 5,719 | 23,054 | 13,444 |
| <i>Copper</i> | | | |
| Sheets | 2,692 | 7,477 | 5,272 |
| Rods, Tubes & Pipes | 3,855 | 266 | 120 |
| Other sorts | 4,326 | 18,107 | 5,994 |
| <i>Lead</i> | | | |
| Sheets | 283 | 77 | 156 |
| Rods, Tubes & Pipes | 24 | 15 | 13 |
| Other sorts | 14,325 | 365 | 564 |
| <i>Zinc</i> | | | |
| Sheets | 1,488 | 1,225 | 2,016 |
| Other sorts | 120 | 799 | 582 |
| Totals | 38,557 | 57,706 | 38,414 |

FUTURE DEVELOPMENT

Considerable progress has already been made in the production of semi-manufactures like sheets, rods, tubes and wires, and the new development schemes which are well under progress, particularly regarding the manufacture of sheets, which is the largest item of non-ferrous manufactures required in the country, will make the country more or less self-sufficient in respect of practically all the requirements of semi-manufactures of non-ferrous metals.

As regards production of virgin metals very little progress has been achieved so far in spite of the fact that there are deposits of important non-ferrous metals like copper and lead found all over the country. Careful planning will be necessary for developing production of metals in the country, if any progress is to be achieved. Any such planning must take into consideration the following important factors:—

1) The development of mining industry is full of great risks and private capital and enterprise is not readily forthcoming under the present circumstances for the development of non-ferrous mining unless some special assistance is granted by the Government. The development of mining requires very large capital, unlike the semi-manufacturing industry which can be started in relatively small units by private capitalists largely with their own private resources. In order to start big companies with large capital from the public for financing such mining concerns, it would be essential to have some financial contribution and assistance from the Government in the form of subscription of share capital, sharing a portion of expenses for prospecting work, and even guaranteeing a certain minimum return on the capital, in order to inspire confidence in the investing public and induce them to put in their capital in such ventures.

Recently, the Government of India has taken bold steps for the development of Shipping and Coal Mining by forming Corporations in which the Government of India is taking 50 per cent share capital. The mining and production of non-ferrous metals in the country is equally important to the national economy of the country, and the Government should take similar action for the development of non-ferrous mining industry.

2) It is also essential that Government should clearly recognise and declare the whole non-ferrous industry, including the semi-manufacturing branch of the non-ferrous industry as a basic industry, which should be assured the grant of an adequate protection and all reasonable financial assistance which may be necessary for its proper development.

3) There is a great need for a thorough investigation of India's mineral resources, as the work done so far is mostly of a superficial nature. Government should undertake intensive mineral surveys and prospecting work for these metals in selected cases as was done for prospecting zinc in the Zawar mines.

4) As long as India's own production of virgin metals is not sufficient to meet all possible requirements of Defence, industrial and civil needs, it is essential that Government should also maintain a stock pile of important metals like tin, copper, lead, aluminium, nickel and zinc. At present, most of the industrially advanced countries are maintaining large and regular stock piles of such metals which have been considered essential both from strategic and economic point of view. In the absence of such stock piles, there is the greatest danger of the non-ferrous manufacturing industry and the industrial and economic life of the country being dislocated by a sudden cutting off of foreign supplies, unless the country has sufficient reserves of such metals.

WORLD PRODUCTION

The following tables give figures of production in the 6 largest producing countries of the world for copper, aluminium, zinc and lead which are the most important of the non-ferrous metals.

COPPER

(In tons of 2,000 lbs.)

| Name of country | 1942 | 1943 | 1944 | 1945 | 1946 | 1947 |
|-------------------------|-----------|-----------|-----------|---------------|---------|-----------|
| U. S. A. | 1,301,000 | 1,338,000 | 1,213,000 | 945,000 | 695,000 | 1,073,000 |
| Canada | 260,000 | 257,000 | 247,000 | 220,000 | 167,000 | 199,000 |
| Rhodesia | 280,000 | 277,000 | 246,000 | 216,000 | 205,000 | 218,000 |
| Belgian Congo | 183,000 | 173,000 | 182,000 | 177,000 | 158,000 | 166,000 |
| Chile | 526,000 | 539,000 | 540,000 | 509,000 | 395,000 | 450,000 |
| Japan | 130,000 | 135,000 | 140,000 | 50,000 | 26,000 | 41,000 |
| TOTAL WORLD OUTPUT | 3,125,000 | 3,184,000 | 3,006,000 | Not available | | |

ALUMINIUM

(In tons of 2,000 lbs.)

| Name of country | 1942 | 1943 | 1944 | 1945 | 1946 | 1947 |
|--------------------|-----------|-----------|-----------|---------|---------|---------------|

* British Zone only.

THE OPIUM INDUSTRY

OPIUM, which is one of the most important and remarkable vegetable drugs known to man, is a light brown to dark looking tough solid with a characteristic smell and bitter taste. It is obtained from the unripe capsule or fruit of the poppy, *Papaver Somniferum*, to give it its scientific name. The capsule or fruit is scratched or cut and the juice which keeps slowly exuding from the cuts during the night is removed early in the morning and allowed to dry further in the shade before it is ready for packing.

Opium is one of the best drugs for sleeplessness, produced by painful disease, and along with its derivatives it is a fine remedy for cough, asthma, diarrhoea, piles and other nasal and throat disorders. It is also an expectorant and an anti-spasmodic. Though opium has great uses as medicine it can also be foully abused. It is a habit forming drug and can be dangerous to both mind and body. The opium addict becomes a physical and mental wreck in course of time losing all interest in life and business, or he becomes a hardened criminal. The opium dens of the world are indeed notorious for their vice and crime. For these reasons most countries regulate the sale and distribution of opium under Dangerous Drugs Rules. To combat illicit traffic in drugs international control organs have been set up, such as the Opium Advisory Board, Permanent Control Opium Board, and Drug Supervisory Board. During the last war, illicit traffic increased especially in Iran, Mexico and Yugoslavia, in China and the Japanese-held territories in the Far East. And so at the San Francisco Conference in 1946 it was decided that the international control agencies should be brought into relation with the Economic and Social Council of the U.N.O. to be better able to fight the evil.

The poppy is grown chiefly in Eastern Europe and Asia specially in U.S.S.R., Turkey, Iran, India and China, the last of which is a big producer as well as consumer. The world medical requirements of opium are estimated at 1000 tons. And though world production has tended to fall since 1936 it was still as high as 1600 tons in 1938 (excluding China and Afghanistan) that is to say, 600 tons in excess of the world's medical needs.

History.—In the sub-continent, the opium trade was created a Government monopoly in 1773 and in 1877 cultivation of poppy was forbidden in India except for supply to the East India Company. The Company made immense profits by the export of the noxious drug to China which unsuccessfully fought two wars to keep it out of the country. But in the end world opinion asserted itself and an agreement was arrived at in 1907 to suppress the opium export to China. The opium factory at Patna was shut down in 1908 and exports to China wholly ceased in 1913. In 1923 the Certificates System came into effect in the importing countries and finally in 1926 the Government of India came out with a declaration that the export of opium except for

medical purposes would be completely prohibited. By the end of 1935 all exports of 'provision' opium as it is called came to a stop.

Here are a few figures which show how in India the cultivation of the poppy and the production of opium steadily diminished from 1907 to 1940. Since 1940, however, production has slightly increased to meet increased medical and other legitimate requirements.

| Year | Acres Grown | Production (Mds.) |
|---------|-------------|-------------------|
| 1907-8 | 488,548 | 71,340 |
| 1911-12 | 200,672 | 31,473 |
| 1913-14 | 145,000 | |
| 1930-31 | 36,537 | 7,656 |
| 1939-40 | 4,898 | 1,306 |
| 1941-42 | 15,301 | |
| 1943-44 | 36,415 | 9,870 |

The following figures show how exports fell from 1913 to 1937:—

| | |
|---------|--------------|
| 1913-14 | 16,858 Cwts. |
| 1918-19 | 9,609 " |
| 1929-30 | 5,500 Chests |
| 1931 | 4,792 " |
| 1932 | 3,583 " |
| 1933 | 1,162 " |
| 1934 | 2,823 " |
| 1935 | 664 " |
| 1935-36 | 257 " |
| 1936-37 | |

From 1915 to '48 they rose again:

| | | |
|---------|-------------|------------|
| 1945-46 | 49 Cwts. | Rs. 75,432 |
| 1946-47 | 220 " | 3,81,000 |
| 1947-48 | 320 " | 8,66,421 |
| 1 Chest | 140 lbs. | |
| 1 Md. | 82 2/7 lbs. | |
| 1 Seer | 2 lbs. | |

Along with the fall in exports the net receipts of the Government of India have fallen too:—

| | |
|---------|---------------|
| 1910-11 | Rs. 801 lakhs |
| 1920-21 | " 183 " |
| 1935-36 | " 27 " |
| 1936-37 | " 19 " |
| 1943-44 | " 2 " |
| 1944-45 | " 5 " |
| 1945-46 | " 51 " |
| 1946-47 | " 8 " |

And here finally are figures which show how while the consumption of opium for medical purposes increased, excise opium sold to Provincial Governments diminished from 1929 to 1940

| Year | Excise Opium | Medical Opium |
|---------|--------------|---------------|
| 1929-30 | 7,797 Mds. | 22.9 Mds. |
| 1931 | 8,128 " | 27.6 " |
| 1932 | 6,403 " | 21.0 " |
| 1933 | 6,000 " | 23.7 " |
| 1934 | 5,873 " | 24.3 " |
| 1935 | 5,859 " | 25.4 " |
| 1936 | 5,596 " | 24.1 " |
| 1937 | 5,882 " | 25.3 " |
| 1938 | 5,384 " | 24.5 " |
| 1939 | 5,393 " | 32.5 " |
| 1940 | 3,347 " | 32.9 " |

Present Position.—The policy of the Government of India before the transfer of power was one of suppression of excessive indulgence but non-interference with moderate use. In effect this remains the policy of the Government today. In 1945, there were 12,000 to 14,000 licensed shops in the sub-continent selling opium albeit in small quantities and the average consumption in eating and smoking was on an average 200 tons per annum in the decade 1930-40.

The poppy is grown today in U.P. and in parts of Central India, Rajasthan and Madhya Bharat. This opium is bought by the Government of India at the fixed rate of Rs. 9 a seer and made into three kinds of opium at the factory in Ghazipur—1. provision opium (71% opium) for export, 2. excise opium (90% opium) sold to Provincial Governments for local consumption, and 3. medical opium (87.5% opium) for the Medical Department in India and Pakistan and for export to London for sale to chemists. The exports are made to Aden, Burma, Nepal, Zanzibar and so on by agreement with their respective Governments. The price of the opium sold to the Provinces is Rs. 18 per seer and of the opium exported is 129 to 1240 per cwt.

Apart from the medical needs of the sub-continent which amount to about 25 cwts., and of the exports for medical purposes to the U.K., which amount to 15 to 25 tons annually, some opium is also used to manufacture morphine and codeine in India. In 1943 the Government Alkaloid Works at Gazipur produced 2,000 lbs. morphine and 424 lbs. codeine with their salts. The Government of India Panel on the chemicals (before partition) estimated a target production of 3,000 lbs. and 1,500 lbs. of morphine and codeine salts respectively for 1946. The requisite opium needs for this purpose were estimated to be in the neighbourhood of 50 tons. In the future, however, the Government of India is expected to limit the production of opium to the medical and scientific requirements of India and for exports according to international agreements.

On the whole though the net revenues of the Government of India from opium traffic have progressively diminished the expenditure on opium consumed in the sub-continent still amounts to about Rs. 2 to 3 crores per annum. In the U.P. alone Opium consumption was as high as 250 cwts. a year, in spite of duty on it being raised by 20 per cent. Whatever may have been the policy in the past it is vitally necessary to stamp addiction to the noxious drug. Assam led the way when it introduced prohibition in March 1941. The loss of Provincial excise revenue may be as high as 3 crores (duties vary from Rs. 51 to Rs. 140 per seer) but it will be amply compensated by higher national health and morale.

THE PAPER INDUSTRY

THOUGH paper was invented in China by a Chinaman, Ts'ai Lun, in A. D. 105 and though Sino-Indian trade is generally dated from 64 A. D., the arrival of paper in India appears to have been very slow. Its manufacture on Indian soil however, was not given attention to owing to our already existing, widespread system of using the *churja* (prepared birch-bark) and palm leaves for writing purposes and the orthodox tendency of Indians. From the Chinese the Muslims learnt the process in the 8th century and they introduced it into Europe and India about the 12th century and the paper records preserved in India, as in Europe, date from about 1080 A. D.

Paper-making in the sub-continent is of some antiquity. The manufacture by hand was practised from quite early times.

The Chinese interpreter to the Chinese embassy that visited Bengal in A.D. 1406 refers to the manufacture of paper in Bengal from the bark of a tree and says that this paper is smooth and glossy like a deer's skin. So the manufacture must have been established in Bengal and, probably elsewhere in India before that year. But even down to the end of the century superior quality paper came from outside. Emperor Babur (1483-1530) in his celebrated memoirs has recorded that the best paper in the world came from Samarkand. According to Sir Aurel Stein the paper invented by Ts'ai Lun was made of old linen rags, fishing nets, bark of trees and raw hemp.

The first paper-making machine in India was erected and operated by a famous missionary, Dr. William Carey, over a century ago at Serampore on the Hooghly River near Calcutta, but the establishment of paper making as a modern industry may be said to date from 1867. In that year the Royal Paper Mill was established at Bally, only a few miles away, using in the first instance Dr. Carey's original plant and machinery. About 15 years later the Upper India Couper Paper Mill at Lucknow and the Titagur Paper Mills at Titagur, near Calcutta, were started. Other mills at Benares and Kanpur, in the Bengal area and other Provinces soon followed. Production then increased so that by about 1900 it amounted to approximately 20,000 tons a year.

Today the quality of paper produced in the sub-continent is accepted as equal to that of most imported paper of the same class, and the range of qualities has been extended to include coloured banks and bonds, tab-sized rag papers, embossed covers and writings, super-calendered tinted printings, and imitation art and craft.

Raw Materials.—In its early days the Indian industry considered the manufacture of high class white paper rather beyond its capacity, and this was to some extent due to its dependence upon rags and waste paper for its raw material. But this crude practice of using rags and waste paper was soon to change. Routledge in 1860 proved the virtues of esparto, a semi-tropical grass—and in 1875 and 1879 reported upon the possibilities of Indian bamboo which served to draw attention to other Indian fibres. There are only incomplete records of the early experiments with Indian fibres, but it is known that two mills made use of Moenj (*Saccharum Moenja*) and Sabal (*Ischaemum Angustifolium*) in their first years. Moenj seems to have held the field in the beginning, for it made a very good paper. Sabal, however, presented less difficulty as regards treatment and, therefore, soon came into universal favour among Indian mills. Having found in Moenj and Sabal ample resources of plant fibre it was perhaps natural that the Indian mills then in operation should

have made no effort to follow up Routledge's researches in bamboo—a much more difficult problem. If they had India might possibly have come to the front as one of the world's most important producers of pulp and paper. What actually happened was that the industry based as it was on Sabal grass, while relatively still in its infancy, was almost put out of business by the competition of wood pulp. Nevertheless it later found a new raw material of great value in bamboo.

The Bamboo Paper Industry (Protection) Act of 1925 not only gave Indian mills an opportunity of repairing the damage to their plant and machinery caused by the incessant and intensive work required by India's first world war demands, and of overcoming the difficulties of getting stores and machinery replacements, but also encouraged and enabled them to develop bamboo pulp as their main fibre. The protective tariff on paper was renewed by the Government of India on the recommendation of the Tariff Board in 1932, and imported wood-pulp was also made subject to a duty of Rs. 45, or approximately £3 a ton. This pulp duty naturally had the direct effect of preventing the establishment of new paper mills designed to work only on imported wood-pulp. The mills, therefore, immediately began to develop and increase the production of bamboo pulp, which had already been proved to be eminently suitable for all the usual classes of fine writing and printing papers, banks ledgers, &c. Bamboo pulp is now the main material though Sabal grass, which is the Indian equivalent of esparto, is also used by some of the mills. Incidentally the manufacture of pulp from bamboo is at present practically confined to India.

The protective tariff attracted others to a profitable field of industry. The number of mills increased from 10 in 1938 to 16 in 1943 operating 34 machines, with an increase in output from 53,000 to 90,000 tons and of board from 8,000 to 21,000 tons. The protective tariff however, was abolished in 1947 as the Government decided that the paper industry no longer required any special assistance, although the Panel on Paper of the Advisory Planning Board recommended its continuance.

For many years the paper pulp section of the Forest Research Institute at Dehra Dun has been carrying out experimental work in connection with the development of new fibres for paper-making, and it has been reported that considerable success has been obtained in making craft paper from bamboo pulp. Two paper mills have now been successfully manufacturing craft papers from bamboo for over a year.

Newsprint.—With the assistance and encouragement of the Commerce Department of the old undivided Government of India, newspapers have now come to an arrangement to ration supplies of imported newsprint and to charge certain agreed prices for various sizes of newspapers. Imports of newsprint from U.S.A. and Canada are permitted up to certain limits by a system of licences. The controls imposed during the war still remain in force.

None of the paper mills in the sub-continent is in a position to meet any part of the newspaper requirements of newsprint. The whole of the sub-continent's newsprint requirements is imported, it being not possible so far to produce it on an economical basis in India or Pakistan owing to a lack of the necessary raw materials. Recent enquiries show that the Kashmir and Tehri-Garhwal States can supply fir and spruce in quantities sufficient for the establishment of a newsprint mill in each of the two States. The two species of wood are well known raw material for the production of mechanical pulp for use in newsprint manufacture and the suitability of both the species from the two States has recently been tested at the Forest Research Institute, Dehra Dun. Most of the established mills have plans for the expansion of production and several new companies have been floated for the manufacture of paper, board and also newsprint which last is to be manufactured from the timber found in the forests of the Central Provinces. But the abnormal rise in the cost of machinery and the difficulties of importing these from abroad, however remain.

The Panel has recommended the establishment of mills for newsprint in Kashmir, Tehri-Garhwal and East Punjab and set the target of production at 20,000 tons in 1951 and 40,000 tons in 1956 against an anticipated annual consumption of 60,000 tons and 100,000 tons respectively.

The industry had made such headway that the outbreak of the Second World War found it ready to take up the vastly increased demand for Indian paper brought about by the difficulty of importing it from abroad. Imports of fine papers are very limited and all paper mills are working to full capacity. The emergency has undoubtedly given the newer mills an excellent opportunity of establishing themselves but with the considerably increased consumption of paper by the Central and Provincial Governments and the Army, a serious shortage of paper has been felt by industry and commerce and the general public.

From April 1, 1943, the old undivided Government of India decided to release for civilian consumption 30 per cent of the total production of home made paper, which was further reduced by an Ordinance issued in June 1944 to 30 per cent of the quantity used in 1943. Government have also taken action to increase the output of the mills by giving them every possible assistance in the matter of transport facilities for raw materials and also in obtaining chemicals such as sulphur, alum, caustic soda, etc. The paper mills have also been asked to confine production to 6 or 7 standard varieties so as to permit of longer runs on machines and allow for the production of the maximum amount of writing surface.

The Panel of the Advisory Planning Board anticipating increased demand for both paper and board in the next four years, recommended a large expansion of the industry aiming at a target of production in each case, as shown below:—

| Kinds of paper. | Anticipated annual consumption in tons. | | Present indigenous production (tons). | Target of indigenous production. | |
|---|---|---------|---------------------------------------|----------------------------------|---------|
| | 1951 | 1956 | 1944 | 1951 | 1956 |
| All types of paper other than newsprint | 220,000 | 312,000 | 90,000 | 169,000 | 302,000 |
| All types of boards including strawboards | 75,000 | 110,000 | 241,000 | 75,000 | 119,000 |

As regards the location of new paper mills for the expansion of the industry, the Panel is of the opinion that no new mills should be set up in Bengal, but instead should be distributed in the following suitable areas:—

Paper:—In Madras, Bombay, Assam, East Punjab, Central Provinces and Berar, former Central Indian States area, Rewa, former Eastern States area, United Provinces and Bihar.

Boards:—In Bombay, West Bengal (near Calcutta), Madras, Central Provinces and Berar, Orissa, East Punjab, United Provinces and Hyderabad State.

Hand made Paper:—The Panel recommends the expansion of this industry by organising systematically for the production of special types of paper, with semi-mechanisation of some of the processes.

The Panel, while of the view that the projected increase of paper and board production can be left to private capital and enterprise without direct financial assistance from Government, has recommended that (i) a survey should be made of all cellulose raw material, (ii) that the paper pulp section of the Dehra Dun Forest Research Institute should be converted into a Pulp and Paper Research Centre, the Govern-

ment sharing the cost with the industry and (iii) that at least 6 young Indians should be sent abroad every year for higher training in addition to technicians trained at the Dehra Dun Centre.

The Government have accepted the Panel's recommendations regarding targets of production and location of mills but no orders have been passed on the other recommendations, although some provincial Governments have started experimenting on suitable raw materials such as planting of eucalyptus and mulberry trees and growing of bhatar grass on preserved areas.

THE PLASTICS INDUSTRY

THOUGH casein was known to the Egyptians and cellulose was discovered as early as 1865

It would be correct to describe the plastics industry as one of the newer industries. But once established the plastics industry went from strength to strength and still continues to advance at an astonishing pace. The reasons for its rapid expansion are mainly two. It has received all the financial capital it has ever needed, and the market for its products has always gone on expanding. Investors in U.S.A. and England and Germany and Japan (which have been the chief producers of plastic goods) had an impression that the plastics industry was a sort of El Dorado where enormous fortunes could be made in a comparatively short time. The progress of the industry justified the hopes of the investor to a great degree chiefly because its products cater for an enormously wide field. There is hardly any industry which does not use at some stage or other someone or other of its products. The makers of plastics, for instance, can count on substantial orders from the electrical, building, motor vehicle ship-building, packaging and container, railway synthetic chemical, aircraft, machinery, shop and office fitting and house-hold equipment, not to speak of the tremendous potentialities of plastics in the manufacture of sugar and textiles.

The outstanding characteristic of plastics is mouldability under heat and pressure. The advantages of plastics over similar synthetic products are summarised in the "British Plastics" as follows:

The first advantage is mouldability. The manufacturer has the assurance that the thousandth moulding will be as accurate as the first. The limit to production is set, where moulding powder is available, not by defects in the powder but by the life of the mould. The moulded article requires no further treatment or finishing after leaving the mould which is an important factor in mass production economy. Plastic materials being uniformly consistent, the moulder can adopt and maintain techniques without flaws due to variation in the raw material. Plastics have the further advantage of dimensional stability and chemical resistance. Some phenolic moulds are reported to have given continuous and satisfactory service as electrical insulators for nearly 40 years. Bearings made from laminated material have been in use for fifteen years. The technique of treating materials with plastic resins in order to increase their resistance to weather and insects, is claimed to be an outstanding success on the Sao Paulo railways, where the wooden material on the permanent way was previously completely destroyed by white ants.

The world production of plastics was estimated in 1947 at about 2,240 million lb. annually. The per capita consumption in India in 1947 was 0.003 lb. as compared to 1.600 lb., 1.450 lb., and 1.000 lb., in Germany, U.S.A., and Britain, respectively.

The plastics industry in the sub-continent unlike that in U.S.A. or England is of recent origin. It received a great stimulus

during the War when imports of plastic goods from U.S.A., England, Germany and Japan considerably dwindled. A number of factories started functioning but at first they confined themselves exclusively to the manufacture of articles meant for domestic use. Later, however, some of them widened their field and today they are all manufacturing electrical appliances as well, such as switches, ceiling roses, cut outs, lamp stands, and shades.

PRESENT POSITION

As in other cases statistics are lacking but the present position of the plastics industry can be roughly described as follows: The number of factories in operation at present is a little more than 30 and the total capital invested is in the neighbourhood of 2 crores. But new factories are springing up and it is estimated that another 2 crores are likely to be invested. That there is great scope for further expansion is clear from the fact that the market for plastics has also rapidly expanded in the course of the last few years. During the three years preceding the War, i.e., 1936-39 the approximate consumption of plastic goods in the sub-continent was computed at Rs. 50 lakhs a year. But in the years 1943-46 the value of the plastics goods consumed in the country rose to as high a figure as 5 crores a year. But this cannot be regarded as a peak. That there is scope for still further expansion is clear from a consideration of some of the conditions prevailing in India and Pakistan at the present moment.

1. Although the sellers' market is fast receding, the pent-up demand for all sorts of consumer goods has not yet been fully satisfied. 2. Germany and Japan both of whom ranked high among producers of plastic goods before the War have withdrawn from the Indian or Pakistani market. 3. The demand for plastic goods and material has been greatly stimulated by the shortage of other materials such as rubber, timber, leather and textiles. 4. Owing to developments which have occurred in new plastic materials and in new applications as a result of War experiences the whole field has been widened. There is thus a huge potential market which continues to expand with time.

The sub-continent has some natural advantages too by way of raw material. The three principal sources from which the plastics industry obtains its raw material are coal, petroleum, and forest and agricultural products. Though India and Pakistan may not be rich in coal and petroleum their forest and agricultural produce is unlimited. Besides, the sub-continent has easy access to such natural resins like lac, which forms yet another source of raw material for the plastics industry. It is also known that facilities for the manufacture of Phenol formaldehyde resins exist in Bihar, Bihawan and cashew-shell liquid, available in certain parts of the country, are also suitable material for the industry. The Council of Scientific and Agricultural Research (now limited to the Dominion of India) has been very active in this field and the whole question of

developing India's natural resources is being thoroughly investigated under the supervision of Sir Shanti Swarup Bhatnagar.

But that is only one half of the story for though the plastics industry in the old undivided India did very well during the War (chiefly because foreign competition was eliminated) it is once again finding itself in grave difficulty. The reasons are fairly obvious. Imports of plastic goods especially from England and the U.S.A. have enormously increased so much so that according to Indian manufacturers supply had actually exceeded demand. They complain that foreign manufacturers are dumping their goods in India and selling them at a price which appears to be below the cost of production. A pound of imported raw material costs more than a pound of manufactured goods and the latter are sometimes sold at a price which is 50 per cent less than their landed costs. And so, the spokesmen for the Indian manufacturers argue, the whole future of the plastics industry would be in peril if the Indian Government did not come to their help. The Government of India have since done well in suspending O.G.L.XI, thereby preventing further imports of plastic goods.

It would appear that in the ultimate analysis the future of the industry hinges on the ability of the Indian manufacturers to import plastics powders from U.S.A. or England or in the alternative to produce them in the country itself. For the present the industry is chiefly dependent on the powders that are being imported from the U.K. and the U.S.A. through the Imperial Chemical Industries, Bakelite, Ltd. and Volkart Brothers who buy the powders abroad and supply them to the manufacturers of plastic goods in the sub-continent. Here are a few figures which give some idea of the quantity in which the powders are imported:

| Year. | Quantity (Cwt.) | Value Rs. |
|---------------|--------------------|--------------|
| 1937-38 | 542 | 29,917 |
| 1938-39 | 884 | 43,483 |
| 1939-40 | 587 | 28,434 |
| 1945-46 | 1,661 | 1,65,561 |

It may be mentioned here that though there is a 30 per cent. duty on imported plastic goods, there is also a 30 per cent. duty on imported plastics powder.

The trouble, however, is that supplies of imported bakelite powders have shown a tendency to fall. More and more of the bakelite powders are being used up in U.K. and U.S.A. leaving less and less for purposes of export. Thus the Indian manufacturers are finding their sources of supply of bakelite powders being progressively reduced. One of the ways in which they are trying to meet the shortage is by manufacturing the powders in India itself.

PLASTICS PANEL

The Panel on Plastics, appointed by the Government of India in 1947, recommended that the moulding industry should be expanded to use about 3,000 tons of moulding powders annually during the next five years and that types of automatic presses should be imported. They also gave a long list of articles proposed to be manufactured, e.g., combs, buttons, trays, etc. Moulding plants, the Panel opined, might be located in any part of the country, preferably near trade centres. A moulding plant utilising 100 tons of moulding powders per annum is considered a minimum economic unit under Indian conditions. Two Die making establishments should be set up, preferably at Bombay and Calcutta.

For the present, the industry will have to use imported moulding powders. The duty on finished plastic goods and moulding powders, namely 30 per cent., was considered unsatisfactory by the Panel. The Panel considered that the expansion of the plastic moulding industry could be left to private enterprise; but if private capital were not forthcoming to instal die-making plants, Government should subsidise the undertaking.

The Panel recommended that the production of the following synthetic plastic moulding

powders should be started as soon as the basic chemicals required for their manufacture are available at economic rates and the demand is sufficiently large to justify the erection of an economic unit for each type: (1) Phenol-formaldehyde (1,500 tons), (2) Cellulose Nitrate (2,000 tons), (3) Urea-formaldehyde (500 tons), and (4) Cellulose acetate (1,000 tons). For a long-range industrial development plan, the production of the following synthetic plastics was recommended: (1) Melamine, (2) Furfural-phenol, (3) Nylon, (4) Polyethylene, (5) Alkyd, (6) Vinyl, (7) Acrylate, (8) Silicone.

Stating that there are bright prospects of developing the naturally-occurring resins for use in the industry, the Panel strongly felt that intensification of co-ordinated research on the utilisation of lac, bhillawan and cashew-nut oil, must be undertaken.

A synthetic or a natural resin is very seldom in a condition suitable for direct moulding and requires the addition of filling materials. Wood flour is one of the most important of these. The Panel recommended that its manufacture should be undertaken in India and an annual production of 1,500 tons aimed at.

The Plastics Development Committee constituted by the Government of India, which

met in New Delhi early in July 1949, recommended a three-point plan for the development of the industry in India. The Committee considered the three urgent needs of the industry, namely, of moulds, plastic powder and technicians. To meet the need for moulds, the Committee suggested to the Government of India to start, in the proposed machine tool factory, a section for casting moulds with a capacity of about 250 moulds per year for the present.

As regards plastic powder, the lack of uniformity in standards was stressed, which forced Indian manufacturers to depend upon foreign imports. While urging top priority to the requirements of the manufacturers of plastic powder, the Committee also recommended the assistance of the Indian Standards Institute for proper standardisation of the products for export as well as for domestic sales. The industry was advised to develop an inspectorate of its own to inspect and grade the different products.

The industry was further asked to develop an apprenticeship system for the training of technicians, and, to meet the difficulties created by conflicting demands from different manufacturers for technicians, whose number is stated to be very limited, it was proposed to introduce a five-year bilateral contract system.

THE RUBBER INDUSTRY

THE sub-continent produces about 16,500 tons of rubber a year which is a little more than one per cent of the world production of rubber. Broadly speaking there are eight major areas in the world where rubber is produced, and if all these areas were placed in order of their importance as producers of rubber the Indian sub-continent would come last but one. The figures quoted below are for 1943 which are the latest available ones:

| Countries | Quantity in tons (One ton = 2,240 lbs.) |
|--|--|
| Straits Settlements, F.M.S., U.M.S. & Brunei | 651,500 |
| Netherlands India | 651,000 |
| Ceylon | 110,000 |
| Indian sub-continent | 17,750 |
| Burma | 13,750 |
| States of N. Borneo | 21,000 |
| Sarawak | 44,000 |
| Thailand | 60,000 |
| Total | 15,69,000 |

Certain of the areas were, of course, destroyed in the course of the war and the present world production of rubber would be found about 12 lakhs of tons.

Area Under Cultivation. The area under rubber cultivation in the sub-continent before the year 1925 was nearly 68,000 acres. Today the area under cultivation stands roughly at 158,322 1/4 acres, that is to say, an increase of more than 90,000 acres. This increase in acreage is largely made up of 14,600 small gardens each below 50 acres in extent owned by small peasant proprietors.

Some of the estates are over 100 acres in extent but the overwhelming majority are less than 5, and in between 100 and 5 there are all gradations:

| | No. | Total area in acres |
|--|---------------|-----------------------|
| Estates of and above 100 acres | 215 | 93,304.93 |
| Estates of and above 50 and below 100 | 184 | 12,458.574 |
| Estates of and above 25 and below 50 | 323 | 10,985.78 |
| Estates of and above 10 and below 25 | 988 | 13,897.29 |
| Estates of and above 5 and below 10 | 1,290 | 8,595.40 |
| Estates below 5 | 13,156 | 19,082.17 |
| Total | 16,159 | 158,322.14 1/4 |

Total Production. The most important statistics of all relate to the total amount of the production of rubber in the sub-continent. As has already been stated, this is about 17,000 tons a year. The yield per acre is disappointing and compares unfavourably with the average yield in Ceylon or Malay or the Netherlands East Indies.

While the average yield per year per acre in the sub-continent varies from 294 to 315 lbs., the average yield per acre in Ceylon is about 350 lbs. In Malay and the East Indies it is higher still, being as much as twice the Indian yield. The Indian grower ascribes the difference in yield chiefly to difference in soil, climate and the distribution in rainfall, which result in high production cost. According to the Government speaking through the Member for Industries and Commerce (Sept. 4, 1947), however, the low yield can be ascribed to out-of-date methods adopted in growing rubber

More than twenty years ago, about 90 per cent. of the rubber plantations were owned by Europeans. Today the whole industry is predominantly Indian in character and composition.

| | Acres |
|---------------------------|--------------------|
| Planted earlier than 1925 | 67,999.91 |
| Planted during 1925 | 4,816.78 |
| " " 1926 | 23,379.24 |
| " " 1927 | 12,653.27 |
| " " 1928 | 5,817.11 |
| " " 1929 | 1,782.22 |
| " " 1930 | 842.71 |
| " " 1931 | 996.98 |
| " " 1932 | 218.59 |
| " " 1933 | 183.12 |
| " " 1934 | 1,182.63 |
| " " 1935 | 97.53 |
| " " 1936 | 647.70 |
| " " 1937 | 1,302.895 |
| " " 1938 | 1,240.23 |
| " " 1939 | 4,085.59 |
| " " 1940 | 4,228.32 |
| " " 1941 | 1,345.53 |
| " " 1942 | 2,926.78 |
| " " 1943 | 12,244.68 |
| " " 1944 | 5,309.64 |
| " " 1945 | 4,438.44 |
| " " 1946 | 580.45 |
| Total | 158,322.145 |

Of the whole area under cultivation by far the biggest single part is in the State of Travancore as the following figures taken from the statistics for 1943 make clear:

| | Acres |
|-------------------------------|--------------------|
| (1) Travancore | 113,731.60 |
| (2) Mysore State | 639.30 |
| (3) Cochin | 14,154.22 |
| (4) Rest of the sub-continent | 29,797.025 |
| Total | 158,322.145 |

even after due allowance is made for climatic conditions. Here are the production figures for the sub-continent:

| Year | Production in tons | Acreage bearing | Average yield per annum per acre in pounds |
|------|--------------------|-----------------|--|
| 1940 | 16,671 | 123,820 | 302 |
| 1941 | 16,295 | 124,135 | 294 |
| 1942 | 16,597 | 123,476 | 301 |
| 1943 | 16,629 | 121,647 | 306 |
| 1944 | 17,174 | 122,191 | 315 |
| 1945 | 16,077 | 122,444 | 294 |
| 1946 | 10,374* | 125,521 | 185* |

*The figures for 1946 are only for up to end of September.

The total amount invested by the rubber producing industry in the sub-continent is roughly 12 crores, Rs. 11,87,41,008.75 to be more precise. This figure works out to about Rs. 750 an acre. Here are a few more figures which together give us some idea of the importance of the rubber growing industry for the economy of the sub-continent. The number of men employed on the rubber estates during 1942 was 46,887 which includes the supervisory staff employed on the estates, the staff at the head offices of the companies and also persons employed in the handling and transport of rubber. At the present time the total number of men employed would be much nearer the 50,000 mark. The estimated value of rubber produced in the sub-continent in 1945 at the rate of Rs. 100 per 100 lbs. is 360 lakhs of rupees. All the figures we have cited together testify to the part played by the rubber growing industry in the economy of South India and the importance of ensuring that the industry pays its way.

Present Position.—Till about the middle of 1934 there was practically very little consumption of indigenous rubber in the sub-continent. Even as late as 1939, out of a total of 16,500 tons produced only about 5,600 tons were accounted for by internal consumption. About two-thirds of the rubber produced was thus available for export, a fact which necessitated Indian participation in the international agreement on the export of rubber. As has already been stated, in 1939 internal consumption rose to 5,600 tons. From then on it continued to increase steadily till in 1941 it reached the figure of 14,297. During the war the demand for rubber soared higher still partly because of the greater requirement of the Allies and partly because supplies from the chief rubber producing countries, like Malay, Java and Burma were not available.

The present position of the rubber growing industry is different from its position either before the war or during the war. There is a big internal market, for a great rubber manufacturing industry (i.e., using rubber as its raw material) has grown up. It consumes more rubber than the growers can produce so that some two to three thousand tons have actually to be imported to meet its total requirements. And when rubber-manufacturing enterprises, now in the process of formation, start operating the industry will need larger imports still or a much larger production than exists today. But though the market for raw rubber has expanded, danger threatens the growers from two directions. There is competition from imported rubber, and second there is competition from synthetic rubber. The danger from foreign competition is all the greater because it is believed that world supply is actually in excess of world demand, and second while the world price of rubber is at present about Rs. 50 for 100 lbs., the Indian grower cannot afford to sell at that price as the cost of production in the Indian sub-continent is much higher.

Indian Rubber Board.—All this was fully expected and it was with the idea of meeting just this situation that the old undivided Government of India appointed an *ad hoc* committee presided over by Sir Frederick James in December 1945. The report of this Committee was considered at a Conference of representatives of planters, manufacturers, dealers and of the various Governments held at Coimbatore in June 1946. The recommendations of that Conference were generally accepted by the old undivided Central Government and the Governments of Travancore and Cochin, and legislation to implement these recommendations have also been brought into force by these Governments.

Finally a body under Central Control, called the Indian Rubber Board was constituted with headquarters at Kottayam by an Act of 1946.

Central Legislature in 1947. The Board was to consist of the following:

- (a) two members representing the Central Government to be nominated by that Government;
- (b) one member representing the Indian Council of Agricultural Research to be nominated by the Central Government;
- (c) one member to be nominated by the Provincial Government of Madras;
- (d) three members to be nominated by the Government of Travancore;
- (e) Two members to be nominated by the Government of Cochin, of whom one shall be a person representing rubber producing interests;
- (f) three members to be nominated by the United Planters' Association of Southern India, Coimoor;
- (g) three members to be nominated by the Rubber Growers' Association of India, Kottayam;
- (h) three members to be nominated by the Association of Planters of Travancore, Kottayam;

(i) three members representing manufacturers, nominated respectively by the Central Government, the Indian Rubber Industries Association, Bombay, and the Association of Rubber Manufacturers in India, Calcutta;

(j) one member to be nominated by the Central Government from among dealers;

(k) the Rubber Production Commissioner (ex-officio).

The Problem.—The objects of the Board were to develop the rubber industry, to see to the marketing of rubber, to regularize import and export and generally to look after the interests of the industry.

Two of the questions with which the Board will deal are what prices should be maintained for Indian rubber in the interests of both the producing and consuming sections of the rubber industry and second what level of imports should be permitted. The grower's case is that he should be assured of the internal market. This can be done by controlling imports and

fixing the price of rubber at a level which will make production possible. The grower cannot be exposed to the full blast of world competition for the world price is only about Rs. 60 while the price fixed by the Central Government during the war varied between Rs. 7½ in 1942 and Rs. 110-10-3 in 1945. That is the grower's case. But then the interests of the consumer of rubber have also to be safeguarded for the manufacturing industry is in a position to build up valuable export markets at a time when foreign currency is of crucial importance in the economic development of the whole sub-continent. Hence price-fixing and import control is a delicate business for the interests of neither the grower nor the consumer can be jeopardized. There is also a growing feeling that the producer of rubber can do a great deal to increase his own efficiency and competitive power. The yield can be improved and so can the quality by the adoption of better and more scientific methods. There could be less carelessness in the collection of raw rubber and in grading and baling. And the whole marketing organisation too can improve. For all this the grower can, of course, rely on the Board for help and advice.

THE SHIPPING INDUSTRY

THE beginning of the 19th century Indian Shipping played an active role in the country's economic life. Ships built in India and run by Indians sailed to all parts of the world. There are many number of testimonies to the strength and vigour of Indian Shipping. According to an estimate by Ptolemy, for instance, a stupendous fleet of nearly 2,000 vessels was put to use for the return of a large part of the army of Alexander via the Indus and the Persian Gulf after his invasion of India. Then there are the tributes paid by Marco Polo to Indian shipbuilding. According to Vasco da Gama, some Indian seamen knew more about navigation than he did.

Mr. C. R. Low in his "History of the Indian Navy", pays a tribute to the Bombay built ship "Salsette" which alone, out of 18 war vessels, escaped shipwreck when the war vessels were beset by ice in the Baltic sea in 1819. In 1852-54 the Wadiah built in Bombay the frigate, later known as the "Tweed", which had such a colourful career till 1888 that she drew widespread attention from naval experts. She took a memorable part in the Crimean and Persian Wars and was then converted into a cable-ship to lay the first cable in the Persian Gulf. The decline in ship-building and Indian Shipping started early in the 19th century and continued right down to 1920 when signs of revival began to appear. The East India Company had a large fleet of its own. But technical progress and political changes combined to wipe out ship-building and the carrier trade, the whole industry having been dominated by the British India Steam Navigation Co. under Lord Incheape for nearly a hundred years. Lord Incheape was an undying man. James Mackay, Viscount Incheape, was born in 1852 and came to Calcutta in 1874 as a clerk in Messrs. Mackinnon Mackenzie & Co., a firm that controlled as it still does the British India Steam Co. This company got the contract for carrying mail between Calcutta and Burma in 1854. The decay of the Turkish Power opened up the Levant and adjoining areas to British Traders in the Near East, while the company's activities also expanded to Malaya and the Far East. Within two years, James Mackay was put in charge of the Bombay Office and in four years became partner of the firm.

After the construction of the Suez Canal the Company made very rapid progress. In due course the British India Company eliminated all its rivals and obtained a virtual monopoly

of the carrying trade of India. Later Lord Incheape also succeeded in taking control of Australian shipping companies, and organised a pool of all shipping companies, under his control. He thus eliminated competition and obtained a leading position in world shipping. At the end of the century, he moved to London which he made his headquarters. In 1897 he became a member of the India Council and remained on the Council till 1911. In 1903 he became President of the British Chamber of Shipping. In 1916 he achieved the greatest success of his career with the amalgamation of the British India with the P. & O. Steam Navigation Company. This amalgamation brought under his control a fleet of over two million tons. Later, in the early twenties he offered to buy the Scindia Steam but the offer was refused.

The first effective competition Lord Incheape encountered came from Scindia Steam in the twenties. Between 1920 and 1930 in spite of freight war and keen competition, the Scindia Steam made steady progress by obtaining control over other Indian companies and by extending its activities further afield. A landmark in the history of Indian Shipping was the setting up of the Training Ship "Dufferin" in 1927 for training Indian seamen. This followed the publication of the report of the Mercantile Marine Committee. In 1928 Mr. S. N. Hajj introduced a Bill in the Legislative Assembly to reserve the coastal trade of India to Indian vessels. From then on this subject was discussed and debated for years without any concrete step being taken.

During World War II most of the ships on the Indian Register were requisitioned by the Government. By 1942 as much as eighty per cent of the bigger ships owned by Indian companies were under requisition, some of which were lost in action. For instance, Scindia Steam lost seven ships, only one of which was replaced in the beginning of 1946. The end of the War thus saw the strength of the Indian fleet very much depleted. Replacement was an urgent necessity but it took much persuasion before Government granted permission to build ships in India. The initiative was taken by Scindias when they started building ships at Vizagapatam in 1940. It was estimated that in that year eleven Indian companies together owned 63 steamers with a total gross registered tonnage of 1,31,748. Of these eleven companies Scindia Steam owned or controlled six and accounted for 1,10,515 in tonnage, that is, 81 per cent of Indian shipping.

SHIPPING POLICY COMMITTEE

After the war, the Government of India appointed a Shipping Policy Committee under the Chairmanship of Sir C. P. Ramaswami Aiyar. The Committee has fixed a target of two million tons for Indian Shipping for the next five years. Several new shipping companies have been started with the result that the strength of Indian shipping today has risen to 3,63,053 gross tons. In addition, three Pakistan shipping companies have 10 ships with a total tonnage of 34,809.

In November 1947 the Commerce Minister announced Government's intention to establish two or three shipping corporations in which Government would subscribe 51 per cent. of the capital, nominate directors in proportion to their contribution and allow Indian companies to hold shares as well as run the corporations as Managing Agents. A single private company would be allowed to subscribe to only one corporation. When no suitable company is available, a combine would be permitted. Ordinarily a lakh would be the optimum tonnage which could be owned by a single corporation.

SHIPPING CORPORATION

A proposal to form without delay one at least of the three Shipping Corporations for the expansion of Indian shipping and its participation in overseas trade, was approved by the Standing Finance Committee at its meeting held in New Delhi, early in January 1949, under the presidency of Dr. John Mathai, Minister of Finance. The first corporation was expected to be floated in Bombay in the middle of May 1949, with the Scindia Steam Navigation Company as its Managing Agents, and would be entrusted with the task of building up the country's trade with Australia and the Far and Near East countries.

The second Corporation would have India-U.K.-Continent as its range, while the last would look after the country's trade interests in the India-South and North American sphere. The Bharat Line and Indian Steamships Company would respectively be in charge of the administration of these Corporations.

To avoid collision of interests the administration of the Corporations protecting trade interests on different routes, was to be entrusted with the three shipping firms operating services on opposite runs. Thus, Scindias who have a predominant part of their trade on the

U.K.-Europe and American route, were to control the first Corporation whose sphere was restricted to the India-Australia-Far and Near East range.

Each of these semi-national bodies would have a capital of Rs. 10 crores, 51 per cent. of which was to be invested by Government. Of the remainder, the Managing Agents were to contribute 26 per cent. while the other 23 per cent. would be made up from public contributions. A Corporation would have 11 directors, 6 of whom would be appointed by Government. Government nominees might not necessarily be Government officials. One of the Government directors would be invested with powers to direct the policy of the Corporation and safeguard special interests.

Three directors would be appointed by the Managing Agents, and two others by shareholders. These were, however, only tentative proposals.

A target of 100,000 tons to be attained within three years was set for each Corporation. A fleet of 24 steamers had been proposed to be acquired by each Corporation.

Government, it was understood, had assured a 3½ per cent. return on the capital for the first few years. They were further understood to have agreed to allow the Managing Agents to have a 10 per cent. share in profits not exceeding Rs. 30 lakhs. But if the profits were between Rs. 30 to 50 lakhs, they were to get 7½ per cent. but if more than Rs. 50 lakhs, again 10 per cent.

Two Liberty vessels have already been purchased from Canada for the first Corporation.

The Scindia Steam has now started regular passenger services between India, U.K., and Europe and regular cargo services with U.S.A. It has two sailings monthly to U.K. and Europe and one to U.S.A. Two ships have been built at Vizagapatnam yard and two are under construction.

The principal Indian shipping companies with their present tonnage are as follows:

| India | No of Steamers | Total Gross Tons. |
|---|----------------|-------------------|
| M/s. Scindia Steam Navigation and Associated Cos. | 33 | 1,94,908 |
| India Steamship Co. Ltd. | 8 | 60,310 |
| Bharat Line Ltd. | 10 | 43,028 |
| Mogul Line Ltd. | 8 | 40,545 |
| Oceanic Nav. Co. Ltd. | 3 | 19,986 |
| Great Eastern Shipping Co. | 1 | 77,124 |
| PAKISTAN. | | |
| East & West Steamship Co. | 6 | 21,776 |
| Muhammedi Steamship Co. | 3 | 11,337 |

The advance which the Scindia Steam has made during last five years is shown by the fact that the Company raised new share capital, including the premium received on new shares, to the extent of Rs. 7.30 crores. In 1948, it raised a further sum of Rs. 5 crores by issue of 4½ per cent. debentures. According to a speech of Mr. Walchand Hirchandani at the Company's Annual Meeting in February 1949, the company has bought nine Liberty ships at a cost of Rs. 2.20 crores. Further the company had three ships built in the U.K., s.s. Jalarajan, s.s. Jalazad and s.s. Jaljawahar, and two more s.s. Jalabala and s.s. Jalamsatya were bought by the Company also in the U.K. These five ships together cost Rs. 2.80 crores. The s.s. 'Jalauseha' was built at the company's yard at Vizagapatnam at a cost of Rs. 68 lakhs. In all the company has spent 7.68 crores in expanding its existing fleet by 15 ships.

PRESENT PROBLEMS

Compared with the pre-war level costs have risen so sharply that shipping is today passing through extremely critical times. Cost of construction of new ships as well as costs of repairs have reached unprecedented heights. Mr. A. D. Finney, addressing the Rotary Club recently, on 'Merchant Shipping', said that although freight had gone up since 1939, they were not commensurate with operation costs. The seamen's wages had gone up five times the pre-war wages. Prices of coal had increased too, and the costs of loading and discharging cargo in some instances had also gone up five times. Mr. Finney disclosed that before the war, the average number of days spent in port in a year was 168 and sea 197, now the corresponding figures were 219 and 146 days respectively. This results in the loss of one round voyage. Mr. Walchand at Scindia's Annual meeting, said that during December 1948, 62 days were lost at the port of Bombay alone because the ships did not get either a regular berth or a dry dock berth. In addition, 43 days were lost in the same month at the same port because other ships did not get a berth for loading or discharging. This would entail on the company a loss of some lakhs of rupees.

CONFERENCE LINE

It is estimated that only about 40 per cent. of India's coastal trade is today carried by Indian owned ships. The British India Steamship with its larger fleet still leads in coastal traffic, the other company in this field being the Asiatic. All these companies, Indian as well as British, have formed themselves into what is known as the Conference Lines for the division of the trade and its regulation in respect of freight and allied problems so as to avert rate-war. Forty years back, when the P. & O. Company enjoyed a practical monopoly of carriage of India's Far Eastern trade, Messrs. Tata & Sons started the 'Bombay-Japan Line'. The rate war which developed reached a stage when companies offered to carry cotton free of charge to Japan. Ultimately, the Tata Line was unable to withstand the competition and had to close down.

To the weapon of rate-war were added others like deferred rebate and discrimination. In the twenties rebates often amounted to 16 to 17 per cent. of freight. The Scindia Steam combined trading with shipping to meet the competition. This company was started in 1919 and was admitted to the Conference in 1923 thus getting its position in the coastal trade recognised. As the agreement was nearing its end, a covert rate-war again broke out in 1929 continued till 1933 when a fresh agreement was finally negotiated. This gave the company a footing in the passenger traffic. The Company's first passenger service started in 1933 between Rangoon and the Ceylon coast. It also got a mail contract. In 1934 a fresh bout of rate-war started with the withdrawal of the Asiatic Company from the Conference but the British India succeeded in ending the rate-war by getting a controlling interest in the company. In 1937, in the Haj traffic, the rate-war led to a fall in passenger rate from Rs. 172 to Rs. 20. The Government of India intervened and settled the rate at Rs. 115. In 1939 the Government apportioned 25 per cent. of the Haj traffic to the Scindias but the Company withdrew from the conference because it demanded 33½ per cent. The rate-war with the Bombay Steam on the West Coast, ended by the Scindias obtaining control of the former company. The Conference Line agreement was to expire in 1939 but war broke out and altered the situation completely. At the time the Scindia Company had asked the British India and the Asiatic for a 50-50 share both in the cargo and passenger traffic.

During the war ships were all requisitioned by the Government. When the war ended the Conference Line arrangement was resumed to regulate coastal shipping.

RATE-WAR IN OVERSEAS TRADE

In the overseas trade a rate-war has been going on since February 1949. On the Bombay-

Karachi-Europe-U.K. service, the Dutch Line gave notice of their withdrawal from the Conference on the ground that their interests were disregarded by the Conference. The Conference permitted entry of the new Danish Line in the India-Europe trade despite protests from the Dutch Lines. Competitive freight reduction then followed between the Dutch and others and by the end of March, 1939 reduction exceeded 80 per cent. on the West coast. The Dutch side of the case was that in view of the reduced quantity of cargo moving to and from North Continental ports, compared to pre-war years, the Conference Lines should protect Dutch interests in the Hamburg-Rotterdam-Antwerp trade with the disappearance of the German Hansa Line. The Dutch readily agreed to allow Indian companies, who have started service to the U.K. and Europe, but when a foreign company, the Danish Line, sought to make inroads into Dutch interests, the Conference should reserve to them "a fair share" in the trade from North Continental Ports. Government intervention was sought to resolve the deadlock, and a conference was arranged to be held in London in the last week of April.

TRAINING SCHEME FOR PERSONNEL

The present method of training Merchant Navy Officers was satisfactory when the merchant service was small but the personnel needs to be expanded today to man two million tons of shipping in five years. The "Biffurh" Old Cadets Association with the help of Mr. K. K. S. Captain has prepared a scheme for the rapid training of adequate personnel. The scheme proposes that for the next ten years 300 recruits should be taken every year, with graduate or under-graduate qualification in addition to minimum physical standards in respect of height, weight, sight, hearing, etc. They should get a three-year training, one year of sea experience and two years of intensive training in a training ship and ashore.

FUTURE DEVELOPMENTS

There is a growing realisation of the need for the planned development of the Indian shipping industry by mutual co-operation between Government, the shipping concerns and labour to reach the target of a two million ton merchant navy in a period of five to seven years. Among the difficulties in the way of expansion of the shipping industry are the present high level of taxation, which discourage the flow of capital into shipping ventures, the high cost of ship-building in India and the inability to secure building berths in the U.K., and finally the lack of qualified officers and engineers. It has been suggested that in view of the mutual understanding between India and U.K. in the matter of sterling balances and trade, the Government of India, in order to achieve its two-million-ton target, should explore all possible avenues and induce British shipping yards to construct more ships for India. In addition Government have been urged to implement their declared policy of rendering such aid to Indian shipping as has been given by important maritime countries like the U.K. and the U.S.A. to their industry. Then there is the imperative need for working the industry in an economic way and finding the necessary cargo. The feeling in shipping circles is that active State intervention and patronage are essential in securing a legitimate share of India's overseas trade for national shipping companies and corporations. Three methods whereby government might enable Indian companies to acquire tonnage are (1) by releasing the foreign exchange required, (2) by supporting their orders for new construction, and (3) by offering the assistance of their diplomatic and trade representatives in locating ships of the type required and in the negotiation for their purchase. As for expanding qualified personnel, it is suggested in shipping circles that, so long as British ships are allowed to ply in the coastal waters of India, the Government of India should arrange with them that they should take in a certain number of Indian cadets as apprentices, under the terms of license or by friendly persuasion.

THE SILK INDUSTRY

SERICULTURE has been practised in the sub-continent for the last two thousand years and a lot of silk used to be exported in days long gone by. Now, however, the sub-continent has lost its export market and imports annually about Rs. 13,000,000 worth of silks on an average. Switzerland and United Kingdom never exported raw silk to the sub-continent. Italy's export stopped long ago. China and Japan used to export till the last Great War. At present the sub-continent does not import silk from any foreign country. The world demand for silk and silk waste has shrunk and there is increasing competition from foreign silk goods and mixtures and artificial silk substitutes. In Assam, eri, mulberry and muga silk-worms are being reared and on an average about Rs. 1,70,000 worth of silk is annually produced there. The Bengal area produced on an average about Rs. 20,00,000 worth of mulberry silk, Bihar and Orissa about Rs. 42 lakhs worth of tasar and a little eri silk. A little mulberry silk is also being produced in Bihar in the district of Purnea. The Central Province produce about Rs. 14 lakhs worth of tasar silk on an average.

The average annual production in Mysore, Kashmir and Jammu, Madras and the pre-partition Punjab would be about Rs. 38,00,000, Rs. 10,00,000, Rs. 2,00,000, Rs. 5,00,000, Rs. 16,000 worth of silk respectively. Bombay and the United Provinces are investigating whether Sericulture can be introduced. The new era industry in Baroda (Bombay Province) is spreading. Some of the States Unions and the Provinces of Madras and East and West Punjab are trying to introduce eri silk-worm rearing.

The industry has been declining in almost all parts of the sub-continent. China is exporting more silk to India and Pakistan than Japan in spite of the tariff wall. In the sub-continent it is only in Mysore and Kashmir that the industry is progressing. It is believed that the moribund industry will be resuscitated if sufficient duty is imposed on foreign silks.

The price of indigenous raw silk has increased by about 300 per cent. on account of the stoppage of the import of raw silk from China and Japan due to the war. Almost all the above Provinces and States are trying to increase their production both in quality and quantity. The production of raw silk has also gone up about 200 per cent. due mainly to an increase in its price.

As for post-war development Bihar has prepared a very ambitious plan.

THE RAYON INDUSTRY

World's first rayon factory capable of producing about a hundred pounds of rayon a day was erected in France in the year 1884. Today the world production of rayon, inclusive of staple fibre, has risen to the staggering amount of over 2,000 million pounds. This man-made fibre has beaten age-old textile fibres like silk and wool quantitatively and now occupies a position second to that of cotton, which is also being threatened by staple fibre.

But in spite of the large production and consumption (amounting to some 75 tons of yarn per day and costing about five crores of rupees to the sub-continent annually, as evidenced by the figures reproduced in Table I below), the rayon industry was unknown in India or Pakistan till 1915 and even now it is only in its incipient stages.

The year 1918 saw no new companies. Activity on the rayon front was restricted to putting the already projected plants into production. Good progress is reported by Travancore rayons as well as the National Rayon in this direction. So far no rayon factories have been started in Pakistan.

The mechanical equipment required for producing rayon is highly complicated and has for the present to be obtained from specialised firms in foreign countries. The Travancore plant will be British cum Swiss and the Hyderabad plant probably entirely British, while the Bombay plant will be American. However, there are several simple items of machinery such as tanks, containers, etc., which could doubtless be made locally and this fact will certainly not be lost sight of by the industry in its own interest.

QUESTION OF TECHNICIANS

The absence in this country of technicians, capable of looking after the new rayon industry is a problem for Managing Agents. There is, however, only one way of solving the difficulty; and that is to give a thorough training to selected young men in rayon factories either at home or if possible abroad. The National Rayon has already moved in this matter, though the plans of the other two companies are not known. There is little likelihood of any serious difficulty arising out of lack of trained labour as the Indian labourer has enough intelligence to grasp and enough dexterity to execute new methods of work.

The combined daily production of the three plants, operating at full capacity, will be 16½ tons of rayon, which is about 20 per cent. of the sub-continent's pre-war consumption. In spite of the separation of Pakistan from India this percentage will, in all probability, hold good for India today, because of the increased demand for rayon in the intervening years. Obviously there is vast scope for expansion of this industry in India and in Pakistan.

Any review of the rayon industry would be incomplete without a consideration of staple fibre, which is nothing but cut rayon. Staple fibre which is a little over a decade old, showed a higher production figure than that of filament rayon during the war. It was originally invented as a substitute for cotton in those countries which had no direct access to raw cotton. Although this new fibre offers today immense possibilities of permeation and combination in spinning and weaving, it will suffice for the present to look upon it only as a substitute for cotton.

As the bulk of the cotton grown in India has a short staple, the country has got to depend on imported cotton for spinning finer counts. Although the efforts of the Indian Central Cotton Committee spread over nearly a quarter of a century succeeded in growing long staple cotton, the actual yield of this variety formed just a fraction of India's requirement and by far the major portion of that requirement now comes from Pakistan. India thus suffers from a serious shortage of long staple cotton, which could best be substituted by staple fibre manufactured in the country itself.

TABLE I

Imports of Rayon goods into the sub-continent (in 1,000 Rs. and lbs.)

| | | 1937-38 | 1938-39 | 1939-40 | 1940-41 |
|----------------------|------|---------|---------|---------|---------|
| Rayon Yarn | Lbs. | 31,589 | 17,248 | 30,764 | 33,889 |
| | Rs. | 20,535 | 9,588 | 21,205 | 26,482 |
| Rayon Piecegoods* .. | Lbs. | 17,939 | 5,719 | 10,864 | 10,691 |
| | Rs. | 21,813 | 9,828 | 21,066 | 21,471 |
| Staple Fibre | Lbs. | 191 | 340 | 509 | 52 |
| | Rs. | 87 | 158 | 255 | 49 |
| Staple Fibre Yarn .. | Lbs. | 2,422 | 2,255 | 6,820 | 9,876 |
| | Rs. | 1,924 | 2,008 | 5,408 | 8,295 |
| TOTAL | Lbs. | 52,141 | 25,562 | 48,957 | 54,508 |
| | Rs. | 44,359 | 21,582 | 47,934 | 59,297 |

* Original quantity in yards, but converted into weight taking five yards to weigh one pound of yarn.

The Indian Central Cotton Committee and the Board of Scientific and Industrial Research evinced early interest in this new industry and did very useful spade work by instituting research and collecting reliable data. The first industrial concern to be formed with the object

of manufacturing rayon in India was the Travancore Rayons Ltd., which was quickly followed by the Sirelilk Ltd., and the National Rayon Corporation Ltd. The following table gives certain particulars about these companies:—

TABLE II

| Name of Company | Formed in | Authorised Capital in lakhs | Issued Capital in lakhs | Process of manufacture | Projected production per day | Plant located in |
|-------------------------------------|--------------|-----------------------------|-------------------------|------------------------|---|------------------|
| The Travancore Rayons Ltd. | January 1946 | Rs. 200 | Rs. 150 | Viscose | 5 tons Rayon; 1½ tons Transparent Paper | Travancore State |
| The Sirelilk Ltd. | August 1946 | 500 (O.S.)* | 200 (O.S.)* | Acetate | 5 tons Rayon | Hyderabad State |
| The National Rayon Corporation Ltd. | ? 1946 | 1,000 | 350 | Viscose | 6½ tons Rayon | Bombay Province |

* 100 Indian Rupees = Approximately 116 O.S. Rupees.

THE STEEL INDUSTRY

Line
fer-
re
ce

THE art of smelting and shaping iron has been known and practised in the sub-continent from very early times and a regular trade in iron with foreign countries is known to have been in existence. The famous Iron pillar at Delhi, which is estimated to have been erected some 2,000 years ago, bears adequate testimony to the skill and craftsmanship of the early Indian workers. The sub-continent also supplied steel from which the famous Damascus or the Wootz sword or dagger blades used to be made.

The aborigines of Central India and other neighbouring districts have also been known to smelt ore into iron in small mud furnaces with the aid of wooden bellows for the supply of the necessary blast to produce the metal. This primitive method of smelting iron, however, almost died out with the gradual industrialisation of the sub-continent, although even during the recent years the aborigines round about the steel town of Jamshedpur have been found smelting iron ore in this way. After the abortive efforts of Mottee and Farquhar in 1779 which were the first recorded attempts made in the sub-continent to manufacture iron and steel on a commercial basis, one Mr. Josiah Hecla, a retired Madras Civil Servant, attempted to establish a Works at Porto Novo with the monetary assistance given by the East India Company but unfortunately with his death and owing to a number of other difficulties that project also met with complete failure.

The next commercial enterprise was the Barakar Iron Foundry at Kulti which ultimately passed into the hands of the Barakar Iron & Steel Co. in 1887. Two years later, this plant was modernised and became known as the Bengal Iron Co. They were the first to produce pig iron in the sub-continent on modern lines.

Jamsetji Tata.—The first successful and the most outstanding attempt to manufacture steel in the sub-continent on a commercial basis was, however, that of the Tata Iron & Steel Co. and credit is due to the indefatigable perseverance and foresight of Jamsetji Tata for his pioneer efforts, for the establishment of a steel industry in India. Jamsetji Tata's sons and their Indian associates with the valuable assistance of American technical experts succeeded in establishing the Tata Iron & Steel Co. which started its Steel Works at Sakchi in the year 1908. Pig iron was made in 1911 and the first steel ingot a year later. Several additions to the plant have since been made from time to time and this Company has now the capacity to produce over 850,000 tons of finished steel per annum. What was before a small village of Sakchi has thus today grown into the foremost industrial city of India, and has been renamed "JAMSHEDPUR" in memory of the founder of the Company.

The Indian Iron and Steel Co. was started in 1918 at Hirapur a few miles from Kulti and in 1938, it acquired the Bengal Iron Co. The amalgamation of these two companies made it possible for the Steel Corporation of Bengal to come into existence. The close proximity of the works of the Steel Corporation of Bengal to those of the Indian Iron and Steel Co. enables the Steel Corporation of Bengal to get from the latter not only pig iron but also gas, power, water, etc. The first ingots were made at the Steel Corporation's Works on 11th November 1939. Five days later, the first ingots were rolled on their 14" Blooming Mill. Production of sheets commenced on 12th February 1940. The construction of the Duplex Plant at the Napuria Works of the Steel Corporation of Bengal was completed in 1946.

The Steel Corporation of Bengal, in addition to the difficulty of obtaining quick delivery of machinery which they had ordered just prior to the outbreak of the War, experienced considerable difficulty in obtaining skilled labour and supervisory staff but in the end they overcame the obstacles and were able to make

valuable contribution to India's industrial progress. Their plant has the capacity to produce 250,000 tons finished steel per annum.

An iron works was started at Bhadravati in Mysore State in 1921 to which a steel plant was added in 1934. During World War II, a 25 ton basic furnace together with two small electric furnaces were installed. Their present annual production capacity for finished steel is about 25,000 tons. During the war, they made a valuable contribution to the steel industry by manufacturing ferro-silicon in their electric furnaces and thus averted a crisis in the steel production as during the War the import of foreign ferro-silicon was scarce, and but for the ferro-silicon made in Mysore, the production of good quality steel would have been impracticable. The ferro-silicon plant in Mysore is producing annually about 1,600 tons of ferro-silicon. Arrangements are being made to increase the production to 6 to 8,000 tons per year by the beginning of 1950. This will be sufficient for the requirements of ferro-silicon of the entire steel industry in India. A rod and strip mill for the manufacture of wire rods and belting hoops which was installed during the war has now started operation. An electric pig iron furnace has been ordered by the Mysore State. This furnace will supplement the production of charcoal pig iron and when it comes into operation early in 1951 the finished steel capacity of the Mysore Works will be raised to 100,000 tons per year.

Mention may also be made of the various steel re-rolling mills in the sub-continent which produce certain sections of steel materials from billets and scrap supplied by the main steel producers. There were about 99 recognised Steel Re-rolling Mills in 1947 and their production for that year was 47,000 tons of steel materials. The total estimated capacity of the re-rollers is about 5,00,000 tons a year on a three-shift working. They are, however, handicapped by the insecurity in respect of supply of their raw materials and this has, perhaps, to some extent, retarded the natural development of the industry. The Government of India propose to put up two new Steel Plants each with a capacity of 500,000 tons or one Plant with a capacity of a million tons, and are negotiating with certain well-known firms of consulting engineers for survey of the resources and possibilities of the project.

High Quality Steel.—While the first World War gave an impetus to the Steel Industry in India and enabled it to supply steel rails to be laid for war purposes in the Middle East, World War II has witnessed still greater developments

The steel industry before World War II had mostly confined itself to the manufacture of ordinary mild steel. Only the ordnance factories and some electric foundries made small-scale attempts to manufacture special grade high quality steels. High tensile steels, corresponding to the American high-yield strength, corrosion-resistant structural steels, as well as the English high tensile steels were, however, developed even before World War II by Tatas and these high tensile steels are known as "TISCOR" and "TISCROM". The latter which is a chrome-manganese-copper, high tensile structural steel fully satisfied the requirements of the British Standard Specification 584 and is corrosion-resisting with high tensile strength and good ductility. About 17,000 tons of this steel were used in the construction of the new Howrah Bridge which spans the river Hooghly at Calcutta—the third largest cantilever bridge in the world. With the outbreak of World War II, the strategic position of the sub-continent and the gradual stoppage of imports owing to increased shipping difficulties, threw a challenge to India's iron and steel industry, and the industry rose to the occasion and successfully produced almost all the varieties of steel used in general engineering practice and machine construction, such as high-speed steels,

hot-die steels, tap steels, nickel-chrome steels for shear blades and punches, steel for the mint, etc.

Some Achievements.—The main development in steel-making under the pressure of war-time necessity occurred at the Tata Iron & Steel Co.'s Works. Tatas made special alloy steel products for direct War demands such as bullet-proof armour plates varying in thickness from 4 mm. to 14 mm for the fabrication of armoured vehicles, bullet-proof rivet bars for the manufacture of rivets for use on these vehicles, bullet-proof plates for flowitzer shields and gun barrels on armoured vehicles nickel-chrome steel rounds for the production of 18 and 25 pound armour piercing shells, special deep drawing quality steels for cartridge cases and for rifle and machine-gun magazines stainless steels for surgical instruments, special steel sheets for the manufacture of nose containers for high explosives aircraft bombs and nickel-chrome-molybdenum steel bars for the manufacture of parachute equipment, etc. These are only an indication of the rich variety of special quality steels developed by the Tata Iron & Steel Co. Research and development magnet steels using indigenous raw materials was also undertaken in order to meet the urgent demands of the Posts and Telegraphs Departments of the undivided Government of India, owing to the acute paucity of imported magnet steel bars.

While Tatas as the principal steel producers in India were responsible for the development of special steels, the Mysore Iron & Steel Works also made use of the resources at their command in manufacturing special steels at their Works. With the outbreak of the Second World War, they made additions to their plant and installed a half-ton Heroult furnace and a Hoskins crucible furnace. In 1941 a Moore's Electromelt furnace of 3½ tons capacity was installed which enabled them to make high-speed tool steels, shear blade steels, heat and wear-resisting steels, austenitic heat-resisting nickel-chrome alloy steel, stainless steel, etc. In 1944, at the instance of the Council of Scientific and Industrial Research, the Mysore Works developed and successfully manufactured nichrome steel suitable for drawing into wire.

A Milestone.—Mention may also be made here of the research carried out on refractory materials and plays particularly at the Testing Laboratory in the Research and Control Department at Jamshedpur which ensured the industry, during the War, a supply of improved quality bricks and shapes for the building and repair of the various furnaces in the Steel Works. Another point of interest is of valuable work that has been done with regard to high temperature mortars for which the industry had to depend hitherto on imported products at very high prices. This determined research has now enabled the Tata Iron & Steel Co. to develop very superior types of mortars for high temperature work.

The establishment of a Wheel, Tyre and Axle Plant at Jamshedpur in 1941 may be regarded as an important milestone in the progress of Indian steel industry. At that time it was hoped that the opening of this plant would be a prelude to a large-scale manufacture of locomotives in India. Within two years of the opening of the Wheel, Tyre and Axle Plant at Jamshedpur, the Jamshedpur Engineering and Machine Manufacturing Co. commenced making chilled wheels for the State Railways. Efforts in this direction were previously made by Indian firms but the operating conditions in the manufacture of Indian pig iron, the high percentage of ash in the coke and the humidity due to which the chill becomes uncontrollable stood in the way. The Jamshedpur Engineering and Machine Manufacturing Co.'s entry in this field, however, has been a success.

On 1st June 1945, the East Indian Railway Workshops at Singhbhum were transferred to Tatas for the manufacture of boilers and locomotives. Steam locomotives complete with

COOPER ENGINEERING LIMITED

SATARA ROAD

India's industrial needs have expanded so considerably with the new national set-up, that our country's manufacturer of machinery and industrial equipment will now receive the greatest fillip. To meet the demands, we manufacture the following, to the highest standard of specification.

DIESEL OIL ENGINES: Being the largest manufacturers of Internal Combustion Engines in India, we can supply Diesel Engines for industrial purposes both single and multi-cylinder types—from 8 B.H.P. to 256 B.H.P. The engines are all four stroke types.

Modelled on the latest designs, they are easy to install, economical in fuel consumption, simple in design and strongly built—skilled attention is unnecessary.

MACHINE TOOLS: We also manufacture the following to the required specification: Shaping Machines, Capstan Lathes, Sliding, Surfacing & Screw Cutting Lathes and Drilling Machines upto 14" capacity. All Machine Tools can be supplied either for belt drive or electric drive.

TEXTILE MACHINERY: Cooper Power Looms, Dobbies and Drop Boxes are well known and are working efficiently in many mills.

AGRICULTURAL MACHINERY: We have given careful attention to the vast agricultural needs and particularly of the special requirements of the Indian farmer. Our agricultural implements and machinery have been designed and built to the exacting needs of the farmer.

CASTINGS: We manufacture all types of castings and we can supply your special requirements.

General Engineering Castings, Wear Resisting Castings, Heat Resisting Castings, Corrosion Resisting Castings, etc., can all be supplied by us to suit your various requirements.

MEEHANITE: This High Duty Iron is manufactured in our factory and we are the sole licensees for India, Burma & Ceylon for this famous brand. Sub-licenses for Meehanite High Duty Irons, etc., have been given to the following Firms:

Messrs. Binny & Co. (Madras) Ltd. - - - Madras.

Messrs. Indian Hume Pipe Co. Ltd., Wadala, Bombay.

Messrs. Jay Engineering Works Ltd. - - - Calcutta.

Messrs. Jessop & Co. Ltd., 93, Clive Street, Calcutta.

Please write or call on us for detailed particulars

COOPER ENGINEERING LTD.

SATARA ROAD (M. S. M. Rly.).

boilers have been manufactured in India Railway Workshops at Jamalpur and Ajmer. The Jamalpur unit built as many as 214 broad gauge locomotives, 103 boilers and 99 tenders till 1926 (when the locomotive workshop was closed), and the Ajmer Workshop manufactured no less than 435 metre-gauge locomotives between 1896 and 1940. The starting of the Tata Locomotive and Engineering Company is, however, the first attempt by a private firm to manufacture boilers and locomotives on a commercial basis. It has successfully started the manufacture of boilers for locomotives after overcoming the initial difficulties and is at present making four to five boilers per month. This Company's programme is to make ultimately 100 locomotives and 100 additional boilers per year. In addition to the Telego Works, the Government of India is constructing a Locomotive Plant at Mihijani in West Bengal. It is programmed to start production

in 1950 or 1951 and will make 120 locomotives and 60 additional boilers per year. Tata Locomotive Company has also begun the construction of road-rollers. Government of India have a contract with Messrs. Marshalls of Gainsborough of England for the manufacture of 1,000 road-rollers. Tata Locomotive Company are the sub-contractors of Messrs. Marshalls and they are making at present in co-ordination with Messrs. Marshalls 20 road-rollers a month. This Company is also planning the addition of a large up-to-date steel foundry to its Works.

A Few Figures.—The block capital invested by the Tata Iron & Steel Co. in their Works is Rs. 38,58,95,329 and that invested by the Steel Corporation of Bengal and the Indian Iron & Steel Company together amounts to Rs. 13,70,03,152.

The plant and equipment used in the steel industry in India are mostly of foreign manu-

facture and unfortunately the industry has to continue to depend on imported machinery for the present.

Where only a quarter of a century ago, India had to depend chiefly on foreign technicians for the development of the industry, during the last few years labour and skilled personnel employed in the Indian steel industry have been mostly Indian. This has been possible owing to the foresight of the managements in training suitable Indian youths for the steel industry.

Tatas today have a technical institute at Jamshedpur where there are two classes of apprenticeship. One is the Trade Apprenticeship Course, the duration of which is two years. The other is the Graduate Apprenticeship course, the duration of which is also two years. After the period of training is over, these apprentices are generally absorbed by the Company in vacancies which occur from time to time.

THE SUGAR INDUSTRY

THE present position and importance of the sugar industry in the industrial economy of India is due in a large measure to the liberal tariff policy pursued by the Government of India in granting tariff protection to the industry from 1932. An important landmark in the history of the sugar industry was the year 1930-31, when at the instance of the (then Imperial) Indian Council of Agricultural Research, the question of protection to the industry was

referred to the Tariff Board by the Government of India. Pending consideration of the Tariff Board's report, the revenue duty on sugar was enhanced to Rs. 7-4-0 per cwt. in March 1931. In addition, a revenue surcharge of 25 per cent, amounting to Rs. 1-13-0 per cwt. was imposed from September 1931. A few months later, the Government of India announced their decision and fixed a protective import duty on sugar at the rate of Rs. 7-4-0 per cwt.

with effect from 1st April 1932, on the recommendations of the Tariff Board. The total import duty, along with the surcharge, was Rs. 9-1-0 per cwt. till 31st March 1934.

Excise & Import Duty. The following table will show at a glance the changes in the excise duty and import duty on sugar, sugar candy* and molasses in India from 1932 till 31st March 1950.

| On Sugar per cwt. | Protective Import Duty per cwt. | Additional Duty per cwt. | Total Import Duty per cwt. |
|---|---|--|----------------------------|
| | Rs. a. p. | | Rs. a. p. |
| From 1st April, 1932 to 31st March, 1934 | 7 4 0 | Revenue surcharge 66 25 c., of protective duty Rs. 1-13 0 | 9 1 0 |
| From 1st April 1934 to 27th February, 1937 | 7 12 0 (0-8-0 being additional margin) | Equivalent excise duty Rs. 1-5 0 | 9 1 0 |
| (Rs. 1-5 0 Excise Duty on domestic production of factory sugar). | | | |
| From 28th February, 1937 | 7 4 0 | Equivalent excise duty Rs. 2-0-0 | 9 4 0 |
| (Rs. 2-0-0 Excise Duty on domestic production of factory sugar). | | | |
| From 1st April, 1939 | 6 12 0 | Equivalent excise duty Rs. 2-0 0 | 8 12 0 |
| (Rs. 2-0-0 Excise Duty on domestic production of factory sugar). | | | |
| From 1st March, 1940 | 6 12 0 | Equivalent excise duty Rs. 3 0 0 | 9 12 0 |
| (Rs. 3-0-0 Excise Duty on domestic production of factory sugar). | | | |
| From 1st April, 1942 | 6 12 0 | Revenue surcharge of 20% on import duty and Equivalent excise duty of Rs. 3, with 20% surcharge thereon | 11 11 2 |
| (Rs. 3-0-0 Excise Duty on domestic production of factory sugar). | | | |
| From 1st April, 1949 | 6 12 0 | Revenue surcharge of 20% on import duty and Equivalent excise duty of Rs. 3-12-0, with 20% surcharge thereon | 12 9 7½ |
| (Rs. 3-12-0 Excise Duty on domestic production of factory sugar). | | | |

* From 20th February 1934, a revenue duty of Rs. 10-8-0 per cwt. was imposed on sugar candy in place of Rs. 9-1-0 per cwt. The rate of import duty on molasses is 3½ per cent ad valorem since April 1932.

The import duty of Rs. 12-9-7 per cent per cwt. works out at Rs. 8-15-6 per maund and Rs. 3-12-0 excise duty per cwt. works out at Rs. 2-10-10 per maund.

This import duty has been continued till 31st March 1950, on the recommendations of the Tariff Board by the Government of India.

† Total import duty including surcharge of 20 per cent as from 1st April 1949.

Protection.—It would be interesting to observe here that protection to the sugar industry, which was given initially for a period of 14 years, under the Sugar Industry (Protection) Act 1932, expired on the 31st March 1946. Protection was continued by the Government of India till 31st March 1947, and a Tariff Board inquiry was undertaken in January 1947 to decide what action was to be taken in regard to the duty on sugar after 31st March 1947. On

the basis of the recommendations of the Tariff Board which conducted a summary enquiry, protection was continued at the same level by the Government of India till 31st March 1949, and it was continued for a period of one more year, ending on 31st March, 1950, before when a further enquiry will be made by the Tariff Board, and the Government will announce its intention regarding continuance of protection before the period of present protection expires.

PRODUCTION

During this period of sixteen years, production of sugar in the country has risen considerably, from 290,000 tons in 1932-33 to 1,241,000 tons in 1939-40. This has been the maximum production so far. During the war period production was generally on the decline and was well under 1,000,000 tons.

The following table shows the number of cane factories, khandsari, net import of sugar and factories working in India, including States, and imports in Kathiawar ports during the last 15 years, and estimates for 1949-1950.

| Year (November-October) | No. of Cane Factories working in India | Cane Factory Production (November- October) | Sugar Refined from Gur (January- December) | Khandsari Conjectural estimates (Nov.-Oct.) | Total Production of Sugar in India (Nov.-Oct.) | Net Imports (Excluding Re-exports) of Sugar in British India (Nov.-Oct.) | Imports of Sugar in Kathiawar Ports (Nov.-Oct.) |
|----------------------------|--|--|--|--|---|---|---|
| | | Tons | Tons | Tons | Tons | Tons | Tons |
| 1932-33 .. | 57 | 290,177 | 80,106 | 275,000 | 615,383 | 321,081 | 68,649 |

† Vide Indian Trade Journal (Supplement), dated 10th October 1946 (From 1933-34 to 1943-44).

‡ Sugar Controller's estimate for Khandsari for 1943-44 is smaller.

The acreage under cultivation of sugarcane has kept pace with the increased production of sugar. From 3,076,000 acres in 1931-32 it went up to 4,700,000 acres in 1946-47. The average has, however, fallen from that high level in subsequent years, and in 1946-47 it was in the vicinity of 4,100,000 acres.

The acreage under improved varieties has gone up from 1,170,000 acres in 1931-32 to nearly 3,500,000 acres in recent years. The average

cane production per acre has not however increased during all these years, and this factor is greatly responsible for the present high cost of sugarcane and sugar in the country.

The following table shows the acreage under sugarcane, underimproved varieties, production of cane per acre, gross production of gur, and calculated production of cane-crop* from 1931-32 to 1948-49. Since 1946-47, the figures are for the Indian Union only.

| Year | Total acreage under sugarcane in thousand acres | Acreage under improved varieties in thousand acres | Average cane production per acre (in tons) | Gross production expressed as gur (in thousand tons) | Calculated production of sugarcane (10- 11 factors) (in thousand tons) |
|------------|---|---|--|---|--|
| 1931-32 .. | 3,076 | 1,170 | 14.1 | 4,116 | 43,316 |
| 1932-33 .. | 3,426 | 1,845 | 14.9 | 4,859 | 51,129 |
| 1933-34 .. | 3,422 | 2,295 | 15.3 | 5,055 | 52,455 |
| 1934-35 .. | 3,602 | 2,433 | 15.1 | 5,292 | 54,346 |

* Vide "Indian Trade Journal", 10th October 1946 and 4th September 1947.

The sugar industry was controlled since 1942 by the Government of India, and this control was maintained all throughout the period of the war and up to 10th December 1947, when control over sugar was lifted. Along with sugar, production of gur was also controlled. While the control succeeded to a certain extent in achieving its object, namely, check over indiscriminate rise in prices, it failed to increase production of sugar, although it was the avowed object of the Government to increase production. With the decontrol of sugar and the fixation of higher prices of sugar by the Government of India, with effect from the 1947-48 crushing season, in order to enable them to enhance the minimum price of the

raw material, namely, sugarcane, from Rs. 1-4-0 per maund to Rs. 2-0-0 per maund in the U. P. and Bihar, principal sugar-producing provinces of the country, larger quantities of sugarcane were available to sugar mills for crushing, and consequently production of sugar went up.

The price was reduced in 1948-49 to Rs. 1-13-0 per maund of cane in U. P. and Rs. 1-10-0 per maund in Bihar in order to decrease the price of sugar, the demand for which had gone down due to the higher prices, and the loss of the Pakistan market. The price of sugar was fixed at Rs. 28-5-0 per maund in place of Rs. 35-7-0 as in the year 1947-48, and the profits of the industry were also thus reduced by the cut in price.

CONSUMPTION OF SUGAR

The per capita consumption of sugar in the sub-continent at the present time is very low and works out to only about 6 lbs. in addition, of course, to 24 lbs. of gur, the total per capita consumption of sugar and gur being about 30 lbs. during the last few years. The per capita consumption of sugar in various other countries is considerably higher as can be seen from the following table, and it is hoped that before long the sugar industry in India will be able to produce a much larger quantity of sugar than at present.

| Per capita consumption of sugar in various countries (pre-war) | lbs. | per head |
|--|--------------------------------|----------|
| United Kingdom .. | 106 | " " |
| U.S.A. .. | 97 | " " |

It must be observed here that the Government of India appointed a Sugar Panel to investigate the possibility of increasing the sugar output of India. The report of this panel was published in 1946. They recommended a target of production of 1,600,000 tons of sugar to be reached at the end of 5 years, of which 1,550,000 tons were for internal consumption and 50,000 tons for export outside India. During 1947, the Government of India, after reviewing the recommendations of the panel, came to the conclusion that the above target should be increased to 1,850,000 tons of sugar per annum and for that purpose they decided to allot a further 25 new units of sugar factories among the various provinces.

Capital Outlay.—The capital invested at the present time in the sugar industry is roughly of the order of 35 crores of rupees. The Sugar Panel estimated that the total cost of machinery required for (a) fuller exploitation of the existing capacity of the sugar factories, (b) enhancement of the capacity of the existing small plants, and (c) construction of 20 new factories of 1,000 tons of cane per day crushing capacity, would be about 11-12 crores of rupees. If to this we add the cost of establishment of 25 new factories decided by the Government of India while reviewing the recommendations of the Sugar Panel in 1947, the total cost would be about 22 crores of rupees for the machinery.

A large bulk of the existing sugar machinery had been imported from various countries, e.g., U.K., Germany, Czechoslovakia, France, etc., but it is impossible that in the years to come certain units of the sugar machinery can be fabricated in India, and if the new plants are fabricated in India, it would be of great help to the engineering industry of the country as well.

Production Target.—It must be observed here also that with the creation of the separate Dominion of Pakistan with effect from 15th August 1947, the Government of India will have to revise their target of production. Normally the consumption of sugar in the Pakistan area is estimated at about 285,000 tons as against a production of about 35,000 tons in that area, and it is quite likely that the Government of India may have to reduce the number of new units by about 20.

It might be of interest to note that the number of working sugar mills in the territory of the Dominion of India at the present time is 134, and in the Dominion of Pakistan, 10, which latter are capable of producing about 35,000 tons of sugar. The acreage under cane in the Union of India will be approximately 3,000,000 acres and in Pakistan, approximately 1,000,000 acres.

It will also be of interest to note here that although the total acreage under cane, namely, 4,000,000 acres, appears to be very large, it comes to only about 2 per cent. of the cultivated area in India and Pakistan, and is approximately 35 per cent. of the world's sugarcane acreage.

The estimate of the total value of sugar and *gur* in India made in 1947 worked out to 212 crores of rupees, and the *per capita* expenditure on sugar thus works out to Rs. 6-0-0. The sugar industry gives employment to 3,500 Graduates, 1,25,000 skilled and unskilled workmen, and interests not less than 20 million cultivators. (Vide the Indian Sugar Industry Annual, 1947-48 : by M. P. Gandhi).

Import Possibilities.—The production of sugar in India at the present time is slightly more than its estimated consumption. It is not likely that there will be any large-sized import of sugar from foreign countries, firstly because production of sugar in the world is at present smaller than the consumption, there are difficulties regarding currency and exchange, and Java which used to be the largest supplier of sugar in the past, is producing at the present time sugar in negligible quantities. Judging from the reports about the economic and political conditions in Java, it would take at least three years before Java is able to produce the quantity of sugar it did in the pre-war years, namely, 15,00,000 tons, and indeed may take a longer period still for Java to rehabilitate its industry to its previous size, due to the ruination brought about by the world war in the economy of the industry. There is, therefore, little danger of large sized imports of sugar from foreign countries, even though prices are low due to restrictions on import and to currency difficulties. India's cost of production

of sugar is higher, principally due to the high cost of sugarcane and works out to about 67 per cent of the price of sugar. Protection to the sugar industry will have to be continued for some time because any disturbance in the present protection would adversely affect the cultivation of cane in India. The Tariff Board of 1947, in their report, while recommending protection to the sugar industry, observed that protection to the sugar industry was in effect protection to the sugarcane cultivation in India which was an integral part of India's agricultural economy. The extent and the speed of the development of the sugar industry in India will depend to some extent upon the attitude of the Union of Pakistan for developing the industry within its Dominion and the arrangements which they make for getting their requirements of sugar in the meanwhile, i.e., from India or foreign countries. The point of keeping the agricultural economy intact was emphasized by the 1949 Tariff Board enquiring on sugar, while recommending continuance of protection for a further period of 2 years.

Gur Production.—Having discussed the production of sugar in this detail, it would be of interest to see the production of *gur* which is an article of direct consumption in India, and the production of which is 3 times as large as that of sugar. The following table shows the calculated net production* of *gur* in India for direct consumption from 1931-32 to 1946-47.

| Year (November-October) | Calculated net Annual Production of <i>Gur</i> for direct consumption (in Tons) | Year (November-October) | Calculated net Annual Production of <i>Gur</i> for direct consumption (in Tons) |
|----------------------------|--|----------------------------|--|
| 1931-32 | 2,758,000 | 1939-40 | 2,441,000 |
| 1932-33 | 3,240,000 | 1940-41 | 3,414,000 |
| 1933-34 | 3,486,000 | 1941-42 | 2,829,000 |
| 1934-35 | 3,701,000 | 1942-43 | 3,015,000 |
| 1935-36 | 4,101,000 | 1943-44 | 3,400,000 |
| 1936-37 | 4,268,000 | 1944-45 | 3,633,000 |
| 1937-38 | 4,364,000 | 1945-46 | 3,578,000 |
| 1938-39 | 2,131,000 | 1946-47 | 3,017,000 |
| | | | (India: Union only) |

* The net production of *gur* is calculated by deducting from the total yield of cane expressed in terms of *gur*, and published in the "Final General Memorandum on the production of the Principal Crops in India," by the Director-General, Commercial Intelligence and Statistics, the *gur* equivalent of the cane used for purposes other than *gur* manufacture. Vide letter No. 3174 stat., dated 2nd July 1947, from the Director, Imperial Institute of Sugar Technology, Kanpur, to the Chairman, Sugar Commission, U.P. and Bihar, Kanpur, for figures from 1944-45 to 1946-47.

SUGAR PRICES

Prices of sugar were fixed since 1942 by the Sugar Controller for India for all factories and they were compelled to sell their sugar at controlled rates and also to consign their sugar to destinations which have been specified by the Sugar Controller from time to time. The average price of sugar in 1942 was Rs. 12-4-0 per maund, in 1943 Rs. 14-9-0 per maund. In 1944 Rs. 15-6-0 per maund, and in 1945 Rs. 16-12-0 per maund. The price fixed in 1946-47 was Rs. 20-14-0 per maund. The minimum price of sugarcane was also on the increase during this period, to compensate the cultivator for the higher cost of cultivation.

Immediately after sugar was decontrolled on the 10th December 1947, the maximum price of sugar was fixed at Rs. 25-7-0 per maund, and at the same time the minimum price of cane, which was Rs. 1-4-0 per maund in 1946-47 season, was increased to Rs. 2-0-0 per maund, both in U.P. and Bihar.

In 1948-49, the price has been reduced to Rs. 28-8-0 per maund. The minimum price of cane was also brought down to Rs. 1-12-0 per maund in the U. P. and Rs. 1-10-0 in Bihar in the same period.

The excise duty on sugar, however, was increased with effect from 1st April 1949 from Rs. 3-0-0 to Rs. 3-12-0 per maund just to raise more revenue for the Government of India.

At the present price, sugar is being sold in retail at about 7 annas per lb. It is essential to bring about a reduction in the price of sugar, particularly if India has any ambition to export sugar to other countries, but unless the cultivation of cane improves and unless it is possible to bring about a great increase in the average yield of cane per acre, from its present average of about 14 tons to at least 30 tons per acre, it is not likely that there will be any appreciable fall in the price of sugar. It may be noted as a matter of interest, however, that India is the largest producer of sugar (including *gur*) amongst the countries of the world and the Indian sugar industry is now the second largest industry in India, second only to the Cotton Textile industry.

THE TEA INDUSTRY

AMONG plantation crops in India tea is the most important. The indigenous tea plant, growing in a wild condition, was first discovered in Assam about 1820. It soon drew the attention of the East India Company, which after some enquiries started an experimental garden in 1835. After working for five years, the plantations of the Government were sold in 1840 to the Assam Company, the first tea concern and to this day the largest company in the sub-continent. It fared badly during the first ten years of its existence, but about 1852, its condition began to improve and its success made the prospects of the industry appear so promising and attractive that speculators eagerly rushed into it.

The discovery of the indigenous tea in Sylhet and Cachar gave the necessary impetus for an expansion of the industry into the Surma valley, and in a few years thereafter the whole of the upper portions of the north-east region (both Brahmaputra and Surma Valley) was converted into a huge tea plantation. Thus, the foundations of the present tea industry were laid during the fifty years of the last century. Since that period the growth of the industry has been phenomenal and in less than a hundred years the sub-continent has become the tea garden and tea-shop of the world.

The following table shows the growth of the industry since 1900:

| Year | Area under tea in thousands of acres | Production in millions of lbs. | Year | Area under tea in thousands of acres | Production in millions of lbs. |
|---------------------|--------------------------------------|--------------------------------|------|--------------------------------------|--------------------------------|
| 1900-1904 (Average) | 523 | 201 | 1934 | 841 | 395 |
| 1905-1909 | 539 | 242 | 1935 | 841 | 389 |
| 1910-1914 | 591 | 290 | 1936 | 842 | 390 |
| 1915-1919 | 662 | 374 | 1937 | 842 | 423 |
| 1920-1924 | 709 | 336 | 1938 | 840 | 447 |
| 1925 | 728 | 364 | 1939 | 841 | 463 |
| 1926 | 739 | 393 | 1940 | 840 | 471 |
| 1927 | 756 | 391 | 1941 | 840 | 500 |
| 1928 | 776 | 404 | 1942 | 841 | 570 |
| 1929 | 788 | 433 | 1943 | 843 | 552 |
| 1930 | 804 | 391 | 1944 | 842 | 507 |
| 1931 | 807 | 394 | 1945 | 841 | 528 |
| 1932 | 840 | 434 | 1946 | 841 | 585 |
| 1933 | 841 | 384 | 1947 | 847 | 600 |

It will be seen from the above table that since the beginning of the present century, while the area under tea has risen by 60 per cent., the production has increased by approximately 191 per cent.

Assam and West Bengal are the two important centres of the tea industry in India, Assam alone accounting for more than half the total production. In 1947, Assam produced 337 million lbs. or 56 per cent. of the total production. Old undivided Bengal produced 160 million lbs. or 27 per cent., Southern India 91 million lbs. or 16 per cent., while the balance was grown in Bihar, United Provinces, Tripura State and Nepal.

The figures are, of course, in respect of undivided India, but it is estimated that out of the total North Indian crop of 504 million lbs. grown in 1947, 42 million lbs. were produced in Pakistan.

EXPORT TRADE

Although there has been a steady increase in the domestic consumption of tea in recent years, the sub-continent is still able to export large quantities to other countries, the principal among which is the United Kingdom. In some years over 80 per cent. of the total quantity of tea produced was exported but this figure dropped in 1945-46 to 70 per cent. Of the total exports of 327 million lbs. during the year 1946-47 the United Kingdom alone took 225 million lbs.

Consequent on the sterling work done by the Indian Tea Market Expansion Board constituted under the Indian Tea Cess Act 1903 the consumption of tea in India and Pakistan during the last ten years has risen from 70 million pounds per annum to the present figure of 140 million pounds per annum. The sub-continent thus becomes one of the leading tea consuming areas although its per capita consumption compared with such countries as the U. K., Eire and Australia is exceedingly low.

The year 1932-33 was one of the worst for the tea industry, as in addition to the world-wide depression, there was considerable over-production with the result that producers of tea all over the world were faced with declining prices and accumulating stocks. The preference granted to Empire teas did not prove sufficiently effective to check the consumption of cheap Java teas. Besides this there was only a small difference in the price of medium and common teas and there was thus no inducement to grow the former. To check over-production a scheme was, therefore, introduced to restrict production and to limit exports. A Bill giving legislative effect to the scheme was passed at the autumn session of the Legislative Assembly in 1933. The industry has consequently been able to enjoy more stable conditions than would otherwise have been possible in the circumstances of the last six years. The export quota which was fixed at 82½ per cent. of the standard exports in 1935-36 rose steadily to 92½ per cent. in 1938-39.

Due to accumulation of stocks and decline in prices the quota for the following year was fixed at 90 per cent. but the restriction of supply and an increase in demand had the effect of placing the industry again in a favourable position in the world market even before the outbreak of the war.

WAR YEARS

The outbreak of war gave rise to entirely new conditions. In the United Kingdom, the entire tea trade passed under the control of the Government. A Tea Controller for India was appointed to administer the emergency tea control scheme. Owing to the suspension of re-exports from London, the need for replenishing their stocks by America and the Colonies and the transfer of their demand by some of the markets supplied by Java to Indian tea, there was a strong demand for practically all kinds of tea and the export quota was, therefore, raised to 95 per cent. in October 1939 and was kept unchanged at 95 per cent. for the next season. In June 1940, however, the International Tea Committee reduced the quota for 1940-41 to 90 per cent. for all participating countries. The reduction had a stimulating effect on the markets, but it was soon discovered that in view of the increased requirements of the United Kingdom, U. S. A., and other countries, the maintenance of the export quota at 90 per cent. would result in a severe curtailment of the available supplies and the quota was revised to 92½ per cent. in October 1940. The export quota for 1941-42 was fixed at 110 per cent. of the standard exports and for the duration of the war the figure remained around this latter level. No export quota figure has been declared for the year 1948-49 as India's standard export figure has not yet been fixed under the new International Tea Agreement. The Government of India however authorised the Indian Tea Licensing Committee to issue licences during the year for exports upto 400 million pounds or approximately 77 per cent. of the crop basis of estates.

The International Tea Agreement which was due to expire on 31st March 1943 was extended to cover the period of the duration of hostilities and a clear two years thereafter. It expired on the 31st March 1948 and a new Agreement has been prepared and will be signed shortly by the producers in India, Pakistan, Ceylon and the Netherlands East Indies.

The following table shows tea exports by sea from the sub-continent to the chief importing countries:—

| Country | 1938-39 (Millions of lbs.) | 1945-46 (Millions of lbs.) | 1946-47 (Millions of lbs.) |
|----------------|-------------------------------|-------------------------------|-------------------------------|
| United Kingdom | 307.9 | 237.9 | 225.5 |
| U. S. A. | 13.4 | 52.3 | 30.0 |
| Canada | 27.1 | 19.7 | 24.0 |
| Australia | 1.3 | 15.7 | 11.4 |
| Iran | 5.1 | 5.7 | 4.9 |
| Egypt | 0.3 | 4.7 | 3.5 |
| Ceylon | 3.9 | 2.9 | 0.8 |
| Arabia | 0.3 | 2.4 | 1.3 |
| Chile | — | 2.0 | 1.9 |

PRICES

In 1932-33 the fall in tea prices was almost catastrophic. The average price of tea per lb. realised at Calcutta auction sales during 1932-33 was 5 as. 2 p. as against 6 as. 5 p. in 1931-32 and 9 as. 4 p. in 1930-31. Prices have, however, risen very considerably since then. After the

outbreak of war they rose steadily and the average auction prices of Rs. 1-0-9 and Re. 1 for the years 1941 and 1942 respectively were higher than in any previous season. Auction sales for teas with export rights were suspended from 15th September 1942 until 1947 and block purchases were made by the British Ministry of Food on behalf of all Allied and certain neutral countries. Prices paid were based on the average received by growers in the years 1936, 1937 and 1938 together with an allowance to cover the extra cost of war time production. The upward trend in tea prices which had begun during the early years of war was maintained when auctions of tea with export rights were renewed in Calcutta in 1947.

The following table shows the variations in the average prices of tea sold at auction sales in Calcutta and the index numbers of these prices with base 1901-2 to 1910-11 = 100:—

| Year | Average prices at auction sales | | | |
|---------------------------|---------------------------------|-----------|---|-----------|
| | Teas with export rights | | Tea for internal consumption | |
| | Price per lb. | Index No. | Price per lb. | Index No. |
| 1901-2 to 1910-11 | Rs. a. p. | 100 | Rs. a. p. | |
| 1927-28 | 0 6 0 | 247 | For the years before the Regulation Scheme (1933) all sales are included under the heading "With Export Rights" | |
| 1928-29 | 0 14 10 | 189 | | |
| 1929-30 | 0 11 4 | 165 | | |
| 1930-31 | 0 9 11 | 156 | | |
| 1931-32 | 0 9 4 | 107 | | |
| 1932-33 | 0 6 5 | 86 | | |
| 1933-34 | 0 5 2 | 160 | 0 4 10 | 81 |
| 1934-35 | 0 9 7 | 146 | 0 5 2 | 86 |
| 1935-36 | 0 8 9 | 157 | 0 4 10 | 81 |
| 1936-37 | 0 9 5 | 148 | 0 4 8 | 78 |
| 1937-38 | 0 10 1 | 180 | 0 4 9 | 79 |
| 1938-39 | 0 11 4 | 160 | 0 4 0 | 67 |
| 1939-40 | 0 9 7 | 190 | 0 4 4 | 72 |
| 1940-41 | 0 11 5 | 225 | 0 4 1 | 68 |
| 1941-42 | 0 13 6 | 278 | 0 7 4 | 122 |
| 1942-43 | 1 0 9 | 267 | 1 0 10 | 209 |
| 1943-44 | 1 0 0 | .. | 0 9 8 | 161 |
| 1944-45 | .. | .. | 0 10 7 | 176 |
| 1945-46 | .. | .. | 0 14 4 | 239 |
| 1946-47 | 1 15 7 | 526 | 1 5 10 | 364 |
| 1947-48 | 1 9 4 | 422 | 1 3 5 | 402 |

The rate of duty under the Indian Tea Cess Act of 1903 was fixed at Rs. 1-6 per 100 lbs. on January 10, 1948. The Indian Tea Cess Act was due to expire on March 31, 1948 but the Government of India extended it by a notification dated March 20, for a period of twelve months. During this period the cess has been leviable only at Indian ports.

The Government of India have recently introduced the Tea Committee for India Bill which provides for the replacement of the Indian Tea Market Expansion Board by the Tea Committee for India. The Bill is now being considered by a Select Committee.

THE TEXTILE INDUSTRY

COTTON

THE sub-continent has been the home of the cotton trade from the earliest times. Its cotton, known as white wool, was well-known to the ancients and its cloth was familiar to the West in the days when the trade was carried on overland.

The export of cotton from the Indian sub-continent began to assume importance with the opening of the sea route. It received an immense stimulus during the American Civil War, when the close blockade of the Confederate ports produced a cotton famine in Lancashire, and threw the English spinners back on India for their supply of raw material. When the war broke out the shipments of Indian cotton were 528,000 bales but during the last year of the war they averaged 973,000 bales. Most of this cotton was sold at an enormously inflated price, and induced a flow of wealth into Bombay, the great centre of the trade, for which there was no outlet. The consequence was an unprecedented outburst of speculation known as the "Share Mania," and when the surrender of Lee re-opened the Southern ports widespread ruin followed. It is estimated that the surplus wealth brought into the country by the American Civil War aggregated £92 millions.

The principal varieties of Indian cotton are Dhollera, Broach, Gomras (from the Berars), Dharwar and Comptans. Broach is the best cotton grown in Western India. Bhangsal cotton, from the Central Provinces, has a good reputation. Bengala is the name given to the cotton of the Ganga valley, and generally to the cottons of the north. The Madras cottons are known as Westerns, Cocanada, Comhatore and Tinnevely. The best of these is Tinnevely. Cambodia cotton has been grown with success in Southern India, but it shows a tendency to revert.

Broach.—The cultivation of cotton in the sub-continent has shown a marked variation by way of adjustments to the world cotton conditions and domestic price fluctuations mainly dictated by overseas markets which happened to be the main customers for Indian cotton in the pre-war years. The gradual decline in the average price of Broach from Rs. 255 in 1873 to Rs. 150-8 in 1899 checked the growth of this crop; but thereafter the growing demand and upward price trend reaching the climax at Rs. 561 in 1923-24 gradually raised the production to 6,098,000 bales in 1924-25 as against 1,000,000 bales in 1890-1900. A downward twist given to the prices by the depression reduced the size of the crop to 4,007,000 bales in 1931-32. After a minor recovery, the price slumped to the bottom of Rs. 157 following the decision of Japan to reduce her purchases from the sub-continent, and the Indian Central Cotton Committee was forced to launch a campaign for reducing the acreage under short stapled cotton for which Japan was the best customer. As a result, the production was voluntarily brought down to 4,909,000 bales in 1939-40 from the all time record level of 6,231,000 bales in 1937-38.

The outbreak of the Second World War reminded the growers of the fortunes they had made in the 1920s and the crop was stepped up under the stimulus of the upward trend of cotton prices to 6,225,000 bales in 1941-42. The war developments, however, upset the calculations and the quotation for Broach fell precipitately to Rs. 148. It also happened that simultaneously, the Government launched the grow-more-food campaign. The combined effect was a sharp cut of 22 per cent. in acreage and 26 per cent. in the output of cotton in 1942-43. The crop was higher in the following year in sympathy with the better cotton prices, but the statutory ceilings on cotton prices and legal

limitations on cotton cultivation reduced the acreage to the 32 year old record low level of 14,803,000 acres yielding 3,543,000 bales in 1943-45.

Cotton Committee.—The constitution of the Indian Central Cotton Committee in March 1921 has proved an important landmark in the history of this leading cash crop of the country. The introduction and extension of super varieties of cotton on which the Committee has been spending nearly Rs. 10 lakhs every year has gradually changed the face of Indian cotton. The production of 'medium and long staple' cotton (7-8 inch and above) increased in 1943-44 by 1,534,000 bales or 35 per cent. as compared with the figure for 1922-27, while there was a reduction of 1,889,000 bales or 49 per cent. during the same period under 'short staple' cotton (below 7 inch). The production of cotton of staple length, one inch and above, was nil in 1922-27; but it amounted to 654,000 bales in 1943-44. While tackling the question of improving the quality of Indian cotton, the importance of raising the yield per acre has not been overlooked by the Committee. The average yield per acre rose from 96 lbs. in the quinquennium 1922-27 to 109 lbs. in the quinquennium 1937-42; it rose still higher, to as much as 112 lbs. in 1943-44.

Cotton Trade.—Bombay is the heart of the cotton trade from where a network of regulated markets have spread throughout the cotton growing tracts. Trading in futures forms an integral part of the markets in Bombay. The year 1942-43 was a most eventful year during which speculation took up the cotton price to the record peak of Rs. 637 on March 12, 1943 and forced the Government of India to close down the futures market on May 1, 1943. This was followed by regulation of movement of cotton,

fixation of floors and ceilings for the various varieties, and the resumption of trading in new crop.

The introduction of the Indian cotton contract, based on Khandesh Jarilla cotton of 1 inch staple with other varieties having staples between 1 inch and 1 inch tenderable against the contract, was an important innovation in 1942-43. The new contract replaced the Broach, Bengal and Oomra contracts which had served the trade for nearly a quarter of a century. It was the outcome of the necessity to establish a close identity between the hedge contract and the type of cotton required by the domestic textile industry.

Indian cotton assumed importance in the past mainly as an exportable commodity and until 1936-37, export markets formed the most important outlets for the commodity. Among them Japan was, of course, the most valuable buyer responsible for the offtake of over one-fourth of the crop. Thereafter the Japanese textile industry was switched on to the Chinese cotton with the result that the Indian sub-continent's total exports fell from the all time record level of 4,568,000 bales during the financial year ended March 31, 1937 to 2,703,000 bales in 1938-39. The bottom was knocked out by the war developments and exports were reduced to 282,000 bales in 1943-44.

The consumption of indigenous cotton by the domestic textile industry became an important feature of the cotton trade only after the 1936-37 cotton season. For the first time in the history of the trade, mill consumption outstripped the export figure in 1937-38. The figure for the absorption of indigenous cotton within the country reached the peak in 1942-43 when the mill industry used 4,280,817 bales, while foreign markets were able to buy only 301,000 bales. This trend has continued since then.

Exports.—The figures for export by sea of Indian cotton from India to foreign countries for the five fiscal years (ending March) 1942-43 to 1946-47 are shown in the table below :—

(In thousand bales of 400 lbs. each)

| Countries | 1942-43 | 1943-44 | 1944-45 | 1945-46 | 1946-47 |
|---------------------------------------|---------|---------|---------|---------|---------|
| United Kingdom | 229 | 180 | 234 | 221 | 107 |
| Australia | 34 | 28 | 8 | 30 | 81 |

| Total | 301 | 282 | 319 | 703 | 911 |

COTTON MILL INDUSTRY

Reference has been made to the popularity of the Indian handloom cloths in the earliest days of which we have record. This trade grew so large that it excited alarm in England, and was killed by a series of enactments, commencing in 1701, which prohibited the use or sale of Indian calicoes in England. The invention of the spinning jenny and the power loom and their development in England converted India from an exporting into an importing country, and made her dependent on the United Kingdom for the bulk of her piece-goods.

The foundations of the Indian cotton mill industry were laid as early as 1818 when the first mill was erected at Calcutta. Bombay saw its first mill in the year 1854 owing to the enterprise of a Parsee merchant, Mr. Cowasjee Nanabhy Davar. Till 1877 Bombay city was the exclusive home of the industry; but its development was thereafter widely distributed because the crop itself was widely distributed over the sub-continent. The factory legislation first undertaken in 1881 led to the diversion of the industry to the States.

The following table shows how by successive stages, the industry's productive capacity has grown:—

| Year | Number of Mills | Number of Spindles | Number of Looms |
|----------|-----------------|--------------------|-----------------|
| 1880 .. | 56 | 1,461,590 | 13,502 |
| 1890 .. | 137 | 3,274,196 | 23,412 |
| 1900 .. | 193 | 4,945,783 | 40,124 |
| 1905 .. | 197 | 5,163,486 | 50,139 |
| 1910 .. | 268 | 6,195,671 | 82,725 |
| 1915 .. | 272 | 6,848,744 | 108,009 |
| 1920 .. | 253 | 6,763,076 | 119,012 |
| 1925 .. | 337 | 8,510,633 | 154,292 |
| 1930 .. | 348 | 9,124,768 | 179,250 |
| 1935 .. | 365 | 9,685,176 | 198,867 |
| 1940 .. | 388 | 10,005,785 | 200,076 |
| 1941 .. | 390 | 9,961,178 | 198,574 |
| 1942 .. | 396 | 10,026,425 | 200,170 |
| 1943 .. | 401 | 10,130,568 | 200,890 |
| 1944 .. | 407 | 10,222,107 | 201,761 |
| 1945 .. | 417 | 10,238,181 | 202,388 |
| 1946 .. | 421 | 10,305,169 | 202,814 |
| 1947* .. | 423 | 10,353,973 | 202,662 |
| 1918* .. | 422 | 10,433,065 | 202,072 |

* Includes Pakistan.

It may be noted that the rate of development has not been uniform in all centres of the industry in the sub-continent and although in the initial stages, the industry was concentrated in Bombay owing to its advantageous geographical and climatic situation, the pre-eminence of Bombay was not maintained in subsequent years. The number of mills in Bombay City was around 81 till 1931, while at present there are only 65 mills. The industry's development in later years has been more rapid in other Provinces in India and particularly in the States. Out of 417 mills, Bombay Province can boast of 200 mills, Madras 69, Bengal (West and East) 37 and the U.P. 30.

From 1860 to 1865, progress was materially assisted by the accession of wealth which accrued to the Bombay commercial interests owing to the high prices at which Indian cotton was sold during the American Civil War. Another factor which contributed to the rapid growth of the industry was the establishment of a profitable export yarn trade with China. In the years 1865 to 1871, the industry suffered a severe set-back to its prosperity owing to the financial crash which followed the American Civil War. In the early 'seventies, after the restoration of credit, the industry made rapid progress, though in the initial stages, the development of the weaving side of the industry was comparatively slow. The profitable yarn trade with China enabled the Bombay mills to make further progress in the 'seventies and 'eighties of the last century.

Cotton Excise Duty.—The growth of the industry in the sub-continent during the early years was regarded with a jealous eye by the Lancashire manufacturing interests whose agitation resulted in the Government of India exempting from import duty coarse yarn and cloth in 1878. This resulted in the substitution of the exempted classes of goods for the medium and fine goods previously imported from Eng-

land, to the detriment of the growing indigenous industry. In 1893, the Indian mints were closed to the free coinage of silver. This step had a disastrous and almost immediate effect on the industry. With the precision of an automatic machine, business with China and Japan came to a standstill as the exchange dropped by about 12 to 15 per cent. to the detriment of the sub-continent. This measure was followed three years later by the imposition of an excise duty of 34 per cent. on cloth manufactured in Indian mills for the purpose of countervailing the import duties which had been re-imposed at the end of 1894. From the date of its imposition, until it was finally abolished in the year 1926 this excise duty was condemned by all shades of public opinion in the sub-continent as an inequitable and unjust burden on the indigenous industry. The closing years of the last century also witnessed the beginnings of the growth of a mill industry in China and Japan, which contributed greatly to the cutting off of the Indian yarn trade with the Far East in the following years. Japan later proved to be a very formidable rival to India in the China market, and eventually threatened the very existence of the Indian industry even in its home market. The loss of the export trade with China and Japan, with whom Indian mills were doing a profitable business in yarn was a serious matter, and was the main reason for the development of the weaving side of the Indian industry, which had previously been relatively neglected.

The first Swadeshi Movement afforded a temporary fillip to the Indian industry in the years 1905 to 1907. The intensification of the movement during these years gave a considerable impetus to the cotton manufacturing industry, and as the yarn trade with China was not then profitable, attention was naturally turned to the installation of more looms in the mills, so that the yarn spun in the mills might be turned into piece-goods instead of being exported to China. In 1907 there were large failures of commercial houses, particularly in Bombay, consequent on the heavy fall in the prices realised for yarn in China, the fall in demand from that country following a famine, and violent fluctuations in the silver exchange. The next three years saw the industry passing through a difficult period accentuated by the enhancement of the duty on silver. The adverse conditions persisted with brief spells of partial recovery until 1917 when the boom arising from the Great War set in, which lasted up to the year 1922. The capital investment in the industry increased from Rs. 20.84 crores in 1917-18 to Rs. 40.98 crores in 1921-22. Production was up during this period by about 50 per cent. while exports of piece-goods were double the pre-war average. The mills' profits soared and the industry paid high dividends amounting to 40.1 per cent. of the paid up capital in 1919, 35.2 per cent. in 1920 and 50 per cent. in 1921.

Abolition of Excise Duty.—This boom was followed by a period of severe depression, especially in Bombay. This depression, combined with the growing severity of Japanese competition in the home market, assisted as it was by inferior labour conditions, led in the years following 1922 to a renewed agitation for the repeal of the cotton excise duty. In August 1925, a deputation from the Bombay and Ahmedabad Millowners' Associations waited on His Excellency the Viceroy. The situation worsened in the following months, and in December 1925, the excise duty was suspended. In March 1926 it was finally abolished.

Protection.—A special Tariff Board was appointed soon after to enquire into the position of the industry, the causes of the depression, the extent to which it was due to foreign competition and the necessity or desirability of protection. The Board found that the difficulties of the industry were mainly due to the unfair advantage which Japan enjoyed owing to the adoption of the double shift system and the employment of women and children at night. The Board, however, presented a majority and a minority report. Government were

unable to accept the recommendations made, but as a measure of partial relief, they removed the import duties on mill stores and textile machinery.

The general disappointment felt at Government's decisions on the Tariff Board's recommendations and the grave crisis which then faced the industry were brought to the notice of His Excellency the Viceroy by a deputation of millowners from all parts of the sub-continent which waited on His Excellency in July 1927. As a result of this deputation Government revised their original decisions and imposed a minimum specific duty of 14 annas per pound on imported yarns with effect from September 1927 for a period of three years. By the end of this period, although labour conditions in Japan had improved, a new danger had arisen in the shape of a large import trade from China where labour conditions were far inferior to those in the Indian sub-continent. The protective duty was, therefore, extended for a further period of three years ending on 31st March 1933.

The utter inadequacy of the protection extended to the industry by the Yarn Protection Act of 1927 was abundantly evidenced by the increasing imports of piece-goods from Japan in the following years. On 22nd July 1929, on the suggestion of the Bombay Millowners' Association, Mr. G. S. Hardy was appointed by Government to examine the possibility of substituting a system of specific duties for the then existing system of *ad valorem* assessment. Mr. Hardy's conclusions, which revealed that Japanese competition was extremely severe in certain classes of goods manufactured in the sub-continent were discussed at a conference of millowners convened by the Government of India towards the end of 1929; and in February 1930, Government introduced in the Legislative Assembly the Cotton Industry (Protection) Bill, which, as finally passed, provided for a change in the then existing revenue duty of 11 per cent. to a protective duty of 15 per cent. in the case of British cotton piece-goods and of 20 per cent. in the case of foreign goods, with an alternative minimum specific duty in either case of 34 annas per pound on plain grey goods. For revenue reasons, these *ad valorem* rates were raised by 5 per cent. In March 1931, and a surcharge of 25 per cent. of the enhanced duties was imposed in October of the same year, bringing the rate of duties to 25 per cent. (British) and 31½ per cent. (foreign) with a minimum specific duty of 4½ annas per pound on plain greys. At the same time, an import duty of 6 ples per pound on all raw cotton and of 10 per cent. on machinery and dyes used by the industry was also levied. The duty on raw cotton was raised in 1930, again for reasons of revenue, to one anna per pound.

Early in 1932 Government directed the Tariff Board to enquire into the question of the grant of substantive protection to the industry. In the meantime the depreciation of the Japanese exchange consequent on Japan's going off the gold standard in 1932, enabled her to place her piece-goods on the Indian market at abnormally low prices, and offset to a very great extent the protection conferred on the Indian industry by the 1930 Act. Government, therefore, directed the Board to hold a special enquiry into this question, and in accordance with the recommendations of the Board, the duties on foreign piece-goods were raised from August 1932, to 50 per cent. or 54 annas per pound, whichever was higher but in view of the continued severity of the Japanese competition, Government once again found it necessary in June 1933 to raise the level of the duty on foreign piece-goods to 75 per cent. *ad valorem* or 63 annas per pound. At the same time notice was also given of Government's intention to abrogate the Indo-Japanese Trade Convention of 1904.

Foreign Trade Delegations. This was followed by the arrival in the sub-continent of an official Delegation from Japan and an unofficial Trade Delegation from the United Kingdom. The United Kingdom unofficial Delegates' deliberations with Indian millowners culminated

in what has been termed the Mody-Lees Pact of 1933, an understanding, which was to be in force until the end of 1935. Similar discussions between certain unofficial delegates from Japan and Indian millowners proved abortive, but the efforts of the Japanese official delegates resulted in a fresh Convention and Protocol being agreed to early in 1934, under which a link was established between the exports of Indian raw cotton to Japan and the imports of cotton piece-goods from Japan. Japan agreed to take one million bales of Indian raw cotton in return for the right to export 325 million yards of cotton piece-goods to the Indian sub-continent, with a maximum limit of 400 million yards for an aggregate outtake of $1\frac{1}{2}$ million bales of Indian raw cotton. Japan was also accorded most-favoured-nation treatment in respect of her miscellaneous trade. In virtue of the terms of the Protocol, the duties on Japanese cotton piece-goods were reduced, with effect from 8th January 1934, to 50 per cent, *ad valorem* with a minimum specific duty of 5½ annas per pound on plain grey goods.

The protective duties on cotton yarn and piece-goods imposed by the Cotton Textile Industry (Protection) Act, 1930, were due to expire on 31st March 1935, but as Government were not able to complete their consideration of the report of the Tariff Board of 1932 (which had recommended the institution of specific duties based on weight subject to their being combined with alternative *ad valorem* duties to prevent a loss of revenue and the imposition of a duty of one anna per pound in the case of yarns below 50s count) before that date, they extended the provisions of the Act for another year.

Textile Protection Bill.—The Cotton Industry (Textile Protection) Bill of 1934 sought to give effect to the recommendations of the Tariff Boards on the cotton and agricultural industries in the light of the Indo-Japanese Protocol and the unofficial agreement entered into between Indian and Lancashire millowners. So far as yarn was concerned, the Act, as passed, fixed the rates of duties at 5 per cent. (British) and 6½ per cent. (non British) with a corresponding alternative minimum specific duty of 14 annas and 1½ annas per pound on counts up to and including 50s. In the case of piece-goods, the levels of the duties were fixed at 25 per cent. and 50 per cent. on British and non-British goods respectively, with a minimum specific duty of 4½ annas and 5½ annas per pound on plain grey goods. The Act also guaranteed protection to the industry for a period of five years ending March 1939, but recognized the need for an examination of the scale of duties on two occasions: firstly on the expiry of the Mody-Lees Pact at the end of 1935, and secondly, at the end of the Indo-Japanese Protocol in March 1937. Accordingly, at the end of 1935, Government directed the Tariff Board to examine the adequacy of the then existing levels of duty on British goods. Accepting the recommendations of the Board, Government reduced, with effect from June 25, 1936, the duty on all United Kingdom cotton piece-goods, with the exception of prints, to 20 per cent. *ad valorem* with a minimum specific duty of 3½ annas per pound on plain grey goods.

Trade Protocol.—The Indo-Japanese Trade Protocol was subsequently renewed for a further period of three years ending March 1940, without any material modification in the rates of duties applicable to Japanese cotton piece-goods. With the separation of Burma from India in April 1937, however, the basic quota of cotton piece-goods for the sub-continent was reduced to 283 million yards, rising to a maximum of 358 million yards leaving a margin of 42 million yards for Burma.

The negotiations between the Government of India and His Majesty's Government in the United Kingdom for the conclusion of a new Trade Agreement in replacement of that entered into at Ottawa in 1932 were brought to a conclusion early in 1939, and the new Agreement specifically provided for a reduction of the basic rates of duties on United Kingdom cotton piece-goods as under:—

Printed goods .. 17½% *ad valorem*

Grey goods .. 15% *ad valorem* or As. 2-7½ ps. per lb., whichever is higher

Others .. 15%

The basic rates were subject to a reduction of 2½ per cent. if imports from the United Kingdom in any year were less than 350 million yards and to an increase to the same extent in the event of United Kingdom imports exceeding 500 million yards. The new rates of duty came into force on April 1, 1939. In the year 1939-40, the European War affected imports from the United Kingdom, and as her sendings of piece-goods did not exceed 350 million yards, the duties on all classes of British piece-goods were reduced by 2½ per cent with effect from April 17, 1940.

Protection Ends.—By the Indian Tariff (Textile Protection) Amendment Act, 1934, the Government of India imposed protective duties on certain types of cloths and yarn imported into British India, for a period of five years, *i.e.*, upto 31st March 1939. By the Indian Tariff (Third Amendment) Act, 1939, protection was extended for a further period of three years terminating on the 31st March 1942. The protection was, further, extended from time to time and the last such extension was due to expire on 31st March 1947.

Towards the end of 1946, the Government of India requested the Tariff Board to hold a summary enquiry and advise whether, in the present circumstances, protection at the existing or at a different scale should be granted to the cotton textile manufacturing industry for a further year after the 31st March 1947. The Tariff Board after consulting the interests concerned, made the following recommendations:—

(i) The industry has failed to substantiate its demand for extension of protection, and the protective duties should be allowed to expire on the 31st March 1947, to be replaced, however by such revenue duties on cotton textiles as may be imposed on budgetary considerations. There should be only one scale of duties and that should be the lower of the two existing scales.

(ii) Any declaration of expiry of protection should be accompanied by a definite and categorical announcement that deprotection does not signify any weakening in the interest of

Government in the well-being and integrity of the cotton textile manufacturing industry which is the premier industry of the sub-continent. A tariff enquiry should definitely be guaranteed to the industry as soon as imports of cotton piece-goods exceed for three months running, a monthly average of 25 million yards unless the industry, itself asks for a tariff enquiry earlier, in order to determine whether the volume and prices of imports affect the position and integrity of the Indian industry so as to call for re-imposition of protection.

(iii) The import duty on yarn is doing no good to the Indian mill industry, while its existence imposes some hardship on the handloom industry; there should, therefore, be no duty on yarn, protective or revenue.

(iv) The recommendations in regard to duties on cotton textiles should apply to the imports of artificial silk and cotton and art silk mixed fabrics.

Government after carefully considering the report submitted by the Tariff Board, announced their decisions as under:—

1. Government accepted recommendation (i) of the Board on the main issue before it, *i.e.*, the protective duties on cotton piece-goods and yarn should expire on the 31st March 1947.
2. Recommendation (ii) also was accepted.
3. As regards recommendation (iii), Government stated that the rates of revenue duties which would be imposed on imports of cotton piece-goods and yarn were under consideration and would be announced at the proper time. Accordingly, by the Indian Tariff (Amendment) Act, 1947, the existing protective duties on cotton cloth and yarn were converted into revenue duties without any change whatsoever in the quantum.
4. Government did not accept recommendation (iv) and the protection for piece-goods, cotton and artificial silk mixed fabric was continued for another year.

Two years later on January 1, 1949 Government imposed an excise duty of 25 per cent *ad valorem* on all superfine cloths manufactured by mills. And on March 1, 1949 an excise duty of 6½ per cent *ad valorem* was imposed on fine cloths, and 3 pias per yard on medium and coarse cloth.

Inter-War Years.—The career of the industry was marked by ups and downs during the inter-war years. Yet on the whole it recorded good progress and the share of imports in the cloth requirements of the country decreased from about four-fifths to much less than a fifth. In the same period, the number of mills in the area formerly called British India increased from 227 to 355, the number of spindles from 6.2 millions to 8.4 millions and the number of looms from 109,000 to 168,000. The output of yarn more than doubled in weight and the output of piece-goods nearly trebled in length. Many technical improvements were effected by the industry during this period, chief among these being the installation of modern machinery for spinning and weaving and the development of new bleaching, dyeing, printing and finishing processes.

The following table shows at a glance the progress made by the Indian cotton mill industry during the last forty-five years:—

| Years ending 30th June | Number of Mills | Number of Spindles installed | Number of Looms installed | Average No. of Hands employed daily | Approximate quantity of Cotton consumed | |
|---------------------------|-----------------------|---------------------------------------|------------------------------------|---|---|----------------------|
| | | | | | Cwts. | Bales of 392 lbs. |
| 1903 | 192 | 50,43,297 | 44,092 | 1,81,399 | 60,87,690 | 17,39,340 |
| 1904 | 191 | 51,18,121 | 45,337 | 1,84,779 | 61,06,681 | 17,44,766 |
| 1905 | 197 | 51,63,486 | 50,139 | 1,95,277 | 65,77,354 | 18,79,244 |
| 1906 | 217 | 52,79,595 | 52,068 | 2,08,616 | 70,82,306 | 20,23,516 |
| 1907 | 224 | 53,83,275 | 58,436 | 2,05,696 | 69,30,595 | 19,80,170 |
| 1908 | 241 | 57,56,020 | 67,920 | 2,21,195 | 69,70,250 | 19,91,500 |
| 1909 | 259 | 60,53,231 | 76,898 | 2,36,924 | 73,81,500 | 21,09,000 |

† Excludes Burma and Ceylon.

* Includes Pakistan.

The following statement shows the quantity (in pounds) of yarn of various counts produced in the sub-continent during the last five years:—

| | 1942-43 | 1943-44 | 1944-45 | 1945-46 | 1946-47 |
|--------------|---------------|---------------|---------------|---------------|---------------|
| 1s to 10s | 166,572,951 | 162,801,774 | 179,802,924 | 192,837,927 | 151,806,794 |
| 11s to 20s | 817,663,852 | 869,417,781 | 854,886,410 | 819,076,803 | 627,959,432 |
| 21s to 30s | 315,557,326 | 373,466,316 | 336,246,237 | 342,480,082 | 270,556,484 |
| 31s to 40s | 149,509,217 | 169,992,951 | 168,018,799 | 156,232,652 | 151,189,692 |
| Above 40s | 65,922,583 | 85,392,373 | 90,106,221 | 91,157,737 | 118,152,587 |
| Wastes, etc. | 18,510,260 | 19,888,387 | 21,864,844 | 23,031,645 | 18,367,653 |
| Grand Total | 1,533,736,189 | 1,680,462,582 | 1,650,925,426 | 1,614,816,846 | 1,338,032,642 |

Fine Count Yarn.—Substantial progress has been made in the last few years in the direction of spinning fine count yarn. Much, however remains to be accomplished: but the duty of one anna per pound which Indian mills have now to pay for long staple cotton imported from abroad is a factor which is likely to hamper more rapid progress.

The statement below shows the total quantities of woven goods manufactured during the past four years:—

| | 1944-45 | 1945-46 | 1946-47 | 1947-48 |
|-----------------------|-----------------------|-----------------------|-----------------------|-----------------------|
| Grey & Bleached goods | Yds. 3,608,103,822 | Yds. 3,550,024,461 | Yds. 3,076,020,084 | Yds. 2,961,672,364 |
| Coloured Piece-goods | 1,118,368,415 | 1,125,609,860 | 813,759,750 | 808,344,189 |
| Grand Total | 4,726,472,237 | 4,675,634,321 | 3,889,779,834 | 3,770,016,553 |

Here again, it may be pointed out that the mills are now turning out increasingly large quantities of fine Dhooties, Cambrics and fine Longcloth on the lines recommended by the first Tariff Board (1927).

The War Years.—After a continuous period of almost unrelieved gloom extending over a period of nearly two decades, culminating in measures being actively explored with a view to bringing about an organised curtailment of production throughout the country, the war in Europe which commenced in September 1939 opened up the prospect of a spell of prosperity for the industry. Following the cessation of trade with Japan, which happened to be the leading supplier of cotton textile to the East in December 1941, the Indian cotton textile industry enjoyed a completely monopolistic position. It was faced with a steadily expanding demand from overseas, an increasing volume of war orders and growing domestic requirements for civil purposes stepped up by inflationary forces. The cloth production was stepped up from 4,012·4 million yards in 1939-40 to the record level of 4,870·6 million yards in 1943-44. Yet the industry was unable

to meet the growing demand and the prices were pushed up to four times the pre-war levels.

In May 1943 the Government of India issued the cotton cloth and yarn (control) order based on an agreement between the Government of India and the representatives of the textile industry. Its objects were to reduce prices and stimulate production by controlling the cost and supply of mill stores and by regulating the price of raw cotton and by superintending the distribution of cloth from the mills to the retailers. The control authorities were, however, faced with a formidable task created by reduction in output due to coal shortage and *havlals* on the one hand and growing demand on the other. Consequently, though in the following two years, the prices stamped on the cloth were brought down by about 60 per cent, the full benefit was not passed to the consumer owing to widespread black market activity, mainly encouraged by illicit exports due to trade regulations and large scale hoarding as inflation hedge.

Exports.—The table below sets out the exports of cotton twist and yarn from the sub-continent to its chief export markets:—

| | 1944-45 | 1945-46 | 1946-47 | 1947-48 |
|---------------------------|------------|------------|-----------|---------|
| | lbs. | lbs. | lbs. | lbs. |
| United Kingdom | .. | .. | .. | .. |
| Burma | .. | .. | .. | .. |
| Straits Settlements | .. | .. | .. | .. |
| Hongkong | .. | .. | .. | .. |
| Syria | 841,360 | 498,100 | 56,800 | .. |
| Others | 16,077,053 | 14,313,183 | 3,734,087 | 41,580 |
| Grand Total .. | 16,918,413 | 14,811,283 | 3,790,887 | 41,580 |

The table below sets out the exports of cotton piece-goods to foreign countries:—

| | (In thousands of yards) | | | | | |
|---------------------------|-------------------------|---------|---------|---------|---------|---------|
| | 1942-43 | 1943-44 | 1944-45 | 1945-46 | 1946-47 | 1947-48 |
| Burma | .. | .. | .. | .. | .. | .. |
| Iran | 30,658 | 8,900 | 11,565 | 5,425 | 17,226 | 7,121 |
| Iraq | 77,773 | 12,750 | 25,172 | 34,171 | 21,317 | 7,081 |
| Straits Settlements | .. | .. | .. | .. | .. | .. |
| Aden, etc. | 41,715 | 34,460 | 52,769 | 37,830 | 13,007 | 11,153 |
| Kenya, etc. | 42,030 | 40,589 | 28,614 | 39,450 | 20,777 | 12,203 |
| Ceylon | 45,419 | 37,646 | 43,800 | 27,808 | 32,118 | 20,027 |
| Portuguese East Africa .. | 2,094 | 204 | 285 | 832 | 536 | 179 |
| Others | 439,149 | 326,788 | 260,816 | 311,629 | 213,337 | 134,658 |
| Grand Total .. | 688,738 | 461,337 | 423,021 | 437,145 | 318,318 | 192,422 |

In relation to the world cotton textile industry, the Indian industry ranks second from the point of view of the volume of cotton consumed, and fifth in point of spindles and looms installed. The position of the mill industry in the economy of the sub-continent will be evident from the fact that, at the present time, it consumes more than 70 per cent. of the total cotton crop, directly gives employment to over 500,000 workers, and affords subsidiary employment to large numbers of persons who are engaged in various trades which directly depend for their existence upon the cotton mill industry.

Hand Weaving Industry.—Hand weavings is the largest single unit among the sub-continent's small scale industries controlled mainly by a small class of entrepreneur. It is essentially an urban industry and turns out approximately 1,600 million yards of cloth representing nearly 25 per cent. of the goods available for domestic needs. The recent estimates indicate that the total number of handlooms is about 2½ millions of which nearly 64 per cent. are throw-shuttle looms and 35 per cent. fly-shuttle looms. The industry supports nearly 10 million persons including 2,400,000 weavers and 3,600,000

auxiliary workers, a number greatly in excess of that dependent on any other industry except agriculture.

The first 15 years of the current century witnessed a steady rise in the production of handloom cloth; but the unsteady supply of yarn during the First World War resulted in a sharp decline of over 50 per cent. in its output. The industry was thereafter able to raise its head; but no appreciable progress could be made owing mainly to the political movement which created a strong prejudice against the use of imported yarn thereby preventing the handloom weaver from finding market for cloth of finer counts woven by him. That was followed by the change in the clothing habits and the competition from the mill made cloth with the result that the hand weaving industry had to face a long period of depression in the thirties.

The economic plight of the handloom weaver focussed the attention of the Government of India and the Provincial Governments on the remedial measures and as a result of the recommendations of the Industries Conference held in 1933, grants-in-aid were allotted to the Provincial Governments to organise the industry by providing facilities for improving its technique, production methods and marketing system.

One of the recent developments in the history of the industry is the entry of small power looms. Eight years ago in 1941, there were 11,604 power looms of which about 55 per cent. were located in Bombay Province alone. The latest information indicates that their number has gone up to 18,758.

The report of the Fact-Finding Committee (Handloom and Mills) appointed by the Government of India in 1941 to survey the position of the industry reveals that the cost of production of the industry is high on account of the heavy profit of the middlemen, while the existing marketing system robs the weaver of a reasonable return owing to the high margin of profit varying up to 46 per cent. usurped by a chain of middle men.

With a view to improving the position of the industry, the Government of India have constituted the All-India Handloom Board on which the weaver, the Provincial Governments and the States interested in the industry are represented. The recommendation of the Board favouring the increase of the present yarn supply to the industry by reserving half the production from the spindles to be installed during the first five years of the post-war development plan has been accepted by Government. Proposals for organising the industry on a sound footing by rationalising and standardising its products and consolidating its markets are under examination. A scheme is being evolved for ensuring free inter-Provincial movement of handloom cloth in order to enable the industry to regain the pre-war markets within the country.

Post-War Plan.—In May 1946 Government of India's Industries and Supplies Department issued a press note on post-war planning which said that the expansion of the sub-continent's present productive capacity of mill-made cloth from 4,800 million yards to 7,200 million yards per annum was desirable but impracticable at present because of the difficulty in securing the necessary machinery. The note added that an expansion of about 2·75 million spindles proposed as the immediate target would produce an additional 1,700 million yards a year, consisting of 510 million yards of fine and 1,190 million yards of coarse cloth. This production, together with handloom cloth, would help to provide approximately 18 yards per head per annum after allowance for exports of 10 per cent. of the total production.

Planning must be on an all-India basis and the distribution of new plants and extensions of the existing plants should follow territorial divisions of India. The plan would in the then circumstances be an interim plan and it was

the intention of the Government of India to review it when world economic conditions or other circumstances made a review desirable. In order to ensure increased supplies of yarn for handloom weavers and other consumers, the Government of India had directed that at least 25 per cent. of the new spindles installed should be left uncovered by looms. Each Province and State would of course be the best assessor of its own exact needs, and the Government of India proposed, therefore, that the Provinces and States might, if so advised, reserve a larger spindleage for such purpose.

On the question of reduction in the duty of foreign cotton and a full rebate of import duty paid on cotton for the benefit of India's export trade, the press note said that the Government of India would review the matter when competitive conditions returned in order that the Indian export trade might be able to compete in world markets on equal terms with other countries.

The Government of India turned down the suggestion for banning imports of second-hand machinery on the ground that it would be some years before India could produce enough

cloth for her own requirements. They would therefore, allow import licences for second-hand machinery for the present if they were fully satisfied that the machinery in question would be serviceable for a reasonable period and suitable for economic production. As regards the suggestion that import of certain machinery should be permitted freely from any country in the world, Government considered that import should be permitted only when there was reason to believe that the plant would be delivered appreciably earlier or would be considerably cheaper or better than if obtained from the sterling area.

THE TOBACCO INDUSTRY

THE Portuguese are credited with having conveyed the tobacco plant and the knowledge of its properties to the sub-continent about the year 1508. Though there are many species in the genus *Nicotiana*, the tobacco of commerce comes only from the two species *Nicotiana tabacum* and *Nicotiana rustica*. Of the two, the former is more common and also commercially more important.

The Indian Dominion is one of the principal tobacco producing regions of the world, being third after U.S.A. and China.

In 1946-47, the area and production of tobacco in the major tobacco growing Provinces and States was as follows:—

| Name of Province or State. | Acres. | Yield (tons) |
|----------------------------|----------|--------------|
| Madras | 3,04,000 | 1,08,080 |
| Bombay | 1,51,220 | 34,145 |
| C.P. & Berar | 8,510* | 2,180 |
| U.P. | 57,560 | 3,850 |
| Assam | 22,500 | 11,500* |
| Mysore | 23,900 | 4,440 |

* Estimated.

RESEARCH

A great deal of research work has been done in the sub-continent during the last 30 years both by the Government and by private agencies.

A sum of rupees ten lakhs is now being annually set apart for research and development work on this commodity, out of the receipts of excise duty which was levied on tobacco on April 1943.

The Government of India have set up an Indian Central Tobacco Committee on the lines of the Indian Central Sugarcane Committee and other such Committees already functioning. This Committee whose jurisdiction is now limited to the Dominion of India is fully representative of all interests relating to tobacco from the grower to the consumer, including research workers. This Committee came into being in November, 1945, and the annual grant of Rs. 10 lakhs set aside for the improvement of production and marketing of tobacco has been placed at the disposal of this Committee.

The Committee has already established a Central Tobacco Research Institute at Rajahmundry (Madras) for fundamental research on all types of tobacco, a Cigarette Tobacco Research Station at Guntur (Madras), a Bidi Tobacco Research Station at Anand (Bombay) and a Main Experimental Research Station for Cigar and Cheroot Tobacco at Dindigul (Madras). Laboratories for these stations have yet to be constructed and equipped. A main experimental Research Station for Hookah-cum-Chewing types of tobacco, for which necessary lands have been acquired is to be set up shortly at Pusa (Bihar). In addition, the Committee is intending to establish a main experimental

Research Station for Cigar wrapper tobacco only at Jalpaiguri (West Bengal) of which soil and climatic conditions are considered to be suitable for producing quality wrapper-tobacco for use in the country's cigar manufacturing industry.

Each Main Station will have sub-stations for the particular types of tobacco. A sub-station for hookah and snuff tobacco at Ferozepur (East Punjab), a sub-station for Bidi tobacco at Nipani (Bombay) and one sub-station for chewing tobacco at Dindigul (Madras) have already been started, while a sub-station for Hookah tobacco is also intended to be opened shortly at Jalpaiguri (West Bengal). Sub-stations for cigarette tobacco will be started in due course. The Committee is already carrying out exploratory survey work with a view to determine the location for such sub-stations in the various parts of the country in so far as their suitability for producing best quality of cigarette tobacco combined with high yield is concerned.

The Committee's headquarters are in Madras.

The Committee's Cigarette Tobacco Research Station at Guntur has evolved a strain of cigarette tobacco, viz., Amarelo 5 which is better than the standard imported American variety of Harrison Special. In that it gives a higher yield of top grades bright leaf, cures better and matures earlier. This strain however possesses "oriental flavour". The possibility of its development for utilisation in the American brands of Cigarettes is at present under the Committee's consideration. The "oriental flavour" is generally not liked by English smokers. In order to do away with this flavour, the Committee is making crosses with Amarelo 5, so that if a strain retaining its parental characteristics but without "oriental flavour" is evolved, it may be introduced into U. K. markets.

The Indian Agricultural Research Institute, at New Delhi, isolated Pusa T. 25 and T. 63 among *N. tabacum* varieties and Pusa T. 18 among *N. rustica* for chewing and hooka purposes respectively. Details of the methods of flue-curing of Virginia tobacco were worked out in 1928.

On the Tobacco Research Station at Nadiad, the Bombay Department of Agriculture isolated Gandin 6, Pillu 45, Kellin 28 and Kallu 49, heavy yielding *bidi* and chewing tobacco strains. Attempts are also being made to improve the Nipani tobacco on the Tobacco Research Station at Nipani.

The Madras Department of Agriculture on the Agricultural Research Station at Guntur isolated the high yielding strain T. 20 in *Natu* or country tobacco for *cheroot* and pipe purposes and early maturing strain (HS 9) of Harrison special cigarette tobacco variety which is very popular in India and Pakistan.

The Tobacco Research Sub-station at Guntur for the improvement of the quality of cigarette tobacco found that Jowar (*Andropogon Sorghum*) as a preceding crop to tobacco helped

to improve the quality of cigarette tobacco better than maize and variga (*Panicum Mitisimum*).

The India Leaf Tobacco Development Company, the largest buyers of tobacco in India have been experimenting since 1920, chiefly in the Guntur area (Madras) and also in Saharanpur (United Provinces) and Whitefield (Mysore State), on the commercial possibilities of Virginia tobacco production and have helped to build up the Virginia Tobacco Industry to the position it now occupies.

The cultivation of Virginia tobacco in the Mysore State has increased appreciably during recent years due also to the impetus given by the Mysore Tobacco Company.

MARKETING

The marketing survey of tobacco conducted by the Agricultural Marketing Adviser to the Government of India revealed the urgent need for standardising the methods of grading and preparing tobacco before putting it on the market. With a view to assisting the trade in this direction, the Indian Tobacco Association, which consists of representatives of growers, dealers and manufacturers, was formed at Guntur. Since then, another association known as the East India Tobacco Federation has come into being with the same object in view. Under the Agricultural Produce (Grading and Marketing) Act, rules were framed in 1937, laying down grade designations, definitions of quality, methods of marking and packing for unmanufactured flue-cured and sun-cured Virginia and sun-cured *Natu* (country) tobacco. Grade specifications for unmanufactured sun-cured "Jutty" (Madras), sun-cured *Motahari* (*Nicotiana Rustica*), Jati Bishpath (*N. Rustica*) and Jati tobacco (*N. Tobacum*) all grown in the Bengal area have since been prescribed.

With a view to controlling the quality of tobacco exported from the sub-continent, the Government of India have banned under the Sea Customs Act of 1878 the export of unmanufactured tobacco of flue-cured and sun-cured Virginia, sun-cured *Natu* (country) and *Motahari* Jutty grown in Madras, Jati and Jati-Bishpath grown in West Bengal, Top leaf and White Burley tobacco. An Inspectorate staff was appointed in 1945 consisting of a Chief Inspector and several Inspectors for examining the quality of tobacco and for supervising its grading on the basis of specifications laid down for Agmark grades. The staff was considerably augmented at the beginning of 1945. A panel of members from the trade has also been set up to settle disputes between the Inspectorate and the authorised packers in respect of the quality of tobacco. The total quantity of tobacco graded during the year 1948 was 93,034 bales valued at 11.6 million rupees. The details and particulars of tobacco graded during the period May to December 1948, for which figures are available, are as under:—

| | |
|-----------------------------|-----------------|
| Flue-cured tobacco | 27 million lbs. |
| Sun-cured Virginia | 3 " " |
| Sun-cured <i>Natu</i> | 4.5 " " |

| | |
|----------------------|------------------|
| Jutty | 1.5 million lbs. |
| Madhavi | 12,500 lbs. |
| Top leaf | 23,000 |
| White Burley | 0.5 million lbs. |

Another important aspect of marketing improvement is the regulation of markets. Attempts at regulating the market charges for tobacco have been made only in Madras so far, where the provisions of the Madras Commercial Crops Markets Act were applied to tobacco in Guntur District and Bezawada taluq of Kistna District in 1939. In this connection, the Guntur Tobacco Market Committee was set up in the same year, and this Committee took up the regulation of market practices regarding weighing, trade allowances and methods of sale. Market yards have been opened by the Committee where the growers and dealers are given facilities for transacting their business in tobacco. This Committee is also attending to the dissemination of market news and propaganda for improving the cultivation of tobacco. The progress achieved so far is not however appreciable and there seems to be clear need for reorganising the organisation in Guntur.

As a first step towards improvement in the present system of marketing of tobacco in India, the Indian Central Tobacco Committee, in collaboration with the Government of Madras, under the provisions of the Commercial Crops Market Act, is contemplating to organise from 1950 marketing season open sales system of compulsory buying and selling of tobacco in auction floors of specified markets in 4 centres of the Guntur district (Madras), so that the grower may get fair price for his produce. A co-operative scheme for marketing of tobacco, including redrying with facilities for loan to small growers, immediate cash part payment for the leaf brought to the market yards and cold warehousing in case the tobacco is not sold, is also under consideration by the Committee. With a view to popularise Indian tobacco in European countries, find out its sales and keep the Indian Exporters informed about its position in those countries from time to time, the Committee has appointed a Sales Officer in the U.K.

PRODUCTION

Indian production is concentrated in 4 clearly defined areas.

(1) **THE GUNTUR AREA** comprises the districts of Guntur, Kistna and adjoining portions of Hyderabad State. Varieties of *N. tabacum* are exclusively grown in this area. Prior to the introduction of the curing of Virginia tobacco in 1928, all the tobacco was sun-cured. The tobacco produced in this area is grouped into (i) Virginia:—(a), Flue-cured (b), Sun-cured, (ii) Country or *Natu* tobacco, invariably sun-cured. In the first group, Harrison Special and in the second group *Phoka Aka*, *Kara Aka* varieties are important. Flue-cured tobacco is being used in the sub-continent and is also exported to the United Kingdom and Egypt for the manufacture of cigarette and pipe tobacco. The sun-cured Virginia and *Natu* tobacco are used for making cheaper cigarettes, etc.

The soils are deep, heavy black cotton soils and rich in lime. Tobacco seed is sown in August and seedlings are transplanted from October to November. The crop is grown invariably with the help of irrigation and is harvested from January to March. The flue-cured Virginia tobacco is marketed from January to April while the sun-cured Country and Virginia tobaccos are marketed from March to June. There are nearly 6,000 flue-curing barns and the Virginia tobacco is cured by means of artificial heat radiated from hot iron pipes arranged on the floor of the barn. The sun-curing is done by stringing the leaf to jute twine and curing them on racks pitched on the open field for drying in the sun.

To the Indian Leaf Tobacco Development Company Ltd. goes the credit for establishing the industry of Virginia tobacco production and for assisting the growers in seed and seedling distribu-

tion, research and propaganda in manurial requirements, proper methods of curing and ensuring a market for the tobacco by buying the major portion of the production.

(2) **THE NORTH BIHAR AREA** comprises the districts of Muzaffarpur, Darbhanga and Purnea. In this area both the *N. tabacum* and *N. rustica* varieties are grown in the proportion of two-thirds to one-third. A major portion of the production of *N. tabacum* is utilised for chewing, while a fairly large quantity is bought by cigarette manufacturers in the sub-continent. The production from *N. rustica* is utilised for hookah purposes.

The soils are light, ash-coloured, deep, and of Gaugetic alluvium, rich in lime generally and in potash in isolated areas. The raising of seedlings commences in August and transplanting in October-November. The crop is generally not irrigated. Harvesting begins in February-March and the produce is ground-cured. It is marketed from April to the middle of June.

(3) **THE CHAROTAR (GUJARAT) AREA** comprises Anand, Borsad and Nadiad talukas of Kaira district and Petlad and Bhadrav talukas in the former Baroda State. This area is grown wholly with varieties of *N. tabacum*, chief among which are (i) *Gandhi*, (ii) *Piliu*, (iii) *Kelva*, (iv) *Kaku*, (v) *Saipuri*. Of late, attempts are being made to grow a few acres under *Calcutta* variety of *N. rustica*. The first three varieties of *N. tabacum* provide the *bidi* tobacco, while *Kaku*, being irrigated with well water rich in salts (Nitrates), is eminently suited for *hookah* and snuff purposes. *Saipuri* is used extensively for chewing. Besides, the Bombay Department of Agriculture and the former Baroda State have worked for the introduction of Virginia tobacco cultivation in the area. The Virginia tobacco was successfully cultivated and cured over about 100 acres and serious attempts are being made to extend the area under this type.

The soils are light sandy loams to dark coloured heavy clays. Sowing is done in July and planting of seedlings in August. *Piliu* and *Kelva* are grown without irrigation while *Gandhi* is grown dry or irrigated. *Kaku* and *Saipuri* are irrigated. The crop is harvested in December-January. The leaf is either air or ground-cured. The tobacco is sold from the latter half of December to the end of June with the peak period in March and April.

(4) **THE NIPANI AREA** includes the Belgaum and Satara districts of Bombay along with Kolhapur, Sangli and Miraj. In this area varieties of *N. tabacum* viz. *Milja*, *Saundli*, *Nipani*, *Jacari*, *Kara Baglani* and *Sarkis* are mainly grown. Of the varieties of *N. rustica*, *Pandharpuri* is the one which is most widely grown. Except for the tobacco produced on the riverine soil, which is used as *hathpan* for chewing, all the

tobacco is converted into *Jarda* or *bidi*. The *Pandharpuri* tobacco is very strong, while the *Nipani* tobacco is very mild and sweet.

The soils are of trap and alluvial slate origin, black and deep heavy clays, though tobacco is grown on a small area on the red loams. The nurseries are sown in the middle of June and the planting is done in the first week of August. The crop is harvested in January and is ground-cured. Supply of tobacco to the market is greatest in February and March and starts dropping by June.

Most of the tobacco exported from the sub-continent to Aden and other near-by areas is from the Charotar and Nipani areas. Apart from these two important areas, each Province and State grows a fairly large quantity of tobacco mostly consumed in the respective areas themselves, and attempts are in progress, through *ad-hoc* committees established for the development of tobacco to grow several different types, e.g., cigarette, *bidi*, *hookah*, chewing and snuff tobaccos upto the limit of the areas' requirements in the first instance. The Indian Council of Agricultural Research, New Delhi, and the Indian Central Tobacco Committee, have been rendering great help in this direction.

MANUFACTURED PRODUCTS

Tobacco is manufactured into many different products for different purposes. The importance of the manufactured products can be gauged by the ex-factory value of the products mentioned below. The figures in brackets show the value of the product in crores of rupees.

[NOTE.—Values for manufactured products are given for undivided India, as separate figures for the Indian Dominion are not yet available.]

(i) *Hookah* (9.60), (ii) *Cheroots* (9.20), (iii) *Bidis* (7.52), (iv) *Cigarettes* (5.86), (v) *Chewing* (3.02), (vi) *Snuff* (1.53), (vii) *Cigars* (0.15) (Total=36.88).

Apart from cigarettes, the other tobacco products are prepared with little or no standard machinery, leaving room for mushroom manufacturers thus leading to a great variation in the quality of products. Standardisation which is becoming necessary is now engaging the attention of the manufacturers.

In 1946-47 tobacco worth Rs. 277 lakhs was imported through the two Dominions, representing a decrease of 23 per cent as compared with the value of imports in 1945-46. The total value of the tobacco exported from the two Dominions in 1946-47 was Rs. 592 lakhs as against Rs. 188 lakhs in 1945-46, i.e. an increase of 220 per cent.

INDIA

The area and production of tobacco in the Indian Dominion is as follows:—

| Excise collectorate | Acreage | YIELD | | | | | Total yield |
|------------------------|---------|------------|-------------|-----------|--|-------------|-------------|
| | | Flue-cured | Air-cured | Stalks | Quantity retained for personal consumption by growers | | |
| | | lbs. | lbs. | lbs. | lbs. | lbs. | |
| MADRAS .. | 274,744 | 83,632,326 | 120,748,292 | 5,199,648 | 4,746,820 | 214,327,066 | |
| BOMBAY .. | 143,291 | 5,924 | 86,136,378 | .. | 1,122,814 | 87,565,116 | |
| CALCUTTA .. | 48,799 | 1,092,965 | 56,306,324 | 1,281,351 | 3,148,872 | 61,829,512 | |
| ALLAHABAD .. | 35,139 | 80,421 | 53,033,333 | 1,904,390 | 4,184,883 | 59,293,627 | |
| DELHI .. | 12,660 | .. | 9,538,426 | 384,367 | 2,708,401 | 12,631,194 | |
| SHILLONG .. | 636 | .. | 361,735 | .. | 113,068 | 474,803 | |
| TOTAL .. | 515,269 | 84,811,636 | 326,425,088 | 8,859,756 | 10,024,858 | 436,121,538 | |

THE VEGETABLE OIL INDUSTRY

DURING the last ten or fifteen years the production of oil seeds in the former Indian Empire, now split up into Indian Dominion and Pakistan, has remained stagnant at about 7,000,000 to 8,000,000 tons. The world production, on the other hand, showed a definite increase from about 24,000,000 tons in 1930 to about 30,000,000 tons in 1939, when the Second World War started. Statistics of production in several important producer countries being unavailable since then, world production cannot be estimated with any accuracy at the present time. Before the Second World War, the Eastern group of countries consisting of China, India and the Indonesian Group of Islands accounted for nearly three-quarters of the world production of oil seeds. The Japanese war having cut off this source of supply to the American continents, the United States of America, Canada, Brazil and Argentina increased their efforts to become self-sufficient in their needs for vegetable oils. This growth is illustrated in Table No. 1 below.

PRODUCTION OF OIL SEEDS IN NORTH AND SOUTH AMERICAS
Ref.: Reviews of Frank Fehr & Co., London. Figures in 1,000 tons

| CROP | 1932 | 1933 | 1934 | 1935 | 1936 | 1937 | 1938 | 1939 |

| Groundnut | 497 | 461 | 525 | 614 | 631 | 627 | 705 | 568 |
| Cotton Seed | 4,600 | 4,475 | 3,850 | 3,500 | 3,260 | 5,017 | 4,024 | 5,276 |
| Soya Bean | 355 | 290 | 476 | 991 | 703 | 1,008 | 1,540 | 2,341 |
| Sunflower Seed | .. | .. | .. | .. | .. | .. | 241 | 270 |
| Castor Seed | .. | .. | .. | .. | .. | 120 | 126 | 125 |
| TOTAL | 7,980 | 6,772 | 6,445 | 7,540 | 6,302 | 8,980 | 8,414 | 10,548 |

| CROP | 1940 | 1941 | 1942 | 1943 | 1944 | 1945 | 1946 | 1947 |
|----------------------|---------------|---------------|---------------|---------------|---------------|---------------|---------------|---------------|
| Linseed | 1,872 | 2,519 | 2,992 | 3,096 | 2,403 | 1,828 | 1,700 | 2,361 |
| Groundnut | 804 | 757 | 1,338 | 1,240 | 1,171 | 1,070 | 1,049 | 1,112 |
| Cotton Seed | 4,799 | 6,255 | 6,076 | 5,735 | 6,067 | 4,708 | 4,471 | 5,094 |
| Soya Bean | 2,139 | 2,858 | 5,624 | 5,244 | 5,166 | 5,135 | 5,391 | 4,858 |
| Sunflower Seed | 325 | 426 | 707 | 436 | 1,074 | 1,032 | 925 | 712 |
| Castor Seed | 117 | 222 | 200 | 250 | 170 | 182 | 167 | 169 |
| TOTAL | 10,056 | 13,037 | 16,937 | 16,001 | 16,051 | 13,955 | 13,703 | 14,296 |

Though there has been a phenomenal growth in oil seeds production in the American continents, the total world production has not however increased proportionately since the beginning of the Second World War as there has been a corresponding fall in the Eastern countries. The cessation of hostilities in 1945 has not improved the situation since political

conditions are still unstable in two countries, China and Indonesia. Russia, whose annual pre-war production was nearly 4,000,000 tons, has not published any figures of production since 1941. Therefore, until statistics of production of these areas are again available, one cannot correctly gauge the extent of the present world production.

OIL SEEDS PRODUCTION IN INDIA

| | TONS IN THOUSANDS | | | | |

MARKET PRICES

For several years before the beginning of the War, there had been a world depression. Prices in the international oil seeds markets had been dropping since the boom created by the

First World War spent itself and the prices reached their lowest levels in 1933-34. There was a temporary recovery but again prices began to drop in 1937 till the beginning of the Second World War. During the war period, the open international market disappeared. Almost all

governments introduced price controls as also controls on imports and exports. Whatever trade was conducted was through the respective governments. Internal prices were however uncontrolled till 1943 and even then, it was introduced only in regard to copra and coconut oil imported from Ceylon. As a result of general inflation, increased demands, shortage of production, prices of oil seeds rose steeply. This is illustrated graphically in Figures Nos. 1 and 2. In the Bombay Market, groundnuts rose from about Rs. 124 per ton in August 1939 to Rs. 695 per ton in July 1947. In the Cochin Market, copra rose from Rs. 148 per ton in August 1939 to Rs. 1,550 in November 1946. In the case of Mawrah seeds, the Bombay Market showed a rise of over seven times the pre-war prices.

Even though the price of oil seeds has increased far more than either the cost of living or the general level of prices published by the Economic Advisor to the Dominion Government, the production of oil seeds has not increased appreciably. This is to some extent due to the restrictions imposed by Government on the sowing of crops other than cereals.

PRODUCTION OF OIL SEEDS

As the former Indian Empire was split up practically overnight into the two independent States of the Dominions of India and Pakistan in August 1947, no statistics are available regarding the state of the vegetable oil industry in the two States. There is, however, no doubt the industrial development of each unit will be affected to a considerable extent. Further, it is too early to forecast what effect the mass migration of millions of people from one State to another will have on each State. Therefore, the following analysis based on available statistics of the former Indian Empire is to be considered as only a rough one.

The principal oil seeds of India and Pakistan are—Groundnuts, Cottonseed, Rapeseed, Linseed, Copra, Castor and Sesamum.

Groundnuts.—Of all the oil seeds produced in the sub-continent, groundnut is the most important. It forms over one-third of the total production. It is produced mostly in the Indian Dominion. The annual production is about 3,000,000 tons of unshelled nuts equivalent to 2,100,000 tons of kernels. Being a cash crop, the fluctuation in world prices affects the area devoted annually to this crop. In 1934-35, one of the worst years for groundnuts, the total production was as low as 1,884,000 tons of unshelled nuts.

Madras Province produces nearly 45 per cent. of the total production, followed by Bombay 25 per cent., Hyderabad State 20 per cent., and the rest of the sub-continent 10 per cent. As a result of the expansion of the Vannaspathi industry and increased demand attempts are being made to extend the area of cultivation of groundnuts in U. P. and the two Punjab.

A considerable quantity of nuts are used for edible purposes. Before the Second World War, India was one of the principal exporting countries in groundnuts. During the war, an impetus was given to the crushing industry as Government banned free export in order to conserve groundnut cake as cattle feed and fertiliser and encouraged the manufacture of Vannaspathi, popularly known as Vegetable Ghee. Though no statistics of ground nut crushing are available, an idea of the rapid growth of the industry can be obtained from the large number of expellers of indigenous manufacture installed during the war.

After an exhaustive inquiry, the Central Agricultural Department estimated that 840,000 tons of groundnut kernels were crushed annually prior to the war. For the last four years a conservative estimate would be about 1,400,000 tons, yielding about 545,000 tons of oil and 825,000 tons of cake. About

140,000 tons of oil are used by the Vanaspathi Industries, 350,000 tons of oil for edible purposes either as straight cooking oil by the poorer classes or as an adulterant to the costlier sesamum oil and 55,000 tons for industrial purposes such as making soaps, lubricants, etc. The cake is used for feeding cattle and as fertilisers.

Cotton Seed.—Though the sub-continent produces nearly 2,000,000 tons of cotton seed annually, the crushing industry had ignored till lately the possibilities of this raw material. The export market also had not taken much notice of it. The Dominion of India produces about 16,000,000 tons and Pakistan about 400,000 tons. As both Sind and Western Punjab are deficient in other oil seeds, what little crushing of cotton seeds was done in the sub-continent during the last fifteen years was in this area. With the partition, it is to be expected that Pakistan will exploit cotton seed crushing to the fullest extent so that cotton seeds will hereafter provide lint for medical dressings, hydrogenated oil for human consumption and nutritive oil cake for the cattle.

If the findings of the Special Committee appointed by the Indian Government to conduct a concerted programme of research on the food value of Vanaspathi are in favour of its development, rapid development of cotton seed crushing in the Indian Dominion may also be expected in future. In the Indian Dominion cotton seed is being used as straight cattle feed. This is a source of national waste of millions of rupees as the lint and the oil content of the seed have no food value for cattle.

An important reason for the unpopularity of cotton seed with oil millers is the fact that it requires special preparatory machinery known as delinters to prepare the seed for crushing and special tempering apparatus to remove the gossypol from the cake. If these precautions are not taken, not only will the oil be of a poor quality but the cake will not be of use as cattle feed. In cold pressing of cotton seed, gossypol would be retained in the cake making it unfit for feeding cattle.

Rapeseed.—Several varieties of Rapeseed are grown in Pakistan and the Dominion of India. The total pre-war production in the two States was about 1,000,000 tons. Statistics of undivided India indicate that nearly one-eighth of the total area under Rapeseed has gone to Pakistan and the rest has remained in India. Of the many varieties, Mustard is not only the most popular but is the most highly valued. Other varieties are Toria, Taramira and Sarson.

Mustard oil is used as a cooking oil all over the north. Rape oils are used to a great extent for adulterating the Mustard oil. As it makes a good lubricating oil, it is used as such in the outlying crushing mills, gunning factories and other small industrial establishments where it is locally available and the mineral lubricating oils are costlier due to transport. About 800,000 tons are estimated to be crushed annually.

Copra.—Though the coconut palm is well known in many parts of the sub-continent the production of milling copra is confined to the south-west coast of the Indian Dominion comprising South Kanara, Malabar, Cochin and Travancore. No statistics of production have been published at any time for copra.

The Agricultural Marketing Department of undivided India after an exhaustive inquiry estimated that the annual production was about 200,000 tons prior to the outbreak of the Second World War, and three-fourths of this quantity was crushed to produce coconut oil and coconut cake. As the demand for coconut oil was far in excess of the Indian production, considerable quantities of copra and coconut oil were imported from Ceylon, Malaya, Java, Seychelles and East Africa. The copra crushing industry on the south-west coast where milling copra is produced, though widely developed, cannot be considered satisfactory, as the machinery employed is of an antiquated type with the result that a high percentage of oil

is retained in the oil cake. Bombay in India and Karachi in Pakistan have, however, a better organised crushing industry with modern oil expellers for extraction. These centres are, however, entirely dependant on imported copra.

The Indian Central Coconut Committee estimate that the quantity of indigenous copra crushed in 1945-46 is 176,000 tons and that of Ceylon copra is 75,000 tons. Of the 158,000 tons of oil produced thereby, they further estimate that 36,000 tons was consumed in the soap industry, 47,000 tons were used in the manufacture of toilet articles, 70,000 tons were used for edible purposes, and the balance of 5,000 tons for other sundry purposes. As coconut cake is entirely used for feeding cattle in this country, it follows that all the 85,000 tons produced from the crushing of 251,600 tons has been consumed for that purpose.

In the year 1941-42, the sub-continent attained the peak in her imports of copra and coconut oil amounting to an equivalent of 184,000 tons in terms of copra. As political conditions became more stable in Indonesia, there is every likelihood of increasing imports in the coming years.

Linseed.—The production of linseed in the sub-continent was about 400,000 tons per annum. Pakistan has a negligible production as all the important producer regions are in the Indian Dominion. Central Provinces and Berar account for nearly a third of the production, U.P. a quarter, Bihar and Orissa a fifth and Hyderabad State a tenth. The rest of India accounts for the balance. About half the production was exported before the war and the rest crushed in the country producing about 77,000 tons of oil and 133,000 tons of cake. The paint and varnish industry of the country, being still undeveloped, consumes only a third of this production. A small quantity is used for edible purposes in the immediate vicinity of the producing centres and the balance exported. The major portion of the linseed cake was exported before the war, as the European dairy farmer values it highly for feeding milch cattle.

Sesamum Seed.—The annual production of Sesamum or Til seed is about 400,000 tons. It is grown in most parts of the Indian Dominion, U.P. and Madras being the largest, and accounting for one-fourth and one-fifth of the production respectively. Both for edible purposes and for toilet use it is more highly appreciated than any other vegetable oil. The Til cake too is extremely popular for feeding both milch and draught cattle. The high market value of the products and its availability all over the country have made it the most popular seed for the village oil-monger for crushing in his *ghani*. It is estimated that over 300,000 tons are crushed in the *ghanies* and oil mills annually.

Castor Seed.—The annual production is about 140,000 tons, of which Hyderabad State produces more than half. The Province of Madras produces about 30,000 tons and the balance is accounted for mainly by Mysore and Bombay. Before the war, more than half the crop was exported but after 1942, the heavy military demand for castor oil gave an impetus to the crushing industry. Now, nearly 120,000 tons are crushed in the country yielding 44,000 tons of oil and 72,000 tons of cake. It is estimated that 30,000 tons are used for lubrication, 4,000 tons for medicinal purposes and the balance for industrial purposes such as manufacture of textile oils, soaps, etc. The cake, though useless for feeding cattle, has a high Nitrogen content and hence is used as a valuable fertilizer for sugarcane.

Several other oil seeds are also available in the country, but at the present time the total production of all of them does not exceed 100,000 tons. These are Mawrah, Niger seeds, Kardi seed, Hongay, Neem, etc. There is considerable potential value in several of them as Mawrah yields a very valuable soapmaking oil, Kardi and Niger seeds yield drying oils.

PRESENT POSITION

As there are no authoritative statistics of production for the Vegetable Oil Industry, and whatever information is available is only from indirect sources, it is impossible to get a true picture of the state of the industry today. According to the Agricultural Marketing Reports on Linseed, Groundnuts and Copra, it was estimated that 25 lakhs to 30 lakhs of tons of seeds were crushed annually in the pre-war days. On the outbreak of the war (as has already been stated), not only was the export of oil seeds severely curtailed but there was a very rapid rise in the price of oil seeds, oils and oil cakes. These two factors gave a tremendous impetus to the oil crushing industry. A survey conducted during 1944-45 indicated that nearly 35 lakhs of tons were being crushed annually.

According to the Marketing Reports referred to above, it is gathered that the machinery employed in the crushing industry consisted of 400,000 bullock-driven *ghanies*, 1,000 manually-operated screw presses, 10,000 power-driven rotary mills, 900 expellers, and 75 hydraulic presses. On this basis the block capital invested in the industry would exceed Rs. 12 crores.

The *ghanies* are responsible for crushing nearly 1,000,000 tons of oil seeds. They are spread all over the country, mostly in villages. They are mostly used in crushing sesamum and mustard seeds, as the cold pressed oils of these seeds are sold at a premium on account of their superior flavour. The screw press is mostly used for crushing castor seed as application of heat is necessary to extract its oil. The power-driven rotary mill is popular for crushing copra and rape seed. All these three types of machines, namely, the *Ghani*, the Screw Press and the Rotary Mill were developed in this country and hence the oil miller has not to go far to buy new ones or to repair old ones.

Both the Expeller and the Hydraulic Press were imported into this country during the last forty years. The Expeller is becoming more and more popular for crushing groundnuts and is displacing the other indigenous types. The Hydraulic Press is used for crushing mowrah and cotton seed.

Even though several Indian workshops took up the manufacture of expellers during the war, the large increase cannot be explained unless the earlier surveys were defective.

THE FUTURE

During the last few years, the Central Government has evinced considerable interest in the development of the Vegetable Oil Industry in the country. The Post-War Planning Department of the Government appointed the Oils and Soaps Panel in 1944, to survey the existing state of the industry and to suggest future lines of development. This Committee completed its investigations in 1946 and submitted the results of their survey and their recommendations for the future expansion of the industry.

The Government constituted the Indian Central Coconut Committee under an Act of the Legislature in 1944, with the primary object of fostering the growth of coconut and developing the copra and coir industry. This Committee has already established two Research centres, one at Kasargod, South Kanara and the other at Krishnapuram, Travancore State, for conducting research on the various aspects of the growth of the coconut tree, and also several nurseries for the supply of seedlings of approved variety to the growers. They publish a monthly Bulletin which is of great value to all interested in the copra industry.

Besides the Indian Central Coconut Committee, the Dominion Government has recently constituted an Indian Oil Seeds Committee to develop the growing, marketing

and manufacture of oil seeds and their by-products. One of the fundamental questions which this Committee has taken up for consideration is whether this country should go in for the increased utilisation of oil seeds at home or revert to the pattern of pre-war economy under which oil seeds constituted an important item of the export trade of this Dominion.

VANASPATHI

Though the action taken by the Dominion Government in the formation of these Committees gave considerable encouragement to the Oil Seed Trade and the Vegetable Oil Industry, the Vanaspathi Industry received a set-back early in 1947. The Vanaspathi Industry, though a minor branch of the Vegetable Oil Industry, is one of the most highly organised and efficient industries. Its history is interesting. It started on a small scale in 1930. Then it grew rapidly as shown in the Table below :—

| Year | No. of factories | Sale in sub-continent in Tons |
|--------------|------------------|-------------------------------|
| 1935 | 5 | 18,000 |
| 1936 | 5 | 22,000 |
| 1937 | 5 | 32,000 |
| 1938 | 5 | 40,000 |
| 1939 | 9 | 51,000 |
| 1940 | 11 | 65,000 |
| 1941 | 12 | 84,000 |
| 1942 | 12 | 71,000 |
| 1943 | 16 | 87,000 |
| 1944 | 18 | 103,000 |
| 1945 | 21 | 134,000 |
| 1946 | 21 | 138,000 |
| 1947 | 23 | 96,000 |
| 1948 | 26 | 127,000 |

In 1944, the Government introduced legislation to control the industry by establishing a Vegetable Oil Products Controller and also promulgated the Vegetable Oil Products Control Order. Under this control, the quality of the product was standardised and new factories had to obtain permits before starting operations. The number of factories in 1944 were 18 with a total capacity of 166,000 tons. The Government gave permits to 17 applicants to start new factories, and planned their location both from the point of view of supply of groundnuts and the consuming markets. According to this plan, the capacity of the 35 factories would be 4,500,000 tons by 1950.

Early in 1947, however, the Food Minister raised doubts in the minds of the consuming public about the suitability of Vanaspathi for edible purposes. There was even a threat of the total stoppage of Vanaspathi manufacture, if the experiments that were being conducted at the Biological Institutes of Government proved that it was harmful to human beings. This attitude of Government has introduced an element of nervousness in the Vanaspathi industry. As the capital invested in the industry exceeds Rs. 20 crores and as it employs several thousands of workmen it is obvious that if the Government should take the threatened step, it will produce great distress.

As a result of protests from several quarters the Government has, however, assured the industry that no hasty step will be taken. If the research conducted in the Western countries on the nutritive value of products similar to Vanaspathi can be relied upon, it seems reasonable to expect a favourable report from the Indian Biologists too. The Vanaspathi Industry will then be assured of its place in the Indian Vegetable Oil Industry.

It seems reasonable to expect that the expansion of the Vegetable Oil Industry which began during the war will continue for several years more as the same factors are still prevalent. There is no likelihood of the world shortage in oilseeds, oils and oil products being made up for a long time to come and hence the present high prices are likely to continue.

Further with the active support of the Dominion Government and the rising standards of living in the country, the industry can safely look forward to a long period of prosperity.

The following diagrams show the change in the prices of mawrah seeds and mawrah oil (in Bombay) and copra and C. N. oil (in Cochin) :

(FIG. 1) PRICE MOVEMENT OF MAWRAH SEEDS AND MAWRAH OIL (IN BOMBAY).

(FIG. 2) PRICE MOVEMENT OF COPRA AND C.N. OIL (IN COCHIN)

THE WOOLLEN INDUSTRY

THE Indian woollen industry has a long and illustrious tradition—the shawls of Kashmir have maintained their world reputation for a considerable time—though it was only in the eighteen-seventies that the power loom was first introduced into the woollen industry. That the indigenous handloom woollen industry covering a wide variety of fabrics from fine shawls to coarse blankets or *Kambhis*, to give their Indian name—has not been entirely replaced by the mill industry is itself a tribute to the skill of the Indian worker. The Indian woollen industry has, however, a long leeway to make up before it can either supply the needs of a growing population or satisfy the demand for better varieties of woollen wear.

The first power spinning plant appears to have been the Cawnpore Woollen Mills, established in 1876, followed in 1882 by the New Egerton Woollen Mills, Dhairawal, the Bangalore Woollen, Cotton and Silk Mills also in 1882 which took over a concern known as the Bangalore Woollen Mills and by the Bombay Woollen Manufacturing Company at Dastar in 1888. The mills at Amritsar were chiefly meant for producing carpet yarn. The first world war gave a fillip to the woollen industry, both the mill industry and the handloom industry. After the end of the war, more mills were started, especially during the period 1919-20, and the capital invested in the industry reached the total of nearly Rs. two crores. The war time prosperity, however, proved impermanent and the industry had to face severe competition, especially from Japan.

This will be clear from the fact that, while the total imports of woollen cloth increased between 1931-32 and 1934-35 from 5.5 million yards to 13.7 million yards, imports from Japan alone increased from 1.2 million yards to 7.3 million yards. Representations were made to the Government of India about the need for protecting the Indian woollen industry. The Tariff Board examined the case for protection of the woollen industry in 1935 and recommended a scale of protective duties ranging from four annas per lb. to one rupee per lb., depending upon the class of goods imported. In addition to *ad valorem* duties of 25 to 40 per cent. The Government of India, however, did not accept these recommendations, on the ground that the industry especially the worsted branch depended upon imported raw materials and therefore, was not entitled to protection. As regards the woollen branch the Government of India felt that the Board's recommendations were vitiated by the fact that an important section of the industry had failed to appear before the Board to tender evidence. The only recommendation that was accepted by the Government was of a minor nature and related to the need for technical advice and assistance to the small-scale woollen industry. The Government of India made a grant of Rs. five lakhs with a view to helping this section of the woollen industry.

The outbreak of World War II hit the Indian woollen industry in a variety of ways, the most important of which was the industry's difficulties in getting supplies of yarn. The power loom weaving mills in Amritsar and Ludhiana, producing shortings, light weight suitings and shawls, were particularly depressed, owing to shortage of yarn, though some relief was later provided to the mills, thanks to imports of yarn from the U.K. and Australia arranged by the Government of India. The war-time demand, however, provided a fresh impetus to the industry and the annual out-turn per shift increased from seven million lbs. before the war to nearly 16 million lbs.

PRESENT POSITION

There are three main groups of mills, those which operate both woollen and worsted systems, those with woollen or worsted systems only, and lastly, the Amritsar group of mills which

purchase ready spun yarn, and from that stage occupy themselves in weaving, dyeing and finishing.

Among the first group, the Cawnpore Woollen Mills and the New Egerton Woollen Mills, Dhairawal each with more than 15,000 spindles and operating both woollen and worsted systems, are the largest units in the sub-continent at the present time. Raymond Woollen Mills, Bombay, are recorded to have 13,280 spindles in 1946 of which a large proportion are worsted spindles.

The present output of the industry is difficult to estimate, in view of the paucity of statistics. Production in 1948 is estimated at over 20 million lbs. But this figure does not include the production of small-scale and cottage industry units.

At the outbreak of the war (1939) there were fourteen woollen mills in the sub-continent, and adding the Amritsar units erected later the total capital employed has been estimated at Rs. three to four crores.

Of the fourteen mills, four were fitted out for woollens and worsted, one was purely a worsted spinning mill, while the rest were mainly woollen mills producing rugs and coarse woollen cloth. Two new woollen mills, one at Allahabad and the other at Bangalore were started in 1943 for producing blankets.

The existing capacity of the woollen industry consists of about 50,000 woollen spindles, 37,500 worsted spindles, 2,300 power-looms and 500 handlooms. Out of the 2,300 power looms about 800 power looms were in the Amritsar area. The Amritsar group of mills also had 2,400 woollen and 18,000 cotton spindles while there were about 700 power looms and 4,000 handlooms located in that area, which were not usually working on woollen fabrics. The demand for woollen piece-goods cannot still be met and there is no doubt that there is great scope for extension of production in a number of varieties, particularly finer varieties. It may be mentioned here that the weight of piece-goods imported during 1935-36 to 1939-40, averaged eight ounces to a yard as against the Indian average of 16 ounces to a yard, which indicates the demand for finer varieties of woollen fabrics. There is also a considerable demand for soft blanket and rugs of the type manufactured in Europe. Indeed, the Panel on woollen industry appointed by the Government of India in 1945 estimates that the approximate Indian consumption of mill made woollen fabrics should be at least 60 per cent. more than it was before the war. The following table gives as estimated by the Panel on woollen industries the Indian production, imports and post-war Indian requirements of woollen goods.

| | Annual average of 1936-39. | | | Est. Demand (In million lbs.) |
|------------------------------------|----------------------------|------------------|-------------------|-------------------------------------|
| | Output lbs. | Imports lbs. | Total lbs. | |
| Woollen knitted apparel | 269,000 | 950,000 | 1,219,000 | 2.2 |
| Woollen worsted piece-goods .. | 2,153,000 | 1,347,000 | 3,500,500 | 5.5 |
| Mixtures | 1,413,000 | 74,500 | 1,487,500 | 2.5 |
| Blankets and rugs | 3,635,000 | 2,137,000 | 5,772,000 | 9.4 |
| Worsted yarn | 1,617,000 | 59,000 | 1,676,000 | 3.0 |
| Knitted wools and hosiery yarns .. | 1,169,000 | 430,000 | 1,599,000 | 2.6 |
| Shawls and Lohis | Nil | 672,000 | 672,000 | 1.0 |
| Carpet yarns | Nil | 1,856,000 | 1,856,000 | 3.0 |
| Mechanical cloth | 144,000 | 67,000 | 211,000 | 0.3 |
| Other goods | 700,000 | 334,000 | 1,034,000 | 1.0 |
| Total | 11,100,000 | 7,927,500 | 19,027,500 | 30.5 |

Quality Must Improve.—It will be seen from the above table that the Indian woollen industry has considerable scope for expansion in most varieties of woollen manufacture, the extent of the increase envisaged by the Panel being from 19,027,500 to 30,500,000 million lbs. or about 55 per cent.

Workmanship has improved steadily and a much greater variety of designs is available. But the most striking improvement in woollen yarns and materials however is still confined to medium and coarse qualities, though in worsted and in hosiery yarns and fabrics the tendency towards finer qualities has been more pronounced. It is for this reason that the Panel thinks that the industry would be well advised to concentrate on the following types of goods:

1. Cheap blankets and rugs of the European type using blends containing processed wools;
2. Tweeds and allied fabrics of the cheaper varieties;
3. Light weight worsted; and
4. Mixture cloths and tropicals.

Thus, while the question of increasing the production of woollen materials is an important one, it is no less important that this increase should be accompanied by improvement in quality. There is still much progress to be made before Indian products can compete with the more highly specialised foreign varieties. But this is in a way dependent on improved types of raw material and of machinery being made available to the industry. The finer types of wool, for instance (used for making tweeds, overcoatings, civilian blankets, rugs, and serge waf yarns) have generally to be imported from abroad. One encouraging sign, however, is that experiments conducted in sheep breeding centres in the sub-continent have indicated that it is possible to improve the quality of Indian wool.

It may be mentioned, in this connection, that following the report of the Wool Survey Mission deputed by the International Wool Secretariat which visited the sub-continent early in 1947, the Executive of the Secretariat has set up a branch at New Delhi in order to assist the industry in using more of its own wools by suggesting methods of blending with imported.

grades and also in the task of improving the quality of woollen fabrics made in India. It is noteworthy that the Panel on woollen industry also emphasised the need for starting woollen development sections as a part of the Industries Departments in the different Provinces and States and for making arrangements to train woollen technicians in India and abroad.

A Word of Caution.—The problem of technical re-equipment of the woollen industry depend for its solution on the availability of machinery from abroad. The war-time backlogs in replacements need urgently to be tackled. The Government of India has announced that every facility is being afforded to the industry for importing machinery for replacement purposes while every care is taken to see that the already adequate capacity for production of heavier types of goods is not added to. The Panel on woollen industry, it might be noted in this connection, considered it desirable that "the manufacture of woollen machinery, at least the essential parts, should be established in this country." This question will perhaps be taken up when the efforts now being made in the sub-continent for the manufacture of cotton textile machinery begin yielding concrete results, since the manufacture of woollen machinery has many things in common with the manufacture of cotton textile machinery.

During the war years practically all the mills were fully employed on orders for Government. This resulted in a gradual using up of all stocks available for the general public from the retail shops. At the end of 1946 therefore, when the controls were withdrawn the Mills anticipated a very big demand for the 1947 winter season. In actual fact the demand was overwhelming and it is expected that the demand will remain in excess of supply for some time to come. Doubts, however, have been expressed whether the boom period will last long enough to justify the erection and establishment of new mills in the sub-continent, it is feared that

any new mills erected at the present time of high prices for plant might later find themselves in great difficulties.

COTTAGE WOOLLEN INDUSTRY

The cottage woollen industry, the products of which have maintained through centuries a reputation for quality, is now facing some very difficult problems, such as, lack of facilities for the purchase of raw materials, and equipment, lack of finishing and marketing facilities, lack of standardisation of the products of the industry and absence of adequate technical guidance and finance. The industry suffered much during the pre-war years from the change of fashions and also from competition from shoddy fabrics from Italy and Poland. At the outbreak of the war which brought some prosperity to the industry, there were about one lakh handlooms working in the sub-continent. The wartime prosperity has again proved too short-lived for the cottage woollen industry. Co-operative effort in production and marketing of goods will help to solve some of these problems.

The Panel on woollen industry made two notable recommendations in this respect. In the first place, the Panel recommended that the Provincial and the State Department of Industries should establish carding, designing, dyeing and finishing centres at suitable places. Secondly, the Panel emphasised that the cottage woollen tweed and rug industry which "prospered during the war as a result of scarcity and of high prices can only survive if it turns its attention to the production of exclusive lines of woollen goods, in other words, prestige products." The cottage woollen industry is at present largely engaged in the production of coarse blankets, that is *Kambhis*. However, with suitable financial help and technical guidance the Indian worker, to whose skill the Wool Survey Mission paid handsome tribute during its visit to the sub-continent should be able to turn out better types of woollen fabrics.

Among the different woollen fabrics manufactured on cottage industry basis in the sub-continent, the most important is perhaps the hand made carpets, an industry which can be traced to the early Mughal period. Indian carpets form an important item of the country's export trade and constitute the major portion of the exports of woollen manufactures. In pre-war years, carpets and rugs used to be exported to the tune of eight to nine million lbs. valued at Rs. 80 to Rs. 100 lakhs.

The chief centres of the industry are Kashmir, Amritsar, Agra, Gwalior and Jaipur for high class carpets, Mirzapur and Bhadoi for medium and cheap class carpets, Bangalore and Warangal in the South for druggets. When the demand for carpets is normal the industry employs 30,000 to 40,000 workers on its eight to ten thousand looms.

The industry faces two chief difficulties. In the first place, there is considerable uncertainty in marketability, largely due to the fact that the industry deals in luxury goods, nearly 90 per cent. of which is exported abroad. Secondly, the industry has to compete, on the one hand with cheap machine-made carpets in foreign markets and, on the other, with similar classes of carpets from China and Persia. There would appear to be considerable scope for market research in this field. It must be emphasised here that the sub-continent has all the raw materials needed for machine-made carpets, like wool, cotton and jute, and the cheap "machine-made carpets", such as those which enter into competition with Indian carpets can also be made, provided the requisite types of machinery are imported from abroad. The establishment of this industry, as the Wool Industry Panel has pointed out, "will supplement and not compete with the demand for hand-made carpets and, if properly organised, will open a very useful vista for a considerable volume of exports."

IRRIGATION

THE area under irrigation in India exceeds 69 million acres and is the largest irrigated area in any country of the world. Although on the partition of the country some of the most magnificent irrigation works in the north of the sub-continent went to Pakistan, still the irrigated area left in India is more than twice of that irrigated in the United States of America or in Pakistan. The total capacity of India's canals is over 60,000 miles, and the total capital outlay on irrigation works is over rupees 125 crores.

The geographical situation of India and the rainfall conditions are such that for successful cultivation, irrigation in one form or other is necessary in all parts of the country, where the mean annual rainfall is less than 50 inches.

The chief characteristics of the rainfall in the sub-continent are its unequal distribution over the country. Its irregular distribution throughout the seasons and its liability to failure or serious deficiency. The normal annual rainfall varies from 460 inches at Cherrapunji in the Assam hills to less than three inches in Upper Sind.

The second important characteristic of the rainfall is its unequal distribution throughout the seasons. Except in the south-east of the Peninsula, where the heaviest precipitation is received from October to December, by far the greater portion of the rain falls during the south-west monsoon, between June and October. During the winter months the rainfall is comparatively small, the normal amount varying from half an inch to two inches, while the hot weather, from March to May or June, is practically rainless. Consequently it happens that in one season of the year the greater part of the country is deluged with rain and is the scene of the most wonderful and rapid growth of vegetation; in another period the same tract becomes a dreary, sun-burnt waste.

From the agricultural point of view however, the most unsatisfactory feature of the rainfall is its liability failure or serious deficiency. The average annual rainfall over the whole country is about 45 inches and there is but little variation from this average from year to year, the greatest recorded being only about seven inches. But if

separate tracts are considered, extraordinary variations are found. At many stations annual rainfalls of less than half the average are not uncommon, while at some less than a quarter of the normal amount has been recorded in a year of extreme drought.

Classing a year in which the deficiency is 25 per cent. as a dry year and one in which it is 40 per cent. as a year of severe drought, the examination of past statistics shows that, over the precarious area, one year in five may be expected to be a dry year and one in ten a year of severe drought. It is largely in order to remove the menace of these years that the great irrigation systems in parts of the country have been constructed. In the arid tracts where the annual rainfall is less than 15", no cultivation is normally possible without irrigation.

SOURCES OF SUPPLY

The two sources of water for irrigation are surface flow in rivers and streams and subterranean waters. The development of these supplies may be divided into three classes, viz., canals, storage reservoirs and wells. Under canals are classified all works of any considerable size for diverting the waters of streams or rivers and carrying them on to the land, under storage reservoirs all works for storage of water and carrying them on to the land and all natural depressions of which the water is used for irrigation, and under wells all kind of works giving access to the subterranean supply, or to the waters of rivers which, running deep below the general level of the ground, have to be lifted vertically before they can be made to flow on to the fields. Canals are of perennial, non-perennial or inundation type according as they draw their supplies from the rivers in all seasons of the year, during specified seasons and only when it is in flood respectively.

The supplies for irrigation are obtained, in the great plains of Northern India and the deltaic areas of Madras, by diversion barrages and in the hills of Central Provinces and Southern India by storages. In Northern India also with the almost full utilisation of available perennial supplies, several multipurpose storage

projects are now contemplated and some of them are actually under construction. Throughout India irrigation from wells is practised on a large scale. In the United Provinces a system of state-managed tube-wells has been introduced in the Ganga Canal Area, worked by power generated at falls in this canal. This type of irrigation is receiving great impetus in the short term plans which aim at making India self-sufficient in food within the shortest possible time.

GROWTH OF IRRIGATION

Irrigation in India has been practised from ancient times but it is mainly during the past 100 years that extensive state-controlled works have been constructed extending benefits of irrigation to vast areas.

A start was made early in the nineteenth century when three important indigenous irrigation works, viz., two canals from river Yumuna, and the Cauvery Delta System (Madras) were remodelled and irrigation facilities extended over large areas. The success obtained on these systems led to the construction, one after another, of the many big projects of diversion of river flow for irrigation purposes and of some storage works also. In India today we have a vast net work of canals in the United Provinces, East Punjab, deltaic areas of Madras and some parts of Bihar. There are about 116 high dams distributed mainly in Bombay, Central India and Southern India. It is interesting to note that the number of all storage works—big or small exceeds 35,000 in Madras and 25,000 in Mysore State.

There has during the last sixty years, been a steady growth in the area irrigated. The area irrigated in 1915-46 from all sources was 48.4 million acres (excluding some states for which figures are not available), which is 20 per cent of the net area sown.

The area irrigated in 1945-46 by Government works was the largest in Madras where it was 6.37 million acres. The United Provinces came next, with an area of 5.95 million acres, followed by East Punjab with an area of 3.67 million acres.

IRRIGATION STATISTICS

TABLE I

SHOWING NET AREA SOWN, AREA IRRIGATED IN TRIENNium 1942-43 TO 1944-45, AND AREA IRRIGATED DURING 1945-46 IN EACH ADMINISTRATIVE UNIT:

| Name of Unit. | Net area sown in 1945-46 in acres. | Average area irrigated in triennium 1942-43 to 1944-45 in acres. | Area irrigated in 1945-46 in acres. | Name of Unit. | Net area sown in 1945-46 in acres. | Average area irrigated in triennium 1942-43 to 1944-45 in acres. | Area irrigated in 1945-46 in acres. |

FINANCES

Irrigation works are divided into three classes, viz., productive, unproductive and minor works.

Productive.—A productive work is one, the net revenue of which within ten years from the date of its completion is sufficient to cover its working expenses and the interest charges on its capital cost. The rate of interest on the capital outlay of works constructed during the different periods have been varying. For works sanctioned before 1st April 1919, the rate is 4 per cent. for works sanctioned between the 1st April 1919 and 1st August 1921 it is 5 per cent. and for works sanctioned between 1st August 1921 and 31st March 1937 it is 6 per cent. For works sanctioned after 1st April 1937,

i.e. after the introduction of the Government of India Act, 1935, different percentages have been adopted in different parts of India. In most of the provinces, the rate is now 4 per cent. but there has been a strong feeling that this percentage should be reduced further even below the present rate of interest to take into account the indirect benefits which irrigation projects bring to the community and the Government. Productive works are financed either from the general revenue or more often from funds raised on Government security. Such loans stand as public debt against the administration concerned till cleared from surpluses of revenue in accordance with the rules in force. Most of the largest irrigation works in India belong to this class.

Unproductive works are those which yield a net revenue which is less than the percentage fixed for productive works. They are constructed primarily with a view to protection of precarious tracts and to guard against the necessity for periodical expenditure on relief of the population in times of famine. They are financed from the current revenues, generally from the annual grants for famine relief and insurance.

Minor. These are small works for which detailed capital or revenue accounts are not maintained. Such works may be productive or unproductive.

Table IV shows the financial results of productive and unproductive works upto the end of the year 1945-46 in the provinces only.

TABLE IV

| Name of Province. | PRODUCTIVE WORKS | | | UNPRODUCTIVE WORKS | | | TOTAL PRODUCTIVE & UNPRODUCTIVE | | |
|-------------------------------|---------------------------------------|--------------|-------------------------------|---------------------------------------|--------------|-------------------------------|---------------------------------------|--------------|-------------------------------|

| Minor Administrations | ... | ... | ... | 29,62,744 | 22,870 | 0.77 | 29,62,744 | 22,870 | 0.77 |
| Total | 44,93,42,708 | 4,04,71,096 | 9.01 | 42,77,86,511 | 77,91,549 | 1.82 | 87,71,29,219 | 4,82,62,645 | 5.59 |

* Total sum at charge.

In addition capital outlay in States exceeds rupees 30 crores for which details are not available.

The sum of rupees 87 crores is not however, a correct estimate of the present value of irrigation works in India. If these works were to be constructed today they would cost about three or four times as much.

CHARGES FOR WATER

Charges for water supplied for irrigation from Government canals, etc., are levied at different rates and in different ways in the various administrations. In most areas water rate is paid separately from land rent according to the area actually irrigated and matured, the rate varying with the crop sown. In some, notably areas in Hyderabad, on minor works in Bombay and wet lands in Madras and Southern Orissa, assessment for irrigated crops includes both land rent and water rate. Other methods of assessment based mostly on the quantity of water supplied, have been tried but the average cultivator in the country fully understands the principle of "No crop, no charge" and has little confidence in any system in which the liability of water charges is independent of the area and the quality of the crop sown.

A different system of assessment is in force in parts of West Bengal, Central Provinces and for long leases and Kharif season leases in Bihar,

where a cultivator pays a small rent for a term of years whether he takes water or not. In these areas the normal rainfall is high and irrigation is required only occasionally, when the rains fail or are delayed. Here the cultivator really pays a small annual premium to ensure that he can get water whenever he requires it.

Perennial block system is in force on major irrigation works in the Deccan. There are six-year sugarcane blocks which are demarcated into suitable plots in which the irrigator is allowed to have sugarcane to the extent of one-third of the area of the block and the rest of the area can be put under any seasonal crop in the monsoon and rabi seasons. There are also two seasonal blocks, which run for six years at a time and in which the irrigator is entitled to grow seasonal crop in the monsoon and rabi season. In addition there are six year garden blocks and 30 years' agreements with sugar factories to give them water for specified areas of sugarcane with specified inch-depth. All these

constitute fixed commitment on Deccan Canals for which water has to be earmarked for each season. Any additional supplies during monsoon or rabi can be sanctioned for additional monsoon and kharif crops on application. Water rates are assessed on a seasonal basis for various types of crops.

By far over the greater part of the country water is paid for separately, the area actually irrigated is measured and a rate is charged per acre according to the crop grown. Lower rates are often levied in case where irrigation is by "lift", that is to say where the land is too high for the water to flow on to it by gravity and consequently the cultivator has to lift it on to his field.

The rates charged are different in each administrative unit and often vary considerably from canal to canal in a single unit. Water rates on some important crops as assessed in some provinces and states are as given under :-

| Name of Province or State. | Name of Crop. | | | | | |
|----------------------------|---------------|--------------|--------------|-------------|--------------|---------------------|
| | Sugarcane. | Rice. | Cotton. | Wheat. | Maize. | Pulses and Millets. |
| | Rs. a. p. | Rs. a. p. | Rs. a. p. | Rs. a. p. | Rs. a. p. | Rs. a. p. |
| East Punjab | 9 0 0 | 6 8 0 | 3 8 0 | 4 4 0 | 3 12 6 | 2 8 0 |
| | to 11 1 6 | to 6 8 10 | to 5 4 0 | to 4 4 7 | to 4 4 0 | to 3 4 5 |
| Madras | 7 8 0 | 6 4 0 | 3 2 0 | | 3 2 0 | 3 2 0 |
| | to 12 0 0 | to 10 0 0 | to 10 0 0 | | to 10 0 0 | to 10 0 0 |
| United Provinces | 5 0 0 | 4 0 0 | 2 8 0 | 3 0 0 | 3 0 0 | 2 8 0 |
| | to 12 0 0 | to 7 8 0 | to 5 8 0 | to 5 0 0 | to 5 0 0 | to 3 4 0 |
| Hyderabad | 27 0 0 | One crop | | | | |
| | to 33 0 0 | 11 0 0 | | | | |
| | | to 13 8 0 | | | | |
| | | Two crops | | | | |
| | | 17 0 0 | | | | |
| | | to 18 0 0 | | | | |

Taken as a whole, irrigation is offered on extremely easy terms, and the water rates represent only a very small proportion of the extra profit which the cultivator secures from the water he receives.

IRRIGATION RESEARCH

Contributions from India to Irrigation Science are not inconsiderable. There are at present, including Ceylon, nine research organisations in the country which carry out research and model experiments on problems confronting engineers in the field of irrigation, canal and river engineering.

Experimental research in India, in connection with irrigation, is of recent origin and the first in the field was Bombay, where a Hydrodynamic Research Station was opened on a small distributory near Poona in 1920. As the supply of water available for experiments was limited at this place, the station was shifted in 1934 to Lake Fife at Khadakvasla. The station was taken over by the Government of India in 1937, to assist irrigation and river training research problems from all parts of India and was renamed as the Central Waterpower Irrigation and Navigation Research Station early in 1948. In order to meet the increased demand for research facilities from the Central, Provincial and State Governments, the station is now under expansion. When reorganised, the station will comprise nine sections, viz. (1) River and Canal Hydraulics, (2) Navigation, (3) Soils and Soil Mechanics, (4) Concrete and Materials of Construction, (5) Mathematics, (6) Statistics, (7) Physics, (8) Chemistry and (9) Hydraulic-Machine Testing. The Bombay Government however,

continues to maintain a separate research station where *inter alia* the problem of the disposal of untreated sewage of Poona by irrigation methods continues to be examined and developed.

The Research Organisation in the Punjab was opened in 1925. In the U.P. in 1930, in Mysore and Bengal in 1944, Madras in 1944 and Hyderabad in 1945.

The research work done at all these stations is co-ordinated by the Central Board of Irrigation.

Some of the outstanding achievements in Research include (1) Design of earthen channels so that they may neither silt nor scour, (2) Devices of silt exclusion, (3) Theory of sub-soil flow for the safe construction of hydraulic structures on permeable foundations, (4) Methods dealing with scour caused by falling water, (5) Siphons for the automatic release of flood surplus water from storage reservoirs, and (6) what is perhaps the most important, the automatic and equitable distribution of water on a scale not known elsewhere in the world.

IRRIGATION ORGANISATIONS

Besides the Irrigation Departments of various Provinces and States, there are three Central bodies dealing with Irrigation matters, viz., the Central Waterpower, Irrigation and Navigation Commission, the Central Board of Irrigation and the Central Groundwater Organisation.

The Central Waterpower, Irrigation and Navigation Commission was set up by the Government of India in 1945 with the object of initiating, co-ordinating and furthering, in consultation with the Provincial and State Governments concerned, schemes for the control, conservation and utilisation of water resources throughout the country, for purposes of water-power generation, irrigation, navigation and flood control, and if so required, the construction of new schemes. The Commission is a strong technical organisation and consists of one Chairman, two full time members, a Chief Designing Engineer and other technical and administrative staff. They have at present the Hirakud Dam Project under construction and many others like Kosi Dam under investigation.

The Central Board of Irrigation which was set up in 1931, is a central organisation which has as its members all Irrigation and Hydro-electric Chief Engineers of all administrations in India. It is the function of this Board to co-ordinate research on irrigation and allied subjects conducted at all the irrigation research stations in India and Ceylon. Meetings of the Board and its Research Committee are held annually. The Research work carried out during each year and other technical papers and problems are discussed and published in the Annual Reports (Technical). In addition the Board also publishes a Quarterly Journal,

Monthly Abstracts of the literature received in the Library, Popular Series Leaflets and Books on various technical subjects. The Board maintains one of the finest libraries on Irrigation, Hydro-electric and Allied subjects where enquiries from engineers in India and abroad are dealt with.

The Board is also the National Committee in India for the International Commission on Large Dams and also the liaison body for the International Association of Hydraulic Structures Research. It deals with all research work on irrigation, soil mechanics and allied subjects and keeps reciprocal contacts with foreign bodies dealing with such problems.

The Central Groundwater Organisation established in 1946 is under the administrative control of the Ministry of Agriculture, Government of India. It was established in connection with the drive for "Grow More Food Campaign" and its objectives include: (a) assisting provinces and states in securing materials for executing tubewell projects and training their personnel in the use of equipment, (b) assisting where required in actual construction of tubewell projects, and (c) collecting and co-ordinating information available about sub-soil supplies and carrying out research in developing improved methods for exploiting ground water supplies.

INDIA'S POTENTIAL RESOURCES

India is fortunate in her immense water resources and in her widespread waterways. On a rough calculation it has been estimated that out of the total quantity of water available in the rivers of the country and the sub-soil, only 6 to 7 per cent has so far been utilised, the rest running to waste and in its progress to the sea doing incalculable damage to life and property through uncontrolled floods. Large areas in various parts of the country are lying as cultivable waste while existing cultivation in many areas produces only poor crops, for want of irrigation facilities. There is thus immense scope for the utilisation of the unused water resources of the country for the benefit of her people. Possibilities of development are immense and the future has a great promise in store for the people of India. It is an advantage that investigations to develop and utilize the entire water resources of the country are now the concern of a central body viz., Central Waterpower, Irrigation and Navigation Commission which has already done commendable work in this direction.

NEW WORKS

The nature of irrigation projects that have been constructed in the past, whether canals, tanks or wells is familiar to all, but the nature of new projects which are now being taken up is different. Many of them are being designed on an extended and ambitious plan. As little water has been left unused from the perennial flow in streams, more and more schemes are being based on storage of water available during the rainy season. Multi-purpose plans are being prepared to provide for irrigation, hydro-electric power, flood control, navigation, recreation facilities and fish culture. The most important of these include:

Bhakra-Nangal Project (East Punjab).—The principal feature of the project is the construction of a dam about 670 feet high on the river Sutlej near the village of Bhakra about 50 miles upstream of Rupsar Town. The total storage capacity of the reservoir is estimated to be 7.20 million acre feet of which 5.4 million acre feet will be available for use. When completed the project will irrigate an additional area of 3.5 million acres a year and will generate 250,000 kW of firm power at 100 per cent load factor.

About eight miles downstream of Bhakra Dam site, Nanad Dam is under construction on the river Sutlej. This dam will serve firstly to divert the requisite supplies from the river for the Nangal Hydel Canal, secondly to provide storage to smoothen the fluctuations in supplies

due to load variations in Bhakra Power Plant, and thirdly to pass the balance supply for use in Sirhind Canal or disposal of surplus in the pre-Bhakra stage. On the lined canal of 12,500 canals will be located three power houses at miles 12, 18.5 and the tail of the canal respectively. The firm power available from these power houses in pre-Bhakra and post-Bhakra stage will be 80,000 kW and 140,000 kW respectively. The work on this project is well advanced.

The total estimated cost of Bhakra-Nangal Project is Rs. 130 crores.

Damodar Valley Project (Bihar and West Bengal).—This project which is a joint effort of the Governments of Bihar and West Bengal comprises 8 dams and one barrage across the river Damodar and its tributaries. The project will provide perennial irrigation to 760,000 acres of land and will generate 300,000 kW of power. The additional advantage of the scheme will be the reduction in yearly flood damage from the Damodar. The scheme is expected to cost Rs. 55 crores. The Government of India with the concurrence of the Provincial Governments of Bihar and West Bengal have set up, through enactment, the Damodar Valley Corporation on the lines of Tennessee Valley Authority in the United States of America. Preliminary work on some dams has started and designs of some others have also been worked out. The actual construction is expected to begin in the winter of 1949.

Kosi Project (Bihar and Nepal).—The most important of the projects in Bihar is the Kosi Project under investigation with the Central Waterpower, Irrigation and Navigation Commission. It will be a multi-purpose project for irrigation, power, navigation, flood control, silt control, soil conservation, drainage, reclamation of water-logged areas, malaria control, fish culture and recreation facilities. The project will comprise a dam about 750 feet high across the Chitra Gorge in Nepal just above the sacred temple of Baraha Kshetra to store about 11 million acre feet of water; power plant at the dam site capable of generating upto 2 million kW of cheap power; a barrage in Nepal across the Kosi to divert its supplies into two canals, one on either bank for irrigating about 2 to 3 million acres in Nepal and Bihar. The project is roughly estimated to cost Rs. 100 crores. After the necessary investigations are complete, the execution of the whole project may take about ten years.

The unified development of Mahanadi Valley, as designed by the Central Waterpower, Irrigation and Navigation Commission comprises three units namely the Hirakud Dam Project, the Tikarpada Dam Project and Naraj Dam Project, each with its own canal system and hydro-electric power installations. The three units are capable of independent development and also of forming an integrated part of the basin wide plan. It has been decided to make a start with the Hirakud Dam Project.

Hirakud Dam Project (Orissa).—Comprises a dam across the river Mahanadi, about 9 miles north of Sambalpur town, gravity and lift canals on either side and two hydro-electric installations. The dam will be 15,517 feet in length of which 4,875 feet will be the concrete section in two portions and the remaining earthen. In addition, there will be 16 miles of dykes on both the flanks. The maximum height of the dam above the lowest river bed will be 150 feet. The reservoir formed by the dam will have a gross storage capacity of 5.98 million acre feet of which 2.25 million acre feet will be dead storage. The project provides for the irrigation of 10,91,953 acres of land out of which 619,035 will be by flow and the balance by lift, and the generation of 218,000 kW of hydro-electric power, besides providing facilities for navigation and protection against flood damage.

The project is estimated to cost Rs. 47.81 crores. Construction work has been started. Temporary quarters for staff are being built. Work on the railway siding and improvement of

the existing roads, etc. is in progress. Drilling and exploratory work is nearing completion. The work on the rail-cum-road bridge across Mahanadi, which will facilitate work on the both banks and also provide a connecting link for the Calcutta-Bombay National Highway is briskly progressing. An agreement with a firm for setting up a cement factory has been finalised. Tenders for obtaining earth moving and power house machinery are being called.

Ramapadasagar Project (Madras).—Is by far the most important multi-purpose scheme projected in Madras. The reservoir on the Godavari will be one of the biggest in the world. A dam 428 feet high with the lowest foundation level 190 feet below the river bed and one and a half mile long, will be built to store 15.6 million acre feet of water. Three canals which will take off the reservoir, one on the left and two on the right will provide irrigation facilities to an undeveloped area of 2.35 million acres (all paddy) and will improve the existing supply to another 2.1 million acres of land. The project will develop 100,000 kW of firm electric power and about 20,000 kW of secondary power and provide, in addition, navigation facilities in the Godavari all through the year. The project is estimated to cost Rs. 86 crores and will take about 12 years for completion. The project when completed, will provide one million tons of rice per year, which according to the present price means an annual food production of rupees 24 crores.

Narbada-Tapti Project (The C.P., Bombay).—Investigations on the River Narbada and Tapti in the Central Provinces and Bombay, under the Central Waterpower, Irrigation and Navigation Commission are in progress. Eight sites for construction of dams have been selected. The whole scheme when completed will provide irrigation to one million acres in the Central Provinces and Bihar and 110,000 acres in the Bombay Province and will generate about 1 million kW of electric power. The scheme is estimated to cost Rs. 200 crores and will take 15 years to complete.

Rihand Dam Scheme (The United Provinces).—This is one of the most important schemes sanctioned by the Government of the United Provinces for the generation of electrical energy. It comprises the construction of masonry dam 300 feet high across the river Rihand, a tributary of the Son. The cost of the dam is estimated to be 16.25 crores and that of transmission lines and transformation Rs. 10 crores. The installed capacity will be 187,500 kW. The power will be used in developing important industries like Steel, Paper, Cement in some districts of the province. The preliminary work on the project is in progress.

Tungabhadra Project (Hyderabad, Madras).—The work on this taken up jointly by Madras and Hyderabad. The main feature of the project is a concrete dam 8,200 feet long and 160 feet high across the Tungabhadra a major tributary of the Krishna. The project was inaugurated in 1945. On the Madras side the project will provide an irrigation of 300,000 acres. About 7,000 kW of firm power will also be developed. In Hyderabad about 410,000 acres will be irrigated and 1,50,000 kW hydro-electric power generated. It is expected that the project will be completed in 1952-53.

Koyna Hydro-Electric Scheme (Bombay).—The scheme envisages the construction of a dam about 300 feet high across the Koyna river about 1 mile north of Helwad, to store about 3.57 million acre feet of water for power and irrigation. The scheme when fully developed is capable of meeting a demand of the order of 290,000 kW (continuous) after reserving about one million acre feet of storage for irrigation. In the ultimate stage when all the water is available for power generation the station will be capable of developing 100,000 kW (continuous). Preliminary investigations have advanced to the stage of preparing detailed designs and estimates.

The project will take about 7 years to complete.

Gandak Valley Project (Bihar, U.P., Nepal).—This will consist of a barrage across the Gandak river at Tribeni Ghat just below the off-take of the Tribeni Canal and the taking off of the two new canals on both banks of the river.

The Western canal is expected to bring under irrigation the whole of Saran District and a portion of Gorakhpur district of the U.P. and some portion of Nepal Territory.

The Eastern canal will irrigate parts of Champaran, Muzaffarpur and Darbhanga districts between the main Gandak and the Buri Gandak.

The project is likely to bring under irrigation an area of over 35 lakhs of acres in Bihar alone, besides its capacity to irrigate some area of Nepal and a portion of the Gorakhpur district of the U.P.

In addition to the construction of these two canals, it is proposed to convert the Tribeni Canal into a perennial canal and also to extend it by another 40 miles to cover an additional area of 1½ lakhs of acres between the irrigation boundaries of the existing Tribeni and Dhaka Canals.

The works have been roughly estimated to cost about 20 crores.

The Government of Nepal and the U.P. have already permitted necessary surveys in their territories and further data is being collected for preparation of detailed Plans and Estimates.

The irrigation on the project will fully develop by 1958.

In addition there are large numbers of big, medium and small size projects under investigation or construction in various provinces and states.

It is however useful to remember that all these projects when completed will add over 27 million acres of irrigation to India's existing 50 million acres.

Jawai River Project (Rajasthan).—The Jodhpur Jawai River Irrigation-cum-Hydro-electric development project scheduled to be completed by the end of 1952 was sponsored by engineers including Mr. Mannersmith, Member of the Indian River Commission, Sir William Stamppe and Dewan Bahadur Iyyanger, former Chief Engineer, Madras Province. Mr. Fergusson undertook a survey and submitted his report in 1944. Recently Mr. M. B. Patel Industrial

Adviser to the former State Government suggested various improvements.

The project envisages the construction of a reservoir calculated to impound 7,000 million cubic feet of water and to store the flow during monsoon and to serve as a balancing reservoir for a future generating system from a catchment area of 305 sq. miles to irrigate 115,000 acres of barani land. The land is expected to produce wheat, sugarcane, cotton, fruit, green manure and to generate about 5,000 kW of hydro-electric power for domestic and industrial purposes.

The Dam is being constructed near the Erlin-pura Railway Station on the B.B. & C.I. Rly. 15 miles from the source of the Jawai River in the Aravalli Hills forming a natural water shed as well as the border between Mewar and Marwar. The area is inhabited by Bhils and Gerasia. An outlet tower over 100 ft. high combining a small hydro-electric plant of some 150 H.P. will be located at the south end of the large granite bollard at which the river divides into two branches. Some of the structures like spillway tunnels would have to stand a water velocity of the order of 100 ft. per second and for this purpose special processing of concrete would have to be done.

THE STATES IN INDIA

THE table reproduced at the end of this article shows the present position, which can be summed up as follows: Out of the 562 States which lay in the Indian sphere 213 States covering an area of 101,560 sq. miles with a population of 17,129,000 have been or are to be merged with the Provinces. 24 States covering an area of 26,514 sq. miles with a population of 2,346,000 have been taken over as centrally administered areas; 304 States, covering an area of 236,352 sq. miles with a population of 37,016,000 have been integrated to form Unions of States. The only States which are not so far affected are Hyderabad, Jammu and Kashmir, Mysore, Benares, Khasi States, Manipur and Tripura. Of these Benares, Manipur, and the Khasi States are due for merger with the appropriate Province. Hyderabad has a Military Government which is really a kind of Interim Government. The future of Kashmir must wait on the result of a plebiscite. Of all the States that remain Mysore is the only one for which the Government of India does not appear to have any immediate plans.

From the point of view of India as a whole the new order may be summed up as follows: while there were 500 odd separate administrative Units in India before the process of integration and merger started there are today only 24. Of these 9 are Governor's Provinces, 9 Chief Commissioners' Provinces and 6 States Unions. The Chief Commissioners' Provinces formed out of a single or merger of States are Himachal Pradesh, Bilaspur, Cutch and Bhopal. The States Unions are Patiala and Eastern States Union, the Rajasthan Union, Vindhya Pradesh, Madhya Bharat, Saurashtra and Travancore-Cochin. Thus of the 82,000,000 people who live in the States about 58,000,000 have been affected by some kind of merger or integration. The balance of 24,000,000 is made up almost wholly by the combined populations of the States of Hyderabad and Mysore.

UNIFICATION

The unification of India is no doubt an achievement of which the Ministry of States is justly proud. But a number of baffling problems still remained to be solved. Unification implies that the different administrative Units have the same kind of internal structure and that they all stand in the same relation to the Central Government. For instance, the administrative machinery of a Union must be similar to that of a Province. A Union like a Province must also have an elected legislature and a ministry responsible to the legislature. In other words, the process of unification must be followed by a process of modernization and democratization. Besides most of the States are badly equipped for the administrative tasks which they are called upon to discharge. Hence the Government of India which was chiefly responsible for the formation of Unions and the merger of States into Provinces has a duty to perform to the people who belong to the merged or integrated States. The Government of India has therefore legally acquired certain over-riding authority over the Governments of the States Unions. It has, for instance, the power to appoint important officials in the Union Governments. It has the right to give directions to the Ruler or Prantakk about the way in which he is to discharge his duties. It has in the ultimate resort, the authority to supersede an incompetent Ministry and take over the administration of the State. All these powers have in fact been exercised by the Government of India. In 1949 May, for instance, the Government of India took the extreme step of dismissing a Ministry in Vindhya Pradesh and assumed complete responsibility for the administration of the Union.

It is worthwhile noting that such close relations between the Centre and a Union were never contemplated at the start. The Government of India were led step by step as it were, into enlarging the sphere of their control till at

last they found themselves assuming direct responsibility for the good Government of the States Unions. The original Instrument of Accession gave the Central Government the power to administer only three subjects on behalf of the Union, communications, foreign affairs and defence. It was during the negotiations that led to the formation of the Rajasthan Union that a new clause was introduced into the Instrument of Accession which gave the Government of India the power to legislate on all subjects which came under the Federal and Concurrent lists under the Government of India Act of 1935 except taxation, and also power, to which reference has already been made, to exercise an over-all supervision over the affairs of the Union.

The States Ministry explained that these over-riding powers would enable the Central Government to direct the process of integration and consolidation, to secure good Government in the interim period, and eventually to make the Unions over to their Governments established under their new constitutions in good working order.

DUTIES OF MINISTRY

Thus the duties of the States Ministry have increased rather than diminished with the unification of the country. In this context it may also be useful to mention a number of other tasks which the Ministry has to discharge in regard to the States which are merged with the Provinces. Firstly as a party to the agreements of merger it is the responsibility of the Government of India to ensure that the provisions of the agreements including those rights guaranteed to the Ruler are duly enforced. Second, it has to settle important questions such as the divisions of assets and liabilities of the merged States between the Central and the Provincial Governments. Third, it has to examine the claims of the Rulers in regard to civil list and private property. Fourth, it has to devise a suitable plan for giving the people of the merged States representation on the Provincial Legislature. Fifth, it has to fix the Rulers' Privy Purses. Sixth, in the States, where an order under section 200A of the Government of India Act of 1935 cannot be applied the Government of India have to intervene to extend Provincial Acts to the merged States through the operation of the Extra Provincial Jurisdiction Act, 1947.

PRIVY PURSE

It is worthwhile enlarging some of these items. Certain broad principles for fixing the privy purse are already worked out.

In the past there was hardly any distinction between the Rulers' personal expenses and State expenditure, and even in those States where such a thing as privy purse did exist no effective steps were taken to see that personal and State expenditure were in practice separately accounted for. Large amounts were thus spent on Rulers, the members of their families and on State ceremonies and functions. Today every Covenant contains a clause fixing the Ruler's privy purse which is calculated to cover the expenses of the Rulers and their families including such expenses as those on residence, marriage, ceremonies, etc. The basis of calculation is the revenue of the State. For the first lakh the Ruler is allowed 15 per cent, for the next four he is allowed 10 per cent, above 5 lakhs 7½ per cent, the maximum being 10 lakhs. This maximum is exceeded only in the case of the Rulers of some of the major States recognized as viable, and even here it is decided that the amount is to be paid only during the life-time of the present Ruler. The savings resulting from fixing the privy purses will, it is calculated, amount to about two crores exclusive of the savings in Vindhya Pradesh, Patiala and East Punjab States Union, Baroda and Kolhapur.

Here, for instance, is a list of the annual pensions which are to be paid to the Rulers of Rajasthan: Jaipur, Rs. 18,00,000; Jodhpur, Rs. 17,50,000; Bikaner, 17,00,000; Mewar, Rs. 10,00,000; Kotah, Rs. 7,00,000; Bundi, Rs. 2,81,000; Tonk, Rs. 2,78,000; Dungarpur, Rs. 1,98,000; Jaisalmer, Rs. 1,80,000; Kishangarh, Rs. 1,36,000; Banswara, Rs. 1,26,000; Jhalawar, Rs. 1,26,000; Parganah, Rs. 1,02,000; Shahpura, Rs. 1,00,000.

PRIVATE PROPERTY

The question of private property was settled except in the case of three or four States by the States Ministry on an *ad hoc* basis. No uniform system was followed in settling the question. The criterion applied was that if a building, for instance, was used exclusively by the Ruler or his family, it was considered to be his private property and if it was used for public purposes, it automatically became the property of the State.

The main features of the settlement are: The Ruler is entitled to retain the palace in which he lives. He can also have one more residential building only, either at a sea-side resort or at a hill station. All buildings in excess of these are to be made over to the State.

In no case is the Ruler allowed to retain any land except where there is positive proof that the land is his ancestral property. Even here, he is subject to the tenancy laws of his State and has to pay taxes like any other landowner. The principle involved in agricultural land is that the Ruler is not entitled to any income besides the privy purse. The States Ministry has restored to the States administrations thousands of acres of such land and in the case of one Ruler, 154 big villages have been taken away and handed over to the State.

In certain cases, Rulers had earmarked portions of the State exchequer as private property. These cases were investigated and settled by taking away what the Rulers were not entitled to keep. This step came as a wind-fall for some Unions who got in all over Rs. 55 crores. For example, the Saurashtra Union got over Rs. 14 crores as a result of the States Ministry's award, the Madhyabharat Union Rs. 25 crores, the Rajasthan Union about Rs. 8 to Rs. 9 crores, the Patiala Union Rs. 5 crores and Vindhya Pradesh Rs. 3 crores.

Several Rulers are stated to have parted with their money and investments without demur. For example, the Maharaja of Gwalior made over to his Government Bombay Improvement Trust scrips bearing an annual interest of about Rs. 50 lakhs. Similarly, the Gaigajali (reserve fund) of over Rs. 3,60,00,000 was also given to the State.

Jewellery—priceless sapphires, emeralds, diamonds and pearls were all divided into two categories. Those actually used by the Ruler himself and those used as regalia at State functions. A list was then made of the jewels falling into the latter category, and though the Ruler could keep this jewellery in his custody the Union Government or the Provincial Government, as the case may be, were given the right of inspection and check up.

The States Ministry declined to recognise the grant of lands made by Rulers to their relatives or others on the eve of integration or merger of their States. In cases where such assignments were made long before the integration, the property becomes subject to land assessment and tenancy laws of the Union or of the province.

Half the number of cars of Rulers, some of whom maintained fleets of 50 and more, were assigned to the State and are now being used by Ministers and other State officials.

The final result of the award is that most of the Rulers have been left with one-fourth of what they considered as their private property, the rest going to their Government.

Some Rulers were generous enough to make over to the State larger slices of property than they were obliged to do under the terms of the agreement. The Maharaja of Travancore for instance granted to the State property to the extent of as much as 20,000 acres.

There are some 35 palaces and houses belonging to Rulers in Old and New Delhi about which no decision was taken. Some of the States administrations claim them as State property while the Rulers challenge the claim.

The States Ministry arranged for the payment of pensions "in deserving cases," which include the aged mothers of certain Rulers, widowed sisters and other near relatives having no personal property.

REPRESENTATION

In regard to the representation of merged States in the Legislatures it was reported at the time of writing that the Government of India were considering giving representation to the population of States merged into provinces by nominations to the respective Provincial Legislatures. The principle would also extend to States taken over by the Centre, representation being given on the Central Legislature.

The Governor-General was expected to make the nominations of representatives of the merged States presumably on a population basis. Action was expected to be taken after the Sections 290 (A) and 290 (B) of the Government of India Act, which the Constituent Assembly adopted in January 1949 conferring on the Governor-General powers to issue orders in respect of the merged States, were brought into force.

It may be recalled that the original principle of providing representation to the States was that half the seats for each State were to be filled by nomination and the other half by election. In this way, 19 States got their representation. Kashmir's four representatives who were the last to take their seats did so on June 4, 1949. Hyderabad would also be given representation when the elections in the State were over.

The proposed method of nomination for representing the merged States in Provincial Legislatures was subjected to strong criticism by some persons. It was suggested that such a procedure was a denial of people's rights and was being adopted to safeguard the vested interests of the party in power.

It was, however, explained on behalf of the States Ministry that the proposed nomination was a purely interim measure and that it would be impossible at the present moment to hold early elections in the merged States.

It was generally expected, however, that in nominating representatives to the Provincial Legislatures, the Governor-General would take into consideration the strength of popular parties. It was also held possible that local bodies and Administrators of the merged States might be consulted before the final selection took place.

If and when the nomination proposal is implemented, the strength of the Bombay Assembly would be increased by 65 seats, that of the Orissa Assembly by 32 seats and that of the Central Provinces by 18 seats.

The Bombay Assembly would have 240 members, of whom 22 would come from Baroda, 9 from Kolhapur, and 51 from the other merged States of the Deccan.

ADMINISTRATIVE SET UP

We may next proceed to describe briefly the administrative set up in the States Union and the newly-formed Chief Commissioner's provinces. So far as the States integrated with the Governors' Provinces are concerned, they are part and parcel of the Province and have therefore the same kind of administration as the rest of the Districts

in the Province. The people of the new Chief Commissioner's Provinces are directly under the Government of India who are in their turn responsible to the Indian Constituent Assembly (Legislative). Thus in the ultimate analysis the people of these centrally administered provinces already possess responsible parliamentary Government of a sort. As already explained they will also have direct representation in the final governing authority when their representatives take their seats in the Indian Constituent Assembly (Legislative) for which provision is made. To associate the people with the Government of the Province more closely Advisory Councils are set up in a number of Provinces. These Councils are intended more especially to help the Chief Commissioners with their administrative work.

The long term plan for the Unions contemplates full responsible Government on the same model as that of the Governors' Provinces. Saurashtra, for instance, has authorized the Indian Constituent Assembly to frame a constitution for itself. In general however, the constitutions are to be framed by Union Constituent Assemblies which are to be elected on the basis of adult franchise. This long-term plan is in different stages of realization in the different Unions. In some of them Constituent Assemblies are already functioning. In others preparations for elections were in progress at the time of writing. A good example of the latter group is the Patiala and East Punjab States Union.

To help the Unions frame constitutions, and to ensure a certain degree of uniformity in the constitutions so framed the Government of India appointed a Committee presided over by Sir B. N. Rao, the members of which were Mr. P. Govinda Menon, M.C.A.; Dr. R. V. Singh; Mr. K. M. Munshi, M.C.A.; Mr. Ram Sahay, M.C.A.; Mr. C. C. Shah, M.C.A.; Mr. K. Hanumanthia, M.C.A.; Mr. R. Shanker, M.C.A. The report which the Committee submitted to the States Ministry in the middle of June 1949 may be summarized as follows.

RAO COMMITTEE REPORT

The Committee proceeded on the assumption that the Indian States would accede to the Union in respect of all subjects and concurrent lists and followed the provisions relating to the provinces contained in the draft Constitution of India.

The Ruler is defined as the head of the State deriving his position from the will of the people, with whom resides sovereign power. The executive power of the State should be vested in the Ruler. Just as the Governor of each Province is to be appointed by the President, the Ruler or the Rajpramukh is to be recognised by the President. The Ruler might exercise the executive power of the State either himself or through officers subordinate to him.

No provision regarding impeachment of the Ruler by the legislature was necessary because the Ruler is defined as a person, for the time being recognised by the President, who could be trusted to withdraw the recognition in the event of misbehaviour on the part of the Ruler.

The structure of the legislative bodies in the States is recommended on the model of provincial legislatures. Provision is however, made for bicameral legislature. Two alternatives have, therefore, been suggested, one for the States which desire to have bicameral legislatures and another for those who wish to have a unicameral assembly.

So far as the composition of the Upper Chambers is concerned, the Committee has left it to be determined by Parliament, with the object of ensuring uniformity throughout India.

In case a Ruler is not able to address the legislature in person, it is proposed that the address might be read by his Chief Minister.

As regards the salary and allowances of the Ruler, the Committee is said to have recommended that they should be charged on the State revenues, but there is difference of opinion as to

the authority for determining the amount. The privy purse of the Rajpramukh and Rulers of the covenanted States is guaranteed by the Government of India as prescribed in the Covenant. Power is given to the President in this regard, who is expected to take into account the terms of the Covenant.

The Judiciary is sought to be made completely independent. The High Court Judges, whose terms and conditions of office should, it is recommended, be similar to those of provincial judiciary, will be appointed by the President. The subordinate Judges are to be appointed by the Ruler on the advice of the Chief Justice of the High Court. The Supreme Court of India will have appellate jurisdiction over the High Courts of the States as in the case of High Courts in the Provinces. The Committee proposed that members of the Election Commission should be appointed by the President. The Chief Election Commissioner will have overall power of control, superintendence and direction and the Election Commission will function as a Regional Commission.

The Committee recommended the inclusion of a new Article suggesting that where the President has, by order, directed that any area included within a province or the whole or any part of the area included within an Indian State should be administered in all respects by the State, as if such area formed part of the State, all the provisions of the Constitution applicable to the State should apply to that area.

As regards power to amend the Constitution, the Committee felt that the State legislatures should have power to initiate any amendments to the Constitutions, for the Constitutions of the Indian States are ordinarily to be made by their own Constituent Assemblies.

The Committee provided for the contingency in which the work of the Constitution making is entrusted to the ordinary legislature and not to a Constituent Assembly specially set up for the purpose.

There was substantial difference of opinion among the members of the Committee as to the wording of the Instrument of Instructions to the Rulers. Some members urged that the wording should be the same as in the case of the provinces, namely "in all matters within the scope of the executive power of the State, the Ruler shall, in the exercise of the powers conferred upon him, be guided by the advice of his Ministers."

Others were of the view that the wording should be: "The Ruler shall, in the exercise of the powers conferred upon him by this Constitution, be guided by the advice of his Ministers." The draft, it is stated, provides for both alternatives.

The best method of giving effect to the proposals, should the Indian States accept them generally would be, according to the Report of the Committee, to insert a special part in the draft Constitution of India to deal with the Constitutions of the Indian States. It should provide in effect that the provisions relating to the provinces should apply to the Indian States. There should be a separate schedule to the Constitution specifying the difference between the provinces and the Indian States.

The designation of the Rajpramukhs as "Ruler" mentioned in the draft Constitution did not find favour with some members of the Committee. So much for long-term arrangements.

Meanwhile the interim political arrangement in the Union may be generally described as follows: The head of the Union is the Raj Pramukh, under whom there is a sort of deputy, Upa Raj Pramukh. The Union of Rajasthan has yet another dignitary, Maharaj Pramukh. Generally the two Pramukhs are elected by a Council of Rulers for a certain period. Often there is no formal election, the Ruler of the leading State in the Union becomes Raj Pramukh by general agreement. Sometimes too a Ruler may be elected Raj Pramukh for life. For instance, in the Union of Rajasthan as it was originally formed the Maharaja of

Udaipur was Rajpramukh for life. There may also be a presidium of Rulers as in Saurashtra, whose presidium consists of five members. To assist the Raj Pramukh a Council of Ministers is set up who are meant to hold office till the new constitution comes into being and a Ministry responsible to the new Legislature is formed. That is the general outline of the kind of Government in force at the moment. Finally, the whole of this administrative set-up is subject to general supervision by the Government of India until the permanent Constitution begins to function.

PROBLEMS FACING UNIONS

We may next pass in review some of the problems which the new Unions have to face. These problems are mainly two, unification of administration and democratization. Both these problems present enormous difficulty. Let us take unification of administration first. Often the various states forming part of a Union have different types of administration. In some all authority is concentrated in a few hands. Such a thing as Department hardly exists. Neither does such a convenient unit of administration as "District." A District Officer as a person who is responsible for co-ordination in a particular area is also unknown. Thus whatever new administrative units are set up they will have to acquire the requisite cohesion and the necessary local tradition before the state machinery can begin to function smoothly. In some States modern organization of a sort does exist but it is not well enough developed—certainly not to the same degree as in a Governor's Province. In many States the traditional form of rule flourishes with a peculiar strength. In some Unions large tracts of land are held under a system called the Jagirdar system with the holders performing a variety of administrative functions. There are also any number of systems of land tenure. Large parts indeed remain under feudal conditions; and anything like a modern system of revenue administration which includes settlement, record of rights, trained revenue staff is unknown over vast areas.

It is thus clear that the administrative personnel inherited by the Union is unequal to the tasks which the new Government have to face. In a great many States rules of recruitment, training, promotion do not exist. The principle of selection through a competitive examination is recognized only in a few States and even here to a very limited extent. Traditions of common service are hardly developed anywhere. In some areas the predominance of certain classes in the public services particularly the Army and the Police is a hindrance.

Yet another obstacle in the way of unification is the bewildering variety of systems of financial control. In some states there is no control of any sort. Departments are allotted huge blocks of grants of which no proper accounts are kept. In others a system of pre-audit exists but, wherever such officials as Auditor-General or Accountant General are present their functions vary from State to State. All these are grave obstacles for a proper system of financial control and audit which is essential to a democratic Government. It may be mentioned here that the whole subject of public finance in Unions and States is now the subject of enquiry by a Committee appointed by the Central Government. A preliminary report of the findings of this Committee is already available. But as this question needs elaboration it is dealt with elsewhere in this article under a separate heading.

POLITICAL PROBLEMS

So much for administrative problems. When we pass to political problems we find the position is just as discouraging. Not many States have legislatures functioning in them. Where legislatures do exist their powers are very limited; everywhere there are blocks of nominated members and the idea that the Ministers are responsible to a Legislature has never been accepted. Even in the local sphere the number of representative institutions such as panchayats,

district committees, municipal committees is very limited. Political parties with a well knit organisation and a well defined programme of action do not exist: whatever differences there are between parties are of a local or factional character. Thus the whole background from which a democratic and representative government arises is completely lacking. Respect for individual rights, the habit of arriving at decisions through discussion and compromise, loyalty to decisions already arrived at which are the quintessence of democracy are yet to develop in all the State Unions.

It is with such poor equipment that the Unions have to set about their work of building a new State. The States are starting as if from scratch and there is much to do by way of reconstruction. Land systems have to be changed, vast irrigation works have to be established, mineral and industrial sources have to be developed. Then there are welfare activities like public health and education which have to be organised. In such of the Unions as lie on strategic border areas security measures have to be put through. All these are problems which are difficult enough to try the skill and experience of long established administrations.

CENTRAL GOVERNMENT HELP

It is precisely because the Central Government is fully conscious that the Union Governments are unequal to the tasks which they have to fulfil that it has acquired the power of control and supervision over the Union Governments. In many different ways the Central Government is helping the Union Governments to organize and re-equip the administrative machinery. For instance, it has made available to Unions the services of experienced officials as Advisers and have also deputed senior officials of All India Services to fill certain key posts such as those of Chief Secretary, Finance Secretary and Inspector General of Police. A senior official of the Indian Civil Service Mr. M. J. Desai was placed on deputation from July to September in 1948 to visit the various Unions, investigate their problems and make suggestions about how the Government of India could help the Unions in building up an efficient administrative service. A plan is also under consideration by which the Unions could participate in the All India Scheme of recruitment to administrative and police services. Such participation would also mark a further step towards the administrative unification of India besides bringing about closer co-operation between the administration of the Centre and the States.

FINANCIAL SYSTEM

Another question which the Government of India are helping the Unions to solve is that of finance. In the case of those States which have merged into Governor's Provinces or consolidated into Centrally administered areas prompt action has been taken to abolish feudal taxes, cesses, internal customs barriers, etc. In the field of Central taxation instructions have been issued to collectors of Central Excise to take over the excise administration in these States. Steps have also been taken to apply to these areas the Central Excise and Salt Act, 1944 and the rules issued thereunder. The Indian Income Tax Act was also applied to these areas on the 1st of April 1949. The Customs administration of Cutch ports is now in the hands of a Collector of Customs appointed by the Central Board of Revenue.

As regards the Unions and Independent States which have so far retained their finance structure a Committee appointed by the Central Government has made a number of recommendations with a view to making their system uniform with that prevailing in the Provinces. This Committee which consisted of Sir V. T. Krishnamachari, Mr. S. K. Patil and Mr. N. Dandekar, I.C.S. with Sir V. T. Krishnamachari as the Chairman commenced work in 1948 November and made a report to the Government in 1949. The present position is highly complicated.

Neither the original Instrument of Accession, nor the Revised Instrument conferred any new financial rights on the Central Government. The States are free to follow their own policies even in the field of federal finance and taxation. They continue to bear expenditure of a federal nature such as that relating to defence, and they continue to derive revenues from sources normally considered as federal such as Customs, Income Tax, Railways, Posts and Telegraphs. The situation is further complicated by the variety of the conditions prevailing in the various States and the likelihood of deficit owing to food scarcity and increased expenditure on administration which is to come up to the level of the Governor's Provinces. Thus the objective of uniformity, however desirable in itself, the Committee opined, should be achieved in such a manner as not to dislocate the finances either of the Central or Union Governments.

According to the Committee's report the Government of India must assume financial control and responsibility for Central subjects in Indian States from April 1, 1950—the deadline set for the integration of States' finances.

From that day income-tax, excise, and other Central taxes will be levied in all the States and the States' Unions by the Central Government, and functions such as Defence, Railways, Posts and Telegraphs, Meteorology and Broadcasting will become the responsibility of the Central Government.

The process of integration should be completed within ten years.

Owing to administrative reasons, the assumption of these functions by the Centre should be a gradual one, and the actual administration of the subjects may be left in the hands of the State Governments, acting as the agent of the Centre.

The Committee pointed out a number of practical difficulties in bringing about a radical change in the pattern of States' finances. It examined in detail the financial structure of each State, its resources and requirements and the minimum period needed to effect the change in the pattern. It came to the conclusion that a period of ten years might be necessary to bring about financial and administrative adjustments, if sudden dislocation of economy and hardship to the people were to be avoided.

The Committee had reached these its main conclusions at the time of writing but had not submitted its final report.

It was expected that the report would be confined mainly to the States' Unions, Mysore and Hyderabad.

MOMENTOUS EVENTS

The White Paper issued on July 5, 1948 described the changes which we have recounted above in the following terms:

"The accession of the States to the Dominion of India was a momentous event in India's history. The full significance of this important event can be appreciated only if it is viewed against its most unpropitious background.... High walls of political isolation had been reared up and buttressed to prevent the infiltration of the urge for freedom and democracy into the Indian States. Disruptive tendencies had been sedulously cultivated and encouraged.... There were not a few who nursed the hope that overwhelmed by the combined weight of the partition of India and the disruption of the States the Government of India would go under.

"In the context of these heavy odds and handicaps the consummation of the ideal of a Federal India comprising both the Provinces and the States was not a mean achievement. For the first time after hundreds of years India became welded into a constitutional entity."

When the Ministry of States came into existence on July 5, 1947 it faced a task of the utmost difficulty. For one thing time was short, whatever there was to do to keep the country together had to be done in less than two months before the partition actually took

effect. The Political Department which had dealt with the States till July 5, 1947 did not make the path of the States Ministry any the easier. A theory had been put out that the States had no relation with the Government of India except through the Crown. According to this theory there were two separate dignitaries at the capital of the Indian Empire, the Governor-General and the Crown Representative though the two offices might be held by the same individual. When he acted as head of the Government he did so as Governor-General. In his dealings with the States he acted not in his capacity as Governor-General but as Representative of the Crown. The main object in inventing this ingenious theory was to deprive the successor Government of India of all the rights that it would normally possess in its relations with the States. The Princes for their part did not show any obvious desire to co-operate with the national Government of India, to start with at any rate. Some of them declared independence; and others opened negotiations with both the Dominions. But eventually they all came round with one or two exceptions when they realized that the Indian part of the sub-continent would face disintegration and anarchy if they did not decide to pull together with the newly established Central Government.

INSTRUMENT OF ACCESSION

The Political Department had under consideration a Stand-Still Agreement and a draft had been sent to the Rulers. But the need of the hour was clearly not a Stand-Still Agreement, but some kind of Federation however loose between all the different administrative units in India, States as well as Provinces. Consequently the States Ministry opened negotiations with the Rulers of all the States with a view to the execution of Instruments of Accession by which the Rulers acceded in respect mainly of three subjects to the Central Government, Foreign Affairs, Defence and Communications. As is mentioned above the Rulers realizing the dangers inherent in the situation accepted the Instrument of Accession proposed by the Ministry of States, and transferred the three subjects to the Central Government. The Instrument also contained a clause which made it incumbent on the Rulers to call together a Constituent Assembly which was to be entrusted with the task of forming a new constitution for the States based on responsible Government.

In fact, the Ministry of States had to meet every situation as it developed. Integration, for instance, suggested itself when law and order over a large area in the former Eastern States Agency utterly broke down. This breakdown occurred as a result of independence in British India, when an insistent demand arose for democratic Government in the States of the Agency. The Rulers did not have the physical power to resist the popular demand. Neither did they have the material resources to set up a modern administrative system in their States like the Provinces. Sooner or later anti-social elements began to take advantage of the situation with the result that law and order broke down and the Government of India had to intervene. Eventually a solution was sought in integration with the neighbouring Provinces—a solution which was suggested as early as 1930 by the Simon Commission. Some of the States were integrated with the C.P., and the rest with Orissa. This showed the answer to similar situations elsewhere, as in Bombay for instance, or Madras, or Bihar or the U.P.

Kathliwar States presented yet another problem. The whole area was composed of native States whose Rulers as well as people had developed a strong territorial sentiment. The most convenient solution was therefore not merger but integration to form one administrative unit. And so the Kathliwar States coalesced to form the Union of Saurashtra. In yet other areas, Central India, for instance, or Rajputana small States and others regarded as viable were so mixed together that integration

of the smaller States was not possible without the bigger States coming in. Hence into the Union of Madhya Bharat came not only a small State like Barwani but also a big State like Gwalior. The same was true of the Rajputana States, into the Rajasthan Union was drawn not only Kishangarh but also Udaipur, and later Jaipur. There was thus no set answer which would meet every possible situation. The answer had to vary to suit the circumstances. Some States for instance were taken over by the Central Government because administrative or strategic reasons compelled it to take such a step.

STATES FORCES

There were about 50 States which had the right to maintain armed forces before the advent of freedom. The National Government allowed these States to retain the State troops because they had fitted into an all-India scheme for defence against external attack or the maintenance of law and order inside the country. Hence there is an obligation on the States to keep the troops at a certain level of technical efficiency. The Central Government has also the right of inspection. In the Unions the Rajpramukhs are vested with the power of ultimate control, but in the exercise of their powers the Rajpramukhs are subject to such directions and instructions as the Government of India may give from time to time. But the future of the armed forces of these States which are merged into a Governor's Province or administered as Chief Commissioners' Provinces is yet to be decided. An Indian States Army Adviser is attached to the Ministry of States.

A note on the Ministry of States should be of interest. The Secretariat consists of 31 officials and 140 other staff which includes some who were recruited to deal with the problems arising out of the plebiscite to be held in Kashmir. The Ministry has an annual budget of Rs. 10,39,000, and if we include its subordinate organizations the expenditure rises to 61,68,000. These regional organizations are only five in number and possess very modest establishments, generally 2 officials and about 25 clerks. The Ministry has retained three police organizations, the Keonjhar Police, the Rajputana Railway Police, and the Western India Railway Police. These police are necessary for security purposes on strategic railway lines.

MERGERS, INTEGRATIONS

We may next pass in review some of the mergers and integrations that have recently taken place.

The Year Book for 1948 gives an account of such of the mergers and integrations as had taken place till 1948 May, that is when the States Ministry's first White Paper was issued. Developments which have taken place since then are outlined below:

1. **Bilaspur**—an East Punjab Hill State was taken over by the Centre on October 12, 1948. Administration by the Centre was considered necessary because of the location in it of the Bakra Dam which was of all India importance.

2. **Mavurbhanj**—in the former Eastern States Agency was taken over by the Central Government on November 9, 1948 and was put under a Chief Commissioner. On January 1, 1949 the State was merged into the Province of Orissa.

3. **Danta**—in Western Rajputana was merged into the Province of Bombay on November 6, 1948. The Government of Bombay also took over **Sirohi** on January 5, 1949 which it is now administering on behalf of the Government of India.

4. **Kolhapur**—The Government of India had to intervene into the affairs of Kolhapur because of the serious disturbances which took place in that State after the assassination of Mahatma Gandhi. As a result of the discussions which the Secretary of the States Ministry had

with the Maharaja of Kolhapur an Administrator was appointed by the Government of India. An enquiry was also made into the disturbances by a commission. Later when it became known that the finances of the State were unsatisfactory the Government of India advanced a loan. Finally a merger agreement was negotiated with the Maharaja and on March 1, 1949 the Government of India made over the administration of the State to the Government of Bombay.

5. **Baroda**—Considerations of a different sort led to the merger of Baroda with Bombay Province. Though Baroda was financially sound and had a very efficient and up-to-date administration it lacked geographical unity. Its territory was interspersed with that of Bombay and Saurashtra in many different places. The administrative inconvenience so caused was thrown into striking relief by the experience during the famine in Baroda State in February 1949. It was found that foodstuffs could not be despatched to Baroda owing to regulations restricting movement of food from one administrative area to another. Consequently the Maharaja of Baroda was advised by the States Ministry to merge Baroda with Bombay. When the Maharaja found that his Ministers also agreed with the advice given by the States Ministry he consented to merge his State. The merger took place on May 1, 1949.

6. **The United State of Rajasthan** formed in 1948 was obviously an incomplete State. Three major States Jaipur, Jodhpur, Bikaner and one minor State Jaisalmer remained outside the Union. Though considered viable all these States were from every point of view historical, cultural, economic an integral part of Rajasthan. Thus an expansion of the United State of Rajasthan embracing the four States mentioned above could not be delayed very long. This larger union materialized on March 30, 1949. Later on May 15, 1949 the United State of Matsya merged with this larger Union to form one consolidated Union of Rajasthan which thus became the biggest of the States Unions.

Alwar and Karauli of the Matsya Union were in favour of merging with Rajasthan, while in Jodhpur and Bharatpur opinion was divided between merger with Rajasthan and merger with the U.P. Some kind of enquiry was conducted into the state of public feeling in Jodhpur and Bharatpur and eventually it was decided to merge them along with the other two Matsya States into Rajasthan.

7. **Bhopal**—There was prolonged agitation in Bhopal for merger with an adjoining Province or States Union. There were also serious differences of opinion in the Council of Ministers of the Bhopal State on the need for merger. An attempt was made by the Ministry to suppress the agitation in the State for merger. Eventually the Nawab of Bhopal after prolonged consultations with the States Ministry agreed to make over the administration to the Government of India. The Government of India took charge on June 1, 1949.

8. **The Travancore-Cochin Union** is generally expected to be the last of its kind. Public opinion was strongly in favour of such a Union. Among the benefits which it was believed would flow from the integration are large-scale social and economic development of the whole area. It was hoped the merger would also help to unify the Hindu community which is broken up into innumerable fragments, and facilitate the attainment of equality by the Harijans who are estimated to form about half the population of the Union. The Union came into being on July 1, 1949.

9. **Mysore**—As regards Mysore the Maharaja signed the revised Instrument of Accession surrendering to the Centre legislative authority in respect of the federal and concurrent legislative lists enumerated in List I and List III of the seventh Schedule of the Government of India Act on June 27, 1949. Mysore was the last big State to do so.

The Centre, however, did not assume authority in regard to taxation; this question, it was decided, should come up for consideration after a detailed study of the report of the Committee on the financial integration of the States.

It will be recalled that the original Instrument of Accession executed by rulers in August-September, 1947, accorded to the Centre only three subjects—defence, external affairs and communications. The revised Instrument of Accession now signed by Mysore includes such items as development of industries, trade unions and regulation of labour, insurance, banking, criminal law, civil procedure code, and electricity. For all practical purposes the revised Instrument of Accession brings Mysore on a par with the provinces.

10. **Junagadh**—The events in Junagadh which culminated in the Central Government's taking charge of the administration are recorded in the *Year Book* for 1948. Later there was a referendum in Junagadh and the adjoining States which resulted in an overwhelming vote in favour of accession to India. Till lately Junagadh was administered by an official appointed by the Government of India who was assisted in his duty by three representatives of the people. In 1948 December the representatives of Junagadh and the adjoining States of Mangrol, Manavadar, Sardargarh and Babaria had passed a resolution to the effect that the administrations of these States should be transferred to the Government of Saurashtra and also that the representatives of these States should take part in the framing of the constitution of the Union which was in progress at the moment. Accordingly a supplementary covenant was executed by the Rulers of Saurashtra giving effect to these resolutions. On January 20, 1948, Junagadh was integrated with Saurashtra; the other States were integrated a short time before.

HYDERABAD

An unpleasant incident in the history of the National Government's relations with the States was the police action in Hyderabad. That extreme step was forced upon the Government of India because of the intransigence of the former authorities of the Hyderabad State. The story begins as early as 1947 June when the States Ministry opened negotiations with Hyderabad along with other States and on the same basis. The Government of India insisted upon accession while the Government of Hyderabad would not recognize paramountcy which accession would imply. Instead the Hyderabad Government suggested a treaty by which Hyderabad would agree to administer the three subjects of Foreign Affairs, Defence and Communications in general conformity with the policy of the Central Government. The negotiations had not ended when August 15 arrived. However, the Governor-General in his speech to the Assembly on August 14 was able to say that though the Nizam had not so far acceded, compromise was in sight and that for a limited period the three central subjects would be dealt with on a stand-still basis. And so negotiations resumed but the heads of agreement, and continued through September and October. Finally, a Stand-Still Agreement was signed on November 22, 1947 to last a year.

This short sketch is concerned with tracing the different stages of the negotiations between the Governments of India and Hyderabad which ended in police action and not with internal developments in the Hyderabad State which were taking a menacing turn at the time. It may be mentioned however that the main elements in the internal situation of the State were the rise of Ittehad to power, the eclipse of the Nizam and the moderate groups, Razakars lawlessness, oppression and terrorization of the majority community, purchase of arms in foreign countries, large and rapid increase in the strength of the armed forces, intrigues in Pakistan against the Government of India, raids on border villages, murder, robbery, arson and military preparation for a hypothetical struggle with India.

It is against growing tension in the State therefore that negotiations for a new agreement to replace the Stand-Still Agreement of November 1947 broke down in June 1948 when the Nizam on the advice of his Council rejected a draft to which the Hyderabad delegation had previously agreed.

DRAFT AGREEMENT

The terms of the draft may be set out in some detail as they held the field until the time when police action started. These were the main terms of the agreement: Hyderabad was to pass Indian Union Legislation on the three subjects of External Affairs, Defence, Communications. Hyderabad's external relations were to be conducted by India but the State could maintain trade agencies in foreign countries. Hyderabad was to limit the strength of the regular army to 20,000 and of irregular forces to 8,000. All other military formations were to be disbanded including Razakars. India had the right of inspection of the armed forces of Hyderabad and was entitled to get whatever information she asked about them. India was not to station any of her forces inside Hyderabad territory except in an emergency proclaimed under Section 102 of the Government of India Act of 1935. So far as political questions were concerned the issue of accession was to be settled by a plebiscite under the supervision of an impartial authority. A Constituent Assembly was to meet early in 1949 for the purpose of framing a constitution on the basis of responsible Government. Meanwhile an Interim Government was to be set up in consultation with the main political parties in the State. Finally, India was to give Hyderabad full co-operation in the economic development of the State. Two questions were left over for amicable settlement later. The first was Hyderabad's demand to control her own export and import trade with countries overseas. And second, Hyderabad's desire to become a member of certain international bodies like the F.A.O. the Postal Union, the International Monetary Fund and so on.

Whatever the terms, it was clear that as long as the Ittehad and the Razakars were in control there was very little hope of any sort of agreement between India and Hyderabad. Sir Mirza Ismail made a last attempt to bring about a settlement. He went to Delhi on behalf of the Nizam. He found after enquiry at the capital that it was still possible to obtain an agreement provided the draft of the last agreement was signed, the Razakars were disbanded, the Ministers were sent away and the Government of Hyderabad made a declaration to the effect that the aim of their policy was responsible Government. Compromise on details could be arranged through a collateral letter. Sir Mirza wrote to the Nizam from Delhi telling him about the state of feeling in the Indian capital and suggesting to the Nizam that he might do two things to prevent open conflict between India and Hyderabad, first to sign the draft agreement himself without the concurrence of his Government and second to invite the Indian Army to afford him protection against the Razakars. The Nizam shrunk from following the course of action suggested by Sir Mirza Ismail, while the Hyderabad Government decided to approach the Security Council.

The Governor-General then made a last appeal to the Nizam to take courage and follow the advice given by Sir Mirza Ismail. He warned the Nizam that any other course might result in the gravest possible consequences to the State. But the appeal failed. The Nizam flatly rejected the Governor-General's terms and made no constructive counter-suggestions of his own. It was plain that things had got to a stage when the dead-lock could not be resolved except by the use of force. Events then moved very quickly. On September 10, 1948 Mohd Nawaz Jung the leader of the Hyderabad Delegation to the Security Council left Hyderabad for Karachi on his way to Paris. On the 13th, Indian Troops entered Hyderabad for the purpose of restoring law and order.

REASONS FOR ACTION

The immediate reasons for the intervention were explained in a White Paper issued by the Government of India on August 10. In the course of a lengthy statement the White Paper said:

"Since July, 1947, the Ittehad-ul-Muslimeen, under the Nizam's inspiration, has been converted into a shock brigade for creating conditions in which the much-coveted theocratic State may come into existence. With this end in view, a quasi-military organisation known as the Razakars has been built up. Militarist demonstrations are a part of their daily routine; and military training is being imparted to them in Hyderabad and Secunderabad. A Razakar, on enrolment, pledges his life to the Ittehad, to Hyderabad and to his leader, and vows 'to fight to the last to maintain the supremacy of the Muslim Power in the Deccan.' The headquarters of the Razakars is in Hyderabad City, but its ramifications cover the whole of the State. Seventy thousand men, women and children have undergone training; 150,000 members are on the rolls, and recruitment is going on briskly to reach the target figure of 500,000 Razakars.

"The internal conditions of Hyderabad State have become a scandal and the majority population has to suffer terrorism of the worst type. In all districts of Hyderabad the Razakars' rule prevails, often supported by the police and the military, and in all cases connived at by them. No Razakar has been known so far to have been brought to book for any atrocity, however violent and unlawful. As a result of the unchecked terrorism of the Razakars, a large number of people are migrating from the State to the territories of the Indian Dominion."

"The fighting lasted only about five days. On the 17th the Nizam ordered cease-fire. On September 18, the Commander of the Hyderabad Army signed the terms of unconditional surrender and the first detachments of the Indian Army arrived in the capital. Major-General Choudhury took over as Military Governor on the following day. On the 20th, the Nizam asked the Hyderabad delegation to the U. N. to withdraw the case from the Security Council.

KASHMIR

Consequent on India's appeal to the U.N.O. to take note of the serious developments in Kashmir the U.N.O. after some deliberation appointed a five-man commission to arrange cease-fire and an eventual plebiscite to solve the problem. The Commission arrived in Karachi, the capital of Pakistan on July 7, 1948 and in Delhi three days later. From Delhi the Commission went to Kashmir. After about a month's tour of the State territory and the war front the Commission proposed on August 13, 1948 a 'cease-fire' and certain terms for a truce. India accepted the proposals in principle while Pakistan raised certain objections which amounted to a virtual rejection of the proposals. Later while the Commission was away in Paris, Pakistan decided on second thought to accept the proposals in principle. The Commission then arrived in the sub-continent and arranged a 'cease-fire' which took effect on January 1, 1949. The aim of all negotiations here is to bring about a set of conditions in which a fair and free plebiscite becomes possible. After 'cease-fire' the U.N. Commission lost no time in making its proposals for a truce and an eventual plebiscite. Both the Government of India and the Government of Pakistan agreed to these proposals in principle. It is in the working of the details and the interpretation of the various clauses that grave differences arose so grave indeed that a plebiscite seemed as remote at the time of writing as in the days when fighting was in progress.

The proposals made by the U.N. Commission may be summarized as follows: First, Pakistan nationals, the frontier tribesmen and the Pakistan armed forces were to withdraw. Next the Indian Army was also to withdraw in stages leaving behind only such forces as were absolutely

necessary for the maintenance of law and order in the State. In those areas under the control of the so-called Azad Kashmir forces administration was to be carried on by the local authorities under the direct supervision of the U.N. Commission. All State subjects who had left the State when disturbances began were to return to the State; and all non-State subjects except those who were on lawful purpose were to leave the State. The Indian and State troops were to be disposed in State territory in such a way as to ensure a free and fair plebiscite consistent, of course, with the need for maintaining law and order. Similarly the so-called Azad Kashmir forces were to take up appropriate positions in the territory at present under their control so that the State citizens could cast their votes without molestation. When conditions were well settled and peaceful a plebiscite was to be held by an Administrator nominated by the Secretary General of the United Nations and appointed by the Government of Kashmir. All political prisoners were to be released and minorities given full protection. There was to be complete freedom of speech, press, assembly, travel, exit and entry, and freedom for all kinds of legitimate political activity and propaganda. There was to be no coercion, bribery, intimidation, the exercise of undue influence or the use of grossly unfair methods of propaganda. Every citizen must be absolutely free to exercise his vote exactly as he pleased in perfect safety.

These, broadly speaking, were the U.N. Commission's proposals. The details were to be worked out through joint consultations among the Governments of India and Pakistan and the United Nations Commission.

The Commission's proposals were made on April 15, 1949. Later the proposals were slightly modified consequent on the clarification of the terms sought by the Governments of India and Pakistan. The modified proposals were then sent to the two Governments on April 25 with a warning that they were to be considered as the final terms. The nomination of the Plebiscite Administrator (Admiral Chester Nimitz) soon followed and the Administrator even made plans for leaving for Kashmir to take up his post. But the formal appointment by the Kashmir Government which was essential before the Administrator could get to work did not materialize. It was explained on behalf of the Kashmir Government that conditions were not yet ripe for the holding of a plebiscite, and so it was too early for the Administrator to start operations.

OBSTACLES TO AGREEMENT

At the time of writing tripartite negotiations with a view to compromise are in progress and some reports indicate that a compromise is not impossible. The differences have been narrowed down, it is said, and Sir B. N. Rau explained that the chief obstacle to a general agreement was the future of the so-called Azad Kashmir forces. The truth must however be faced that points on which differences can arise at any stage are too numerous to permit of an early solution. Here, for instance, are a few of the difficulties. Where is the true line to be drawn in the far north and north-east? Who is to be in charge of the Ladakh area the eastern part of which is Buddhist? When and at what intervals are Indian troops to be withdrawn? Are the Pakistan troops to be withdrawn by similar stages? Then there are the refugees from Kashmir who have to return to the States to exercise their votes. How are genuine refugees to be sorted from bogus refugees? How are the authorities to prevent impersonation? What arrangements are to be made in the State to house the refugees while they are waiting for the plebiscite? Then there are a host of questions connected more directly with the plebiscite itself. Is the plebiscite to be held District-wise or in the State as a whole? What is to be the method of voting? How is one to define 'undue influence' or 'unscrupulous propaganda'? Would, for instance, an 'Islamic appeal' be classed as 'undue influence'? The sheer physical obstacles to a fair plebiscite are

almost forbidding. Large areas of the territory of the Kashmir State like Muzaffarabad, Mirpur, Poonch, the western part of Jhelum, Baramulla, Ladakh and the whole of the Gilgit Agency are mountainous. There are no roads, properly so-called and communication is difficult in the extreme. The only parts of the State where communication is good are Jammu and the Kashmir Valley itself. Moreover everywhere the population is illiterate. Political consciousness hardly exists. Whatever beliefs and loyalties there are of a purely local nature. Thus it is not everywhere that a vote can be taken as representing the voter's own deliberate decision. All these are real obstacles; and there is no disposition anywhere to minimize their seriousness. But there is no alternative to plebiscite. Neither can a solution be sought through partition of the State. Both India and Pakistan have flatly declared that Kashmir must accede as a whole either to India or to Pakistan; there will be no partition of any sort.

Meanwhile there were charges and counter-charges about breach of the cease-fire terms. India alleged that Pakistan troops had occupied a number of positions in the no-man's land and had opened fire on Indian troops on a number of occasions. Pakistan in its reply rejected the charges and said that the U.N. observers had reported no breaches of the cease-fire. The Pakistan Government then made some counter-charges of its own. It declared that Indian troops had occupied a number of hill features, that India was building new fortifications and was in general engaged in strengthening the military forces of the Kashmir Government.

Two developments which affect the internal structure of the Kashmir State are the retirement of the Maharaja owing to reasons of health and the granting of direct representation to the State in the Indian Constituent Assembly. Four members from Kashmir took their seats in the Constituent Assembly on June 4, 1949. On June 20 the Yuvaraj of Kashmir, Karan Singh Bahadur took over the reins of Government from his father. The Maharaja issued a proclamation on the occasion which authorized his son to carry on all his functions in regard to the Government of the Kashmir State during his temporary absence.

SIKKIM

On June 7, 1949 the Government of India, assumed responsibility for the administration of Sikkim. Pending the appointment of a Dewan the Political Agent of the Government of India at Gangtok, the capital of the State, was asked to take over. These changes were a consequence of a report made by Dr. Bakrishna Kesar the Deputy Minister in Charge of External Affairs, who made a tour of the State towards the end of May, 1949. Ever since the advent of independence in India there was agitation in the State for reduction of land revenue, formal accession and for political reforms in the State. The agitation was led by members belonging to the State Congress. On February 25, 1949 about 25 people were arrested including the President, the General Secretary and the organizing Secretary of the Congress. Public feeling became inflamed and a mob marched on the capital and demanded the release of the imprisoned leaders. In May an interim Ministry was formed with the State Congress leader as head of the Ministry. Differences soon arose between the Maharaja and his Ministry which was almost immediately reflected in tension in the State. It was feared that disorder and bloodshed might occur. On June 6 the Maharaja wrote a letter to the Political Agent that administration was not possible without assistance from the Government of India. A year's taxes, for instance, were in arrears. Consequently the Government of India despatched a company of troops to Gangtok and instructed the Political Agent to take over the administration. At the time of writing the Government of India had decided to appoint a Dewan for the State. Negotiations were also in progress for stabilizing relations between India and Sikkim either through accession or by means of a treaty.

Geographically Sikkim lies on this side of the Himalayan water-shed and hence within the Indian sphere. Sikkim is of great strategic importance to India as it lies on the direct trade route to Tibet and Bhutan. It forms a sort of buffer between India, Tibet and China. India's Political Agent in Sikkim also conducts India's relations with Tibet and Bhutan.

Sikkim became a British protectorate through a treaty with China in 1890. Ever since the British representative in Sikkim acted in the capacity of an unofficial adviser. Financial help was also freely given in the maintenance of roads and bungalows. When India became independent a Stand-Still Agreement was negotiated with Sikkim by which the three subjects of External Affairs, Defence, and Communications were controlled by the Government of India, a position that will hold till a permanent settlement is made.

Sikkim is grouped with Cochin Behar for purposes of representation in the Indian Constituent Assembly, in which the two together have one member. Sikkim has an area of 2,818 sq. miles and a population of about 122,000. It is of interest to note that the Darjeeling District of West Bengal originally belonged to Sikkim. The situation in the State is complicated by the fact that while the so-called King's Party is Buddhist, the State Congress is Nepalese Hindu. Nepalese Hindus form about two-thirds of the population, and Buddhists one-third.

GOVERNMENT COMMUNIQUE

The official announcement made by the Government of India on June 7, 1949 about the situation in the State is reproduced below:

After tracing the recent events in the State leading to the formation of an interim Ministry under Congress leadership the announcement said: "Dr. Bakrishna V. Kesar visited Gangtok towards the end of May. In his report to the Government of India he stated that there was tension between the Ministry and the Maharaja and that there was a likelihood of bloodshed. He therefore recommended that, since a breakdown in the administration was likely, the Government of India should appoint a Dewan to take over the administration until the situation became normal.

"The Maharaja was also informed that, in case the administration broke down before a Dewan was sent, the Political Officer might be entrusted with the administration. The Deputy Foreign Minister further recommended that a small force should be sent to Gangtok to help the Political Officer in maintaining law and order, should the need for this arise.

"On June 6, the Maharaja sent a letter to the Political Officer, informing him that the administration could not be carried on satisfactorily without the Government of India's assistance and requesting the Political Officer to take over the administration pending the appointment of a Dewan to whom the Maharaja would delegate all powers necessary for carrying on the administration until normal conditions were restored.

"The same day the Political Officer sent for the Ministers and informed them that the Government of India were assuming responsibility for the administration. This is being done with effect from today."

PREVIOUS HISTORY

The Narendra Mandal or Chamber of Princes came into existence, with the earnest co-operation of a number of leading Princes themselves, as one of the results of the Report on Indian constitutional reform presented to Parliament by Montagu, Secretary of State for India and Lord Chelmsford, Viceroy and Governor-General of India in 1919. The proposal was that the Chamber should exist as a permanent consultative body, with the Viceroy as President and the members composing the Chamber consisting mainly of the Princes and Chiefs

having salutes or whose membership might otherwise be considered desirable by the Viceroy. Certain smaller Chiefs were grouped and were given the privilege of nominating a member to represent them from year to year. The Chamber, a recommendatory body, performed its functions under a constitution approved by the Secretary of State and dealt with questions submitted to it concerning the Princes and their rights and privileges generally and their position in imperial affairs.

The Chamber was formally inaugurated by the Duke of Connaught on 8th February 1921.

As the constitution of the Chamber provided for each State-Member exercising one vote on any question coming before the Chamber, power in the Chamber gradually fell into the hands of a majority representing the smaller States because these States were naturally the readiest to exercise their membership privileges. This development caused serious dissatisfaction among the Greater States and out of that sprang a movement for the re-organization of the Chamber.

The differences between the Greater States and the Lesser States were much sharpened by the different view-points which they held in regard to Federation. His late Highness of Patiala early in 1936 resigned the Chancellorship on this account. Thereafter His late Highness of Bikaner resigned from the Standing Committee of the Chamber. Only one Ruling Prince with a salute as big as 17 guns was then left an active participant in the Chamber's affairs. His Highness of Patiala was succeeded in the Chancellorship by His Highness of Dholpur, who automatically proceeded to the appointment from that of pro-Chancellor. His Excellency the Viceroy, in consultation with the Princes, convened a meeting in February 1937.

This meeting was preceded by intensive deliberations in the Informal Conferences of Princes. Their Highnesses at discussions which they held in Bombay in October 1936 appointed a Constitution Committee, under the Chairmanship of His late Highness the Maharaja of Patiala and including the Chancellor, to examine the Government of India Act of 1935 from the point of view of the States' entry into Federation. This Committee produced its report in the first week of February 1937, and in the course of it said that upon careful consideration of the Act they had "come to the conclusion that the safeguards have been substantially met" and that certain further recommendations now newly made by themselves would, if adopted, completely fulfil them. These recommendations, the Committee said, had been drafted in consideration of the fact that the Act had already been passed. They complied, therefore, four proposed changes in the Draft States Instrument of Accession.

This report was taken into consideration by the general body of Princes at an informal Conference which adopted the report of the Constitution Committee. This decision was endorsed at a formal meeting of the Chamber of Princes in February 1937 by the re-election of His late Highness of Patiala to the Chancellorship by an overwhelming majority, and by the election of a pro-Chancellor and Standing Committee in sympathy with the same decision.

His Highness the Jam Sahab of Nawanagar succeeded His late Highness of Patiala in the Chancellorship and held the office for a number of years until the election in 1944 of His Highness the Nawab of Bhopal.

Internal Reform.—The pace of administrative and constitutional reform in the States rapidly increased in the years before the war owing to the introduction of provincial autonomy in British India, the apparent approach of Federation, and pressure—sometimes direct—from the Indian National Congress.

A new factor in the accession of the States to the proposed federation arose early in 1938. The Congress demanded as one of the conditions precedent to its active co-operation with the

federal scheme of 1935 the introduction in the States of self-governing institutions and an undertaking by the States rulers that in choosing their representatives to the federal legislature they would adopt an elective element. Neither the British Government nor their representatives in India could countenance these demands which were contrary to the provisions of the Act. Nevertheless the tide of democracy could not be stemmed.

Numerous States announced their Rulers' intention to liberalise their constitutional machinery and to improve their administration. Many actually introduced reforms. A few Rulers declared that responsible government was the goal of policy and took steps towards it.

An extraordinary development took place early in 1939 when Mahatma Gandhi decided on a fast to death to compel the Thakore Sahab of Rajkot to implement his promise concerning the membership of a reforms committee. The Viceroy intervened and Mahatma Gandhi agreed to the adjudication of the Chief Justice of the Federal Court, which went in his favour. But subsequently further difficulties over the constitution of the committee arose owing to the Mahatma's promise to the minorities and the Mahatma eventually recanted and declared that his fast had been coercive in character. He therefore left the committee to be constituted by the State. Later Mahatma Gandhi announced a "new technique" for agitation by States' subjects, in which he counselled moderation in their demands and called off all civil disobedience movements in the State.

His advice and direction was followed in almost every State where previously the air had been thick with strife. In some cases the response was quick, while in others the local leaders were inclined to be resentful of this sudden brake on their activities. Eventually, however, quiet was restored on the "States front," although stray "incidents" continued to engage the attention of the local public and of Mahatma Gandhi himself.

1943 Meeting.—The annual meeting of the Princes Chamber was held in October 1943. It was addressed by Lord Linlithgow for the last time for he left India almost immediately after. The address was listened to by the largest number of Princes that had ever attended any session since the inauguration of the Chamber. The Crown Representative upheld the federal ideal as the best for Indian unity and for the constitutional future of India and declared that "that unity is wholly consistent with the survival and orderly development of Indian States." He emphasised that the Crown's obligations to protect carried with them equally binding responsibilities to ensure, if need be, that what was protected continued to be worthy of protection.

1944 Crisis.—In the middle of September two deputations of the Princes waited on His Excellency the Crown Representative. One of them discussed questions affecting smaller States such as interstate general services, while the other took up with His Excellency the industrial policy of the Government of India as affecting the States, post-war reconstructions, treaty rights and relationship with the Crown. What happened at this interview is not clear except from the rapid events which culminated in a crisis in December 1944. On December 4, 1944, for the first time in the 23-year-long history of the Chamber of Princes, the Standing Committee of the Chamber resigned *en bloc* and the session of the Chamber, scheduled to meet on the following day, was obliged to be postponed *sine die*.

On this crisis of first rate importance there is, obviously enough, no authoritative information. For an understanding of the subject, one has to rely on press reports published at the time. These varied in detail but were agreed on the main causes of the crisis. According to these press reports, the unprecedented step of the resignation of the entire Standing Committee of the Chamber and the appointment of a "Committee of action" (including the Chan-

cellor and the Pro-Chancellor, the Nawab of Bhopal and the Jam Sahab of Nawanagar) was the climax of a series of events since September 15-16, 1944 when a deputation of Princes, led by the Nawab of Bhopal, waited on H. E. the Crown Representative.

About a month later the Chancellor addressed a communication to the Political Adviser to the Viceroy. The latter replied on December 2, which was the immediate cause of the Princes' decision. The decision was taken after several hours of protracted discussion extending over two days, and in the later stages the opinion of rulers outside the Standing Committee and of a few eminent administrators with State experience was consulted.

Besides the Nawab of Bhopal, Chancellor of the Chamber, and the Pro-Chancellor, the Jam Sahab of Nawanagar, the members of the Standing Committee who resigned include the Rulers of Indore, Dewas (Senior), Doodharpur, Patiala, Jaipur, Bikaner, Bilaspur and Rampur.

Princes' Demands.—Newspaper reports claim that the Princes' deputation to the Viceroy in the middle of September raised eight points, namely: First, the boards set up to control the working of the joint services of States should consist of full-powered States and should not include minority representatives of States.

Secondly, joint advisers appointed for groups of States which find it financially and otherwise desirable to have them should not deal with Political Officers over the head of the State administrations.

Thirdly, the working of various schemes relating to the States should be reviewed periodically.

Fourthly, the Standing Committee should be given the opportunity to prepare schemes to secure minimum standards of administration in the States.

Fifthly, Princes should be allowed to draw up an alternative plan for co-operative grouping.

Sixthly, joint High Courts should not be set up. The Raja of Bilaspur, in particular, is reported to have opposed these courts as an invasion of the rights of States.

Seventhly, the Instrument of Attachment should be revised in consultation with representatives of the attaching and attached States and no further attachments should be made.

Eighthly, arbitration machinery should be set up to ensure that treaty rights are not overridden.

The Viceroy's reply expressed disagreement with points one, two, five, six and eight and the first part of seven, and promised consideration of three and four. As regards the second part of seven, the reply pointed out that the scheme of attachment was limited to Western India and Gujarat States and the Government had no intention of extending it to other States.

The reply promised protection against undue newspaper attacks from British India against States and drew attention to the fact that as States' administrations improved occasions for harsh or unjust criticisms would become less and less.

On the question of post-war reconstruction and industrial planning, the Crown Representative was against allowing any unit or units to follow any policy of development that was likely to upset the All-India scheme.

In the summer of 1945, it was reported that the deadlock had almost been resolved. The resignations made in December 1944 were withdrawn late in the summer of 1945 and the Princely Order turned its attention to measures towards the political, social and economic uplift of the States against the background of current developments in the country.

THE WAVELL PLAN

The Princes' meeting in Bombay in the summer of 1945 coincided with the conference of leaders convened by the Viceroy. The Nawab of

Rhopal, addressing the Constitutional Advisory Committee of Princes and Ministers, welcomed the Wavell Plan, expressed the desire that an agreed settlement should be reached, and gave the assurance that the Princes would co-operate most cordially with an interim national Government for British India on matters of all-India concern.

His Highness felt confident that they could come to reasonable and honourable terms with the Government of a free India, and said "India is our motherland. We have a great heritage of tradition, culture and administrative experience. We yield to none in patriotism . . . We must associate our people as closely as possible with the administration of our States. This is, in fact, being done in many States. . ."

The Standing Committee met again at the end of September, 1945, and considered a number of questions of interest to the States.

Referring to the contention that low taxation standards in the Indian States attracted capital from British India, Sir Manubhai Mehta made it clear that the States had no intention to invite British Indian industrialists to establish industries in State territories at the expense of the industrial development of British India. The States asked for a voice in the formulation of the economic and industrial policy of the whole country. Sir Manubhai also complained that the Central Government had obstructed the natural growth of industries in Indian States.

Sir Manubhai declared that the States were prepared to collaborate in order to see that India achieved full political progress. What they opposed was unilateral changes in their treaty rights. He said that there should be no change in the monarchical form of government. The rulers might accept representative or responsible government.

Princely circles were busy in January 1946 on the eve of the annual session of the Chamber. Both at the meeting of the Standing Committee and at a general conference of about two hundred rulers and ministers, they discussed the position of the States in general against the background of impending constitutional developments in India, the attachment scheme, all-India industrial and aviation policies, co-operative grouping of States and joint services.

LARGER UNITS

Meeting after an interval of nearly two years, the annual session of the Chamber of Princes heard the Viceroy, Lord Wavell, give an assurance on one of the main points of difference which led to the crisis of 1944, namely, treaty rights and relationship with the Crown.

"I can assure you," said the Viceroy, "that there is no intention on our part to initiate any change in this relationship or these rights without your consent."

"I am confident that you will have no intention or desire to stand in the way of the growth of India to its full stature or to hinder the political, economic or social progress and advancement of your subjects."

Speaking of States whose finance was inadequate, Lord Wavell suggested that it was incumbent upon them so to modify their constitutional position as to ensure the welfare of their subjects for the future. In order that these States might have political stability, adequate financial resources and effective association of the people with the administration, he strongly urged that they should arrange to join a larger unit or combine with other small States to form a political entity of a sufficient size.

The Viceroy also touched on the importance of gradually approximating taxation policies and systems in Indian States with those of British India.

IMPORTANT DECLARATION

An important declaration on constitutional developments in Indian States, guaranteeing certain fundamental rights to the States people,

was made by the Chancellor, the Nawab of Bhopal. On behalf of the States he pledged himself to make "our fullest contribution to any attempt to settle India's constitutional problems on a just and reasonable basis." The declaration of rights was an earnest of this desire. A resolution urging States to adopt immediate measures to implement the policy outlined in the declaration was adopted by the Chamber.

As an earnest of the spirit of collaboration to enable the States to play their full part in the India of the future, the Chancellor made the following declaration:

"The Chamber of Princes in consultation with the Committee of Ministers has given anxious consideration to the question of the development of constitutional reforms in Indian States.

"The Chancellor of the Chamber of Princes is authorised to make the following declaration on behalf of and with the full authority of the Chamber of Princes:

"The object is to set up forthwith constitutions in the States in which the sovereign powers of the Rulers are exercised through regular constitutional channels without in any way affecting or impairing the continuance of the reigning dynasty in, and the integrity of, each State.

"There shall be popular institutions with elected majorities to ensure close and effective association of the people with the governance of the States.

"It is understood that in framing the detailed constitution of individual States on the above lines, regard shall be had to the special circumstances in each State.

Rights of Subjects.—"Most States have already adopted statutory provisions guaranteeing the rule of law and the security and protection of persons and property within their territories. In order to lay down and declare the position in this matter in precise and clear terms, the following essential rights should be guaranteed in States where this has not already been done with powers vested in the courts of the States to redress any infringement of these rights:—

"(1) No person should be deprived of his liberty, nor should his dwelling or property be entered, sequestered or confiscated save in accordance with law.

"(2) Such right may be suspended as may be prescribed in case of war, rebellion or serious internal disorder.

"(3) Every person should enjoy the right of free expression of opinion, the right of free association and combination and the right to assemble peacefully without arms and without military formation for purposes not opposed to law or morality.

"(4) Every person should enjoy freedom of conscience and the right of freely to profess and practice his religion, subject to public order and morality.

"(5) All persons should be equal before the law, irrespective of religion, caste or creed.

"(6) No disability should attach to any person merely by reason of his religion, caste or creed, in regard to public employment, office of power or honour, or in the exercise of any trade or calling.

"(7) There should be no *begar* (forced labour).

Administration.—It is affirmed that the administration shall be based on the following essential principles which would be strictly enforced where they do not obtain at present:

"1. The administration of justice must vest in an impartial and competent judiciary independent of the executive, and there must be suitable provision for the impartial adjudication of disputes between individuals and the State.

"2. The Rulers in their own States should clearly demarcate administrative budgets from civil lists and fix the latter at a reasonable percentage of the ordinary revenue.

"3. The incidence of taxation must be fair and equitable and a definite and substantial portion of the revenue must be allocated for the benefit of the people, particularly in the nation building departments.

"It is strongly recommended that the essential measures recommended in this declaration should, where they are not in force, be adopted without delay.

"This declaration, made spontaneously and earnestly, is inspired by faith in the peoples of Indian States and in the future destiny of the States. It represents the will of the Rulers to implement these decisions without reservation or delay. May it lead to increasing freedom from want and fear, and freedom of the mind and its expression! May it grow on the sure foundation of mutual love, tolerance, service and responsibility!"

Collaboration Promised.—Replying to the Crown Representative's opening address, the Nawab of Bhopal on behalf of the Princes, said: "We are grateful to Your Excellency for the assurance that there is no intention to initiate any change in our relationship with the Crown or the rights guaranteed by our treaties and engagements without our consent. We have already declared that we have no intention of withholding our consent to any adjustments which may be required under the future constitutional arrangements in India and which we consider reasonable in the wider interests of India.

Referring to the attachment scheme the Chancellor said: "We take it as understood that the arrangements envisaged under this suggestion are intended to proceed on the basis of mutual consent and do not exclude suitable schemes of joint services between some bigger and some smaller States where these may be evolved by mutual agreement. We are convinced that it is possible to ensure the objective in view without impairing the continuance of the ruling dynasty, or the integrity and autonomy of the State concerned."

GUARANTEES

The political outlook underwent a transformation with the announcement in the middle of March, 1946, that a British Cabinet Delegation would visit India and finally settle the constitutional problem of the country.

At a meeting of Rulers and Ministers of the Indian States, early in April 1946, it was generally agreed that any constitution would be subject to ratification by the States in order to be binding on them, that adherence to the monarchical form of Government and continuance of the reigning dynasty in each state would not be open to question and that the existing treaties and *sanads* would not be altered unilaterally without the consent of the States concerned. It was also agreed that the following points should be placed before the Cabinet Delegation:

Enforcement of constitutional safeguards, which the States may secure, should be such as can be enforced through the Federal Court;

Every State shall continue to retain its sovereignty, except to the extent to which its powers are delegated by it to the future Indian Union;

The territorial integrity of each State shall not be interfered with and the existing boundaries of each State shall not be altered without its free consent and approval;

The reigning dynasty of each State shall continue;

The existing form of Government in each State shall not be interfered with by the Union or any unit of the Union;

States which cannot individually afford to provide the basic efficiency of administration required in modern times should freely enter into suitable arrangements founded on consent with large States or combine in groups of small States.

Shortly after, the Indian States Constitutional Advisory Committee decided that the Princely Order should remain outside the proposed Interim Government, but the idea that an *ad hoc* committee should be established, to serve as a liaison body between the Interim Central Executive and the Indian States, found strong support.

MISSION'S PROPOSALS

In a memorandum on States Treaties and Paramountcy, presented to the Chancellor of the Chamber of Princes, the Cabinet Mission said among other things:

"Prior to the recent statement of the British Prime Minister in the House of Commons an assurance was given to the Princes that there was no intention on the part of the Crown to initiate any change in their relationship with the Crown or the rights guaranteed by their treaties and engagements without their consent. It was at the same time stated that the Princes' consent to any changes which might emerge as a result of negotiations would not unreasonably be withheld...

"During the interim period, which must elapse before the coming into operation of a new Constitutional structure under which British India will be independent or fully self-governing, paramountcy will remain in operation. But the British Government could not and will not in any circumstances transfer paramountcy to an Indian Government.

"In the meanwhile, the Indian States are in a position to play an important part in the formulation of the new Constitutional structure for India... In order to facilitate this they will doubtless strengthen their position by doing everything possible to ensure that their administrations conform to the highest standard. Where adequate standards cannot be achieved within the existing resources of the State they will no doubt arrange in suitable cases to form or join administrative units large enough to enable them to be fitted into the constitutional structure. It will also strengthen the position of States during this formative period if the various Governments which have not already done so take active steps to place themselves in close and constant touch with public opinion in their State by means of representative institutions.

"During the Interim period it will be necessary for the States to conduct negotiations with British India in regard to the future regulation of matters of common concern, especially in the economic and financial field. Such negotiations, which will be necessary whether the States desire to participate in the new Indian Constitutional structure or not, will occupy a considerable period of time, and since some of these negotiations may well be incomplete when the new structure comes into being, it will, in order to avoid administrative difficulties, be necessary to arrive at an understanding between the States and those likely to control the succession Government or Governments that for a period of time the then existing arrangements as to these matters of common concern should continue until the new agreements are completed. In this matter, the British Government and the Crown Representative will lend such assistance as they can, should it be so desired.

"When a new fully self-governing or independent Government or Governments come into being in British India, R. M. G.'s influence with these Governments will not be such as to enable them to carry out the obligations of paramountcy. Moreover, they cannot contemplate that British troops would be retained in India for this purpose. Thus, as a logical sequence and in view of the desires expressed to them on behalf of the Indian States, His Majesty's Government will cease to exercise the powers of paramountcy. This means that the rights of the States which flow from their relationship to the Crown will no longer exist and that all the rights surrendered by the States to the paramount power will return to the States. Political arrangements between the

States on the one side and the British Crown and British India on the other will thus be brought to an end. The void will have to be filled either by the States entering into a federal relationship with the successor Government or Governments in British India, or failing this, entering into particular political arrangements with it or them."

Princes' Reaction.—Shortly after the Standing Committee of the Chamber and Ministers of other States met to consider the Cabinet Mission's proposals in the light of the memorandum quoted above. In June 1946 the Chancellor wrote to the Viceroy:—

"... The Standing Committee are of the view that the plan provides the necessary machinery for the attainment by India of independence as well as a fair basis for further negotiations. They welcome the declaration of the Cabinet Mission in regard to paramountcy, but consider certain adjustments necessary for the Interim period which have already been indicated by them...

"The Standing Committee have decided, in response to Your Excellency's invitation, to set up a Negotiating Committee whose personnel is given in the enclosed list. The Committee did their utmost to keep the number small as desired by Your Excellency, but they felt that it would not be possible for them to reduce that number... The result of the negotiations are proposed to be considered by the Standing Committee of Princes, the Committee of Ministers and the Constitutional Advisory Committee whose recommendations will be placed before a general conference of Rulers and representatives of States...

"In the meantime, as desired by Your Excellency, questions relating to the exercise of paramountcy in the Interim period are proposed to be pursued with Sir Conrad and any outstanding points will be submitted to Your Excellency."

To this the Viceroy replied at the end of June:—

"The Cabinet Mission and I welcome the attitude which the Princes have adopted towards the plan which we have proposed for the solution of India's constitutional problem, and we particularly appreciate the action of the Standing Committee in endorsing the suggestions we made in regard to the manner in which States could best fit themselves to make their due contribution to India's new constitutional structure.

"I understand from Sir Conrad Corfield that he is already engaged in active discussions with the authorities of the Central Government about the machinery for giving effect to the Princes' proposal for a Consultative Committee to deal with matters of common concern to British India and the States.

PEOPLE'S REPRESENTATIVES

The Indian States had to fit in into the radical transformation which the Indian political scene was to undergo. The trend towards democratisation of Princely rule was determined partly by the realisation among the rulers themselves to end the medieval autocracy, partly by the influence of external nationalist urges, especially the representatives of the States' people.

In July 1946 a demand that States' representatives on the proposed Constituent Assembly must be elected representatives of the States' people was made by the Standing Committee of All-India States People's Conference which met in Bombay. The resolution declared that the people of the States would not recognise any decision taken without their approval and consent. Pandit Jawaharlal Nehru presided over the meeting.

The meeting appointed a committee of five persons with powers to add two more members to prepare material and draft proposals on behalf of the States' people for the then coming constitutional changes in the country as a whole and internal changes in the States.

Five more resolutions were adopted relating to Kashmir, Bikaner, Kalat States, the food situation in Mysore and the organisation of labour in States. The committee released that the ban on Pandit Nehru's entry into Kashmir was unwarranted, that it could not be tolerated and that there would be no peace until Sheikh Abdullah was released.

On the eve of Independence Day, Mr. K. T. Bhasiyam, a prominent Congressman and former President of the Mysore Congress and a member of the Expert Committee appointed by the All-India States People's Conference in Bombay to draft a constitution for Indian States with a view to aligning them with the provinces in a free Indian Union, issued for publication his draft constitution for the States. Under Mr. Bhasiyam's scheme, India's 564 States were to be classified under three heads, namely, those that could remain as they were, those that had to be grouped together to constitute administrative units and those that could not or would not join a group and had to be abolished as States.

In September it was announced that the States' Negotiating Committee, which was to negotiate on behalf of the Indian States, members relating to States' representation on the Constituent Assembly, was to consist of nine members. They were: the Nawab of Bhopal, Chancellor of the Chamber of Princes; the Maharaja of Patiala, Pro-Chancellor; the Jam Sahib of Nawanshar; the Maharaja of Dungarpur; Sir Mirza Ismail, President of the Nizam's Executive Council; Sir Ramaswami Mudaliar, Dewan of Mysore; Sir C. P. Ramaswami Aiyar, Dewan of Travancore; Sir Sultan Ahmed, Constitutional Advisor to the Chancellor; and Sardar K. M. Panikkar, Prime Minister of Bikaner.

A little later Pandit Jawaharlal Nehru, in a statement to the press, declared that he felt that he should not continue to function as President of the All-India States People's Conference under the prevailing circumstances though he proposed to remain a member of the Standing Committee. In his place Sheikh Mahomed Abdulla, the Vice-Chancellor, was chosen to function as President.

OBJECTIVES RESOLUTION

The deep concern of the Indian Princes for the future was evidenced by the important and many meetings held by them in December to consult jointly on the negotiations which were to be conducted with the Constituent Assembly. The meeting of the Standing Committee of the Princes was first held in Delhi under the chairmanship of the Chancellor, H. H. the Nawab of Bhopal. This was followed by a meeting of the Grouping Committee of the Chamber of Princes at which the various schemes for a regional confederation of the grouping of the States was discussed.

The States Constitutional Advisory Committee reviewed the up-to-date constitutional position in the country, *vis-à-vis* the States, and discussed the broad outlines of the policy to be followed by the Negotiations Committee set up by the Princes. Three members of the States Negotiating Committee then present in Delhi regretted to note that the resolution had been moved at the preliminary session of the Constituent Assembly raising many fundamental constitutional issues which, in their opinion, could not and should not be considered or decided by the Constituent Assembly in the absence of States' representatives and before the Negotiations contemplated under the Cabinet Mission's plan. (The Constituent Assembly's resolution, *inter alia*, proposed to set up an independent sovereign republic comprising not only British India but also the territories that then formed the States).

The All-India States People's Conference at the close of December, after a critical reference to the activities of the Political Department of the Government of India, demanded in a resolution for a "complete change" both in its personnel and its relations with the Govern-

ment of India and States. The Chief Officers of the Department, it was urged, should be Indians acceptable to the people of the States and further the Department's activities should be carried on in close consultation with the Government of India.

Later, in a report, the Experts Committee of the Conference laid down ten principles which, in its view, was to frame the basis of responsible Government in the States and suggested the grouping of the States into regional units.

At the deliberations of the leading Princes and Ministers in New Delhi at the end of January 1947 grave fears were expressed about the future of the States. Engendered by Pandit Nehru's resolution on the objectives of the Constituent Assembly, the terms of the motion constituting the Committee to confer with the States and the speeches of leaders and of the legal opinion of British Indian statesmen were discussed. The plea that all aspects of the position of the States in the future union and not merely the method of representation of the States in the Constituent Assembly should be the subject of negotiation was the main point of the resolution drafted by the States' Constitutional Advisory Committee and adopted by the Committee of Ministers.

It was later adopted by the Standing Committee of the Princes' Chamber and later endorsed by a conference of about 60 rulers. Besides authorising the Negotiations Committee to settle the terms of the States' participation in the Constituent Assembly and to determine their ultimate position in the All-India Union subject to ratification by the States, the resolution offered co-operation in framing an agreed constitution according to the Cabinet Mission's plan. It also laid down certain fundamental propositions which were to serve as the basis for the States' acceptance of the Mission's scheme. The majority party in the Constituent Assembly did not see eye to eye with the Princes in many of the conditions stipulated in the resolution. But then the Princes, it was argued, had been "provoked" by some of the sentiments expressed in the Constituent Assembly.

AGREEMENT REACHED

The Princes' attitude was summed up in the words of the Nawab of Bhopal, "You are asked to quit or exist on sufferance only; it will be unworthy on our part to succumb to these threats."

On February 9, 1947, a momentous agreement was reached between the Negotiating Committee of the Constituent Assembly and the Princes' Chamber as a result of which the States' co-operation in constitution-making was practically assured. The proposals as to how the States ought to be represented in the Constituent Assembly and the distribution among the States of their quota of seats was to be drawn up by the Secretariats of the Constituent Assembly and the Princes' Chamber and submitted to another joint meeting of the two committees to be held early next month.

The following month a joint statement was issued by H.H. the Nawab of Bhopal, Chancellor of the Chamber of Princes, and Pandit Jawaharlal Nehru, which said:

"The States' Negotiating Committee set up by the Chamber of Princes and the corresponding committee of the Constituent Assembly held joint meetings yesterday and today. In

the course of the discussions, reference was made to the Cabinet Delegation's statement of May 16, the resolutions of the Constituent Assembly and the resolution passed by the Conference of Rulers. The discussions were friendly and satisfactory.

"On the basis of a general understanding arrived at, it was decided to take up the question of the representation of the States in the Constituent Assembly. The Secretariats of the Assembly and the Chamber of Princes were accordingly asked together to draw up detailed proposals for the allocation of the 93 seats allotted to the States and to place them for consideration before the next joint meeting of the two committees which will consider the proposed allocation as well as the method of selection of the States' representatives."

A joint meeting of the Standing Committee of Princes and the Constitutional Advisory Committee ratified a day later the action taken by the States' Negotiating Committee.

As a logical sequel to this agreement and surviving a second shock, the negotiations between the committees of the Constituent Assembly and the Princes' Chamber emerged satisfactorily. In an agreement reached on the method of representation of the States and the method of distribution of the 93 States' seats in the Constituent Assembly, a sub-committee representative of both sides was to supervise the implementation of the agreement. As a result of this agreement the States' people would have at least a 50 per cent. share in the States' quota.

Split Averted.—At a meeting of the Committee of Ministers of the Chamber of Princes held in Bombay at the end of March, it was suggested to hold a round table conference of representatives of the major political parties in India and of the States to find out the greatest measure of accord which could be secured as regards defence, communications and foreign affairs when the final transfer of power to one or more successor governments was to be effected.

A threatened split in the ranks of the Princely Order on what constituted the appropriate moment for the States' representatives to enter the Constituent Assembly was averted by a last minute compromise reached after midnight parleys early in April to resolve group differences on the eve of a general conference of rulers in Bombay which was to follow immediately. The compromise formula prepared by His Highness the Maharaja of Gwalior permitted freedom to the member States of the Chamber to enter the Assembly at any stage they might deem proper after the Assembly would ratify the agreement between the Negotiating Committees of the Chamber of Princes and of the Assembly.

At the annual session of the All-India States' People's Conference held at Gwalior in mid-April, Dr. Pattabhi Sitaramayya, who presided, declared that the Princes had no place in the Constituent Assembly any more than Governors of provinces, which might thereafter be called States composing the Indian Union. The conference decided to accept the agreement arrived at between the Negotiating Committees of the Princes and the Constituent Assembly regarding the method of selecting States representatives to the Constituent Assembly. Also resolutions on constitutional reforms in the States, Instructions to Praja Mandals and on grouping of States were passed at this session.

The Joint Committee of the Negotiating Committee of the Constituent Assembly and

the Chamber of Princes finalised the draft allocation of seats among the States on April 24. Sixty out of the 93 seats earmarked for the States were to be shared by 20 bigger States entitled to send representatives to the Assembly independently. The remaining 33 seats were distributed among the smaller States which would form groups as described to elect the allotted number of representatives.

At the end of April, Pandit Nehru moved resolutions in the Constituent Assembly "recording" the report of the committee appointed to negotiate with the States' Negotiating Committee and welcomed the representatives of the States who had already been chosen, expressing the hope that other States which had not chosen their representatives so far would take immediate steps to that end in accordance with the agreed procedure.

DISSOLUTION RECOMMENDED
